[Rousseau here quotes Tacitus, *Agricola*, 31, in Latin.] When the quarrels of the great disturbed the kingdom of France, and the Coadjutor of Paris brought with him to the Parliament a knife in his pocket, this did not keep the French people from living happily and in great numbers in a free and decent ease. Long ago, Greece flourished in the midst of the cruelest wars. Blood flowed in waves, and the whole country was covered with men. It seemed, says Machiavelli, that in the midst of murders, proscriptions, and civil wars, our republic became more powerful; the virtue of its citizens, their mores, and their independence did more to reinforce it than all its dissensions did to weaken it. A little agitation gives strength to souls, and what truly brings about prosperity for the species is not so much peace as liberty.

28. The slow formation and the progress of the Republic of Venice in its lagoons offers a notable example of this succession. And it is rather astonishing that after more than twelve hundred years the Venetians seem to be no further than the second stage, which began with *Serrar di Consiglio* in 1198. As for the ancient dukes, for whom the Venetians are reproached, whatever the *squitinio della libertà veneta* may say about them, it has been proved that they were not their sovereigns.

The Roman Republic does not fail to be brought forward as an objection against me, which, it will be said, followed a completely opposite course, passing from monarchy to aristocracy to democracy. I am quite far from thinking of it in this way.

The first establishment of Romulus was a mixed government that promptly degenerated into despotism. For some particular reasons, the state perished before its time, just as one sees a newborn die before reaching manhood. The expulsion of the Tarquins was the true epoch of the birth of the republic. But it did not at first take on a constant form, because in failing to abolish the patriciate, only half the work was completed. For in this way, since hereditary aristocracy, which is the worst of all forms of legitimate administration, remained in conflict with democracy, a form of government that is always uncertain and adrift, it was not determined, as Machiavelli has proved, until the establishment of the tribunes. It was only then that there was a true government and a veritable democracy. In fact, the populace then was not merely sovereign but also magistrate and judge. The senate was merely a subordinate tribunal whose purpose was to temper and concentrate the government; and the consuls themselves, though they were patricians, magistrates, and absolute generals in war, in Rome were merely presidents of the people.

from a small number to a large number, it could be said to slacken, but this reverse progression is impossible.

In fact, the government never changes its form except when its exhausted energy leaves it too enfeebled to be capable of preserving what belongs to it. Now if it were to become still more slack while it expanded, its force would become entirely nil; it would be still less likely to subsist. It must therefore wind up and tighten its force in proportion as it gives way; otherwise the state it sustains would fall into ruin.

The dissolution of the state can come about in two ways.

First, when the prince no longer administers the state in accordance with the laws and usurps the sovereign power. In that case a remarkable change takes place, namely that it is not the government but the state that shrinks. I mean that the state as a whole is dissolved, and another is formed inside it, composed exclusively of the members of the government, and which is no longer anything for the rest of the populace but its master and tyrant. So that the instant that the government usurps sovereignty, the social compact is broken, and all ordinary citizens, on recovering by right their natural liberty, are forced but not obliged to obey.

The same thing happens also when the members of the government separately usurp the power they should only exercise as a body. This is no less an infraction of the laws, and produces even greater disorder. Under these circumstances, there are, so to speak, as many princes as magistrates, and the state, no less divided than the government, perishes or changes its form.

When the state dissolves, the abuse of government, whatever it is, takes the common name *anarchy*. To distinguish, democracy degenerates into *ochlocracy*, aristocracy into *oligarchy*. I would add that royalty degenerates into *tyranny*, however this latter term is equivocal and requires an explanation.

In the ordinary sense a tyrant is a king who governs with violence and without regard for justice and the laws. In the strict sense, a tyrant is a private individual who arrogates to himself royal authority without having any right to it. This is how the Greeks understood the word tyrant. They gave the name indifferently to good and bad princes whose authority was not legitimate.[29] Thus *tyrant* and *usurper* are two perfectly synonymous words.

To give different names to different things, I call the usurper of royal authority a *tyrant*, and the usurper of sovereign power a *despot*. The tyrant is someone who intrudes himself, contrary to the laws, in order to govern according to the laws. The despot is someone who places himself above the laws themselves. Thus the tyrant cannot be a despot, but the despot is always a tyrant.

Chapter 11

On the Death of the Body Politic

Such is the natural and inevitable tendency of the best constituted governments. If Sparta and Rome perished, what state can hope to last forever? If we

---

From that point on, the government was also seen to follow its natural inclination and to tend strongly toward aristocracy. With the patriciate having abolished itself, as it were, the aristocracy was no longer in the body of patricians, as it was in Venice and Genoa, but in the body of the senate which was composed of patricians and plebeians, and even in the body of the tribunes when they began to usurp an active power. For words do not affect things, and when the populace has leaders who govern for it, it is always an aristocracy, regardless of the name these leaders bear.

The abuse of aristocracy gave birth to civil wars and the triumvirate. Sulla, Julius Caesar, and Augustus became in fact veritable monarchs, and finally, under the despotism of Tiberius, the state was dissolved. Roman history therefore does not invalidate my principle; it confirms it.

29. *For all are considered and are called tyrants who use perpetual power in a city accustomed to liberty.* [Rousseau here quotes the Latin.] Cornelius Nepos, *Life of Miltiades.* It is true that Aristotle, *Nicomachean Ethics,* Book XVIII, Chapter 10, distinguishes between a tyrant and a king, in that the former governs for his own utility and the latter governs only for the utility of his subjects. But besides the fact that generally all the Greek authors used the word tyrant in another sense, as appears most clearly in Xenophon's *Hiero,* it would follow from Aristotle's distinction that there has not yet been a single king since the beginning of the world.

wish to form a durable establishment, let us then not dream of making it eternal. To succeed, one must not attempt the impossible or flatter oneself with giving to the work of men a solidity that things human do not allow.

The body politic, like the human body, begins to die from the very moment of its birth, and carries within itself the causes of its destruction. But both can have a constitution that is more or less robust and suited to preserve them for a longer or shorter time. The constitution of man is the work of nature; the constitution of the state is the work of art. It is not within men's power to prolong their lives; it is within their power to prolong the life of the state as far as possible, by giving it the best constitution it can have. The best constituted state will come to an end, but later than another, if no unforeseen accident brings about its premature fall.

The principle of political life is in the sovereign authority. Legislative power is the heart of the state; the executive power is the brain, which gives movement to all the parts. The brain can fall into paralysis and yet the individual may still live. A man may remain an imbecile and live. But once the heart has ceased its functions, the animal is dead.

It is not through laws that the state subsists; it is through legislative power. Yesterday's law does not obligate today, but tacit consent is presumed from silence, and the sovereign is taken to be giving incessant confirmation to the laws it does not abrogate while having the power to do so. Whatever it has once declared it wants, it always wants, unless it revokes its declaration.

Why then is so much respect paid to ancient laws? For just this very reason. We must believe that nothing but the excellence of the ancient wills that could have preserved them for so long. If the sovereign had not constantly recognized them to be salutary, it would have revoked them a thousand times. This is why, far from growing weak, the laws continually acquire new force in every well constituted state. The prejudice in favor of antiquity each day renders them more venerable. On the other hand, wherever the laws weaken as they grow old, this proves that there is no longer a legislative power, and that the state is no longer alive.

Chapter 12

How the Sovereign Authority Is Maintained

The sovereign, having no other force than legislative power, acts only through the laws. And since the laws are only authentic acts of the general will, the sovereign can act only when the populace is assembled. With the populace assembled, it will be said: what a chimera! It is a chimera today, but two thousand years ago it was not. Have men changed their nature?

The boundaries of what is possible in moral matters are less narrow than we think. It is our weaknesses, our vices and our prejudices that shrink them. Base souls do not believe in great men; vile slaves smile with an air of mockery at the word liberty.

Let us consider what can be done in the light of what has been done. I will not speak of the ancient republics of Greece; however, the Roman Republic was, to my mind, a great state, and the town of Rome was a great town. The last census in Rome gave four thousand citizens bearing arms, and the last census count of the empire gave four million citizens, not counting subjects, foreigners, women, children, and slaves.

What difficulty might not be imagined in frequently calling assemblies of the immense populace of that capital and its environs. Nevertheless, few weeks passed by without the Roman people being assembled, and even several times in one week. It exercised not only the rights of sovereignty but also a part of those of the government. It took care of certain matters of public business; it tried certain cases; and this entire populace was in the public meeting place hardly less often as magistrate than as citizen.

In looking back to the earliest history of nations, one would find that most of the ancient governments, even the monarchical ones such as those of the Macedonians and the Franks, had similar councils. Be that as it may, this lone contestable fact answers every difficulty: arguing from the actual to the possible seems like good logic to me.

Chapter 13

Continuation

It is not enough for an assembled people to have once determined the constitution of the state by sanctioning a body of laws. It is not enough for it to have established a perpetual government or to have provided once and for all for the election of magistrates. In addition to the extraordinary assemblies that unforeseen situations can necessitate, there must be some fixed, periodic assemblies that nothing can abolish or prorogue, so that on a specified day the populace is rightfully convened by law, without the need for any other formal convocation.

But apart from these assemblies which are lawful by their date alone, any assembly of the people that has not been convened by the magistrates appointed for that task and in accordance with the prescribed forms should be regarded as illegitimate, and all that takes place there should be regarded as null, since the order itself to assemble ought to emanate from the law.

As to the question of the greater or lesser frequency of legitimate assemblies, this depends on so many considerations that no precise rules can be given about it. All that can be said is that in general the more force a government has, the more frequently the sovereign ought to show itself.

I will be told that this may be fine for a single town, but what is to be done when the state includes several? Will the sovereign authority be divided, or will it be concentrated in a single town with all the rest made subject to it?

I answer that neither should be done. In the first place, the sovereign authority is simple and one; it cannot be divided without being destroyed. In the second place, a town cannot legitimately be in subjection to another town, any more than a nation can be in subjection to another nation, since the essence of the body politic consists in the harmony of obedience and liberty; and the words *subject* and *sovereign* are identical correlatives, whose meaning is combined in the single word "citizen."

I answer further that it is always an evil to unite several towns in a single city, and that anyone wanting to bring about this union should not expect to avoid its natural disadvantages. The abuses of large states should not be raised as an objection against someone who wants only small ones. But how are small states to be given enough force to resist the large ones, just as the Greek cities long ago resisted a great king, and more recently Holland and Switzerland have resisted the house of Austria?

Nevertheless, if the state cannot be reduced to appropriate boundaries, one expedient still remains: not to allow a fixed capital, to make the seat of government move from one town to another, and to assemble the estates of the country in each of them in their turn.

Populate the territory uniformly, extend the same rights everywhere, spread abundance and life all over. In this way the state will become simultaneously as strong and as well governed as possible. Recall that town walls are made from the mere debris of rural houses. With each palace I see being erected in the capital, I believe I see an entire countryside turned into hovels.

Chapter 14

Continuation

Once the populace is legitimately assembled as a sovereign body, all jurisdiction of the government ceases; the executive power is suspended, and the person of the humblest citizen is as sacred and inviolable as that of the first magistrate, for where those who are represented are found, there is no longer any representative. Most of the tumults that arose in the comitia in Rome were due to ignorance or neglect of this rule. On such occasions the consuls were merely the presidents of the people; the tribunes, ordinary speakers;[30] the senate, nothing at all.

These intervals of suspension, during which the prince recognizes or ought to recognize an actual superior, have always been disturbing to him. And these assemblies of the people, which are the aegis

30. In nearly the same sense as is given this word in English Parliament. The similarity between these activities would have put the consuls and the tribunes in conflict, even if all jurisdiction had been suspended.

of the body politic and the curb on the government, have at all times been the horror of leaders. Thus they never spare efforts, objections, difficulties, or promises to keep the citizens from having them. When the citizens were greedy, cowardly, and pusillanimous, more enamored of repose than with liberty, they do not hold out very long against the redoubled efforts of the government. Thus it is that, as the resisting force constantly grows, the sovereign authority finally vanishes, and the majority of the cities fall and perish prematurely.

But between the sovereign authority and arbitrary government, there sometimes is introduced an intermediate power about which we must speak.

Chapter 15

On Deputies or Representatives

Once public service ceases to be the chief business of the citizens, and they prefer to serve with their wallet rather than with their person, the state is already near its ruin. Is it necessary to march off to battle? They pay mercenary troops and stay at home. Is it necessary to go to the council? They name deputies and stay at home. By dint of laziness and money, they finally have soldiers to enslave the country and representatives to sell it.

The hustle and bustle of commerce and the arts, the avid interest in profits, softness and the love of amenities: these are what change personal services into money. A person gives up part of his profit in order to increase it at leisure. Give money and soon you will be in chains. The word *finance* is a slave's word. It is unknown in the city. In a truly free state the citizens do everything with their own hands and nothing with money. Far from paying to be exempted from their duties, they would pay to fulfill them themselves. Far be it from me to be sharing commonly held ideas. I believe that forced labor is less opposed to liberty than are taxes.

The better a state is constituted, the more public business takes precedence over private business in the minds of the citizens. There even is far less private business, since, with the sum of common happiness providing a more considerable portion of each individual's happiness, less remains for him to look for through private efforts. In a well run city everyone flies to the assemblies; under a bad government no one wants to take a step to get to them, since no one takes an interest in what happens there, for it is predictable that the general will will not predominate, and that in the end domestic concerns absorb everything. Good laws lead to making better laws; bad laws bring about worse ones. Once someone says *what do I care?* about the affairs of state, the state should be considered lost.

The cooling off of patriotism, the activity of private interest, the largeness of states, conquests, the abuse of government: these have suggested the route of using deputies or representatives of the people in the nation's assemblies. It is what in certain countries is called the third estate. Thus the private interest of two orders is given first and second place; the public interest is given merely third place.

Sovereignty cannot be represented for the same reason that it cannot be alienated. It consists essentially in the general will, and the will does not allow of being represented. It is either itself or something else; there is nothing in between. The deputies of the people, therefore, neither are nor can be its representatives; they are merely its agents. They cannot conclude anything definitively. Any law that the populace has not ratified in person is null; it is not a law at all. The English people believes itself to be free. It is greatly mistaken; it is free only during the election of the members of Parliament. Once they are elected, the populace is enslaved; it is nothing. The use the English people makes of that freedom in the brief moments of its liberty certainly warrants their losing it.

The idea of representatives is modern. It comes to us from feudal government, that iniquitous and absurd government in which the human race is degraded and the name of man is in dishonor. In the ancient republics and even in monarchies, the people never had representatives. The word itself was unknown. It is quite remarkable that in Rome where the tribunes were so sacred, no one even imagined that they could usurp the functions of the people, and that in the midst of such a great multitude, they never tried to pass a single plebiscite on their own authority. However, we can size up the difficulties that were sometimes caused by the crowd by what

took place in the time of the Gracchi, when part of the citizenry voted from the rooftops.

Where right and liberty are everything, inconveniences are nothing. In the care of this wise people, everything was handled correctly. It allowed its lictors to do what its tribunes would not have dared to do. It had no fear that its lictors would want to represent it.

However, to explain how the tribunes sometimes represented it, it is enough to conceive how the government represents the sovereign. Since the law is merely the declaration of the general will, it is clear that the people cannot be represented in the legislative power. But it can and should be represented in the executive power, which is merely force applied to the law. This demonstrates that, on close examination, very few nations would be found to have laws. Be that as it may, it is certain that, since they have no share in the executive power, the tribunes could never represent the Roman people by the rights of their office, but only by usurping those of the senate.

Among the Greeks, whatever the populace had to do, it did by itself. It was constantly assembled at the public square. It inhabited a mild climate; it was not greedy; its slaves did the work; its chief item of business was its liberty. No longer having the same advantages, how are the same rights to be preserved? Your harsher climates cause you to have more needs;[31] six months out of the year the public square is uninhabitable; your muted tongues cannot make themselves understood in the open air; you pay more attention to your profits than to your liberty; and you are less fearful of slavery than you are of misery.

What! Can liberty be maintained only with the support of servitude? Perhaps. The two extremes meet. Everything that is not in nature has its drawbacks, and civil society more so than all the rest. There are some unfortunate circumstances where one's liberty can be preserved only at the expense of someone else's, and where the citizen can be perfectly free only if the slave is completely enslaved. Such was the situation in Sparta. As for you, modern peoples, you do not have slaves, but you yourselves are slaves. You pay for their liberty with your own. It is in vain that you crow about that preference. I find more cowardice in it than humanity.

I do not mean by all this that having slaves is necessary, nor that the right of slavery is legitimate, for I have proved the contrary. I am merely stating the reasons why modern peoples who believe themselves free have representatives, and why ancient peoples did not have them. Be that as it may, the moment a people gives itself representatives, it is no longer free; it no longer exists.

All things considered, I do not see that it is possible henceforth for the sovereign to preserve among us the exercise of its rights, unless the city is very small. But if it is very small, will it be subjugated? No. I will show later[32] how the external power of a great people can be combined with the ease of administration and the good order of a small state.

Chapter 16

That the Institution of Government Is Not a Contract

Once the legislative power has been well established, it is a matter of establishing the executive power in the same way. For this latter, which functions only by means of particular acts, not being of the essence of the former, is naturally separate from it. Were it possible for the sovereign, considered as such, to have the executive power, right and fact would be so completely confounded that we would no longer know what is law and what is not. And the body politic, thus denatured, would soon fall prey to the violence against which it was instituted.

Since the citizens are all equal by the social contract, what everyone should do can be prescribed by everyone. On the other hand, no one has the right to demand that someone else do what he does not do for himself. Now it is precisely this right, indispensable for making the body politic live and move, that

31. To adopt in cold countries the luxury and softness of the orientals is to desire to be given their chains; it is submitting to these with even greater necessity than they did.

32. This is what I intended to do in the rest of this work, when in treating external relations I would have come to confederations. An entirely new subject, and its principles have yet to be established.

the sovereign gives the prince in instituting the government.

Several people have claimed that this act of establishment was a contract between the populace and the leaders it gives itself, a contract by which are stipulated between the two parties the conditions under which the one obliges itself to command and the other to obey. It will be granted, I am sure, that this is a strange way of entering into a social contract! But let us see if this opinion is tenable.

First, the supreme authority cannot be modified any more than it can be alienated; to limit it is to destroy it. It is absurd and contradictory for the sovereign to acquire a superior. To obligate oneself to obey a master is to return to full liberty.

Moreover, it is evident that this contract between the people and some or other persons would be a particular act. Whence it follows that this contract could be neither a law nor an act of sovereignty, and that consequently it would be illegitimate.

It is also clear that the contracting parties would, in relation to one another, be under only the law of nature and without any guarantee of their reciprocal commitments, which is contrary in every way to the civil state. Since the one who has force at his disposal is always in control of its employment, it would come to the same thing if we were to give the name contract to the act of a man who would say to another, "I am giving you all my goods, on the condition that you give me back whatever you wish."

There is only one contract in the state, that of the association, and that alone excludes any other. It is impossible to imagine any public contract that was not a violation of the first contract.

Chapter 17

On the Institution of the Government

What should be the terms under which we should conceive the act by which the government is instituted? I will begin by saying that this act is complex or composed of two others, namely the establishment of the law and the execution of the law.

By the first, the sovereign decrees that there will be a governing body established under some or other form. And it is clear that this act is a law.

By the second, the people names the leaders who will be placed in charge of the established government. And since this nomination is a particular act, it is not a second law, but merely a consequence of the first and a function of the government.

The problem is to understand how there can be an act of government before a government exists, and how the people, which is only sovereign or subject, can in certain circumstances become prince or magistrate.

Moreover, it is here that we discover one of those remarkable properties of the body politic, by which it reconciles seemingly contradictory operations. For this takes place by a sudden conversion of sovereignty into democracy, so that, without any noticeable change, and solely by a new relation of all to all, the citizens, having become magistrates, pass from general to particular acts, and from the law to its execution.

This change of relation is not a speculative subtlety without exemplification in practice. It takes place everyday in the English Parliament, where the lower chamber on certain occasions turns itself into a committee of the whole in order to discuss better the business of the sovereign court, thus becoming the simple commission of the sovereign court (the latter being what it was the moment before), so that it later reports to itself, as the House of Commons, the result of what it has just settled in the committee of the whole, and deliberates all over again under one title about what it had already settled under another.

The peculiar advantage to democratic government is that it can be established in actual fact by a simple act of the general will. After this, the provisional government remains in power, if this is the form adopted, or establishes in the name of the sovereign the government prescribed by the law; and thus everything is in accordance with the rule. It is not possible to institute the government in any other legitimate way without renouncing the principles established above.

Chapter 18

The Means of Preventing Usurpations of the Government

From these clarifications, it follows, in confirmation of Chapter XVI, that the act that institutes the government is not a contract but a law; that the trustees of

the executive power are not the masters of the populace but its officers; that it can establish and remove them when it pleases; that for them there is no question of contracting, but of obeying; and that in taking on the functions the state imposes on them, they merely fulfill their duty as citizens, without in any way having the right to dispute over the conditions.

Thus, when it happens that the populace institutes a hereditary government, whether it is monarchical within a single family or aristocratic within a class of citizens, this is not a commitment it is entering. It is a provisional form that it gives the administration, until the populace is pleased to order it otherwise.

It is true that these changes are always dangerous, and that the established government should never be touched except when it becomes incompatible with the public good. But this circumspection is a maxim of politics and not a rule of law [*droit*], and the state is no more bound to leave civil authority to its leaders than it is to leave military authority to its generals.

Again, it is true that in such cases it is impossible to be too careful about observing all the formalities required in order to distinguish a regular and legitimate act from a seditious tumult, and the will of an entire people from the clamor of a faction. And it is here above all that one must not grant anything to odious cases except what cannot be refused according to the full rigor of the law [*droit*]. And it is also from this obligation that the prince derives a great advantage in preserving his power in spite of the people, without anyone being able to say that he has usurped it. For in appearing to use only his rights, it is quite easy for him to extend them, and under the pretext of public peace, to prevent assemblies destined to reestablish good order. Thus he avails himself of a silence he keeps from being broken, or of irregularities he causes to be committed, to assume that the opinion of those who are silenced by fear is supportive of him, and to punish those who dare to speak. This is how the decemvirs, having been first elected for one year and then continued for another year, tried to retain their power in perpetuity by no longer permitting the comitia to assemble. And it is by this simple means that all the governments of the world, once armed with the public force, sooner or later usurp the public authority.

The periodic assemblies I have spoken of earlier are suited to the prevention or postponement of this misfortune, especially when they have no need for a formal convocation. For then the prince could not prevent them without openly declaring himself a violator of the laws and an enemy of the state.

The opening of these assemblies, which have as their sole object the preservation of the social treaty, should always take place through two propositions which can never be suppressed, and which are voted on separately:

The first: *Does it please the sovereign to preserve the present form of government?*

The second: *Does it please the people to leave its administration to those who are now in charge of it?*

I am presupposing here what I believe I have demonstrated, namely that in the state there is no fundamental law that cannot be revoked, not even the social compact. For if all the citizens were to assemble in order to break this compact by common agreement, no one could doubt that it was legitimately broken. Grotius even thinks that each person can renounce the state of which he is a member and recover his natural liberty and his goods by leaving the country.[33] But it would be absurd that all the citizens together could not do what each of them can do separately.

End of the Third Book

BOOK IV

Chapter 1

That the General Will Is Indestructible

So long as several men together consider themselves to be a single body, they have but a single will, which is concerned with their common preservation and the general well-being. Then all the energies of the state are vigorous and simple; its maxims are clear

33. On the understanding that one does not leave in order to evade one's duty and to be exempt from serving the homeland the moment it needs us. In such circumstances, taking flight would be criminal and punishable; it would no longer be withdrawal, but desertion.

and luminous; there are no entangled, contradictory interests; the common good is clearly apparent everywhere, demanding only good sense in order to be perceived. Peace, union, equality are enemies of political subtleties. Upright and simple men are difficult to deceive on account of their simplicity. Traps and clever pretexts do not fool them. They are not even clever enough to be duped. When, among the happiest people in the world, bands of peasants are seen regulating their affairs of state under an oak tree, and always acting wisely, can one help scorning the refinements of other nations, which make themselves illustrious and miserable with so much art and mystery?

A state thus governed needs very few laws; and in proportion as it becomes necessary to promulgate new ones, this necessity is universally understood. The first to propose them merely says what everybody has already felt; and there is no question of either intrigues or eloquence to secure the passage into law of what each has already resolved to do, once he is sure the others will do likewise.

What misleads argumentative types is the fact that, since they take into account only the states that were badly constituted from the beginning, they are struck by the impossibility of maintaining such an administration. They laugh when they imagine all the foolishness a clever knave or a sly orator could get the people of Paris or London to believe. They do not know that Cromwell would have been sentenced to hard labor by the people of Berne, and the Duc de Beaufort imprisoned by the Genevans.

But when the social bond begins to relax and the state to grow weak, when private interests begin to make themselves felt and small societies begin to influence the large one, the common interest changes and finds opponents. Unanimity no longer reigns in the votes; the general will is no longer the will of all. Contradictions and debates arise, and the best advice does not pass without disputes.

Finally, when the state, on the verge of ruin, subsists only in an illusory and vain form, when the social bond of unity is broken in all hearts, when the meanest interest brazenly appropriates the sacred name of the public good, then the general will becomes mute. Everyone, guided by secret motives, no more express their opinions as citizens than if the state had never existed; and iniquitous decrees having as their sole purpose the private interest are falsely passed under the name of laws.

Does it follow from this that the general will is annihilated or corrupted? No, it is always constant, unalterable and pure; but it is subordinate to other wills that prevail over it. Each man, in detaching his interest from the common interest, clearly sees that he cannot totally separate himself from it; but his share of the public misfortune seems insignificant to him compared to the exclusive good he intends to make his own. Apart from this private good, he wants the general good in his own interest, just as strongly as anyone else. Even in selling his vote for money he does not extinguish the general will in himself; he evades it. The error he commits is that of changing the thrust of the question and answering a different question from the one he was asked. Thus, instead of saying through his vote *it is advantageous to the state, he says it is advantageous to this man or that party that this or that view should pass.* Thus the law of the public order in the assemblies is not so much to maintain the general will, as to bring it about that it is always questioned and that it always answers.

I could present here a number of reflections about the simple right to vote in every act of sovereignty, a right that nothing can take away from the citizens; and on the right to state an opinion, to offer proposals, to divide, to discuss, which the government always takes great care to allow only to its members. But this important subject would require a separate treatise, and I cannot say everything in this one.

Chapter 2

On Voting

It is clear from the preceding chapter that the manner in which general business is taken care of can provide a rather accurate indication of the present state of mores and of the health of the body politic. The more harmony reigns in the assemblies, that is to say, the closer opinions come to unanimity, the more dominant too is the general will. But long debates, dissen-

sions, and tumult betoken the ascendance of private interests and the decline of the state.

This seems less evident when two or more orders enter into its constitution, as had been done in Rome by the patricians and the plebeians, whose quarrels often disturbed the comitia, even in the best of times in the Republic. But this exception is more apparent than real. For then, by the vice inherent in the body politic, there are, as it were, two states in one. What is not true of the two together is true of each of them separately. And indeed even in the most tumultuous times, the plebiscites of the people, when the senate did not interfere with them, always passed quietly and by a large majority of votes. Since the citizens have but one interest, the people had but one will.

At the other extreme of the circle, unanimity returns. It is when the citizens, having fallen into servitude, no longer have either liberty or will. Then fear and flattery turn voting into acclamations. People no longer deliberate; either they adore or they curse. Such was the vile manner in which the senate expressed its opinions under the emperors; sometimes it did so with ridiculous precautions. Tacitus observes that under Otho, the senators, while heaping curses upon Vitellius, contrived at the same time to make a frightening noise, so that, if by chance he became master, he would be unable to know what each of them had said.

From these various considerations there arise the maxims by which the manner of counting votes and comparing opinions should be regulated, depending on whether the general will is more or less easy to know and the state more or less in decline.

There is but one law that by its nature requires unanimous consent. This is the social compact. For civil association is the most voluntary act in the world. Since every man is born free and master of himself, no one can, under any pretext whatever, place another under subjection without his consent. To decide that the son of a slave is born a slave is to decide that he was not a man.

If, therefore, at the time of the social compact, there are opponents to it, their opposition does not invalidate the contract; it merely prevents them from being included in it. They are foreigners among citizens. Once the state is instituted, residency implies consent. To inhabit the territory is to submit to sovereignty.[34]

Aside from this primitive contract, the vote of the majority always obligates all the others. This is a consequence of the contract itself. But it is asked how a man can be both free and forced to conform to wills that are not his own. How can the opponents be both free and be placed in subjection to laws to which they have not consented?

I answer that the question is not put properly. The citizen consents to all the laws, even to those that pass in spite of his opposition, and even to those that punish him when he dares to violate any of them. The constant will of all the members of the state is the general will; through it they are citizens and free.[35] When a law is proposed in the people's assembly, what is asked of them is not precisely whether they approve or reject, but whether or not it conforms to the general will that is theirs. Each man, in giving his vote, states his opinion on this matter, and the declaration of the general will is drawn from the counting of votes. When, therefore, the opinion contrary to mine prevails, this proves merely that I was in error, and that what I took to be the general will was not so. If my private opinion had prevailed, I would have done something other than what I had wanted. In that case I would not have been free.

This presupposes, it is true, that all the characteristics of the general will are still in the majority. When they cease to be free, there is no longer any liberty regardless of the side one takes.

In showing earlier how private wills were substituted for the general will in public deliberations, I

34. This should always be understood in connection with a free state, for otherwise the family, goods, the lack of shelter, necessity, or violence can keep an inhabitant in a country in spite of himself; and then his sojourn alone no longer presupposes his consent to the contract or to the violation of the contract.

35. In Genoa, the word *libertas* [liberty] can be read on the front of prisons and on the chains of galley-slaves. This application of the motto is fine and just. Indeed it is only malefactors of all social classes who prevent the citizen from being free. In a country where all such people were in the galleys, the most perfect liberty would be enjoyed.

have given an adequate indication of the possible ways of preventing this abuse. I will discuss this again at a later time. With respect to the proportional number of votes needed to declare this will, I have also given the principles on the basis of which it can be determined. The differences of a single vote breaks a tie vote; a single opponent destroys a unanimous vote. But between a unanimous and a tie vote there are several unequal divisions, at any of which this proportionate number can be fixed in accordance with the condition and needs of the body politic.

Two general maxims can serve to regulate these ratios. One, that the more important and serious the deliberations are, the closer the prevailing opinion should be to unanimity. The other, that the more the matter at hand calls for alacrity, the smaller the prescribed difference in the division of opinion should be. In decisions that must be reached immediately, a majority of a single vote should suffice. The first of these maxims seems more suited to the laws, and the second to public business. Be that as it may, it is the combination of the two that establishes the ratios that best help the majority to render its decision.

Chapter 3

On Elections

With regard to the elections of the prince and the magistrates, which are, as I have said, complex acts, there are two ways to proceed, namely by choice or by lots. Both of these have been used in various republics, and at present we still see a very complicated mixture of the two in the election of the Doge of Venice.

Voting by lot, says Montesquieu, *is of the essence of democracy*. I agree, but why is this the case? *Drawing lots*, he continues, *is a way of electing that harms no one; it leaves each citizen a reasonable hope of serving the homeland.* These are not reasons.

If we keep in mind that the election of leaders is a function of government and not of the sovereignty, we will see why the method of drawing lots is more in the nature of democracy, where the administration is better in proportion as its acts are less numerous.

In every true democracy the magistrature is not an advantage but a heavy responsibility that cannot justly be imposed on one private individual rather than another. The law alone can impose this responsibility on the one to whom it falls by lot. For in that case, with the condition being equal for all and the choice not depending on any human will, there is no particular application that alters the universality of the law.

In any aristocracy, the prince chooses the prince; the government is preserved by itself, and it is there that voting is appropriate.

The example of the election of the Doge of Venice, far from destroying this distinction, confirms it. This mixed form suits a mixed government. For it is an error to regard the government of Venice as a true aristocracy. For although the populace there has no part in the government, the nobility is itself the people. A multitude of poor Barnabites never came near any magistrature, have nothing to show for their nobility but the vain title of excellency and the right to be present at the grand council. Since this grand council is as numerous as our general council in Geneva, its illustrious members have no more privileges than our single citizens. It is certain that, aside from the extreme disparity between the two republics, the bourgeoisie of Geneva exactly corresponds to the Venetian patriciate. Our natives and inhabitants correspond to the townsmen and people of Venice. Our peasants correspond to the subjects on the mainland. Finally, whatever way one considers this Republic, apart from its size, its government is no more aristocratic than ours. The whole difference lies in the fact that, since we do not have leaders who serve for life, we do not have the same need to draw lots.

Elections by lot would have few disadvantages in a true democracy where, all things being equal both in mores and talents as well as in maxims and fortunes, the choice would become almost indifferent. But I have already said there is no such thing as a true democracy.

When choice and lots are mixed, the former should fill the position requiring special talents, such as military posts. The latter is suited to those positions, such as the responsibilities of judicature, where good sense, justice, and integrity are enough, because in a well constituted state these qualities are common to all the citizens.

Neither the drawing of lots nor voting have any

place in a monarchical government. Since the monarch is by right the only prince and sole magistrate, the choice of his lieutenants belongs to him alone. When the Abbé de St. Pierre proposed multiplying the Councils of the King of France and electing the members by ballot, he did not realize that he was proposing to change the form of government.

It remains for me to speak of the manner in which the votes are cast and gathered in the people's assembly. But perhaps in this regard the history of the Roman system of administration will explain more clearly all the maxims I could establish. It is not beneath the dignity of a judicious reader to consider in some detail how public and private business was conducted in a council made of two hundred thousand men.

Chapter 4

On the Roman Comitia

We have no especially reliable records of the earliest period of Rome's history. It even appears quite likely that most of the things reported about it are fables.[36] And in general the most instructive part of the annals of peoples, which is the history of their founding, is the part we most lack. Experience teaches us every day the causes that lead to the revolutions of empires. But since peoples are no longer being formed, we have almost nothing but conjecture to explain how they were formed.

The customs we find established attest at the very least to the fact that these customs had an origin. Of the traditions that go back to these origins, those that are supported by the greatest authorities and that are confirmed by the strongest reasons should pass for the most certain. These are the maxims I have tried to follow in attempting to find out how the freest and most powerful people on earth exercised its supreme power.

After the founding of Rome, the new-born Republic, that is, the army of the founder, composed of Albans, Sabines, and foreigners, was divided into three classes, which took the name *tribus* [tribes] by nature of this division. Each of these tribes was divided into ten curiae, and each curia into decuriae, at the head of which were placed leaders called *curiones* and *decuriones*.

Moreover, from each tribe was drawn a body of one hundred horsemen or knights, called a *century*. It is clear from this that these divisions, being hardly necessary in a market-town, originally were exclusively military. But it appears that an instinct for greatness led the small town of Rome to provide itself in advance with a system of administration suited to the capital of the world.

One disadvantage soon resulted from this initial division. With the tribes of the Albans[37] and the Sabines[38] always remaining constant, while that of the foreigners[39] grew continually, thanks to their perpetual influx, this latter group soon outnumbered the other two. The remedy that Servius found for this dangerous abuse was to change the division and, in place of the division based on race, which he abolished, to substitute another division drawn from the areas of the town occupied by each tribe. In place of the three tribes, he made four. Each of them occupied one of the hills of Rome and bore its name. Thus, in remedying the inequality of the moment, he also prevented it from happening in the future. And in order that this division might not be merely one of localities but of men, he prohibited the inhabitants of one quarter from moving into another, which prevented the races from mingling with one another.

He also doubled the three ancient centuries of horsemen and he added to them twelve others, but always under the old names, a simple and judicious means by which he achieved the differentiation of the body of knights from that of the people, without causing the latter to murmur.

To the four urban tribes, Servius added fifteen others called rural tribes because they were formed

36. The name *Rome*, which presumably comes from *Romulus*, is Greek, and means *force*. The name *Numa* is also Greek, and means *law*. What is the likelihood that the first two kings of that town would have borne in advance names so clearly related to what they did?

37. Ramnenses.

38. Tatienses.

39. Luceres.

from the inhabitants of the countryside, divided into the same number of cantons. Subsequently, the same number of new ones were brought into being, and the Roman people finally found itself divided into thirty-five tribes, a number at which they remained fixed until the end of the Republic.

There resulted from this distinction between the tribes of the city and those of the countryside an effect worth noting, because there is no other example of it, and because Rome owed it both the preservation of its mores and the growth of its empire. One might have thought that the urban tribes soon would have arrogated to themselves power and honors, and wasted no time in vilifying the rural tribes. What took place was quite the opposite. The early Romans' taste for country life is well known. They inherited this taste from the wise founder who united liberty with rural and military labors, and, so to speak, relegated to the town arts, crafts, intrigue, fortune and slavery.

Thus, since all the illustrious men in Rome lived in the country and tilled the soil, people became accustomed to look only there for the mainstays of the Republic. Since this condition was that of the worthiest patricians, it was honored by everyone. The simple and laborious life of the townsmen was preferred to the lazy and idle life of the bourgeois of Rome. And someone who would have been merely a miserable proletarian in the town, became a respected citizen as a field worker. It was not without reason, said Varro, that our great-souled ancestors established in the village the nursery of those robust and valiant men who defended them in time of war and nourished them in time of peace. Pliny says positively that the tribes of the fields were honored on account of the men who made them up; on the other hand, cowards whom men wished to vilify were transferred in disgrace to the tribes of the town. When the Sabine Appius Claudius came to settle in Rome, he was decked with honors and inscribed in a rural tribe that later took the name of his family. Finally, freedmen all entered the urban tribes, never the rural ones. And during the entire period of the Republic, there was not a single example of any of these freedmen reaching any magistrature, even if he had become a citizen.

This maxim was excellent, but it was pushed so far that it finally resulted in a change and certainly an abuse in the administration.

First, the censors, after having long arrogated to themselves the right to transfer citizens arbitrarily from one tribe to another, permitted most of them to have themselves inscribed in whatever tribe they pleased. Certainly this permission served no useful purpose and deprived the censorship of one of its greatest resources. Moreover, with the great and the powerful having themselves inscribed in the tribes of the countryside, and the freedmen who had become citizens remaining with the populace in the tribes of the town, the tribes in general no longer had either place or territory. On the contrary, they all found themselves so intermixed that the number of each could no longer be identified except by the registers, so that in this way the idea of the word *tribe* passed from being proprietary to personal, or rather, it became almost a chimera.

In addition, it happened that since the tribes of the town were nearer at hand, they were often the strongest in the comitia, and sold the state to those who deigned to buy the votes of the mob that made them up.

Regarding the curiae, since the founder had created ten curiae in each tribe, the entire Roman people, which was then contained within the town walls, was composed of thirty curiae, each of which had its temples, its gods, its officials, its priests and its feasts called *compitalia*, similar to the *paganalia* later held by the rural tribes.

When Servius established this new division, since this number thirty could not be divided equally among his four tribes, and since he did not want to alter it, the curiae became another division of the inhabitants of Rome, independent of the tribes. But there was no question of the curiae either in the rural tribes or among the people that make them up, for since the tribes had become a purely civil establishment and another system of administration had been introduced for the raising of troops, the military divisions of Romulus were found to be superfluous. Thus, even though every citizen was inscribed in a tribe, there were quite a few who were not inscribed in a curia.

Servius established still a third division which bore no relationship to the two preceding ones and which became, in its effects, the most important of all. He divided the entire Roman people into six classes,

which he distinguished neither by place nor by person, but by wealth. Thus the first classes were filled by the rich, the last by the poor, and the middle ones by those who enjoyed a moderate fortune. These six classes were subdivided into one hundred ninety-three other bodies called centuries, and these bodies were divided in such wise that the first class alone contained more than half of them, and the last contained only one. Thus it was that the class with the smallest number of men was the one with the greatest number of centuries, and that the entire last class counted only as a subdivision, even though it alone contained more than half the inhabitants of Rome.

In order that the people might have less of a grasp of the consequences of this last form, Servius feigned giving it a military air. He placed in the second class two centuries of armorers, and two instruments of war in the fourth. In each class, with the exception of the last, he made a distinction between the young and the old, that is to say, between those who were obliged to carry arms and those whose age exempted them by law. This distinction, more than that of wealth, produced the necessity for frequently retaking the census or counting. Finally, he wished the assembly to be held in the Campus Martius, and that all those who were of age to serve should come there with their arms.

The reason he did not follow this same division of young and old in the last division is that the populace of which it was composed was not accorded the honor of bearing arms for the homeland. It was necessary to possess a hearth in order to obtain the right to defend it. And of the innumerable troops of beggars who today grace the armies of kings, there is perhaps no one who would not have been disdainfully chased from a Roman cohort, when the soldiers were the defenders of liberty.

There still is a distinction in the last class between the *proletarians* and those that are called *capite censi*. The former, not completely reduced to nothing, at least gave citizens to the state, sometimes even soldiers in times of pressing need. As for those who possessed nothing at all and could be reckoned only by counting heads, they were reckoned to be absolutely worthless, and Marius was the first who deigned to enroll them.

Without deciding here whether this third method of reckoning was good or bad in itself, I believe I can affirm that it could be made practicable only by the simple mores of the early Romans, their disinterestedness, their taste for agriculture, their dislike for commerce and for the passion for profits. Where is the modern people among whom their devouring greed, their unsettled spirit, their intrigue, their continual displacements, their perpetual revolutions of fortunes could allow such an establishment to last twenty years without overturning the entire state? It must also be duly noted that the mores and the censorship, which were stronger than this institution, corrected its defects in Rome, and that a rich man found himself relegated to the class of the poor for having made too much of a show of his wealth.

From all this, it is easy to grasp why mention is almost never made of more than five classes, even though there actually were six. The sixth, since it furnished neither soldiers for the army nor voters for the Campus Martius[40] and was of virtually no use in the Republic, was hardly ever counted for anything.

Such were the various divisions of the Roman people. Let us now look at the effect these divisions had on the assemblies. When legitimately convened, these assemblies were called *comitia*. Ordinarily they were held in the Roman forum or in the Campus Martius, and were distinguished as comitia curiata, comitia centuriata, and comitia tributa, according to which of the three forms was the basis on which they were organized. The comitia curiata were based on the institution of Romulus, the comitia centuriata on that of Servius, and the comitia tributa on that of the tribunes of the people. No law received sanction, no magistrate was elected save in the comitia. And since there was no citizen who was not inscribed in a curia, in a century, or in a tribe, it followed that no citizen was excluded from the right of suffrage, and that the Roman people was truly sovereign both de jure and de facto.

For the comitia to be legitimately assembled and for what took place to have the force of law, three conditions had to be met: first, the body or the magistrate

40. I say *Campus Martius* because it was here that the comitia centuriata gathered. In the two other forms of assembly, the people gathered in the *forum* or elsewhere, and then the *capite censi* had as much influence and authority as the first citizens.

who called these assemblies had to be invested with the necessary authority to do so; second, the assembly had to be held on one of the days permitted by law; third, the auguries had to be favorable.

The reason for the first regulation needs no explanation. The second is an administrative matter. Thus the comitia were not allowed to be held on holidays and market days, when people from the country, coming to Rome on business, did not have time to spend the day in the public forum. By means of the third rule, the senate held in check a proud and restless people, and appropriately tempered the ardor of seditious tribunes. But these latter found more than one way of getting around this constraint.

The laws and the election of leaders were not the only matters submitted to the judgment of the comitia. Since the Roman people had usurped the most important functions of government, it can be said that the fate of Europe was decided in its assemblies. This variety of objects gave rise to the various forms these assemblies took on according to the matters on which they had to pronounce.

In order to judge these various forms, it is enough to compare them. In instituting the curiae, Romulus had intended to contain the senate by means of the people and the people by means of the senate, while he dominated both equally. He therefore gave the people, by means of this form, all the authority of number to balance that of power and wealth which he left to the patricians. But in conformity with the spirit of the monarchy, he nevertheless left a greater advantage to the patricians through their clients' influence on the majority of the votes. This admirable institution of patrons and clients was a masterpiece of politics and humanity, without which the patriciate, so contrary to the spirit of the Republic, could not have subsisted. Only Rome had the honor of giving the world this fine example, which never led to any abuse, and which, for all that, has never been followed.

Since this same form of curiae had subsisted under the kings until Servius, and since the reign of the last Tarquin was not considered legitimate, royal laws were generally known by the name *leges curiatae.*

Under the Republic, the curiae, always limited to the four urban tribes and including no more than the populace of Rome, was unable to suit either the senate, which was at the head of the patricians, or the tribunes, who, plebeians though they were, were at the head of the citizens who were in comfortable circumstances. The curiae therefore fell into discredit and their degradation was such that their thirty assembled lictors together did what the comitia curiata should have done.

The division by centuries was so favorable to the aristocracy, that at first difficult it is to see how the senate did not always prevail in the comitia which bears this name, and by which the consuls, the censors, and other crurale magistrates were elected. In fact, of the one hundred ninety-three centuries that formed the six classes of the entire Roman people, the first class contained ninety-eight, and, since the voting was counted by centuries only, this first class alone prevailed in the number of votes over all the rest. When all its centuries were in agreement, they did not even continue to gather the votes. Decisions made by the smallest number passed for a decision of the multitude; and it can be said that in the comitia centuriata business was regulated more by the majority of money than by one of votes.

But this extreme authority was tempered in two ways. First, since ordinarily the tribunes, and always a large number of plebeians, were in the class of the rich, they balanced the credit of the patricians in this first class.

The second way consisted in the following. Instead of at the outset making the centuries vote according to their order, which would have meant always beginning with the first, one century was chosen by lot, and that one[41] alone proceeded to the election. After this, all the centuries were called on another day according to their rank, repeated the same election and usually confirmed it. Thus the authority of example was removed from rank in order to give it to lot, in accordance with the principle of democracy.

There resulted from this custom still another advantage; namely that the citizens from the country had time between the two elections to inform themselves of the merit of the provisionally named

41. This century, having been chosen thus by lot, was called *prae rogativa*, on account of the fact that it was the first to be asked for its vote, and it is from this that the word *prerogative* is derived.

candidate, so as to give their votes only on condition of their having knowledge of the issue. But on the pretext of speeding things up, this custom was finally abolished and the two elections were held on the same day.

Strictly speaking, the comitia tributa were the council of the Roman people. They were convened only by the tribunes. The tribunes were elected and passed their plebiscites there. Not only did the senate hold no rank in them, it did not even have the right to be present. And since the senators were forced to obey the laws upon which they could not vote, they were less free in this regard than the humblest citizens. This injustice was altogether ill-conceived, and was by itself enough to invalidate the decrees of a body to which all its members were not admitted. If all the patricians had been present at these comitia in virtue of the right they had as citizens, having then become simple private individuals, they would not have had a great deal of influence on a form of voting that was tallied by counting heads, and where the humblest proletarian had as much clout as the prince of the senate.

Thus it can be seen that besides the order that resulted from these various distributions for gathering the votes of so great a people, these distributions were not reducible to forms indifferent in themselves, but each one had effects relative to the viewpoints that caused it to be preferred.

Without going further into greater detail here, it is a consequence of the preceding clarifications that the comitia tributa were the most favorable to the popular government, and the comitia centuriata more favorable to the aristocracy. Regarding the comitia curiata, in which the populace of Rome alone formed the majority, since these were good only for favoring tyranny and evil designs, they fell of their own weight into disrepute, and even the seditious abstained from using a means that gave too much exposure to their projects. It is certain that all the majesty of the Roman people is found only in the curia centuriata, which alone were complete, for the comitia curiata excluded the rural tribes, and the comitia tributa the senate and the patricians.

As to the manner of counting the votes, among the early Romans it was as simple as their mores, though not so simple as in Sparta. Each gave his vote in a loud voice, and a clerk marked it down accordingly. The majority vote in each tribe determined the tribe's vote; the majority vote of the tribes determined the people's vote; and the same went for the curia and the centuries. This custom was good so long as honesty reigned among the citizens and each was ashamed to give his vote publicly in favor of an unjust proposal or an unworthy subject. But when the people became corrupt and votes were bought, it was fitting that they should give their votes in secret in order to restrain the buyers through distrust and to provide scoundrels the means of not being traitors.

I know that Cicero condemns this change and attributes the ruin of the Republic partly to it. But although I am aware of the weight that Cicero's authority should have here, I cannot agree with him. On the contrary, I think that, by having made not enough of these changes, the fall of the state was accelerated. Just as the regimen of healthy people is not suitable for the sick, one should not want to govern a corrupt people by means of the same laws that are suited to a good people. Nothing proves this maxim better than the long life of the Republic of Venice, whose shadow still exists, solely because its laws are suited only to wicked men.

Tablets were therefore distributed to the citizens by mean of which each man could vote without anyone knowing what his opinion was. New formalities were also established for collecting the tablets, counting the votes, comparing the numbers, and so on. None of this prevented the integrity of the officials in charge of these functions[42] from often being under suspicion. Finally, to prevent intrigue and vote trafficking, edicts were passed whose sheer multiplicity is proof of their uselessness.

Toward the end of the period of the Republic, it was often necessary to have recourse to extraordinary expedients in order to make up for the inadequacy of the law. Sometimes miracles were alleged. But this means, which could deceive the populace, did not deceive those who governed it. Sometimes an assembly was unexpectedly convened before the candidates had time to carry out their intrigues. Sometimes an entire session was spent on talk, when it was clear

42. Custodes, diribitores, rogatores suffragiorum.

that the populace was won over and ready to take the wrong side on an issue. But finally ambition eluded everything; and what is unbelievable is that in the midst of so much abuse, this immense people, by virtue of its ancient regulations, did not cease to choose magistrates, pass laws, judge cases, or expedite private and public business, almost as easily as the senate itself could have done.

Chapter 5

On the Tribunate

When it is not possible to establish an exact proportion between the constitutive parts of the state, or when indestructible causes continually alter the relationships between them, a special magistrature is then established that does not make up a larger body along with them. This magistrature restores each term to its true relationship to the others, and which creates a link or a middle term either between the prince and the people or between the prince and the sovereign, or on both sides at once, if necessary.

This body, which I will call the *tribunate*, is the preserver of the laws and the legislative power. It serves sometimes to protect the sovereign against the government, as the tribunes of the people did in Rome; sometimes to sustain the government against the people, as the Council of Ten now does in Venice; and sometimes to maintain equilibrium between the two, as the ephors did in Sparta.

The tribunate is not a constitutive part of the city and it should have no share in either the legislative or the executive power. But this is precisely what makes its own power the greater. For although it is unable to do anything, it can prevent everything. It is more sacred and more revered as a defender of the laws than the prince who executes them and the sovereign who gives them. This was very clearly apparent in Rome when the proud patricians, who always scorned the entire populace, were forced to bow before a humble official of the people, who had neither auspices nor jurisdiction.

A well tempered tribunate is the firmest support of a good constitution. But if it has the slightest bit too much force, it undermines everything. As to weakness, there is none in its nature; and provided it is something, it is never less than it ought to be.

It degenerates into tyranny when it usurps the executive power, of which it is merely the moderator, and when it wants to dispense the laws it ought only protect. The enormous power of the ephors, which was without danger so long as Sparta preserved its mores, hastened corruption once it had begun. The blood of Agis, who was slaughtered by these tyrants, was avenged by his successor. The crime and the punishment of the ephors equally hastened the fall of the republic; and after Cleomenes Sparta was no longer anything. Rome also perished in the same way, and the excessive power of the tribunes, which they had gradually usurped, finally served, with the help of the laws that were made to protect liberty, as a safeguard for the emperors who destroyed it. As for the Council of Ten in Venice, it is a tribunal of blood, equally horrible to the patricians and the people, and which, far from proudly protecting the laws, no longer serves any purpose, after their degradation, beyond that of delivering blows in the dark which no one dares notice.

Just like the government, the tribunate weakened as a result of the multiplication of its members. When the tribunes of the Roman people, who at first were two in number, then five, wanted to double this number, the senate let them do so, certain that one part would hold the others in check; and this did not fail to happen.

The best way to prevent usurpations by so formidable a body, one that no government has yet made use of, would be not to make this body permanent, but to regulate the intervals during which it would be suppressed. These intervals, which ought not be so long as to allow abuses time to grow in strength, can be fixed by law in such a way that it is easy to shorten them, as needed, by means of extraordinary commissions.

This way seems to me to have no disadvantage, for since, as I have said, the tribunate is not part of the constitution, it can be set aside without doing the constitution any harm, because a newly established magistrate begins not with the power his predecessor had, but with the power the law gives him.

Chapter 6

On Dictatorship

The inflexibility of the laws, which prevents them from adapting to circumstances, can in certain instances make them harmful and render them the instrument of the state's downfall in time of crisis. The order and the slowness of formal procedures require a space of time which circumstances sometimes do not permit. A thousand circumstances can present themselves which the legislator has not foreseen, and it is a very necessary bit of foresight to realize that not everything can be foreseen.

It is therefore necessary to avoid the desire to strengthen political institutions to the point of removing the power to suspend their effect. Sparta itself allowed its laws to lie dormant.

But only the greatest dangers can counterbalance the danger of altering the public order, and the sacred power of the laws should never be suspended except when it is a question of the safety of the homeland. In these rare and obvious cases, public safety can be provided for by a special act which confers the responsibility for it on someone who is most worthy. This commission can be carried out in two ways, according to the type of danger.

If increasing the activity of government is enough to remedy the situation, it is concentrated in one or two members. Thus it is not the authority of the laws that is altered, but merely the form of their administration. But if the peril is such that the apparatus of the laws is an obstacle to their being protected, then a supreme leader is named who silences all the laws and briefly suspends the sovereign authority. In such a case, the general will is not in doubt, and it is evident that the first intention of the people is that the state should not perish. In this manner, the suspension of legislative authority does not abolish it. The magistrate who silences it cannot make it speak; he dominates it without being able to represent it. He can do anything but make laws.

The first way was used by the Roman senate when, by a sacred formula, it entrusted the consuls with the responsibility for providing for the safety of the Republic. The second took place when one of the two consuls named a dictator,[43] a custom for which Alba had provided Rome the precedent.

In the beginning days of the Republic, there was frequent recourse to dictatorship, since the state did not yet have a sufficiently stable basis to be capable of sustaining itself by the force of its constitution. Since the mores at that time made many of the precautions superfluous that would have been necessary in other times, there was no fear either that a dictator would abuse his authority or that he would try to hold on to it beyond his term of office. On the contrary, it seemed that such a great power was a burden to the one in whom it was vested, so quickly did he hasten to rid himself of it, as if a position that took the place of the laws would have been too troublesome and dangerous!

Thus it is not so much the danger of its being abused as it is that of its being degraded which makes one criticize the injudicious use of this supreme magistrature in the early days of the Republic. For while it was being wasted on elections, dedications and purely formal proceedings, there was reason to fear that it would become less formidable in time of need, and that people would become accustomed to regard as empty a title that was used exclusively in empty ceremonies.

Toward the end of the Republic, the Romans, having become more circumspect, were as unreasonably sparing in their use of the dictatorship as they had formerly been lavish. It was easy to see that their fear was ill-founded; that the weakness of the capital then protected it against the magistrates who were in its midst; that a dictator could, under certain circumstances, defend the public liberty without ever being able to make an attack on it; and that Rome's chains would not be forged in Rome itself, but in its armies. The weak resistance that Marius offered Sulla and Pompey offered Caesar clearly demonstrated what could be expected of internal authority in the face of external force.

This error caused them to make huge mistakes; for example, failing to name a dictator in the Catalinian affair. For since this was a question merely of the interior of the town and, at most, of some province in Italy, with the unlimited authority that the laws

43. This nomination was made at night and in secret, as if it were shameful to place a man beyond the laws.

give the dictator, he would have easily quelled the conspiracy, which was stifled only by a coming together of favor chance happenings, which human prudence has no right to expect.

Instead of that, the senate was content to entrust all its power to the consuls. Whence it happened that, in order to act effectively, Cicero was forced to exceed this power on a crucial point. And although the first transports of joy indicated approval of his conduct, eventually Cicero was justly called to account for the blood of citizens shed against the laws, a reproach that could not have been delivered against a dictator. But the eloquence of the consul carried the day. And since even he, Roman though he was, preferred his own glory to his homeland, he sought not so much the most legitimate and safest way of saving the state as he did the way that would get him all the honor for settling this affair.[44] Thus he was justly honored as the liberator of Rome and justly punished as a lawbreaker. However brilliant his recall may have been, it undoubtedly was a pardon.

For the rest, whatever the manner in which this important commission was conferred, it is important to limit a dictatorship's duration to a very short period of time which cannot be prolonged. In the crises that call for its being established, the state is soon either destroyed or saved; and once the pressing need has passed, the dictatorship becomes tyrannical or needless. In Rome, where the dictators had terms of six months only, most of them abdicated before their terms had expired. If the term had been longer, perhaps they would have been tempted to prolong it further, as did the decemvirs with a one year term. The dictator only had time enough to see to the need that got him elected. He did not have time to dream up other projects.

Chapter 7

On the Censorship

Just as the declaration of the general will takes place through the law, the declaration of the public judgment takes place through the censorship. Public opinion is the sort of law whose censor is the minister, and which he only applies to particular cases, after the example of the prince.

Thus the censorial tribunal, far from being the arbiter of the people's opinion, is merely its spokesman; and as soon as it deviates from this opinion, its decisions are vain and futile.

It is useless to distinguish the mores of a nation from the objects of its esteem, for all these things derive from the same principle and are necessarily intermixed. Among all the peoples of the world, it is not nature but opinion which decides the choice of their pleasures. Reform men's opinions, and their mores will soon become purified all by themselves. Men always love what is good or what they find to be so; but it is in this judgment that they make mistakes. Hence this is the judgment whose regulation is the point at issue. Whoever judges mores judges honor; and whoever judges honor derives his law from opinion.

The opinions of a people arise from its constitution. Although the law does not regulate mores, legislation is what gives rise to them. When legislation weakens, mores degenerate; but then the judgment of the censors will not do what the force of the laws has not done.

It follows from this that the censorship can be useful for preserving mores, but never for reestablishing them. Establish censors while the laws are vigorous. Once they have lost their vigor, everything is hopeless. Nothing legitimate has any force once the laws no longer have force.

The censorship maintains mores by preventing opinions from becoming corrupt, by preserving their rectitude through wise applications, and sometimes even by making a determination on them when they are still uncertain. The use of seconds in duels, which had been carried to the point of being a craze in the kingdom of France, was abolished by the following few words of the king's edict: *as for those who are cowardly enough to call upon seconds.* This judgment anticipated that of the public and suddenly made a determination. But when the same edicts tried to declare that it was also an act of cowardice to fight duels (which of course is quite true, but contrary to common opinion), the public mocked this decision; it concerned a matter about which its mind was already made up.

44. He could not have been sure of this, had he proposed a dictator, since he did not dare name himself, and he could not be sure that his colleague would name him.

I have said elsewhere[45] that since public opinion is not subject to constraint, there should be no vestige of it in the tribunal established to represent it. It is impossible to show too much admiration for the skill with which this device, entirely lost among us moderns, was put into effect among the Romans and even better among the Lacedaemonians.

When a man of bad mores put forward a good proposal in the council of Sparta, the ephors ignored it and had the same proposal put forward by a virtuous citizen. What honor for the one, what shame for the other; and without having given praise or blame to either of the two! Certain drunkards of Samos[46] defiled the tribunals of the ephors. The next day, a public edict gave the Samians permission to be filthy. A true punishment would have been less severe than impunity such as this. When Sparta made a pronouncement on what was or was not decent, Greece did not appeal its judgments.

Chapter 8

On Civil Religion

At first men had no other kings but the gods, and no other government than a theocratic one. They reasoned like Caligula, and then they reasoned correctly. A lengthy alteration of feelings and ideas is necessary before men can be resolved to accept a fellow man as a master, in the hope that things will turn out well for having done so.

By the mere fact that a god was placed at the head of every political society, it followed that there were as many gods as there were peoples. Two peoples who were alien to one another and nearly always enemies, could not recognize the same master for very long. Two armies in combat with one another could not obey the same leader. Thus national divisions led to polytheism, and this in turn led to theological and civil intolerance which are by nature the same, as will be stated later.

The fanciful notion of the Greeks that they had rediscovered their gods among the beliefs of barbarian peoples arose from another notion they had of regarding themselves as the natural sovereigns of these peoples. But in our day it is a ridiculous bit of erudition which equates the gods of different nations: as if Moloch, Saturn, and Chronos could have been the same god; as if the Phoenicians' Baal, the Greeks' Zeus, and the Romans' Jupiter could have been the same; as if there could be anything in common among chimerical beings having different names!

But if it is asked how in pagan cultures, where each state has its own cult and its own gods, there are no wars of religion, I answer that it was for this very reason that each state, having its own cult as well as its own government, did not distinguish its gods from its laws. Political war was theological as well. The departments of the gods were, so to speak, fixed by national boundaries. The gods of one people had no rights over other peoples. The gods of the pagans were not jealous gods. They divided dominion over the world among themselves. Moses himself and the Hebrew people sometimes countenanced this idea in speaking of the god of Israel. It is true they regarded as nothing the gods of the Canaanites, a proscribed people destined for destruction, and whose land they were to occupy. But note how they spoke of the divinities of neighboring peoples whom they were forbidden to attack! *Is not the possession of what belongs to your god Chamos,* said Jephthah to the Ammonites, *lawfully yours? By the same right we possess the lands our victorious god has acquired for himself.*[47] It appears to me that here was a clear recognition of the parity between the rights of Chamos and those of the god of Israel.

45. I merely call attention in this chapter to what I have treated at greater length in my *Letter to D'Alembert.*

46. [Rousseau adds the following in the 1782 edition: "They are from another island which the delicacy of our language prohibits me from naming at this time."]

47. *Nonne ea quae possidet Chamos deus tuus, tibi jure debentur?* Such is the text of the Vulgate. Father de Carrières has translated it: *Do you not believe that you have the right to possess what belongs to your god Chamos?* I do not know the force of the Hebrew text; but I see that in the Vulgate Jephthah positively acknowledges the right of the god Chamos, and that the French translator weakened this recognition by adding an *according to you* which is not in the Latin.

But when the Jews, while in subjection to the kings of Babylon and later to the kings of Syria, wanted to remain steadfast in not giving recognition to any other god but their own, their refusal, seen as rebellion against the victor, brought them the persecutions we read of in their history, and of which there is no other precedent prior to Christianity.[48]

Since, therefore, each religion was uniquely tied to the laws of the state which prescribed it, there was no other way of converting a people except by enslaving it, nor any other missionaries than conquerors. And with the obligation to change cult being the law of the vanquished, it was necessary to begin by conquering before talking about it. Far from men fighting for the gods, it was, as it was in Homer, the gods who fought for men; each asked his own god for victory and paid for it with new altars. Before taking an area, the Romans summoned that area's gods to leave it. And when they allowed the Tarentines to keep their angry gods, it was because at that point they considered these gods to be in subjection to their own and forced to do them homage. They left the vanquished their gods, just as they left them their laws. A wreath to the Capitoline Jupiter was often the only tribute they imposed.

Finally, the Romans having spread this cult and their gods, along with their empire, and having themselves often adopted the gods of the vanquished by granting the right of the city to both alike, the peoples of this vast empire gradually found themselves to have multitudes of gods and cults, which were nearly the same everywhere. And that is how paganism finally became a single, identical religion in the known world.

Such were the circumstances under which Jesus came to establish a spiritual kingdom on earth. In separating the theological system from the political system, this made the state to cease being united and caused internal divisions that never ceased to agitate Christian peoples. But since this new idea of an otherworldly kingdom had never entered the heads of the pagans, they always regarded the Christians as true rebels who, underneath their hypocritical submission, were only waiting for the moment when they would become independent and the masters, and adroitly usurp the authority they pretended in their weakness to respect. This is the reason for the persecutions.

What the pagans feared happened. Then everything changed its appearance. The humble Christians changed their language, and soon this so-called otherworldly kingdom became, under a visible leader, the most violent despotism in this world.

However, since there has always been a prince and civil laws, this double power has given rise to a perpetual jurisdictional conflict that has made all good polity impossible in Christian states, and no one has ever been able to know whether it is the priest or the master whom one is obliged to obey.

Nevertheless, several peoples, even in Europe or nearby have wanted to preserve or reestablish the ancient system, but without success. The spirit of Christianity has won everything. The sacred cult has always remained or again become independent of the sovereign and without any necessary link to the state. Mohammed had very sound opinions. He tied his political system together very well, and so long as the form of his government subsisted under his successors, the caliphs, this government was utterly unified, and for that reason it was good. But as the Arabs became prosperous, lettered, polished, soft and cowardly, they were subjugated by barbarians. Then the division between the two powers began again. Although it is less apparent among the Mohammedans than among the Christians, it is there all the same, especially in the sect of Ali; and there are states, such as Persia, where it never ceases to be felt.

Among us, the kings of England have established themselves as heads of the Church, and the czars have done the same. But with this title, they became less its masters than its ministers. They have acquired not so much the right to change it as the power to maintain it. They are not its legislators; they are merely its princes. Wherever the clergy constitutes a body,[49] it is master and legislator in its own realm.

48. It is quite clear that the Phocian War, called the Holy War, was not a war of religion at all. It had for its object to punish sacrileges, and not to make unbelievers submit.

49. It should be carefully noted that it is not so much the formal assemblies, such as those of France, which bind the clergy together into a body, as it is the communion of the churches. Communion and excommunica-

Thus there are two powers, two sovereigns, in England and in Russia, just as there are everywhere else.

Of all the Christian writers, the philosopher Hobbes is the only one who clearly saw the evil and the remedy, who dared to propose the reunification of the two heads of the eagle and the complete restoration of political unity, without which no state or government will ever be well constituted. But he should have seen that the dominating spirit of Christianity was incompatible with his system, and that the interest of the priest would always be stronger than that of the state. It is not so much what is horrible and false in his political theory as what is just and true that has caused it to be hated.[50]

I believe that if the facts of history were developed from this point of view, it would be easy to refute the opposing sentiments of Bayle and Warburton, the one holding that no religion is useful to the body politic, while the other maintains, to the contrary, that Christianity is its firmest support. We could prove to the first that no state has ever been founded without religion serving as its base, and to the second that Christian law is at bottom more injurious than it is useful for the strong constitution of the state. To succeed in making myself understood, I need only give a bit more precision to the excessively vague ideas about religion that are pertinent to my subject.

When considered in relation to society, which is either general or particular, religion can also be divided into two kinds, namely the religion of the man and that of the citizen. The first—without temples, altars or rites, and limited to the purely internal cult of the supreme God and to the eternal duties of morality—is the pure and simple religion of the Gospel, the true theism, and what can be called natural divine law [*droit*]. The other, inscribed in a single country, gives it its gods, its own titulary patrons. It has its dogmas, its rites, its exterior cult prescribed by laws. Outside the nation that practices it, everything is infidel, alien and barbarous to it. It extends the duties and rights of man only as far as its altars. Such were all the religions of the early peoples, to which the name of civil or positive divine law [*droit*] can be given.

There is a third sort of religion which is more bizarre. In giving men two sets of legislation, two leaders, and two homelands, it subjects them to contradictory duties and prevents them from being simultaneously devout men and citizens. Such is the religion of the Lamas and of the Japanese, and such is Roman Christianity. It can be called the religion of the priest. It leads to a kind of mixed and unsociable law [*droit*] which has no name.

Considered from a political standpoint, these three types of religion all have their faults. The third is so bad that it is a waste of time to amuse oneself by proving it. Whatever breaks up social unity is worthless. All institutions that place man in contradiction with himself are of no value.

The second is good in that it unites the divine cult with love of the laws, and that, in making the homeland the object of its citizens' admiration, it teaches them that all service to the state is service to its tutelary god. It is a kind of theocracy in which there ought to be no pontiff other than the prince and no priests other than the magistrates. To die for one's country is then to become a martyr; to violate its laws is to be impious. To subject a guilty man to public execration is to deliver him to the wrath of the gods: *sacer estod.*

On the other hand, it is bad in that, being based on error and lies, it deceives men, makes them credulous and superstitious, and drowns the true cult of the divinity in an empty ceremony. It is also bad when, on becoming exclusive and tyrannical, it makes a people bloodthirsty and intolerant, so that men breathe only murder and massacre, and believe they are performing a holy action in killing anyone who does not accept its gods. This places such a people in a natural state of war with all others, which is quite harmful to its own security.

---

tion are the social compact of the clergy, one with which it will always be the master of the peoples and the kings. All the priests who communicate together are citizens, even if they should be from the opposite ends of the world. This invention is a political masterpiece. There is nothing like this among the pagan priests; thus they never made up a body of clergy.

50. Notice, among other things, in Grotius' letter to his brother, dated April 11, 1643, what this learned man approves of and what he criticizes in his book *De Cive.* It is true that, prone to being indulgent, he appears to forgive the author for his good points for the sake of his bad ones. But not everyone is so merciful.

Thus there remains the religion of man or Christianity (not that of today, but that of the Gospel, which is completely different). Through this holy, sublime, true religion, men, in being the children of the same God, all acknowledge one another as brothers, and the society that unites them is not dissolved even at death.

But since this religion has no particular relation to the body politic, it leaves laws with only the force the laws derive from themselves, without adding any other force to them. And thus one of the great bonds of a particular society remains ineffectual. Moreover, far from attaching the hearts of the citizens to the state, it detaches them from it as from all the other earthly things. I know of nothing more contrary to the social spirit.

We are told that a people of true Christians would form the most perfect society imaginable. I see but one major difficulty in this assumption, namely that a society of true Christians would no longer be a society of men.

I even say that this supposed society would not, for all its perfection, be the strongest or the most durable. By dint of being perfect, it would lack a bond of union; its destructive vice would be in its very perfection.

Each man would fulfill his duty; the people would be subject to the laws; the leaders would be just and moderate, the magistrates would be upright and incorruptible; soldiers would scorn death; there would be neither vanity nor luxury. All of this is very fine, but let us look further.

Christianity is a completely spiritual religion, concerned exclusively with things heavenly. The homeland of the Christian is not of this world. He does his duty, it is true, but he does it with a profound indifference toward the success or failure of his efforts. So long as he has nothing to reproach himself for, it matters little to him whether anything is going well or poorly down here. If the state is flourishing, he hardly dares to enjoy the public felicity, for fear of becoming puffed up with his country's glory. If the state is in decline, he blesses the hand of God that weighs heavily on his people.

For the society to be peaceful and for harmony to be maintained, every citizen without exception would have to be an equally good Christian. But if, unhappily, there is a single ambitious man, a single hypocrite, a Cataline, for example, or a Cromwell, he would quite undoubtedly gain the upper hand on his pious compatriots. Christian charity does not readily allow one to think ill of his neighbors. Once he has discovered by some ruse the art of deceiving them and of laying hold of a part of the public authority, behold a man established in dignity! God wills that he be respected. Soon, behold a power! God wills that he be obeyed. Does the trustee of his power abuse it? He is the rod with which God punishes his children. It would be against one's conscience to expel the usurper. It would be necessary to disturb the public tranquillity, use violence and shed blood. All this accords ill with the meekness of a Christian. And after all, what difference does it make whether one is a free man or a serf in this vale of tears? The essential thing is getting to heaven, and resignation is but another means to that end.

What if a foreign war breaks out? The citizens march without reservation into combat; none among them dreams of deserting. They do their duty, but without passion for victory; they know how to die better than how to be victorious. What difference does it make whether they are the victors or the vanquished? Does not providence know better than they what they need? Just imagine the advantage a fierce, impetuous and passionate enemy could draw from their stoicism! Set them face to face with those generous peoples who were devoured by an ardent love of glory and homeland. Suppose your Christian republic is face to face with Sparta or Rome. The pious Christians will be beaten, crushed and destroyed before they realize where they are, or else they will owe their safety only to the scorn their enemies will conceive for them. To my way of thinking, the oath taken by Fabius' soldiers was a fine one. They did not swear to die or to win; they swore to return victorious. And they kept their promise. Christians would never have taken such an oath; they would have believed they were tempting God.

But I am deceiving myself in talking about a Christian republic; these terms are mutually exclusive. Christianity preaches only servitude and dependence. Its spirit is too favorable to tyranny for tyranny not to take advantage of it at all times. True Christians are made to be slaves. They know

it and are hardly moved by this. This brief life has too little value in their eyes.

Christian troops, we are told, are excellent. I deny this. Is someone going to show me some? For my part, I do not know of any Christian troops. Someone will mention the crusades. Without disputing the valor of the crusaders, I will point out that quite far from being Christians, they were soldiers of the priest; they were citizens of the church; they were fighting for its spiritual country which the church, God knows how, had made temporal. Properly understood, this is a throwback to paganism. Since the Gospel does not establish a national religion, no holy war is possible among Christians.

Under the pagan emperors, Christian soldiers were brave. All the Christian authors affirm this, and I believe it. This was a competition for honor against the pagan troops. Once the emperors were Christians, this competition ceased. And when the cross expelled the eagle, all Roman valor disappeared.

But leaving aside political considerations, let us return to right and determine the principles that govern this important point. The right which the social compact gives the sovereign over the subjects does not, as I have said, go beyond the limits of public utility.[51] The subjects, therefore, do not have to account to the sovereign for their opinions, except to the extent that these opinions are of importance to the community. For it is of great importance to the state that each citizen have a religion that causes him to love his duties. But the dogmas of that religion are of no interest either to the state or its members, except to the extent that these dogmas relate to morality and to the duties which the one who professes them is bound to fulfill toward others. Each man can have in addition such opinions as he pleases, without it being any of the sovereign's business to know what they are. For since the other world is outside the province of the sovereign, whatever the fate of subjects in the life to come, it is none of its business, so long as they are good citizens in this life.

There is, therefore, a purely civil profession of faith, the articles of which it belongs to the sovereign to establish, not exactly as dogmas of religion, but as sentiments of sociability, without which it is impossible to be a good citizen or a faithful subject.[52] While not having the ability to obligate anyone to believe them, the sovereign can banish from the state anyone who does not believe them. It can banish him not for being impious but for being unsociable, for being incapable of sincerely loving the laws and justice, and of sacrificing his life, if necessary, for his duty. If, after having publicly acknowledged these same dogmas, a person acts as if he does not believe them, he should be put to death; he has committed the greatest of crimes: he has lied before the laws.

The dogmas of the civil religion ought to be simple, few in number, precisely worded, without explanations or commentaries. The existence of a powerful, intelligent, beneficent divinity that foresees and provides; the life to come; the happiness of the just; the punishment of the wicked; the sanctity of the social contract and of the laws. These are the positive dogmas. As for the negative dogmas, I am limiting them to just one, namely intolerance. It is part of the cults we have excluded.

Those who distinguish between civil and theological intolerance are mistaken, in my opinion. Those two types of intolerance are inseparable. It is impossible to live in peace with those one believes to be damned. To love them would be to hate God who punishes them. It is absolutely necessary either to reclaim them or torment them. Whenever theological intolerance is allowed, it is impossible for it not to

51. *In the Republic*, says the Marquis d'Argenson, *each man is perfectly free with respect to what does not harm others.* This is the invariable boundary. It cannot be expressed more precisely. I have been unable to deny myself the pleasure of occasionally citing this manuscript, even though it is unknown to the public, in order to pay homage to the memory of a famous and noteworthy man, who, even as a minister, retained the heart of a citizen, along with just and sound opinions on the government of his country.

52. By pleading for Cataline, Caesar tried to establish the dogma of the mortality of the soul. To refute him, Cato and Cicero did not waste time philosophizing. They contented themselves with showing that Caesar spoke like a bad citizen and advanced a doctrine that was injurious to the state. In fact, this was what the Roman senate had to judge, and not a question of theology.

have some civil effect;[53] and once it does, the sovereign no longer is sovereign, not even over temporal affairs. Thenceforward, priests are the true masters; kings are simply their officers.

Now that there no longer is and never again can be an exclusive national religion, tolerance should be shown to all those that tolerate others, so long as their dogmas contain nothing contrary to the duties of a citizen. But whoever dares to say *outside the church there is no salvation* ought to be expelled from the state, unless the state is the church and the prince is the pontiff. Such a dogma is good only in a theocratic government; in all other forms of government it is ruinous. The reason why Henry IV is said to have embraced the Roman religion should make every decent man, and above all any prince who knows how to reason, leave it.

53. Marriage, for example, being a civil contract, has civil effects without which it is impossible for a society even to subsist. Suppose then that a clergy reaches the point where it ascribes to itself alone the right to permit this act (a right that must necessarily be usurped in every intolerant religion). In that case, is it not clear that in establishing the authority of the church in this matter, it will render ineffectual that of the prince, who will have no more subjects than those whom the clergy wishes to give him? Is it not also clear that the clergy—if master of whether to marry or not to marry people according to whether or not they accept this or that doctrine, according to whether they accept or reject this or that formula, according to whether they are more or less devout—in behaving prudently and holding firm, will alone dispose of inheritance, offices, the citizens, the state itself, which could not subsist, if composed solely of bastards? But, it will be said, abuses will be appealed; summonses and decrees will be issued; temporal holdings will be seized. What a pity! If it has a little—I will not say courage—but good sense, the clergy will serenely allow the appeals, the summonses, the decrees and the seizures, and it will end up master. It is not, it seems to me, a big sacrifice to abandon a part when one is sure of securing the whole.

Chapter 9

Conclusion

After laying down the true principles of political right and attempting to establish the state on this basis, it remains to support the state by means of its external relations, which would include the laws of nations, commerce, the right of war and conquest, public law, leagues, negotiations, treaties, and so on. But all that forms a new subject which is too vast for my nearsightedness. I should always set my sights on things that are nearer at hand to me.

End

IMMANUEL KANT

By 1784, the movement known as the Enlightenment was virtually dead in Germany. The Leibniz-Wolffian rationalism of earlier decades would not survive the century. Moses Mendelssohn, its clearest expositor, would die in 1785, embroiled in debate about the Spinozism of his friend Gotthold Ephraim Lessing. Yet, in 1784, Mendelssohn published in the *Berlinische Monatsschrift* an essay in which he answered the question: "What is Enlightenment?" In the next issue, another answer to the same question was published by Mendelssohn's younger contemporary and associate Immanuel Kant (1724–1804), and yet while Kant's answer clearly underlines the themes of the period, it is written by a philosopher whose work and whose thinking had already superseded it. To be sure, Kant would never abandon the themes of rationality and freedom; they are the core of his thinking. But in 1781 he had already published a work that dramatically altered the terms of discussion. Kant and the German Romantics—Johann Gottfried Herder, Johann Georg Hamann, Novalis, and others—set the Enlightenment and dogmatic rationalism to rest in the 1780s and 1790s, and yet in 1784 Kant's differences with the past were perhaps hard to discern.

Kant lived all of his life in or near Königsberg, in East Prussia, where he was born on April 22, 1724. His father was a harnessmaker; the family were devoted Pietists, committed to moral conduct and inner purity as the primary modes of religious worship. In his youth Kant learned to dislike the trappings of religious ritual and formality. In 1750 he enrolled at the University of Königsberg, where he studied with Martin Knutzen, a Leibniz-Wolffian who introduced him to mathematics, physics, and astronomy, as well as logic and metaphysics. After leaving the university, Kant served as a private tutor and returned to town in 1754, when he published the *Universal Natural History and Theory of the Heavens*. It was an attempt, now considered original, to apply Newtonian physics and its principles to the problem of the generation of the solar system.

By 1755 Kant was qualified as a *Privatdozent* (lecturer) at the university, where he lectured on mathematics, philosophy, scientific subjects, and much more. Until this time Newton and the new science, along with the current rationalist philosophy, were the major influences on Kant. In 1762, however, another powerful influence was added to them. When Kant received his copy of Rousseau's *Émile*, for two days he interrupted his rigorous routine of afternoon walks in order to finish reading the book. It was Rousseau who taught him "to honor man" and to make the cultural and political defense of human dignity his primary task. In the same year Kant submitted an essay to the Berlin Academy on the subject whether the principles of natural theology and morality can be proven like those of geometry. Although Mendelssohn's essay won the prize, both were published together in 1764.

In 1770 the University of Königsberg appointed Kant Professor of Logic and Metaphysics, and Kant delivered his Inaugural Dissertation, in which he first adumbrated the "critical" philosophy that would shape the remainder of his career. The following decade Kant published nothing. He was deep at work on his classic, the *Critique of Pure Reason*, which would appear in 1781. This was followed by a flood of publications: the *Prolegomena to Any Future Metaphysics*, the revisions of the First Critique in 1787, the *Critique of Practical Reason* in 1787, the *Critique of Judgment* in 1790, and the *Grounding for the Metaphysics of Morals* in 1785. In this last, extraordinary work, Kant presented his defense of rational morality, of autonomy, and of human dignity in a book that is one of the classic texts of Western moral philosophy.

During these years Kant's life was filled with teaching, writing, conversation, and occasional public controversy. In his public writings and discussions, he defended the rule of law, argued against the right of rebellion, and yet praised the French Revolution. In 1793 Kant published *Religion within the Limits of Reason Alone*

and with this strange and difficult work drew the severe censure of Frederick William II and his royal cabinet. Kant was forbidden to write or lecture on any religious subject. He weighed the dilemma, to heed his sovereign or to acknowledge his deepest convictions, and on October 12, 1794, Kant chose to submit as an obedient subject. It was an act that generated widespread criticism.

In 1795 Kant published *To Perpetual Peace*, his first work after the ban and his defense of an international league of nations. The book was especially praised in France; in it Kant gives fullest expression to his political views. In 1797 he chose no longer to lecture but continued to write until his death, on February 12, 1804. Heine once said that no one could write a life of Kant because Kant had no life. This is a harsh judgment. Having read Plato since 1768, Kant had assimilated the Socratic commitment to truth. His life was a quest for it, and hence to write the tale of that life would be to write the story of his thought, a story of reason, freedom, and human dignity.

Kant's critical philosophy is a watershed in modern metaphysics, epistemology, and moral theory. His goal was to acknowledge the supremacy of science, to revise the role of metaphysics, and yet to ground morality in rationality. All subsequent Western philosophy and moral theory is indebted to his work and to the strategies which he employed for confronting the challenges of science, philosophy, ethics, and religion in the modern world.

Grounding for the Metaphysics of Morals

PREFACE

387

Ancient Greek philosophy was divided into three sciences: physics, ethics, and logic. This division is perfectly suitable to the nature of the subject, and the only improvement that can be made in it is perhaps only to supply its principle so that there will be a possibility on the one hand of insuring its completeness and on the other of correctly determining its necessary subdivisions.

All rational knowledge is either material and concerned with some object, or formal and concerned only with the form of understanding and of reason themselves and with the universal rules of thought in general without regard to differences of its objects. Formal philosophy is called logic. Material philosophy, however, has to do with determinate objects and with the laws to which these objects are subject; and such philosophy is divided into two parts, because these laws are either laws of nature or laws of freedom. The science of the former is called physics, while that of the latter is called ethics; they are also called doctrine of nature and doctrine of morals respectively.

Logic cannot have any empirical part, i.e., a part in which the universal and necessary laws of thought would be based on grounds taken from experience; for in that case it would not be logic, i.e., a canon for understanding and reason, which is valid for all thinking and which has to be demonstrated.[1] Natural and moral philosophy, on the contrary, can each have an empirical part. The former has to because it must determine the laws of nature as an object of experience, and the latter because it must determine the will of man insofar as the will is affected by nature. The laws of the former are those according to which 388
everything does happen, while the laws of the latter are those according to which everything ought to happen, although these moral laws also consider the conditions under which what ought to happen frequently does not.

All philosophy insofar as it is founded on experience may be called empirical, while that which sets forth its doctrines as founded entirely on a priori principles may be called pure. The latter, when merely formal, is called logic; but when limited to determinate objects of the understanding, it is called metaphysics.

In this way there arises the idea of a twofold metaphysics: a metaphysics of nature and a metaphysics of morals.[2] Physics will thus have its empirical part, but also a rational one. Ethics will too, though here the empirical part might more specifically be called practical anthropology,[3] while the rational part might properly be called morals.

All industries, crafts, and arts have gained by the division of labor, viz., one man does not do everything, but each confines himself to a certain kind of work that is distinguished from all other kinds by the treatment it requires, so that the work may be done with

3. [*Anthropology from a Pragmatic Point of View* first appeared in 1798.]

the highest perfection and with greater ease. Where work is not so distinguished and divided, where everyone is a jack of all trades, there industry remains sunk in the greatest barbarism. Whether or not pure philosophy in all its parts requires its own special man might well be in itself a subject worthy of consideration. Would not the whole of this learned industry be better off if those who are accustomed, as the public taste demands, to purvey a mixture of the empirical with the rational in all sorts of proportions unknown even to themselves and who style themselves independent thinkers, while giving the name of hair-splitters to those who apply themselves to the purely rational part, were to be given warning about pursuing simultaneously two jobs which are quite different in their technique, and each of which perhaps requires a special talent that when combined with the other talent produces nothing but bungling? But I only ask here whether the nature of science does not require that the empirical part always be carefully separated from the rational part. Should not physics proper (i.e., empirical physics) be preceded by a metaphysics of nature, and practical anthropol-
389 ogy by a metaphysics of morals? Both of these metaphysics must be carefully purified of everything empirical in order to know how much pure reason can accomplish in each case and from what sources it draws its a priori teaching, whether such teaching be conducted by all moralists (whose name is legion) or only by some who feel a calling thereto.

Since I am here primarily concerned with moral philosophy, the foregoing question will be limited to a consideration of whether or not there is the utmost necessity for working out for once a pure moral philosophy that is wholly cleared of everything which can only be empirical and can only belong to anthropology. That there must be such a philosophy is evident from the common idea of duty and of moral laws. Everyone must admit that if a law is to be morally valid, i.e., is to be valid as a ground of obligation, then it must carry with it absolute necessity. He must admit that the command, "Thou shalt not lie," does not hold only for men, as if other rational beings had no need to abide by it, and so with all the other moral laws properly so called; and he must concede that the ground of obligation here must therefore be sought not in the nature of man nor in the circumstances of the world in which man is placed, but must be sought a priori solely in the concepts of pure reason; he must grant that every other precept which is founded on principles of mere experience—even a precept that may in certain respects be universal—insofar as it rests in the least on empirical grounds—perhaps only in its motive—can indeed be called a practical rule, but never a moral law.

Thus not only are moral laws together with their principles essentially different from every kind of practical cognition in which there is anything empirical, but all moral philosophy rests entirely on its pure part. When applied to man, it does not in the least borrow from acquaintance with him (anthropology) but gives a priori laws to him as a rational being. To be sure, these laws require, furthermore, a power of judgment sharpened by experience, partly in order to distinguish in what cases they are applicable, and partly to gain for them access to the human will as well as influence for putting them into practice. For man is affected by so many inclinations that, even though he is indeed capable of the idea of a pure practical reason, he is not so easily able to make that idea effective *in concreto* in the conduct of his life.

A metaphysics of morals is thus indispensably necessary, not merely because of motives of speculation 390
regarding the source of practical principles which are present a priori in our reason, but because morals themselves are liable to all kinds of corruption as long as the guide and supreme norm for correctly estimating them are missing. For in the case of what is to be morally good, that it conforms to the moral law is not enough; it must also be done for the sake of the moral law. Otherwise that conformity is only very contingent and uncertain, since the non-moral ground may now and then produce actions that conform with the law but quite often produces actions that are contrary to the law. Now the moral law in its purity and genuineness (which is of the utmost concern in the practical realm) can be sought nowhere but in a pure philosophy. Therefore, pure philosophy (metaphysics) must precede; without it there can be no moral philosophy at all. That philosophy which mixes pure principles with empirical ones does not deserve the name of philosophy (for philosophy is distinguished from ordinary rational knowledge by its treatments in a separate science of what the latter

comprehends only confusedly). Still less does it deserve the name of moral philosophy, since by this very confusion it spoils even the purity of morals and counteracts its own ends.

There must be no thought that what is required here is already contained in the propaedeutic that precedes the celebrated Wolff's moral philosophy, i.e., in what he calls *Universal Practical Philosophy*,[4] and that hence there is no need to break entirely new ground. Just because his work was to be a universal practical philosophy, it has not taken into consideration any special kind of will, such as one determined solely by a priori principles without any empirical motives and which could be called a pure will, but has considered volition in general, together with all the actions and conditions belonging to it under this general signification. And thereby does his propaedeutic differ from a metaphysics of morals in the same way that general logic, which expounds the acts and rules of thinking in general, differs from transcendental philosophy, which treats merely of the particular acts and rules of pure thinking, i.e., of that thinking whereby objects are cognized completely a priori. For the metaphysics of morals has to investigate the idea and principles of a possible pure will and not the actions and conditions volition as such, which are for
391 the most part drawn from psychology. Moral laws and duty are discussed in this universal practical philosophy (though quite improperly), but this is no objection to what has been said about such philosophy. For the authors of this science remain true to their idea of it on the following point also: they do not distinguish the motives which, as such, are presented completely a priori by reason alone and are properly moral, from the empirical motives which the understanding raises to general concepts merely by the comparison of experiences. Rather, they consider motives irrespective of any difference in their source; and inasmuch as they regard all motives as being homogeneous, they consider nothing but their relative strength or weakness. In this way they frame their concept of obligation, which is certainly not moral, but is all that can be expected from a philosophy which never decides regarding the origin of all possible practical concepts whether they are a priori or merely a posteriori.

I intend some day to publish a metaphysics of morals,[5] but as a preliminary to that I now issue this *Grounding* [1785]. Indeed there is properly no other foundation for such a metaphysics than a critical examination of pure practical reason, just as there is properly no other foundation for a metaphysics [of nature] than the critical examination of pure speculative reason, which has already been published.[6] But, in the first place, the former critique is not so absolutely necessary as the latter one, because human reason can, even in the most ordinary mind, be easily brought in moral matters to a high degree of correctness and precision, while on the other hand in its theoretical but pure use it is wholly dialectical. In the second place, if a critical examination of pure practical reason is to be complete, then there must, in my view, be the possibility at the same time of showing the unity of practical and speculative reason in a common principle; for in the final analysis there can be only one and the same reason, which is to be differentiated solely in its application. But there is no possibility here of bringing my work to such completeness, without introducing considerations of an entirely different kind and without thereby confusing the reader. Instead of calling the present work a *Critique of Pure Practical Reason*, I have, therefore, adopted the title *Grounding for the Metaphysics of Morals* [*Grundlegung zur Metaphysik der Sitten.*][7]

But, in the third place, since a metaphysics of morals, despite the forbidding title, is nevertheless capable of a high degree of popularity and adaptation to the ordinary understanding, I find it useful to separate from the aforementioned metaphysics this

4. [This work of Christian Wolff was published in 1738–39; this and other of his works served for many years as the standard philosophy textbooks in German universities. Wolff's philosophy was founded on that of Leibniz.]

5. [This appeared in 1797.]

6. [The first edition of the *Critique of Pure Reason* appeared in 1781, while the second edition appeared in 1787. The *Critique of Practical Reason* was published in 1788.]

7. [This might be translated as *Laying the Foundation for the Metaphysics of Morals.* But for the sake of brevity *Grounding for the Metaphysics of Morals* has been chosen.]

preliminary work on its foundation [*Grundlage*] in
392 order later to have no need to introduce unavoidable subtleties into doctrines that are easier to grasp.

The present *Grounding* [*Grundlegung*] is, however, intended for nothing more than seeking out and establishing the supreme principle of morality. This constitutes by itself a task which is complete in its purpose and should be kept separate from every other moral inquiry. The application of this supreme principle to the whole ethical system would, to be sure, shed much light on my conclusions regarding this central question, which is important but has not heretofore been at all satisfactorily discussed; and the adequacy manifested by the principle throughout such application would provide strong confirmation for the principle. Nevertheless, I must forego this advantage, which after all would be more gratifying for myself than helpful for others, since ease of use and apparent adequacy of a principle do not provide any certain proof of its soundness, but do awaken, rather, a certain bias which prevents any rigorous examination and estimation of it for itself, without any regard to its consequences.

The method adopted in this work is, I believe, one that is most suitable if we proceed analytically from ordinary knowledge to a determination of the supreme principle and then back again synthetically from an examination of this principle and its sources to ordinary knowledge where its application is found. Therefore, the division turns out to be the following:

1. *First Section.* Transition from the Ordinary Rational Knowledge of Morality to the Philosophical.
2. *Second Section.* Transition from Popular Moral Philosophy to a Metaphysics of Morals.
3. *Third Section.* Final Step from a Metaphysics of Morals to a Critique of Pure Practical Reason.

393

FIRST SECTION

Transition from the Ordinary Rational Knowledge of Morality to the Philosophical

There is no possibility of thinking of anything at all in the world, or even out of it, which can be regarded as good without qualification, except a *good will.* Intelligence, wit, judgment, and whatever talents of the mind one might want to name are doubtless in many respects good and desirable, as are such qualities of temperament as courage, resolution, perseverance. But they can also become extremely bad and harmful if the will, which is to make use of these gifts of nature and which in its special constitution is called character, is not good. The same holds with gifts of fortune; power, riches, honor, even health, and that complete well-being and contentment with one's condition which is called happiness make for pride and often hereby even arrogance, unless there is a good will to correct their influence on the mind and herewith also to rectify the whole principle of action and make it universally conformable to its end. The sight of a being who is not graced by any touch of a pure and good will but who yet enjoys an uninterrupted prosperity can never delight a rational and impartial spectator. Thus a good will seems to constitute the indispensable condition of being even worthy of happiness.

Some qualities are even conducive to this good will itself and can facilitate its work. Nevertheless, 394
they have no intrinsic unconditional worth; but they always presuppose, rather, a good will, which restricts the high esteem in which they are otherwise rightly held, and does not permit them to be regarded as absolutely good. Moderation in emotions and passions, self-control, and calm deliberation are not only good in many respects but even seem to constitute part of the intrinsic worth of a person. But they are far from being rightly called good without qualification (however unconditionally they were commended by the ancients). For without the principles of a good will, they can become extremely bad; the coolness of a villain makes him not only much more dangerous but also immediately more abominable in our eyes than he would have been regarded by us without it.

A good will is good not because of what it effects or accomplishes, nor because of its fitness to attain some proposed end; it is good only through its willing, i.e., it is good in itself. When it is considered in itself, then it is to be esteemed very much higher than anything which it might ever bring about merely in order to favor some inclination, or even the sum total of all inclinations. Even if, by some especially unfortunate fate or by the niggardly provision of step-

motherly nature, this will should be wholly lacking in the power to accomplish its purpose; if with the greatest effort it should yet achieve nothing, and only the good will should remain (not, to be sure, as a mere wish but as the summoning of all the means in our power), yet would it, like a jewel, still shine by its own light as something which has its full value in itself. Its usefulness or fruitlessness can neither augment nor diminish this value. Its usefulness would be, as it were, only the setting to enable us to handle it in ordinary dealings or to attract to it the attention of those who are not yet experts, but not to recommend it to real experts or to determine its value.

But there is something so strange in this idea of the absolute value of a mere will, in which no account is taken of any useful results, that in spite of all the agreement received even from ordinary reason, yet there must arise the suspicion that such an idea may perhaps have as its hidden basis merely some high-flown fancy, and that we may have misunderstood
395 the purpose of nature in assigning to reason the governing of our will. Therefore, this idea will be examined from this point of view.

In the natural constitution of an organized being, i.e., one suitably adapted to the purpose of life, let us take as a principle that in such a being no organ is to be found for any end unless it be the most fit and the best adapted for that end. Now if that being's preservation, welfare, or in a word its happiness, were the real end of nature in the case of a being having reason and will, then nature would have hit upon a very poor arrangement in having the reason of the creature carry out this purpose. For all the actions which such a creature has to perform with this purpose in view, and the whole rule of his conduct would have been prescribed much more exactly by instinct; and the purpose in question could have been attained much more certainly by instinct than it ever can be by reason. And if in addition reason had been imparted to this favored creature, then it would have had to serve him only to contemplate the happy constitution of his nature, to admire that nature, to rejoice in it, and to feel grateful to the cause that bestowed it; but reason would not have served him to subject his faculty of desire to its weak and delusive guidance nor would it have served him to meddle incompetently with the purpose of nature. In a word, nature would have taken care that reason did not strike out into a practical use nor presume, with its weak insight, to think out for itself a plan for happiness and the means for attaining it. Nature would have taken upon herself not only the choice of ends but also that of the means, and would with wise foresight have entrusted both to instinct alone.

And, in fact, we find that the more a cultivated reason devotes itself to the aim of enjoying life and happiness, the further does man get away from true contentment. Because of this there arises in many persons, if only they are candid enough to admit it, a certain degree of misology, i.e., hatred of reason. This is especially so in the case of those who are the most experienced in the use of reason, because after calculating all the advantages they derive, I say not from the invention of all the arts of common luxury, but even from the sciences (which in the end seem to them to be also a luxury of the understanding), they yet find that they have in fact only brought more trouble on their heads than they have gained 396
in happiness. Therefore, they come to envy, rather than despise, the more common run of men who are closer to the guidance of mere natural instinct and who do not allow their reason much influence on their conduct. And we must admit that the judgment of those who would temper, or even reduce below zero, the boastful eulogies on behalf of the advantages which reason is supposed to provide as regards the happiness and contentment of life is by no means morose or ungrateful to the goodness with which the world is governed. There lies at the root of such judgments, rather, the idea that existence has another and much more worthy purpose, for which, and not for happiness, reason is quite properly intended, and which must, therefore, be regarded as the supreme condition to which the private purpose of men must, for the most part, defer.

Reason, however, is not competent enough to guide the will safely as regards its objects and the satisfaction of all our needs (which it in part even multiplies); to this end would an implanted natural instinct have led much more certainly. But inasmuch as reason has been imparted to us as a practical faculty, i.e., as one which is to have influence on the will, its true function must be to produce a will which is not merely good as a means to some further end, but

is good in itself. To produce a will good in itself reason was absolutely necessary, inasmuch as nature in distributing her capacities has everywhere gone to work in a purposive manner. While such a will may not indeed be the sole and complete good, it must, nevertheless, be the highest good and the condition of all the rest, even of the desire for happiness. In this case there is nothing inconsistent with the wisdom of nature that the cultivation of reason, which is requisite for the first and unconditioned purpose, may in many ways restrict, at least in this life, the attainment of the second purpose, viz., happiness, which is always conditioned. Indeed happiness can even be reduced to less than nothing, without nature's failing thereby in her purpose; for reason recognizes as its highest practical function the establishment of a good will, whereby in the attainment of this end reason is capable only of its own kind of satisfaction, viz., that of fulfilling a purpose which is in turn determined only by reason, even though such fulfillment should often interfere with the purpose of inclination.

397 The concept of a will estimable in itself and good without regard to any further end must now be developed. This concept already dwells in the natural sound understanding and needs not so much to be taught as merely to be elucidated. It always holds first place in estimating the total worth of our actions and constitutes the condition of all the rest. Therefore, we shall take up the concept of *duty*, which includes that of a good will, though with certain subjective restrictions and hindrances, which far from hiding a good will or rendering it unrecognizable, rather bring it out by contrast and make it shine forth more brightly.

I here omit all actions already recognized as contrary to duty, even though they may be useful for this or that end; for in the case of these the question does not arise at all as to whether they might be done from duty, since they even conflict with duty. I also set aside those actions which are really in accordance with duty, yet to which men have no immediate inclination, but perform them because they are impelled thereto by some other inclination. For in this [second] case to decide whether the action which is in accord with duty has been done from duty or from some selfish purpose is easy. This difference is far more difficult to note in the [third] case where the action accords with duty and the subject has in addition an immediate inclination to do the action. For example,[8] that a dealer should not overcharge an inexperienced purchaser certainly accords with duty; and where there is much commerce, the prudent merchant does not overcharge but keeps to a fixed price for everyone in general, so that a child may buy from him just as well as everyone else may. Thus customers are honestly served, but this is not nearly enough for making us believe that the merchant has acted this way from duty and from principles of honesty; his own advantage required him to do it. He cannot, however, be assumed to have in addition [as in the third case] an immediate inclination toward his buyers, causing him, as it were, out of love to give no one as far as price is concerned any advantage over another. Hence the action was done neither from duty nor from immediate inclination, but merely for a selfish purpose.

On the other hand,[9] to preserve one's life is a duty; and, furthermore, everyone has also an immediate inclination to do so. But on this account the often anxious care taken by most men for it has no intrinsic 398
worth, and the maxim of their action has no moral content. They preserve their lives, to be sure, in accordance with duty, but not from duty. On the other hand,[10] if adversity and hopeless sorrow have completely taken away the taste for life, if an unfortunate man, strong in soul and more indignant at his fate than despondent or dejected, wishes for death and yet preserves his life without loving it—not from inclination or fear, but from duty—then his maxim indeed has a moral content.[11]

8. [The ensuing example provides an illustration of the second case.]

9. [This next example illustrates the third case.]

10. [The ensuing example illustrates the fourth case.]

11. [Four different cases have been distinguished in the two foregoing paragraphs. Case 1 involves those actions which are contrary to duty (lying, cheating, stealing, etc.). Case 2 involves those which accord with duty but for which a person perhaps has no immediate inclination, though he does have a mediate inclination thereto (one pays his taxes not because he likes to but in order to avoid the penalties set for delinquents, one treats his fellows well not because he really likes them but because he wants their votes when at some future time he runs for

To be beneficent where one can is a duty; and besides this, there are many persons who are so sympathetically constituted that, without any further motive of vanity or self-interest, they find an inner pleasure in spreading joy around them and can rejoice in the satisfaction of others as their own work. But I maintain that in such a case an action of this kind, however dutiful and amiable it may be, has nevertheless no true moral worth.[12] It is on a level with such actions as arise from other inclinations, e.g., the inclination for honor, which if fortunately directed to what is in fact beneficial and accords with duty and is thus honorable, deserves praise and encouragement, but not esteem; for its maxim lacks the moral content of an action done not from inclination but from duty. Suppose then the mind of this friend of mankind to be clouded over with his own sorrow so that all sympathy with the lot of others is extinguished, and suppose him still to have the power to benefit others in distress, even though he is not touched by their trouble because he is sufficiently absorbed with his own; and now suppose that, even though no inclination moves him any longer, he nevertheless tears himself from this deadly insensibility and performs the action without any inclination at all, but solely from duty—then for the first time his action has genuine moral worth.[13] Further still, if nature has put little sympathy in this or that man's heart, if (while being an honest man in other respects) he is by temperament cold and indifferent to the sufferings of others, perhaps because as regards his own sufferings he is endowed with the special gift of patience and fortitude and expects or even requires that others should have the same; if such a man (who would truly not be nature's worst product) had not been exactly fashioned by her to be a philanthropist, would he not yet find in himself a source from which he might give himself a worth far higher than any that a good-natured temperament might have? By all means, because just here does the worth of the character come out; this worth is moral 399
and incomparably the highest of all, viz., that he is beneficent, not from inclination, but from duty.[14]

To secure one's own happiness is a duty (at least indirectly); for discontent with one's condition under many pressing cares and amid unsatisfied wants might easily become a great temptation to transgress one's duties. But here also do men of themselves already have, irrespective of duty, the strongest and deepest inclination toward happiness, because just in this idea are all inclinations combined into a sum total.[15] But the precept of happiness is often so constituted as greatly to interfere with some inclinations, and yet men cannot form any definite and certain concept

---

public office, etc.). A vast number of so-called "morally good" actions actually belong to this case 2—they accord with duty because of self-seeking inclinations. Case 3 involves those which accord with duty and for which a person does have an immediate inclination (one does not commit suicide because all is going well with him, one does not commit adultery because he considers his wife to be the most desirable creature in the whole world, etc.). Case 4 involves those actions which accord with duty but are contrary to some immediate inclination (one does not commit suicide even when he is in dire distress, one does not commit adultery even though his wife has turned out to be an impossible shrew, etc.). Now case 4 is the crucial test case of the will's possible goodness—but Kant does not claim that one should lead his life in such a way as to encounter as many such cases as possible in order constantly to test his virtue (deliberately marry a shrew so as to be able to resist the temptation to commit adultery). Life itself forces enough such cases upon a person without his seeking them out. But when there is a conflict between duty and inclination, duty should always be followed. Case 3 makes for the easiest living and the greatest contentment, and anyone would wish that life might present him with far more of these cases than with cases 2 or 4. But yet one should not arrange his life in such a way as to avoid case 4 at all costs and to seek out case 3 as much as possible (become a recluse so as to avoid the possible rough and tumble involved with frequent association with one's fellows, avoid places where one might encounter the sick and the poor so as to spare oneself the pangs of sympathy and the need to exercise the virtue of benefiting those in distress, etc.). For the purpose of philosophical analysis Kant emphasizes case 4 as being the test case of the will's possible goodness, but he is not thereby advocating puritanism.]

12. [This is an example of case 3.]

13. [This is an example of case 4.]

14. [This is an even more extreme example of case 4.]

15. [This is an example of case 3.]

of the sum of satisfaction of all inclinations that is called happiness. Hence there is no wonder that a single inclination which is determinate both as to what it promises and as to the time within which it can be satisfied may outweigh a fluctuating idea; and there is no wonder that a man, e.g., a gouty patient, can choose to enjoy what he likes and to suffer what he may, since by his calculation he has here at least not sacrificed the enjoyment of the present moment to some possibly groundless expectations of the good fortune that is supposed to be found in health. But even in this case, if the universal inclination to happiness did not determine his will and if health, at least for him, did not figure as so necessary an element in his calculations; there still remains here, as in all other cases, a law, viz., that he should promote his happiness not from inclination but from duty, and thereby for the first time does his conduct have real moral worth.[16]

Undoubtedly in this way also are to be understood those passages of Scripture which command us to love our neighbor and even our enemy. For love as an inclination cannot be commanded; but beneficence from duty, when no inclination impels us[17] and even when a natural and unconquerable aversion opposes such beneficence,[18] is practical, and not pathological, love. Such love resides in the will and not in the propensities of feeling, in principles of action and not in tender sympathy; and only this practical love can be commanded.

The second proposition[19] is this: An action done from duty has its moral worth, not in the purpose that is to be attained by it, but in the maxim according to which the action is determined. The moral worth
400 depends, therefore, not on the realization of the object of the action, but merely on the principle of volition according to which, without regard to any objects of the faculty of desire, the action has been done. From what has gone before it is clear that the purposes which we may have in our actions, as well as their effects regarded as ends and incentives of the will, cannot give to actions any unconditioned and moral worth. Where, then, can this worth lie if it is not to be found in the will's relation to the expected effect? Nowhere but in the principle of the will, with no regard to the ends that can be brought about through such action. For the will stands, as it were, at a crossroads between its a priori principle, which is formal, and its a posteriori incentive, which is material; and since it must be determined by something, it must be determined by the formal principle of volition, if the action is done from duty—and in that case every material principle is taken away from it.

The third proposition, which follows from the other two, can be expressed thus: Duty is the necessity of an action done out of respect for the law. I can indeed have an inclination for an object as the effect of my proposed action; but I can never have respect for such an object, just because it is merely an effect and is not an activity of the will. Similarly, I can have no respect for inclination as such, whether my own or that of another. I can at most, if my own inclination, approve it; and, if that of another, even love it, i.e., consider it to be favorable to my own advantage. An object of respect can only be what is connected with my will solely as ground and never as effect—something that does not serve my inclination but, rather, outweighs it, or at least excludes it from consideration when some choice is made—in other words, only the law itself can be an object of respect and hence can be a command. Now an action done from duty must altogether exclude the influence of inclination and therewith every object of the will. Hence there is nothing left which can determine the will except objectively the law and subjectively pure respect for this practical law, i.e., the will can be subjectively determined by the maxim[20] that I should follow such a law even if all my inclinations are thereby thwarted. 401

16. [This example is a weak form of case 4; the action accords with duty but is not contrary to some immediate inclination.]

17. [This is case 4 in its weak form.]

18. [This is case 4 in its strong form.]

19. [The first proposition of morality says that an action must be done from duty in order to have any moral worth. It is implicit in the preceding examples but was never explicitly stated.]

20. A maxim is the subjective principle of volition. The objective principle (i.e., one which would serve all rational beings also subjectively as a practical principle if reason had full control over the faculty of desire) is the practical law. [See below Kant's footnote at Ak. 420–21.]

Thus the moral worth of an action does not lie in the effect expected from it nor in any principle of action that needs to borrow its motive from this expected effect. For all these effects (agreeableness of one's condition and even the furtherance of other people's happiness) could have been brought about also through other causes and would not have required the will of a rational being, in which the highest and unconditioned good can alone be found. Therefore, the pre-eminent good which is called moral can consist in nothing but the representation of the law in itself, and such a representation can admittedly be found only in a rational being insofar as this representation, and not some expected effect, is the determining ground of the will. This good is already present in the person who acts according to this representation, and such good need not be awaited merely from the effect.[21]

402 But what sort of law can that be the thought of which must determine the will without reference to any expected effect, so that the will can be called absolutely good without qualification? Since I have deprived the will of every impulse that might arise for it from obeying any particular law, there is nothing left to serve the will as principle except the universal conformity of its actions to law as such, i.e., I should never act except in such a way that I can also will that my maxim should become a universal law.[22] Here mere conformity to law as such (without having as its basis any law determining particular actions) serves the will as principle and must to serve it if duty is not to be a vain delusion and a chimerical concept. The ordinary reason of mankind in its practical judgments agrees completely with this, and always has in view the aforementioned principle.

For example, take this question. When I am in distress, may I make a promise with the intention of not keeping it? I readily distinguish here the two meanings which the question may have; whether making a false promise conforms with prudence or with duty. Doubtless the former can often be the case. Indeed I clearly see that escape from some present difficulty by means of such a promise is not enough. In addition I must carefully consider whether from this lie there may later arise far greater inconvenience for me than from what I now try to escape. Furthermore, the consequences of my false promise are not easy to foresee, even with all my supposed cunning; loss of confidence in me might prove to be far more disadvantageous than the misfortune which I now try to avoid. The more prudent way might be to act according to a universal maxim and to make it a habit not to promise anything without intending to keep it. But that such a maxim is, nevertheless, always based on nothing but a fear of consequences becomes clear to me at once. To be truthful from duty is, however, quite different from being truthful from fear of disadvantageous consequences; in the first case the

21. There might be brought against me here an objection that I take refuge behind the word "respect" in an obscure feeling, instead of giving a clear answer to the question by means of a concept of reason. But even though respect is a feeling, it is not one received through any outside influence but is, rather, one that is self-produced by means of a rational concept; hence it is specifically different from all feelings of the first kind, which can all be reduced to inclination or fear. What I recognize immediately as a law for me, I recognize with respect; this means merely the consciousness of the subordination of my will to a law without the mediation of other influences upon my sense. The immediate determination of the will by the law, and the consciousness thereof, is called respect, which is hence regarded as the effect of the law upon the subject and not as the cause of the law. Respect is properly the representation of a worth that thwarts my self-love. Hence respect is something that is regarded as an object of neither inclination nor fear, although it has at the same time something analogous to both. The object of respect is, therefore, nothing but the law—indeed that very law which we impose on ourselves and yet recognize as necessary in itself. As law, we are subject to it without consulting self-love; as imposed on us by ourselves, it is a consequence of our will. In the former aspect, it is analogous to fear; in the latter, to inclination. All respect for a person is properly only respect for the law (of honesty, etc.) of which the person provides an example. Since we regard the development as our talents as a duty, we think of a man of talent as being also a kind of example of the law (the law of becoming like him by practice), and that is what constitutes our respect for him. All so-called moral interest consists solely in respect for the law.

22. [This is the first time in the *Grounding* that the categorical imperative is stated.]

concept of the action itself contains a law for me, while in the second I must first look around elsewhere to see what are the results for me that might be connected with the action. For to deviate from the
403 principle of duty is quite certainly bad; but to abandon my maxim of prudence can often be very advantageous for me, though to abide by it is certainly safer. The most direct and infallible way, however, to answer the question as to whether a lying promise accords with duty is to ask myself whether I would really be content if my maxim (of extricating myself from difficulty by means of a false promise) were to hold as a universal law for myself as well as for others, and could I really say to myself that everyone may promise falsely when he finds himself in a difficulty from which he can find no other way to extricate himself. Then I immediately become aware that I can indeed will the lie but can not at all will a universal law to lie. For by such a law there would really be no promises at all, since in vain would my willing future actions be professed to other people who would not believe what I professed, or if they over-hastily did believe, then they would pay me back in like coin. Therefore, my maxim would necessarily destroy itself just as soon as it was made a universal law.[23]

Therefore, I need no far-reaching acuteness to discern what I have to do in order that my will may be morally good. Inexperienced in the course of the world and incapable of being prepared for all its contingencies, I only ask myself whether I can also will that my maxim should become a universal law. If not, then the maxim must be rejected, not because of any disadvantage accruing to me or even to others, but because it cannot be fitting as a principle in a possible legislation of universal law, and reason exacts from me immediate respect for such legislation. Indeed I have as yet no insight into the grounds of such respect (which the philosopher may investigate). But I at least understand that respect is an estimation of a worth that far outweighs any worth of what is recommended by inclination, and that the necessity of acting from pure respect for the practical law is what constitutes duty, to which every other motive must give way because duty is the condition of a will good in itself, whose worth is above all else.

Thus within the moral cognition of ordinary human reason we have arrived at its principle. To be sure, such reason does not think of this principle abstractly in its universal form, but does always have it actually in view and does use it as the standard of 404
judgment. It would here be easy to show how ordinary reason, with this compass in hand, is well able to distinguish, in every case that occurs, what is good or evil, in accord with duty or contrary to duty, if we do not in the least try to teach reason anything new but only make it attend, as Socrates did, to its own principle—and thereby do we show that neither science nor philosophy is needed in order to know what one must do to be honest and good, and even wise and virtuous. Indeed we might even have conjectured beforehand that cognizance of what every man is obligated to do, and hence also to know, would be available to every man, even the most ordinary. Yet we cannot but observe with admiration how great an advantage the power of practical judgment has over the theoretical in ordinary human understanding. In the theoretical, when ordinary reason ventures to depart from the laws of experience and the perceptions of sense, it falls into sheer inconceivabilities and self-contradictions, or at least into a chaos of uncertainty, obscurity, and instability. In the practical, however, the power of judgment first begins to show itself to advantage when ordinary understanding excludes all sensuous incentives from practical laws. Such understanding then becomes even subtle, whether in quibbling with its own conscience or with other claims regarding what is to be called right, or whether in wanting to determine correctly for its own instruction the worth of various actions. And the most extraordinary thing is that ordinary understanding in this practical case may have just as good a hope of hitting the mark as that which any philosopher may promise himself. Indeed it is almost more certain in this than even a philosopher is, because he can have no principle other than what ordinary understanding has, but he may easily confuse his judgment by a multitude

23. [This means that when you tell a lie, you merely take exception to the general rule that says everyone should always tell the truth and believe that what you are saying is true. When you lie, you do not thereby will that everyone else lie and not believe that what you are saying is true, because in such a case your lie would never work to get you what you want.]

of foreign and irrelevant considerations and thereby cause it to swerve from the right way. Would it not, therefore, be wiser in moral matters to abide by the ordinary rational judgment or at most to bring in philosophy merely for the purpose of rendering the system of morals more complete and intelligible and of presenting its rules in a way that is more convenient for use (especially in disputation), but not for the purpose of leading ordinary human understanding away from its happy simplicity in practical matters and of bringing it by means of philosophy into a new path of inquiry and instruction?

405 Innocence is indeed a glorious thing; but, unfortunately, it does not keep very well and is easily led astray. Consequently, even wisdom—which consists more in doing and not doing than in knowing—needs science, not in order to learn from it, but in order that wisdom's precepts may gain acceptance and permanence. Man feels within himself a powerful counterweight to all the commands of duty, which are presented to him by reason as being so pre-eminently worthy of respect; this counterweight consists of his needs and inclinations, whose total satisfaction is summed up under the name of happiness. Now reason irremissibly commands its precepts, without thereby promising the inclinations anything; hence it disregards and neglects these impetuous and at the same time so seemingly plausible claims (which do not allow themselves to be suppressed by any command). Hereby arises a natural dialectic, i.e., a propensity to quibble with these strict laws of duty, to cast doubt upon their validity, or at least upon their purity and strictness, and to make them, where possible, more compatible with our wishes and inclinations. Thereby are such laws corrupted in their very foundations and their whole dignity is destroyed—something which even ordinary practical reason cannot in the end call good.

Thus is ordinary human reason forced to go outside its sphere and take a step into the field of practical philosophy, not by any need for speculation (which never befalls such reason so long as it is content to be mere sound reason) but on practical grounds themselves. There it tries to obtain information and clear instruction regarding the source of its own principle and the correct determination of this principle in its opposition to maxims based on need and inclination, so that reason may escape from the perplexity of opposite claims and may avoid the risk of losing all genuine moral principles through the ambiguity into which it easily falls. Thus when ordinary practical reason cultivates itself, there imperceptibly arises in it a dialectic which compels it to seek help in philosophy. The same thing happens in reason's theoretical use; in this case, just as in the other, peace will be found only in a thorough critical examination of our reason.

SECOND SECTION 406

Transition from Popular Moral Philosophy to a Metaphysics of Morals

If we have so far drawn our concept of duty from the ordinary use of our practical reason, one is by no means to infer that we have treated it as a concept of experience. On the contrary, when we pay attention to our experience of the way human beings act, we meet frequent and—as we ourselves admit—justified complaints that there cannot be cited a single certain example of the disposition to act from pure duty; and we meet complaints that although much may be done that is in accordance with what duty commands, yet there are always doubts as to whether what occurs has really been done from duty and so has moral worth. Hence there have always been philosophers who have absolutely denied the reality of this disposition in human actions and have ascribed everything to a more or less refined self-love. Yet in so doing they have not cast doubt upon the rightness of the concept of morality. Rather, they have spoken with sincere regret as to the frailty and impurity of human nature, which they think is noble enough to take as its precept an idea so worthy of respect but yet is too weak to follow this idea: reason, which should legislate for human nature, is used only to look after the interest of inclinations, whether singly or, at best, in their greatest possible harmony with one another.

In fact there is absolutely no possibility by means 407
of experience to make out with complete certainty a single case in which the maxim of an action that may in other respects conform to duty has rested solely on moral grounds and on the representation of one's

duty. It is indeed sometimes the case that after the keenest self-examination we can find nothing except the moral ground of duty that could have been strong enough to move us to this or that good action and to such great sacrifice. But there cannot with certainty be at all inferred from this that some secret impulse of self-love, merely appearing as the idea of duty, was not the actual determining cause of the will. We like to flatter ourselves with the false claim to a more noble motive; but in fact we can never, even by the strictest examination, completely plumb the depths of the secret incentives of our actions. For when moral value is being considered, the concern is not with the actions, which are seen, but rather with their inner principles, which are not seen.

Moreover, one cannot better serve the wishes of those who ridicule all morality as being a mere phantom of human imagination getting above itself because of self-conceit than by conceding to them that the concepts of duty must be drawn solely from experience (just as from indolence one willingly persuades himself that such is the case as regards all other concepts as well). For by so conceding, one prepares for them a sure triumph. I am willing to admit out of love for humanity that most of our actions are in accordance with duty; but if we look more closely at our planning and striving, we everywhere come upon the dear self, which is always turning up, and upon which the intent of our actions is based rather than upon the strict command of duty (which would often require self-denial). One need not be exactly an enemy of virtue, but only a cool observer who does not take the liveliest wish for the good to be straight off its realization, in order to become doubtful at times whether any true virtue is actually to be found in the world. Such is especially the case when years increase and one's power of judgment is made shrewder by experience and keener in observation. Because of these things nothing can protect us from a complete falling away from our ideas of duty and preserve in
408 the soul a well-grounded respect for duty's law except the clear conviction that, even if there never have been actions springing from such pure sources, the question at issue here is not whether this or that has happened but that reason of itself and independently of all experience commands what ought to happen. Consequently, reason unrelentingly commands actions of which the world has perhaps hitherto never provided an example and whose feasibility might well be doubted by one who bases everything upon experience; for instance, even though there might never yet have been a sincere friend, still pure sincerity in friendship is nonetheless required of every man, because this duty, prior to all experience, is contained as duty in general in the idea of a reason that determines the will by means of a priori grounds.

There may be noted further that unless we want to deny to the concept of morality all truth and all reference to a possible object, we cannot but admit that the moral law is of such widespread significance that it must hold not merely for men but for all rational beings generally, and that it must be valid not merely under contingent conditions and with exceptions but must be absolutely necessary. Clearly, therefore, no experience can give occasion for inferring even the possibility of such apodeictic laws. For with what right could we bring into unlimited respect as a universal precept for every rational nature what is perhaps valid only under the contingent conditions of humanity? And how could laws for the determination of our will be regarded as laws for the determination of a rational being in general and of ourselves only insofar as we are rational beings, if these laws were merely empirical and did not have their source completely a priori in pure, but practical, reason?

Moreover, worse service cannot be rendered morality than that an attempt be made to derive it from examples. For every example of morality presented to me must itself first be judged according to principles of morality in order to see whether it is fit to serve as an original example, i.e., as a model. But in no way can it authoritatively furnish the concept of morality. Even the Holy One of the gospel must first be compared with our ideal of moral perfection before he is recognized as such. Even he says of himself, "Why do you call me (whom you see) good? None is good (the archetype of the good) except God only 409
(whom you do not see)." But whence have we the concept of God as the highest good? Solely from the idea of moral perfection, which reason frames a priori and connects inseparably with the concept of a free will. Imitation has no place at all in moral matters. And examples serve only for encouragement, i.e., they put beyond doubt the feasibility of what the law

commands and they make visible what the practical rule expresses more generally. But examples can never justify us in setting aside their true original, which lies in reason, and letting ourselves be guided by them.

If there is then no genuine supreme principle of morality which does not rest on pure reason alone, independent of all experience, I think it is unnecessary even to ask whether it is a good thing to exhibit these concepts generally (*in abstracto*), which, along with the principles that belong to them, hold a priori, so far as the knowledge involved is to be distinguished from ordinary knowledge and is to be called philosophical. But in our times it may well be necessary to do so. For if one were to take a vote as to whether pure rational knowledge separated from everything empirical, i.e., metaphysics of morals, or whether popular practical philosophy is to be preferred, one can easily guess which side would be preponderant.

This descent to popular thought is certainly very commendable once the ascent to the principles of pure reason has occurred and has been satisfactorily accomplished. That would mean that the doctrine of morals has first been grounded on metaphysics and that subsequently acceptance for morals has been won by giving it a popular character after it has been firmly established. But it is quite absurd to try for popularity in the first inquiry, upon which depends the total correctness of the principles. Not only can such a procedure never lay claim to the very rare merit of a true philosophical popularity, inasmuch as there is really no art involved at all in being generally intelligible if one thereby renounces all basic insight, but such a procedure turns out a disgusting mishmash of patchwork observations and half-reasoned principles in which shallowpates revel because all this is something quite useful for the chitchat of everyday life. Persons of insight, on the other hand, feel confused by all this and turn their eyes away with a dissatisfaction which they nevertheless cannot cure.
410 Yet philosophers, who quite see through the delusion, get little hearing when they summon people for a time from this pretended popularity in order that they may be rightfully popular only after they have attained definite insight.

One need only look at the attempts to deal with morality in the way favored by popular taste. What he will find in an amazing mixture is at one time the particular constitution of human nature (but along with this also the idea of a rational nature in general), at another time perfection, at another happiness; here moral feeling, and there the fear of God; something of this, and also something of that. But the thought never occurs to ask whether the principles of morality are to be sought at all in the knowledge of human nature (which can be had only from experience). Nor does the thought occur that if these principles are not to be sought here but to be found, rather, completely a priori and free from everything empirical in pure rational concepts only, and are to be found nowhere else even to the slightest extent—then there had better be adopted the plan of undertaking this investigation as a separate inquiry, i.e., as pure practical philosophy or (if one may use a name so much decried) as a metaphysics[24] of morals. It is better to bring this investigation to full completeness entirely by itself and to bid the public, which demands popularity, to await the outcome of this undertaking.

But such a completely isolated metaphysics of morals, not mixed with any anthropology, theology, physics, or hyperphysics, and still less with occult qualities (which might be called hypophysical), is not only an indispensable substratum of all theoretical and precisely defined knowledge of duties, but is at the same time a desideratum of the highest importance for the actual fulfillment of their precepts. For the pure thought of duty and of the moral law generally, unmixed with any extraneous addition of empirical inducements, has by the way of reason alone (which first becomes aware hereby that it can of itself be practical) an influence on the human heart so much more powerful than all 411

24. Pure philosophy of morals (metaphysics) may be distinguished from the applied (viz., applied to human nature) just as pure mathematics is distinguished from applied mathematics and pure logic from applied logic. By this designation one is also immediately reminded that moral principles are not grounded on the peculiarities of human nature but must subsist a priori of themselves, and that from such principles practical rules must be derivable for every rational nature, and accordingly for human nature.

other incentives[25] which may be derived from the empirical field that reason in the consciousness of its dignity despises such incentives and is able gradually to become their master. On the other hand, a mixed moral philosophy, compounded both of incentives drawn from feelings and inclinations and at the same time of rational concepts, must make the mind waver between motives that cannot be brought under any principle and that can only by accident lead to the good but often can also lead to the bad.

It is clear from the foregoing that all moral concepts have their seat and origin completely a priori in reason, and indeed in the most ordinary human reason just as much as in the most highly speculative. They cannot be abstracted from any empirical, and hence merely contingent, cognition. In this purity of their origin lies their very worthiness to serve us as supreme practical principles; and to the extent that something empirical is added to them, just so much is taken away from their genuine influence and from the absolute worth of the corresponding actions. Moreover, it is not only a requirement of the greatest necessity from a theoretical point of view, when it is a question of speculation, but also of the greatest practical importance, to draw these concepts and laws from pure reason, to present them pure and unmixed, and indeed to determine the extent of this entire practical and pure rational cognition, i.e., to determine the whole faculty of pure practical reason. The principles 412
should not be made to depend on the particular nature of human reason, as speculative philosophy may permit and even sometimes finds necessary; but, rather, the principles should be derived from the universal concept of a rational being in general, since moral laws should hold for every rational being as such. In this way all morals, which require anthropology in order to be applied to humans, must be entirely expounded at first independently of anthropology as pure philosophy, i.e., as metaphysics (which can easily be done in such distinct kinds of knowledge). One knows quite well that unless one is in possession of such a metaphysics, then the attempt is futile, I shall not say to determine exactly for speculative judgment the moral element of duty in all that accords with duty, but that the attempt is impossible, even in ordinary and practical usage, especially in that of moral instruction, to ground morals on their genuine principles and thereby to produce pure moral dispositions and engraft them on men's minds for the promotion of the highest good in the world.

In this study we must advance by natural stages not merely from ordinary moral judgment (which is here ever so worthy of respect) to philosophical judgment, as has already been done, but also from popular philosophy, which goes no further than it can get by groping about with the help of examples, to metaphysics (which does not permit itself to be held back any longer by what is empirical, and which, inasmuch as it must survey the whole extent of rational knowledge of this kind, goes right up to ideas, where examples themselves fail us). In order to make such an advance, we must follow and clearly present the practical faculty of reason from its universal rules of determination to the point where the concept of duty springs from it.

Everything in nature works according to laws. Only a rational being has the power to act according to his conception of laws, i.e., according to principles, and thereby has he a will. Since the derivation of actions from laws requires reason, the will is nothing but practical reason. If reason infallibly determines the will, then in the case of such a being actions which are recognized to be objectively necessary are also sub-

25. I have a letter from the late excellent Sulzer [Johann Georg Sulzer (1720–1779), an important Berlin savant, who translated Hume's *Inquiry Concerning the Principles of Morals* into German in 1755] in which he asks me why it is that moral instruction accomplishes so little, even though it contains so much that is convincing to reason. My answer was delayed so that I might make it complete. But it is just that the teachers themselves have not purified their concepts: since they try to do too well by looking everywhere for motives for being morally good, they spoil the medicine by trying to make it really strong. For the most ordinary observation shows that when a righteous act is represented as being done with a steadfast soul and sundered from all view to any advantage in this or another world, and even under the greatest temptations of need or allurement, it far surpasses and eclipses any similar action that was in the least affected by any extraneous incentive; it elevates the soul and inspires the wish to be able to act in this way. Even moderately young children feel this impression, and duties should never be represented to them in any other way.

jectively necessary, i.e., the will is a faculty of choosing only that which reason, independently of inclination, recognizes as being practically necessary, i.e., as good. But if reason of itself does not sufficiently determine
413 the will, and if the will submits also to subjective conditions (certain incentives) which do not always agree with objective conditions; in a word, if the will does not in itself completely accord with reason (as is actually the case with men), then actions which are recognized as objectively necessary are subjectively contingent, and the determination of such a will according to objective laws is necessitation. That is to say that the relation of objective laws to a will not thoroughly good is represented as the determination of the will of a rational being by principles of reason which the will does not necessarily follow because of its own nature.

The representation of an objective principle insofar as it necessitates the will is called a command (of reason), and the formula of the command is called an imperative.

All imperatives are expressed by an *ought* and thereby indicate the relation of an objective law of reason to a will that is not necessarily determined by this law because of its subjective constitution (the relation of necessitation). Imperatives say that something would be good to do or to refrain from doing, but they say it to a will that does not always therefore do something simply because it has been represented to the will as something good to do. That is practically good which determines the will by means of representations of reason and hence not by subjective causes, but objectively, i.e., on grounds valid for every rational being as such. It is distinguished from the pleasant as that which influences the will only by means of sensation from merely subjective causes, which hold only for this or that person's senses but do not hold as a principle of reason valid for everyone.[26]

A perfectly good will would thus be quite as much 414
subject to objective laws (of the good), but could not be conceived as thereby necessitated to act in conformity with law, inasmuch as it can of itself, according to its subjective constitution, be determined only by the representation of the good. Therefore no imperatives hold for the divine will, and in general for a holy will; the *ought* is here out of place, because the *would* is already of itself necessarily in agreement with the law. Consequently, imperatives are only formulas for expressing the relation of objective laws of willing in general to the subjective imperfection of the will of this or that rational being, e.g., the human will.

Now all imperatives command either hypothetically or categorically. The former represent the practical necessity of a possible action as a means for attaining something else that one wants (or may possibly want). The categorical imperative would be one which represented an action as objectively necessary in itself, without reference to another end.

Every practical law represents a possible action as good and hence as necessary for a subject who is practically determinable by reason; therefore all imperatives are formulas for determining an action which is necessary according to the principle of a will that is good in some way. Now if the action would be good merely as a means to something else, so is the imperative hypothetical. But if the action is represented as good in itself, and hence as necessary in a will which of itself conforms to reason as the principle of the will, then the imperative is categorical.

---

26. The dependence of the faculty of desire on sensations is called inclination, which accordingly always indicates a need. The dependence of a contingently determinable will on principles of reason, however, is called interest. Therefore an interest is found only in a dependent will which is not of itself always in accord with reason; in the divine will no interest can be thought. But even the human will can take an interest in something without thereby acting from interest. The former signifies practical interest in the action, while the latter signifies pathological interest in the object of the action. The former indicates only dependence of the will on principles of reason by itself, while the latter indicates the will's dependence on principles of reason for the sake of inclination, i.e., reason merely gives the practical rule for meeting the need of inclination. In the former case the action interests me, while in the latter case what interests me is the object of the action (so far as this object is pleasant for me). In the First Section we have seen that in the case of an action done from duty regard must be given not to the interest in the object, but only to interest in the action itself and in its rational principle (viz., the law).

An imperative thus says what action possible by me would be good, and it presents the practical rule in relation to a will which does not forthwith perform an action simply because it is good, partly because the subject does not always know that the action is good and partly because (even if he does know it is good) his maxims might yet be opposed to the objective principles of practical reason.

A hypothetical imperative thus says only that an
415 action is good for some purpose, either possible or actual. In the first case it is a problematic practical principle; in the second case an assertoric one. A categorical imperative, which declares an action to be of itself objectively necessary without reference to any purpose, i.e., without any other end, holds as an apodeictic practical principle.

Whatever is possible only through the powers of some rational being can be thought of as a possible purpose of some will. Consequently, there are in fact infinitely many principles of action insofar as they are represented as necessary for attaining a possible purpose achievable by them. All sciences have a practical part consisting of problems saying that some end is possible for us and of imperatives telling us how it can be attained. These can, therefore, be called in general imperatives of skill. Here there is no question at all whether the end is reasonable and good, but there is only a question as to what must be done to attain it. The prescriptions needed by a doctor in order to make his patient thoroughly healthy and by a poisoner in order to make sure of killing his victim are of equal value so far as each serves to bring about its purpose perfectly. Since there cannot be known in early youth what ends may be presented to us in the course of life, parents especially seek to have their children learn many different kinds of things, and they provide for skill in the use of means to all sorts of arbitrary ends, among which they cannot determine whether any one of them could in the future become an actual purpose for their ward, though there is always the possibility that he might adopt it. Their concern is so great that they commonly neglect to form and correct their children's judgment regarding the worth of things which might be chosen as ends.

There is, however, one end that can be presupposed as actual for all rational beings (so far as they are dependent beings to whom imperatives apply); and thus there is one purpose which they not merely can have but which can certainly be assumed to be such that they all do have by a natural necessity, and this is happiness. A hypothetical imperative which represents the practical necessity of an action as means for the promotion of happiness is assertoric. It may be expounded not simply as necessary to an uncertain, 416
merely possible purpose, but as necessary to a purpose which can be presupposed a priori and with certainty as being present in everyone because it belongs to his essence. Now skill in the choice of means to one's own greatest well-being can be called prudence[27] in the narrowest sense. And thus the imperative that refers to the choice of means to one's own happiness, i.e., the precept of prudence, still remains hypothetical; the action is commanded not absolutely but only as a means to a further purpose.

Finally, there is one imperative which immediately commands a certain conduct without having as its condition any other purpose to be attained by it. This imperative is categorical. It is not concerned with the matter of the action and its intended result, but rather with the form of the action and the principle from which it follows; what is essentially good in the action consists in the mental disposition, let the consequences be what they may. This imperative may be called that of morality.

Willing according to these three kinds of principles is also clearly distinguished by dissimilarity in the necessitation of the will. To make this dissimilarity clear I think that they are most suitably named in their order when they are said to be either *rules of skill*, *counsels of prudence*, or *commands (laws) of morality*. For law alone involves the concept of a necessity that is unconditioned and indeed objective and hence universally valid, and commands are laws

27. The word "prudence" is used in a double sense: firstly, it can mean worldly wisdom, and, secondly, private wisdom. The former is the skill of someone in influencing others so as to use them for his own purposes. The latter is the sagacity to combine all these purposes for his own lasting advantage. The value of the former is properly reduced to the latter, and it might better be said of one who is prudent in the former sense but not in the latter that he is clever and cunning, but on the whole imprudent.

which must be obeyed, i.e., must be followed even in opposition to inclination. Counsel does indeed involve necessity, but involves such necessity as is valid only under a subjectively contingent condition, viz., whether this or that man counts this or that as belonging to his happiness. On the other hand, the categorical imperative is limited by no condition, and can quite properly be called a command since it is absolutely, though practically, necessary. The first kind of imperatives might also be called technical
417 (belonging to art), the second kind pragmatic[28] (belonging to welfare), the third kind moral (belonging to free conduct as such, i.e., to morals).

The question now arises: how are all of these imperatives possible?[29] This question does not seek to know how the fulfillment of the action commanded by the imperative can be conceived, but merely how the necessitation of the will expressed by the imperative in setting a task can be conceived. How an imperative of skill is possible requires no special discussion. Whoever wills the end, wills (so far as reason has decisive influence on his actions) also the means that are indispensably necessary to his actions and that lie in his power. This proposition, as far as willing is concerned, is analytic. For in willing an object as my effect there is already thought the causality of myself as an acting cause, i.e., the use of means. The imperative derives the concept of actions necessary to this end from the concept of willing this end. (Synthetic propositions are indeed required for determining the means to a proposed end; but such propositions are concerned not with the ground, i.e., the act of the will, but only with the way to realize the object of the will.) Mathematics teaches by nothing but synthetic propositions that in order to bisect a line according to a sure principle I must from each of its extremities draw arcs such that they intersect. But when I know that the proposed result can come about only by means of such an action, then the proposition (if I fully will the effect, then I also will the action required for it) is analytic. For it is one and the same thing to conceive of something as an effect that is possible in a certain way through me and to conceive of myself as acting in the same way with regard to the aforesaid effect.

If it were only as easy to give a determinate concept of happiness, then the imperatives of prudence would exactly correspond to those of skill and would be likewise analytic. For there could be said in this case 418
just as in the former that whoever wills the end also wills (necessarily according to reason) the sole means thereto which are in his power. But, unfortunately, the concept of happiness is such an indeterminate one that even though everyone wishes to attain happiness, yet he can never say definitely and consistently what it is that he really wishes and wills. The reason for this is that all the elements belonging to the concept of happiness are unexceptionally empirical, i.e., they must be borrowed from experience, while for the idea of happiness there is required an absolute whole, a maximum of well-being in my present and in every future condition. Now it is impossible for the most insightful and at the same time most powerful, but nonetheless finite, being to frame here a determinate concept of what it is that he really wills. Does he want riches? How much anxiety, envy, and intrigue might he not thereby bring down upon his own head! Or knowledge and insight? Perhaps these might only give him an eye that much sharper for revealing that much more dreadfully evils which are at present hidden but are yet unavoidable, or such an eye might burden him with still further needs for the desires which already concern him enough. Or long life? Who guarantees that it would not be a long misery? Or health at least? How often has infirmity of the body kept one from excesses into which perfect health would have allowed him to fall, and so on? In brief, he is not able on any principle to determine with complete certainty what will make him truly happy, because to do so would require omniscience. Therefore, one cannot act according to determinate principles in

28. It seems to me that the proper meaning of the word "pragmatic" could be defined most accurately in this way. For those sanctions are called pragmatic which properly flow not from the law of states as necessary enactments but from provision for the general welfare. A history is pragmatically written when it teaches prudence, i.e., instructs the world how it can provide for its interests better than, or at least as well as, has been done in former times.

29. [That is, why should one let his actions be determined at various times by one or the other of these three kinds of imperatives?]

order to be happy, but only according to empirical counsels, e.g., of diet, frugality, politeness, reserve, etc., which are shown by experience to contribute on the average the most to well-being. There follows from this that imperatives of prudence, strictly speaking, cannot command at all, i.e., present actions objectively as practically necessary. They are to be taken as counsels (*consilia*) rather than as commands (*praecepta*) of reason. The problem of determining certainly and universally what action will promote the happiness of a rational being is completely insoluble. Therefore, regarding such action no imperative that in the strictest sense could command what is to be done to make one happy is possible, inasmuch as
419 happiness is not an ideal of reason but of imagination. Such an ideal rests merely on empirical grounds; in vain can there be expected that such grounds should determine an action whereby the totality of an infinite series of consequences could be attained. This imperative of prudence would, nevertheless, be an analytic practical proposition if one assumes that the means to happiness could with certainly be assigned; for it differs from the imperative of skill only in that for it the end is given while for the latter the end is merely possible. Since both, however, command only the means to what is assumed to be willed as an end, the imperative commanding him who wills the end to will likewise the means thereto is in both cases analytic. Hence there is also no difficulty regarding the possibility of an imperative of prudence.

On the other hand, the question as to how the imperative of morality is possible is undoubtedly the only one requiring a solution. For it is not at all hypothetical; and hence the objective necessity which it presents cannot be based on any presupposition, as was the case with the hypothetical imperatives. Only there must never here be forgotten that no example can show, i.e., empirically, whether there is any such imperative at all. Rather, care must be taken lest all imperatives which are seemingly categorical may nevertheless be covertly hypothetical. For instance, when it is said that you should not make a false promise, the assumption is that the necessity of this avoidance is no mere advice for escaping some other evil, so that it might be said that you should not make a false promise lest you ruin your credit when the falsity comes to light. But when it is asserted that an action of this kind must be regarded as bad in itself, then the imperative of prohibition is therefore categorical. Nevertheless, it cannot with certainty be shown by means of an example that the will is here determined solely by the law without any other incentive, even though such may seem to be the case. For it is always possible that secretly there is fear of disgrace and perhaps also obscure dread of other dangers; such fear and dread may have influenced the will. Who can prove by experience that a cause is not present? Experience only shows that a cause is not perceived. But in such a case the so-called moral imperative, which as such appears to be categorical and unconditioned, would actually be only a pragmatic precept which makes us pay attention to our own advantage and merely teaches us to take such advantage into consideration.

We shall, therefore, have to investigate the possibility of a categorical imperative entirely a priori, inasmuch as we do not here have the advantage of having its reality given in experience and conse- 420
quently of thus being obligated merely to explain its possibility rather than to establish it. In the meantime so much can be seen for now: the categorical imperative alone purports to be a practical law, while all the others may be called principles of the will but not laws. The reason for this is that whatever is necessary merely in order to attain some arbitrary purpose can be regarded as in itself contingent, and the precept can always be ignored once the purpose is abandoned. Contrariwise, an unconditioned command does not leave the will free to choose the opposite at its own liking. Consequently, only such a command carries with it that necessity which is demanded from a law.

Secondly, in the case of this categorical imperative, or law of morality, the reason for the difficulty (of discerning its possibility) is quite serious. The categorical imperative is an a priori synthetic practical proposition;[30] and since discerning the possibility of propositions of this sort involves so much difficulty

30. I connect a priori, and therefore necessarily, the act with the will without presupposing any condition taken from some inclination (though I make such a connection only objectively, i.e., under the idea of a reason having full power over all subjective motives). Hence this is a practical proposition which does not analytically derive

in theoretic knowledge, there may readily be gathered that there will be no less difficulty in practical knowledge.

In solving this problem, we want first to inquire whether perhaps the mere concept of a categorical imperative may not also supply us with the formula containing the proposition that can alone be a categorical imperative. For even when we know the purport of such an absolute command, the question as to how it is possible will still require a special and difficult effort, which we postpone to the last section.[31]

If I think of a hypothetical imperative in general, I do not know beforehand what it will contain until its condition is given. But if I think of a categorical imperative, I know immediately what it contains. For since, besides the law, the imperative contains only
421 the necessity that the maxim[32] should accord with this law, while the law contains no condition to restrict it, there remains nothing but the universality of a law as such with which the maxim of the action should conform. This conformity alone is properly what is represented as necessary by the imperative.

Hence there is only one categorical imperative and it is this: Act only according to that maxim whereby you can at the same time will that it should become a universal law.[33]

Now if all imperatives of duty can be derived from this one imperative as their principle, then there can at least be shown what is understood by the concept of duty and what it means, even though there is left undecided whether what is called duty may not be an empty concept.

The universality of law according to which effects are produced constitutes what is properly called nature in the most general sense (as to form), i.e., the existence of things as far as determined by universal laws. Accordingly, the universal imperative of duty may be expressed thus: Act as if the maxim of your action were to become through your will a universal law of nature.[34]

We shall now enumerate some duties, following the usual division of them into duties to ourselves and to others and into perfect and imperfect duties.[35]

1. A man reduced to despair by a series of misfortunes feels sick of life but is still so far in possession of his 422
reason that he can ask himself whether taking his own life would not be contrary to his duty to himself.[36] Now he asks whether the maxim of his action could become a universal law of nature. But his maxim is this: from self-love I make as my principle to shorten my life when its continued duration threatens more evil than it promises satisfaction. There only remains the question as to whether this principle of self-love can become a universal law of nature. One sees at once a contradiction in a system of nature whose law would destroy life by means of the very same feeling that acts so as to stimulate the furtherance of life, and hence there could be

---

the willing of an action from some other willing already presupposed (for we possess no such perfect will) but which connects the willing of an action immediately with the concept of the will of a rational being as something which is not contained in this concept.

31. [See below Ak. 446–63.]

32. A maxim is the subjective principle of acting and must be distinguished from the objective principle, viz., the practical law. A maxim contains the practical rule which reason determines in accordance with the conditions of the subject (often his ignorance or his inclinations) and is thus the principle according to which the subject does act. But the law is the objective principle valid for every rational being, and it is the principle according to which he ought to act, i.e., an imperative.

33. [This formulation of the categorical imperative is often referred to as the formula of universal law.]

34. [This is often called the formula of the law of nature.]

35. There should be noted here that I reserve the division of duties for a future *Metaphysics of Morals* [in Part II of the *Metaphysics of Morals*, entitled *The Metaphysical Principles of Virtue*, Ak. 417–474]. The division presented here stands as merely an arbitrary one (in order to arrange my examples). For the rest, I understand here by a perfect duty one which permits no exception in the interest of inclination. Accordingly, I have perfect duties which are external [to others], while other ones are internal [to oneself]. This classification runs contrary to the accepted usage of the schools, but I do not intend to justify it here, since there is no difference for my purpose whether this classification is accepted or not.

36. [Not committing suicide is an example of a perfect duty to oneself. See *Metaphysical Principles of Virtue*, Ak. 422–24.]

no existence as a system of nature. Therefore, such a maxim cannot possibly hold as a universal law of nature and is, consequently, wholly opposed to the supreme principle of all duty.

2. Another man in need finds himself forced to borrow money. He knows well that he won't be able to repay it, but he sees also that he will not get any loan unless he firmly promises to repay it within a fixed time. He wants to make such a promise, but he still has conscience enough to ask himself whether it is not permissible and is contrary to duty to get out of difficulty in this way. Suppose, however, that he decides to do so. The maxim of his action would then be expressed as follows: when I believe myself to be in need of money, I will borrow money and promise to pay it back, although I know that I can never do so. Now this principle of self-love or personal advantage may perhaps be quite compatible with one's entire future welfare, but the question is now whether it is right.[37] I then transform the requirement of self-love into a universal law and put the question thus: how would things stand if my maxim were to become a universal law? He then sees at once that such a maxim could never hold as a universal law of nature and be consistent with itself, but must necessarily be self-contradictory. For the universality of a law which says that anyone believing himself to be in difficulty could promise whatever he pleases with the intention of not keeping it would make promising itself and the end to be attained thereby quite impossible, inasmuch as no one would believe what was promised him but would merely laugh at all such utterances as being vain pretenses.

3. A third finds in himself a talent whose cultivation
423 could make him a man useful in many respects. But he finds himself in comfortable circumstances and prefers to indulge in pleasure rather than to bother himself about broadening and improving his fortunate natural aptitudes. But he asks himself further whether his maxim of neglecting his natural gifts, besides agreeing of itself with his propensity to indulgence, might agree also with what is called duty.[38] He then sees that a system of nature could indeed always subsist according to such a universal law, even though every man (like South Sea Islanders) should let his talents rust and resolve to devote his life entirely to idleness, indulgence, propagation, and, in a word, to enjoyment. But he cannot possibly will that this should become a universal law of nature or be implanted in us as such a law by a natural instinct. For as a rational being he necessarily wills that all his faculties should be developed, inasmuch as they are given him for all sorts of possible purposes.

4. A fourth man finds things going well for himself but sees others (whom he could help) struggling with great hardships; and he thinks: what does it matter to me? Let everybody be as happy as Heaven wills or as he can make himself; I shall take nothing from him nor even envy him; but I have no desire to contribute anything to his well-being or to his assistance when in need. If such a way of thinking were to become a universal law of nature, the human race admittedly could very well subsist and doubtless could subsist even better than when everyone prates about sympathy and benevolence and even on occasions exerts himself to practice them but, on the other hand, also cheats when he can, betrays the rights of man, or otherwise violates them. But even though it is possible that a universal law of nature could subsist in accordance with that maxim, still it is impossible to will that such a principle should hold everywhere as a law of nature.[39] For a will which resolved in this way would contradict itself, inasmuch as cases might often arise in which one would have need of the love and sympathy of others and in which he would deprive himself, by such a law of nature springing from his own will, of all hope of the aid he wants for himself.

These are some of the many actual duties, or at least what are taken to be such, whose derivation from 424
the single principle cited above is clear. We must be able to will that a maxim of our action become a universal law; this is the canon for morally estimating any of our actions. Some actions are so constituted that their maxims cannot without contradiction even be thought as a universal law of nature, much less

37. [Keeping promises is an example of a perfect duty to others. See *ibid.*, Ak. 423–31.]

38. [Cultivating one's talents is an example of an imperfect duty to oneself. See *ibid.*, Ak. 444–46.]

39. [Benefiting others is an example of an imperfect duty to others. See *ibid.*, Ak. 452–54.]

be willed as what should become one. In the case of others this internal impossibility is indeed not found, but there is still no possibility of willing that their maxim should be raised to the universality of a law of nature, because such a will would contradict itself. There is no difficulty in seeing that the former kind of action conflicts with strict or narrow [perfect] (irremissible) duty, while the second kind conflicts only with broad [imperfect] (meritorious) duty.[40] By means of these examples there has thus been fully set forth how all duties depend as regards the kind of obligation (not the object of their action) upon the one principle.

If we now attend to ourselves in any transgression of a duty, we find that we actually do not will that our maxim should become a universal law—because this is impossible for us—but rather that the opposite of this maxim should remain a law universally.[41] We only take the liberty of making an exception to the law for ourselves (or just for this one time) to the advantage of our inclination. Consequently, if we weighed up everything from one and the same standpoint, namely, that of reason, we would find a contradiction in our own will, viz., that a certain principle be objectively necessary as a universal law and yet subjectively not hold universally but should admit of exceptions. But since we at one moment regard our action from the standpoint of a will wholly in accord with reason and then at another moment regard the very same action from the standpoint of a will affected by inclination, there is really no contradiction here. Rather, there is an opposition (*antagonismus*) of inclination to the precept of reason, whereby the universality (*universalitas*) of the principle is changed into a mere generality (*generalitas*) so that the practical principle of reason may meet the maxim halfway. Although this procedure cannot be justified in our own impartial judgment, yet it does show that we actually acknowledge the validity of the categorical imperative and (with all respect for it) merely allow ourselves a few exceptions which, as they seem to us, are unimportant and forced upon us.

We have thus at least shown that if duty is a concept 425
which is to have significance and real legislative authority for our actions, then such duty can be expressed only in categorical imperatives but not at all in hypothetical ones. We have also—and this is already a great deal—exhibited clearly and definitely for every application what is the content of the categorical imperative, which must contain the principle of all duty (if there is such a thing at all). But we have not yet advanced far enough to prove a priori that there actually is an imperative of this kind, that there is a practical law which of itself commands absolutely and without any incentives, and that following this law is duty.

In order to attain this proof there is the utmost importance in being warned that we must not take it into our mind to derive the reality of this principle from the special characteristics of human nature. For duty has to be a practical, unconditioned necessity of action; hence it must hold for all rational beings (to whom alone an imperative is at all applicable) and for this reason only can it also be a law for all human wills. On the other hand, whatever is derived from the special natural condition of humanity, from certain feelings and propensities, or even, if such were possible, from some special tendency peculiar to human reason and not holding necessarily for the will of every rational being—all of this can indeed yield a maxim valid for us, but not a law. This is to say that such can yield a subjective principle according to which we might act if we happen to have the propensity and inclination, but cannot yield an objective principle according to which we would be directed to act even though our every propensity, inclination, and natural tendency were opposed to it. In fact, the sublimity and inner worth of the command are so much the more evident in a duty, the fewer subjective causes there are for it and the more they oppose it; such causes do not in the least weaken the necessitation exerted by the law or take away anything from its validity.

Here philosophy is seen in fact to be put in a precarious position, which should be firm even though there is neither in heaven nor on earth

40. [Compare *ibid.*, Ak. 390–94, 410–11, 421–51.]

41. [This is to say, for example, that when you tell a lie, you do so on the condition that others are truthful and believe that what you are saying is true, because otherwise your lie will never work to get you what you want. When you tell a lie, you simply take exception to the general rule that says everyone should always tell the truth.]

anything upon which it depends or is based. Here philosophy must show its purity as author of its laws, and not as the herald of such laws as are whispered to it by an implanted sense or by who knows what tutelary nature. Such laws may be better than nothing
426 at all, but they can never give us principles dictated by reason. These principles must have an origin that is completely a priori and must at the same time derive from such origin their authority to command. They expect nothing from the inclination of men but, rather, expect everything from the supremacy of the law and from the respect owed to the law. Without the latter expectation, these principles condemn man to self-contempt and inward abhorrence.

Hence everything empirical is not only quite unsuitable as a contribution to the principle of morality, but is even highly detrimental to the purity of morals. For the proper and inestimable worth of an absolutely good will consists precisely in the fact that the principle of action is free of all influences from contingent grounds, which only experience can furnish. This lax or even mean way of thinking which seeks its principle among empirical motives and laws cannot too much or too often be warned against, for human reason in its weariness is glad to rest upon this pillow. In a dream of sweet illusions (in which not Juno but a cloud is embraced) there is substituted for morality some bastard patched up from limbs of quite varied ancestry and looking like anything one wants to see in it but not looking like virtue to him who has once beheld her in her true form.[42]

Therefore, the question is this: is it a necessary law for all rational beings always to judge their actions according to such maxims as they can themselves will that such should serve as universal laws? If there is such a law, then it must already be connected (completely a priori) with the concept of the will of a rational being in general. But in order to discover this connection we must, however reluctantly, take a step into metaphysics, although into a region of it different from speculative philosophy, i.e., we must enter the metaphysics of morals. In practical philosophy the concern is not with accepting grounds for 427
what happens but with accepting laws of what ought to happen, even though it never does happen—that is, the concern is with objectively practical laws. Here there is no need to inquire into the reasons as to why something pleases or displeases, how the pleasure of mere sensation differs from taste, and whether taste differs from a general satisfaction of reason, upon what does the feeling of pleasure and displeasure rest, and how from this feeling desires and inclinations arise, and how, finally, from these there arise maxims through the cooperation of reason. All of this belongs to an empirical psychology, which would constitute the second part of the doctrine of nature, if this doctrine is regarded as the philosophy of nature insofar as this philosophy is grounded on empirical laws. But here the concern is with objectively practical laws, and hence with the relation of a will to itself insofar as it is determined solely by reason. In this case everything related to what is empirical falls away of itself, because if reason entirely by itself determines conduct (and the possibility of such determination we now wish to investigate), then reason must necessarily do so a priori.

The will is thought of as a faculty of determining itself to action in accordance with the representation of certain laws, and such a faculty can be found only in rational beings. Now what serves the will as the objective ground of its self-determination is an end; and if this end is given by reason alone, then it must be equally valid for all rational beings. On the other hand, what contains merely the ground of the possibility of the action, whose effect is an end, is called the means. The subjective ground of desire is the incentive; the objective ground of volition is the motive. Hence there arises the distinction between subjective ends, which rest on incentives, and objective ends, which depend on motives valid for every rational being. Practical principles are formal when they abstract from all subjective ends; they are material, however, when they are founded upon subjective ends, and hence upon certain incentives. The ends which a rational being arbitrarily proposes to himself as effects of this action (material ends) are all merely

42. To behold virtue in her proper form is nothing other than to present morality stripped of all admixture of what is sensuous and of every spurious adornment of reward or self-love. How much she then eclipses all else that appears attractive to the inclinations can be easily seen by everyone with the least effort of his reason, if it be not entirely ruined for all abstraction.

relative, for only their relation to a specially constituted faculty of desire in the subject gives them their worth. Consequently, such worth cannot provide any
428 universal principles, which are valid and necessary for all rational beings and, furthermore, are valid for every volition, i.e., cannot provide any practical laws. Therefore, all such relative ends can be grounds only for hypothetical imperatives.

But let us suppose that there were something whose existence has in itself an absolute worth, something which as an end in itself could be a ground of determinate laws. In it, and in it alone, would there be the ground of a possible categorical imperative, i.e., of a practical law.

Now I say that man, and in general every rational being, exists as an end in himself and not merely as a means to be arbitrarily used by this or that will. He must in all his actions, whether directed to himself or to other rational beings, always be regarded at the same time as an end. All the objects of inclinations have only a conditioned value; for if there were not these inclinations and the needs founded on them, then their object would be without value. But the inclinations themselves, being sources of needs, are so far from having an absolute value such as to render them desirable for their own sake that the universal wish of every rational being must be, rather, to be wholly free from them. Accordingly, the value of any object obtainable by our action is always conditioned. Beings whose existence depends not on our will but on nature have, nevertheless, if they are not rational beings, only a relative value as means and are therefore called things. On the other hand, rational beings are called persons inasmuch as their nature already marks them out as ends in themselves, i.e., as something which is not to be used merely as means and hence there is imposed thereby a limit on all arbitrary use of such beings, which are thus objects of respect. Persons are, therefore, not merely subjective ends, whose existence as an effect of our actions has a value for us; but such beings are objective ends, i.e., exist as ends in themselves. Such an end is one for which there can be substituted no other end to which such beings should serve merely as means, for otherwise nothing at all of absolute value would be found anywhere. But if all value were conditioned and hence contingent, then no supreme practical principle could be found for reason at all.

If then there is to be a supreme principle and, as far as the human will is concerned, a categorical imperative, then it must be such that from the conception of what is necessarily an end for everyone because this end is an end in itself it constitutes an objective principle of the will and can hence serve as a practical 429
law. The ground of such a principle is this: rational nature exists as an end in itself. In this way man necessarily thinks of his own existence; thus far is it a subjective principle of human actions. But in this way also does every other rational being think of his existence on the same rational ground that holds also for me;[43] hence it is at the same time an objective principle, from which, as a supreme practical ground, all laws of the will must be able to be derived. The practical imperative will therefore be the following: Act in such a way that you treat humanity, whether in your own person or in the person of another, always at the same time as an end and never simply as a means.[44] We now want to see whether this can be carried out in practice.

Let us keep to our previous examples.[45]

First, as regards the concept of necessary duty to oneself, the man who contemplates suicide will ask himself whether his action can be consistent with the idea of humanity as an end in itself. If he destroys himself in order to escape from a difficult situation, then he is making use of his person merely as a means so as to maintain a tolerable condition till the end of his life. Man, however, is not a thing and hence is not something to be used merely as a means; he must in all his actions always be regarded as an end in himself. Therefore, I cannot dispose of man in my own person by mutilating, damaging, or killing him. (A more exact determination of this principle so as to avoid all misunderstanding, e.g., regarding the amputation of limbs in order to save oneself, or the

43. This proposition I here put forward as a postulate. The grounds for it will be found in the last section. [See below Ak. 446–63.]

44. [This oft-quoted version of the categorical imperative is usually referred to as the formula of the end in itself.]

45. [See above Ak. 422–23.]

exposure of one's life to danger in order to save it, and so on, must here be omitted; such questions belong to morals proper.)

Second, as concerns necessary or strict duty to others, the man who intends to make a false promise will immediately see that he intends to make use of another man merely as a means to an end which the latter does not likewise hold. For the man whom I
430 want to use for my own purposes by such a promise cannot possibly concur with my way of acting toward him and hence cannot himself hold the end of this action. This conflict with the principle of duty to others becomes even clearer when instances of attacks on the freedom and property of others are considered. For then it becomes clear that a transgressor of the rights of men intends to make use of the persons of others merely as a means, without taking into consideration that, as rational beings, they should always be esteemed at the same time as ends, i.e., be esteemed only as beings who must themselves be able to hold the very same action as an end.[46]

Third, with regard to contingent (meritorious) duty to oneself, it is not enough that the action does not conflict with humanity in our own person as an end in itself; the action must also harmonize with this end. Now there are in humanity capacities for greater perfection which belong to the end that nature has in view as regards humanity in our own person. To neglect these capacities might perhaps be consistent with the maintenance of humanity as an end in itself, but would not be consistent with the advancement of this end.

Fourth, concerning meritorious duty to others, the natural end that all men have is their own happiness. Now humanity might indeed subsist if nobody contributed anything to the happiness of others, provided he did not intentionally impair their happiness. But this, after all, would harmonize only negatively and not positively with humanity as an end in itself, if everyone does not also strive, as much as he can, to further the ends of others. For the ends of any subject who is an end in himself must as far as possible be my ends also, if that conception of an end in itself is to have its full effect in me.

This principle of humanity and of every rational nature generally as an end in itself is the supreme 431
limiting condition of every man's freedom of action. This principle is not borrowed from experience, first, because of its universality, inasmuch as it applies to all rational beings generally, and no experience is capable of determining anything about them; and, secondly, because in experience (subjectively) humanity is not thought of as the end of men, i.e., as an object that we of ourselves actually make our end which as a law ought to constitute the supreme limiting condition of all subjective ends (whatever they may be); and hence this principle must arise from pure reason [and not from experience]. That is to say that the ground of all practical legislation lies objectively in the rule and in the form of universality, which (according to the first principle) makes the rule capable of being a law (say, for example, a law of nature). Subjectively, however, the ground of all practical legislation lies in the end; but (according to the second principle) the subject of all ends is every rational being as an end in himself. From this there now follows the third practical principle of the will as the supreme condition of the will's conformity with universal practical reason, viz., the idea of the will of every rational being as a will that legislates universal law.[47]

According to this principle all maxims are rejected which are not consistent with the will's own legislation of universal law. The will is thus not merely subject to the law but is subject to the law in such a way that it must be regarded also as legislating for itself and only on this account as being subject to the law (of which it can regard itself as the author).

46. Let it not be thought that the trivial *quod tibi non vis fieri, etc.* [do not do to others what you do not want done to yourself] can here serve as a standard or principle. For it is merely derived from our principle, although with several limitations. It cannot be a universal law, for it contains the ground neither of duties to oneself nor of duties of love toward others (for many a man would gladly consent that others should not benefit him, if only he might be excused from benefiting them). Nor, finally, does it contain the ground of strict duties toward others, for the criminal would on this ground be able to dispute with the judges who punish him; and so on.

47. [This is usually called the formula of autonomy.]

In the previous formulations of imperatives, viz., that based on the conception of the conformity of actions to universal law in a way similar to a natural order and that based on the universal prerogative of rational beings as ends in themselves, these imperatives just because they were thought of as categorical excluded from their legislative authority all admixture of any interest as an incentive. They were, however, only assumed to be categorical because such an assumption had to be made if the concept of duty was to be explained. But that there were practical propositions which commanded categorically could not itself be proved, nor can it be proved anywhere in this section. But one thing could have been done, viz., to indicate that in willing from duty the renunciation of all interest is the specific mark distinguishing a categorical imperative from a hypothetical one and that such renunciation was expressed in the imperative itself by means of some determination contained in it. This is done in the present (third) formulation of the principle, namely, in the idea of the will of every rational being as a will that legislates universal law.

When such a will is thought of, then even though a will which is subject to law may be bound to this law by means of some interest, nevertheless a will that is itself a supreme lawgiver is not able as such to depend on any interest. For a will which is so dependent would itself require yet another law restricting the interest of its self-love to the condition that such interest should itself be valid as a universal law.

Thus the principle that every human will as a will that legislates universal law in all its maxims,[48] provided it is otherwise correct, would be well suited to being a categorical imperative in the following respect: just because of the idea of legislating universal law such an imperative is not based on any interest, and therefore it alone of all possible imperatives can be unconditional. Or still better, the proposition being converted, if there is a categorical imperative (i.e., a law for the will of every rational being), then it can only command that everything be done from the maxim of such a will as could at the same time have as its object only itself regarded as legislating universal law. For only then are the practical principle and the imperative which the will obeys unconditional, inasmuch as the will can be based on no interest at all.

When we look back upon all previous attempts that have been made to discover the principle of morality, there is no reason now to wonder why they one and all had to fail. Man was viewed as bound to laws by his duty; but it was not seen that man is subject only to his own, yet universal, legislation and that he is bound only to act in accordance with his own will, which is, however, a will purported by nature to legislate universal laws. For when man is thought as being merely subject to a law (whatever it might be), then the law had to carry with it some interest functioning as an attracting stimulus or as a constraining force for obedience, inasmuch as the law did not arise as a law from his own will. Rather, in order that his will conform with law, it had to be necessitated by something else to act in a certain way. By this absolutely necessary conclusion, however, all the labor spent in finding a supreme ground for duty was irretrievably lost; duty was never discovered, but only the necessity of acting from a certain interest. This might be either one's own interest or another's, but either way the imperative had to be always conditional and could never possibly serve as a moral command. I want, therefore, to call my principle the principle of the autonomy of the will, in contrast with every other principle, which I accordingly count under heteronomy.

The concept of every rational being as one who must regard himself as legislating universal law by all his will's maxims, so that he may judge himself and his actions from this point of view, leads to another very fruitful concept, which depends on the aforementioned one, viz., that of a kingdom of ends.

By "kingdom" I understand a systematic union of different rational beings through common laws. Now laws determine ends as regards their universal validity; therefore, if one abstracts from the personal differences of rational beings and also from all content of their private ends, then it will be possible to think of a whole of all ends in systematic connection (a whole both of rational beings as ends in themselves and also

48. I may here be excused from citing instances to elucidate this principle inasmuch as those which were first used to elucidate the categorical imperative and its formula can all serve the same purpose here. [See above Ak. 421–23, 429–30.]

of the particular ends which each may set for himself); that is, one can think of a kingdom of ends that is possible on the aforesaid principles.

For all rational beings stand under the law that each of them should treat himself and all others never merely as means but always at the same time as an end in himself. Hereby arises a systematic union of rational beings through common objective laws, i.e., a kingdom that may be called a kingdom of ends (certainly only an ideal), inasmuch as these laws have in view the very relation of such beings to one another as ends and means.[49]

A rational being belongs to the kingdom of ends as a member when he legislates in it universal laws while also being himself subject to these laws. He belongs to it as sovereign, when as legislator he is himself subject to the will of no other.

434 A rational being must always regard himself as legislator in a kingdom of ends rendered possible by freedom of the will, whether as member or as sovereign. The position of the latter can be maintained not merely through the maxims of his will but only if he is a completely independent being without needs and with unlimited power adequate to his will.

Hence morality consists in the relation of all action to that legislation whereby alone a kingdom of ends is possible. This legislation must be found in every rational being and must be able to arise from his will, whose principle then is never to act on any maxim except such as can also be a universal law and hence such as the will can thereby regard itself as at the same time the legislator of universal law. If now the maxims do not by their very nature already necessarily conform with this objective principle of rational beings as legislating universal laws, then the necessity of acting on that principle is called practical necessitation, i.e., duty. Duty does not apply to the sovereign in the kingdom of ends, but it does apply to every member and to each in the same degree.

The practical necessity of acting according to this principle, i.e., duty, does not rest at all on feelings, impulses, and inclinations, but only on the relation of rational beings to one another, a relation in which the will of a rational being must always be regarded at the same time as legislative, because otherwise he could not be thought of as an end in himself. Reason, therefore, relates every maxim of the will as legislating universal laws to every other will and also to every action toward oneself; it does so not on account of any other practical motive or future advantage but rather from the idea of the dignity of a rational being who obeys no law except what he at the same time enacts himself.

In the kingdom of ends everything has either a price or a dignity. Whatever has a price can be replaced by something else as its equivalent; on the other hand, whatever is above all price, and therefore admits of no equivalent, has a dignity.

Whatever has reference to general human inclinations and needs has a market price; whatever, without presupposing any need, accords with a certain taste, i.e., a delight in the mere unpurposive play of our 435 mental powers,[50] has an affective price; but that which constitutes the condition under which alone something can be an end in itself has not merely a relative worth, i.e., a price, but has an intrinsic worth, i.e., dignity.

Now morality is the condition under which alone a rational being can be an end in himself, for only thereby can he be a legislating member in the kingdom of ends. Hence morality and humanity, insofar as it is capable of morality, alone have dignity. Skill and diligence in work have a market price; wit, lively imagination, and humor have an affective price; but fidelity to promises and benevolence based on principles (not on instinct) have intrinsic worth. Neither nature nor art contain anything which in default of these could be put in their place; for their worth consists, not in the effects which arise from them, nor in the advantage and profit which they provide, but in mental dispositions, i.e., in the maxims of the will which are ready in this way to manifest themselves in action, even if they are not favored with success. Such actions also need no recommendation from any subjective disposition or taste so as to meet with immediate favor and delight; there is no need of any immediate propensity or feeling toward them. They exhibit the will performing them as an object of im-

49. [This is usually called the formula of the kingdom of ends.]

50. [See Kant, *Critique of Aesthetic Judgment*, §'s 1–5.]

mediate respect; and nothing but reason is required to impose them upon the will, which is not to be cajoled into them, since in the case of duties such cajoling would be a contradiction. This estimation, therefore, lets the worth of such a disposition be recognized as dignity and puts it infinitely beyond all price, with which it cannot in the least be brought into competition or comparison without, as it were, violating its sanctity.

What then is it that entitles the morally good disposition, or virtue, to make such lofty claims? It is nothing less than the share which such a disposition affords the rational being of legislating universal laws, so that he is fit to be a member in a possible kingdom of ends, for which his own nature has already determined him as an end in himself and therefore as a legislator in the kingdom of ends. Thereby is he free as regards all laws of nature, and he obeys only those laws which he gives to himself. Accordingly, his maxims can belong to a universal legislation to which he at the
436 same time subjects himself. For nothing can have any worth other than what the law determines. But the legislation itself which determines all worth must for that very reason have dignity, i.e., unconditional and incomparable worth; and the word "respect" alone provides a suitable expression for the esteem which a rational being must have for it. Hence autonomy is the ground of the dignity of human nature and of every rational nature.

The aforementioned three ways of representing the principle of morality are at bottom only so many formulas of the very same law: one of them by itself contains a combination of the other two. Nevertheless, there is a difference in them, which is subjectively rather than objectively practical, viz., it is intended to bring an idea of reason closer to intuition (in accordance with a certain analogy) and thereby closer to feeling. All maxims have, namely,

1. A form, which consists in universality; and in this respect the formula of the moral imperative is expressed thus: maxims must be so chosen as if they were to hold as universal laws of nature.
2. A matter, viz., an end; and here the formula says that a rational being, inasmuch as he is by his very nature an end and hence an end in himself, must serve in every maxim as a condition limiting all merely relative and arbitrary ends.
3. A complete determination of all maxims by the formula that all maxims proceeding from his own legislation ought to harmonize with a possible kingdom of ends as a kingdom of nature.[51] There is a progression here through the categories of the *unity* of the form of the will (its universality), the *plurality* of its matter (its objects, i.e., its ends), and the *totality* or completeness of its system of ends. But one does better if in moral judgment he follows the rigorous method and takes as his basis the universal formula 437
of the categorical imperative: Act according to that maxim which can at the same time make itself a universal law. But if one wants also to secure acceptance for the moral law, it is very useful to bring one and the same action under the three aforementioned concepts and thus, as far as possible, to bring the moral law nearer to intuition.

We can now end where we started in the beginning, viz., the concept of an unconditionally good will. That will is absolutely good which cannot be evil, i.e., whose maxim, when made into a universal law, can never conflict with itself. This principle is therefore also its supreme law: Act always according to that maxim whose universality as a law you can at the same time will. This is the only condition under which a will can never be in conflict with itself, and such an imperative is categorical. Inasmuch as the validity of the will as a universal law for possible actions is analogous to the universal connection of the existence of things in accordance with universal laws, which is the formal aspect of nature in general, the categorical imperative can also be expressed thus:

51. Teleology considers nature as a kingdom of ends; morals regards a possible kingdom of ends as a kingdom of nature. In the former the kingdom of ends is a theoretical idea for explaining what exists. In the latter it is a practical idea for bringing about what does not exist but can be made actual by our conduct, i.e., what can be actualized in accordance with this very idea.

Act according to maxims which can at the same time have for their object themselves as universal laws of nature. In this way there is provided the formula for an absolutely good will.

Rational nature is distinguished from the rest of nature by the fact that it sets itself an end. This end would be the matter of every good will. But in the idea of an absolutely good will—good without any qualifying condition (of attaining this or that end)—complete abstraction must be made from every end that has to come about as an effect (since such would make every will only relatively good). And so the end must here be conceived, not as an end to be effected, but as an independently existing end. Hence it must be conceived only negatively, i.e., as an end which should never be acted against and therefore as one which in all willing must never be regarded merely as means but must always be esteemed at the same time as an end. Now this end can be nothing but the subject of all possible ends themselves, because this subject is at the same time the subject of a possible absolutely good will; for such a will cannot without contradiction be subordinated to any other object.
438 The principle: So act in regard to every rational being (yourself and others) that he may at the same time count in your maxim as an end in himself, is thus basically the same as the principle: Act on a maxim which at the same time contains in itself its own universal validity for every rational being. That in the use of means for every end my maxim should be restricted to the condition of its universal validity as a law for every subject says just the same as that a subject of ends, i.e., a rational being himself, must be made the ground for all maxims of actions and must thus be used never merely as means but as the supreme limiting condition in the use of all means, i.e., always at the same time as an end.

Now there follows incontestably from this that every rational being as an end in himself must be able to regard himself with reference to all laws to which he may be subject as being at the same time the legislator of universal law, for just this very fitness of his maxims for the legislation of universal law distinguishes him as an end in himself. There follows also that his dignity (prerogative) of being above all the mere things of nature implies that his maxims must be taken from the viewpoint that regards himself, as well as every other rational being, as being legislative beings (and hence are they called persons). In this way there is possible a world of rational beings (*mundus intelligibilis*) as a kingdom of ends, because of the legislation belonging to all persons as members. Therefore, every rational being must so act as if he were through his maxim always a legislating member in the universal kingdom of ends. The formal principle of these maxims is this: So act as if your maxims were to serve at the same time as a universal law (for all rational beings). Thus a kingdom of ends is possible only on the analogy of a kingdom of nature; yet the former is possible only through maxims, i.e., self-imposed rules, while the latter is possible only through laws of efficient causes necessitated from without. Regardless of this difference and even though nature as a whole is viewed as a machine, yet insofar as nature stands in a relation to rational beings as its ends, it is on this account given the name of a kingdom of nature. Such a kingdom of ends would actually be realized through maxims whose rule is prescribed to all rational beings by the categorical imperative, if these maxims were universally obeyed. But even if a rational being himself strictly obeys such a maxim, he cannot for that reason count on everyone else's being true to it, nor can he expect the kingdom of nature and its purposive order to be in harmony with him as a fitting member of a kingdom of ends made possible by himself, i.e., he cannot expect the kingdom of nature to favor his expectation of happi- 439
ness. Nevertheless, the law: Act in accordance with the maxims of a member legislating universal laws for a merely possible kingdom of ends, remains in full force, since it commands categorically. And just in this lies the paradox that merely the dignity of humanity as rational nature without any further end or advantage to be thereby gained—and hence respect for a mere idea—should yet serve as an inflexible precept for the will; and that just this very independence of the maxims from all such incentives should constitute the sublimity of maxims and the worthiness of every rational subject to be a legislative member in the kingdom of ends, for otherwise he would have to be regarded as subject only to the natural law of his own needs. And even if the kingdom of nature as well as the kingdom of ends were thought of as both united under one sovereign so that the latter

kingdom would thereby no longer remain a mere idea but would acquire true reality, then indeed the kingdom of ends would gain the addition of a strong incentive, but never any increase in its intrinsic worth. For this sole absolute legislator must, in spite of all this, always be thought of as judging the worth of rational beings solely by the disinterested conduct prescribed to themselves by means of this idea alone. The essence of things is not altered by their external relations; and whatever without reference to such relations alone constitutes the absolute worth of man is also what he must be judged by, whoever the judge may be, even the Supreme Being. Hence morality is the relation of actions to the autonomy of the will, i.e., to the possible legislation of universal law by means of the maxims of the will. That action which is compatible with the autonomy of the will is permitted; that which is not compatible is forbidden. That will whose maxims are necessarily in accord with the laws of autonomy is a holy, or absolutely good, will. The dependence of a will which is not absolutely good upon the principle of autonomy (i.e., moral necessitation) is obligation, which cannot therefore be applied to a holy will. The objective necessity of an action from obligation is called duty.

From what has just been said, there can now easily be explained how it happens that, although in the concept of duty we think of subjection to the law,
440 yet at the same time we thereby ascribe a certain dignity and sublimity to the person who fulfills all his duties. For not insofar as he is subject to the moral law does he have sublimity, but rather has it only insofar as with regard to this very same law he is at the same time legislative, and only thereby is he subject to the law. We have also shown above[52] how neither fear nor inclination, but solely respect for the law, is the incentive which can give an action moral worth. Our own will, insofar as it were to act only under the condition of its being able to legislate universal law by means of its maxims—this will, ideally possible for us, is the proper object of respect. And the dignity of humanity consists just in its capacity to legislate universal law, though with the condition of humanity's being at the same time itself subject to this very same legislation.

52. [Ak. 400–402.]

Autonomy of the Will As the Supreme Principle of Morality

Autonomy of the will is the property that the will has of being a law to itself (independently of any property of the objects of volition). The principle of autonomy is this: Always choose in such a way that in the same volition the maxims of the choice are at the same time present as universal law. That this practical rule is an imperative, i.e., that the will of every rational being is necessarily bound to the rule as a condition, cannot be proved by merely analyzing the concepts contained in it, since it is a synthetic proposition. For proof one would have to go beyond cognition of objects to a critical examination of the subject, i.e., go to a critique of pure practical reason, since this synthetic proposition which commands apodeictically must be capable of being cognized completely a priori. This task, however, does not belong to the present section. But that the above principle of autonomy is the sole principle of morals can quite well be shown by mere analysis of the concepts of morality; for thereby the principle of morals is found to be necessarily a categorical imperative, which commands nothing more nor less than this very autonomy.

Heteronomy of the Will As the Source of All Spurious Principles of Morality *441*

If the will seeks the law that is to determine it anywhere but in the fitness of its maxims for its own legislation of universal laws, and if it thus goes outside of itself and seeks this law in the character of any of its objects, then heteronomy always results. The will in that case does not give itself the law, but the object does so because of its relation to the will. This relation, whether it rests on inclination or on representations of reason, admits only of hypothetical imperatives: I ought to do something because I will something else. On the other hand, the moral, and hence categorical, imperative says that I ought to act in this way or that way, even though I did not will something else. For example, the former says that I ought not to lie if I would maintain my reputation; the latter says that I ought not to lie even though lying were to bring me

not the slightest discredit. The moral imperative must therefore abstract from every object to such an extent that no object has any influence at all on the will, so that practical reason (the will) may not merely minister to an interest not belonging to it but may merely show its own commanding authority as the supreme legislation. Thus, for example, I ought to endeavor to promote the happiness of others, not as though its realization were any concern of mine (whether by immediate inclination or by any satisfaction indirectly gained through reason), but merely because a maxim which excludes it cannot be comprehended as a universal law in one and the same volition.

Classification of All Possible Principles of Morality Founded upon the Assumed Fundamental Concept of Heteronomy

Here as elsewhere human reason in its pure use, so long as it lacks a critical examination, first tried every possible wrong way before it succeeded in finding the only right way.

All principles that can be taken from this point of
442 view are either empirical or rational. The first kind, drawn from the principle of happiness, are based upon either physical or moral feeling. The second kind, drawn from the principle of perfection, are based upon either the rational concept of perfection as a possible effect of our will or else upon the concept of an independent perfection (the will of God) as a determining cause of our will.

Empirical principles are wholly unsuited to serve as the foundation for moral laws. For the universality with which such laws ought to hold for all rational beings without exception (the unconditioned practical necessity imposed by moral laws upon such beings) is lost if the basis of these laws is taken from the particular constitution of human nature or from the accidental circumstances in which such nature is placed. But the principle of one's own happiness is the most objectionable. Such is the case not merely because this principle is false and because experience contradicts the supposition that well-being is always proportional to well-doing, nor yet merely because this principle contributes nothing to the establishment of morality, inasmuch as making a man happy is quite different from making him good and making him prudent and sharp-sighted for his own advantage quite different from making him virtuous. Rather, such is the case because this principle of one's own happiness bases morality upon incentives that undermine it rather than establish it and that totally destroy its sublimity, inasmuch as motives to virtue are put in the same class as motives to vice and inasmuch as such incentives merely teach one to become better at calculation, while the specific difference between virtue and vice is entirely obliterated. On the other hand, moral feeling, this alleged special sense,[53] remains closer to morality than does the aforementioned principle of one's own happiness. Yet the appeal to the principle of moral feeling is superficial, since men who cannot think believe that they will be helped out by feeling, even when the question is solely one of universal laws. They do so even though feelings naturally differ from one another by an infinity of degrees, so that feelings are not capable of providing a uniform measure of good and evil; furthermore, they do so even though one man cannot by his feeling judge validly at all for other men. Nevertheless, the principle of moral feeling is closer to morality and its dignity than is the principle of one's own happiness inasmuch as the former principle pays virtue the honor of ascribing to her directly the satisfac- 443
tion and esteem that is held for her, and does not, as it were, tell her to her face that our attachment to her rests not on her beauty but only on our advantage.

Among the rational principles of morality (or those arising from reason rather than from feeling) there is the ontological concept of perfection. It is empty,

53. I count the principle of moral feeling under that of happiness, because every empirical interest promises to contribute to our well-being through the amenity afforded by something, whether immediately and without any reference to advantage or with reference to advantage. Similarly, the principle of sympathy for the happiness of others must with Hutcheson be counted along with the principle of moral sense as adopted by him. [Francis Hutcheson (1694–1747) was Professor of Moral Philosophy in the University of Glasgow, Scotland. He was the main proponent of the doctrine of moral sense.]

indeterminate, and hence of no use for finding in the immeasurable field of possible reality the maximum sum suitable for us. Furthermore, in attempting to distinguish specifically between the reality just mentioned and every other, it exhibits as inevitable tendency for turning about in a circle and cannot avoid tacitly presupposing the morality that it has to explain. Nevertheless, it is better than the theological concept, whereby morality is derived from a divine and most perfect will. It is better not merely because we cannot intuit divine perfection but can only derive it from our own concepts, among which morality is foremost; but also because if it is not so derived (and being thus derived would involve a crudely circular explanation), then the only remaining concept of God's will is drawn from such characteristics as desire for glory and dominion combined with such frightful representations as those of might and vengeance. Any system of morals based on such notions would be directly opposed to morality.

But if I had to choose between the concept of moral sense and that of perfection in general (both of which at least do not weaken morality, even though they are not at all capable of serving as its foundation), I would decide for the latter because it at least withdraws the decision of the question from sensibility and brings it to the court of pure reason, though it does not even here get any decision. Furthermore, I would choose the concept of perfection in general because it preserves the indeterminate idea (of a will good in itself) free from falsity until it can be more precisely determined.

For the rest, I believe that I may be excused from a lengthy refutation of all these doctrines. Such a refutation would be merely superfluous labor, since it is so easy and is presumably so well understood even by those whose office requires them to declare themselves for one of these theories (since their hearers would not tolerate suspension of judgment). But what interests us more here is to know that these principles never lay down anything but heteronomy of the will as the first ground of morality and that they must, consequently, necessarily fail in their purpose.

444 In every case where an object of the will must be laid down as the foundation for prescribing a rule to determine the will, there the rule is nothing but heteronomy. The imperative is then conditioned, viz., if or because one wills this object, one should act thus or so. Hence the imperative can never command morally, i.e., categorically. Now the object may determine the will by means of inclination, as in the case of the principle of one's own happiness, or by means of reason directed to objects of our volition in general, as in the case of the principle of perfection. Yet in both cases the will never determines itself immediately by the thought of an action, but only by the incentive that the anticipated effect of the action has upon the will: I ought to do something because I will something else. And here must yet another law be assumed in me the subject, whereby I necessarily will this something else; this other law in turn requires an imperative to restrict this maxim. For the impulse which the representation of an object that is possible by means of our powers is to exert upon the will of a subject in accordance with his natural constitution belongs to the nature of the subject, whether to his sensibility (his inclination and taste) or to his understanding and reason, whose employment on an object is by the particular arrangement of their nature attended with satisfaction; consequently, the law would, properly speaking, be given by nature. This law, insofar as it is a law of nature, must be known and proved through experience and is therefore in itself contingent and hence is not fit to be an apodeictic practical rule, such as a moral rule must be. The law of nature under discussion is always merely heteronomy of the will; the will does not give itself the law, but a foreign impulse gives the law to the will by means of the subject's nature, which is adapted to receive such an impulse.

An absolutely good will, whose principle must be a categorical imperative, will therefore be indeterminate as regards all objects and will contain merely the form of willing; and indeed that form is autonomy. This is to say that the fitness of the maxims of every good will to make themselves universal laws is itself the only law that the will of every rational being imposes on itself, without needing to assume any incentive or interest as a basis.

How such a synthetic practical a priori proposition is possible and why it is necessary are problems whose solution does not lie any longer within the bounds of a metaphysics of morals. Furthermore, we have not here asserted the truth of this proposition, much 445

less professed to have within our power a proof of it. We simply showed by developing the universally accepted concept of morality that autonomy of the will is unavoidably bound up with it, or rather is its very foundation. Whoever, then, holds morality to be something real, and not a chimerical idea without any truth, must also admit the principle here put forward. Hence this section, like the first, was merely analytic. To show that morality is not a mere phantom of the brain, which morality cannot be if the categorical imperative, and with it the autonomy of the will, is true and absolutely necessary as an a priori principle, we require a possible synthetic use of pure practical reason. But we must not venture on this use without prefacing it with a critical examination of this very faculty of reason. In the last section we shall give the main outlines of this critical examination as far as sufficient for our purpose.[54]

446

THIRD SECTION

TRANSITION FROM A METAPHYSICS OF MORALS TO A CRITIQUE OF PURE PRACTICAL REASON

The Concept of Freedom Is the Key for an Explanation of the Autonomy of the Will

The will is a kind of causality belonging to living beings insofar as they are rational; freedom would be the property of this causality that makes it effective independent of any determination by alien causes. Similarly, natural necessity is the property of the causality of all non-rational beings by which they are determined to activity through the influence of alien causes.

The foregoing explanation of freedom is negative and is therefore unfruitful for attaining an insight regarding its essence; but there arises from it a positive concept, which as such is richer and more fruitful. The concept of causality involves that of laws according to which something that we call cause must entail something else—namely, the effect. Therefore freedom is certainly not lawless, even though it is not a property of will in accordance with laws of nature. It must, rather, be a causality in accordance with immutable laws, which, to be sure, is of a special kind; otherwise a free will would be something absurd. As we have already seen [in the preceding paragraph], natural necessity is a heteronomy of efficient causes, inasmuch as every effect is possible only in accor- 447
dance with the law that something else determines the efficient cause to exercise its causality. What else, then, can freedom of the will be but autonomy, i.e., the property that the will has of being a law to itself? The proposition that the will is in every action a law to itself expresses, however, nothing but the principle of acting according to no other maxim than that which can at the same time have itself as a universal law for its object. Now this is precisely the formula of the categorical imperative and is the principle of morality. Thus a free will and a will subject to moral laws are one and the same.

Therefore if freedom of the will is presupposed, morality (together with its principle) follows by merely analyzing the concept of freedom. However, the principle of morality is, nevertheless, a synthetic proposition: viz., an absolutely good will is one whose maxim can always have itself as content when such maxim is regarded as a universal law; it is synthetic because this property of the will's maxim can never be found by analyzing the concept of an absolutely good will. Now such synthetic propositions are possible only as follows—two cognitions are bound together through their connection with a third in which both of them are to be found. The positive concept of freedom furnishes this third cognition, which cannot, as is the case with physical causes, be the nature of the world of sense (in whose concept is combined the concept of something as cause in relation to something else as effect). We cannot here yet show straight away what this third cognition is which freedom indicates to us and of which we have an a priori idea, nor can we as yet conceive of the deduction of the

54. [The ensuing Third Section is difficult to grasp. Kant expressed himself more clearly regarding the topics discussed there in the *Critique of Practical Reason*, Part I, Book 1 ("Analytic of Pure Practical Reason").]

concept of freedom from pure practical reason and therewith also the possibility of a categorical imperative. Rather, we require some further preparation.

Freedom Must Be Presupposed as a Property of the Will of All Rational Beings

It is not enough to ascribe freedom to our will, on whatever ground, if we have not also sufficient reason for attributing it to all rational beings. For inasmuch as morality serves as a law for us only insofar as we are rational beings, it must also be valid for all rational beings. And since morality must be derived solely from the property of freedom, one must show that freedom is also the property of the will of all rational
448 beings. It is not enough to prove freedom from certain alleged experiences of human nature (such a proof is indeed absolutely impossible, and so freedom can be proved only a priori). Rather, one must show that freedom belongs universally to the activity of rational beings endowed with a will. Now I say that every being who cannot act in any way other than under the idea of freedom is for this very reason free from a practical point of view. This is to say that for such a being all the laws that are inseparably bound up with freedom are valid just as much as if the will of such a being could be declared to be free in itself for reasons that are valid for theoretical philosophy.[55] Now I claim that we must necessarily attribute to every rational being which has a will also the idea of freedom, under which only can such a being act. For in such a being we think of a reason that is practical, i.e., that has causality in reference to its objects. Now we cannot possibly think of a reason that consciously lets itself be directed from outside as regards its judgments; for in that case the subject would ascribe the determination of his faculty of judgment not to his reason, but to an impulse. Reason must regard itself as the author of its principles independent of foreign influences. Therefore as practical reason or as the will of a rational being must reason regard itself as free. This is to say that the will of a rational being can be a will of its own only under the idea of freedom, and that such a will must therefore, from a practical point of view, be attributed to all rational beings.

55. I adopt this method of assuming as sufficient for our purpose that freedom is presupposed merely as an idea by rational beings in their actions in order that I may avoid the necessity of having to prove freedom from a theoretical point of view as well. For even if this latter problem is left unresolved, the same laws that would bind a being who was really free are valid equally for a being who cannot act otherwise than under the idea of its own freedom. Thus we can relieve ourselves of the burden which presses on the theory.

Concerning the Interest Attached to the Ideas of Morality

We have finally traced the determinate concept of morality back to the idea of freedom, but we could not prove freedom to be something actual in ourselves and in human nature. We saw merely that we must 449
presuppose it if we want to think of a being as rational and as endowed with consciousness of its causality as regards actions, i.e., as endowed with a will. And so we find that on the very same ground we must attribute to every being endowed with reason and a will this property of determining itself to action under the idea of its own freedom.

Now there resulted from the presupposition of this idea of freedom also the consciousness of a law of action: that the subjective principles of actions, i.e., maxims, must always be so adopted that they can also be valid objectively, i.e., universally, as principles, and can therefore serve as universal laws of our own legislation. But why, then, should I subject myself to this principle simply as a rational being and by so doing also subject to this principle all other beings endowed with reason? I am willing to grant that no interest impels me to do so, because this would not give a categorical imperative. But nonetheless I must necessarily take an interest in it and discern how this comes about, for this *ought* is properly a *would* which is valid for every rational being, provided that reason is practical for such a being without hindrances. In the case of beings who, like ourselves, are also affected by sensibility, i.e., by incentives of a kind other than the purely rational, and who do not always act as reason by itself would act, this necessity of action is expressed only as an *ought*, and the subjective necessity is to be distinguished from the objective.

It therefore seems as if we have in the idea of freedom actually only presupposed the moral law, namely, the principle of the autonomy of the will, and as if we could not prove its reality and objective necessity independently. In that case we should indeed still have gained something quite considerable by at least determining the genuine principle more exactly than had previously been done. But as regards its validity and the practical necessity of subjecting oneself to it, we would have made no progress. We could give no satisfactory answer if asked the following questions: why must the universal validity of our maxim taken as a law be a condition restricting our actions; upon what do we base the worth that we assign to this way of acting—a worth that is supposed to be so great that there can be no higher interest; 450 how does it happen that by this alone does man believe that he feels his own personal worth, in comparison with which that of an agreeable or disagreeable condition is to be regarded as nothing.

Indeed we do sometimes find that we can take an interest in a personal characteristic which involves no interest in any [external] condition but only makes us capable of participating in the condition in case reason were to effect the allotment. This is to say that the mere worthiness of being happy can of itself be of interest even without the motive of participating in this happiness. This judgment, however, is in fact only the result of the importance that we have already presupposed as belonging to moral laws (when by the idea of freedom we divorce ourselves from all empirical interest). However, in this way we are not as yet able to have any insight into why it is that we should divorce ourselves from such interest, i.e., that we should consider ourselves as free in action and yet hold ourselves as subject to certain laws so as to find solely in our own person a worth that can compensate us for the loss of everything that gives worth to our condition. We do not see how this is possible and hence how the moral law can obligate us.

One must frankly admit that there is here a sort of circle from which, so it seems, there is no way to escape. In the order of efficient causes we assume that we are free so that we may think of ourselves as subject to moral laws in the order of ends. And we then think of ourselves as subject to these laws because we have attributed to ourselves freedom of the will. Freedom and self-legislation of the will are both autonomy and are hence reciprocal concepts. Since they are reciprocal, one of them cannot be used to explain the other or to supply its ground, but can at most be used only for logical purposes to bring seemingly different conceptions of the same object under a single concept (just as different fractions of the same value are reduced to lowest terms).

However, one recourse still remains open to us, namely, to inquire whether we do not take one point of view when by means of freedom we think of ourselves as a priori efficient causes, and another point of view when we represent ourselves with reference to our actions as effects which we see before our eyes.

No subtle reflection is required for the following observation, which even the commonest understanding may be supposed to make, though it does so in its own fashion through some obscure discrimination of the faculty of judgment which it calls feeling: all 451 representations that come to us without our choice (such as those of the senses) enable us to know objects only as they affect us; what they may be in themselves remains unknown to us. Therefore, even with the closest attention and the greatest clarity that the understanding can bring to such representations, we can attain to a mere knowledge of appearances but never to knowledge of things in themselves. Once this distinction is made (perhaps merely as a result of observing the difference between representations which are given to us from without and in which we are passive from those which we produce entirely from ourselves and in which we show our own activity), then there follows of itself that we must admit and assume that behind the appearances there is something else which is not appearance, namely, things in themselves. Inasmuch as we can never cognize them except as they affect us [through our senses], we must admit that we can never come any nearer to them nor ever know what they are in themselves. This must provide a distinction, however crude, between a world of sense and a world of understanding; the former can vary considerably according to the difference of sensibility [and sense impressions] in various observers, while the latter, which is the basis of the former, remains always the same. Even with regard to himself, a man cannot presume to know what he is in himself by means of the acquaintance which he has through

internal sensation. For since he does not, as it were, create himself and since he acquires the concept of himself not a priori but empirically, it is natural that he can attain knowledge even about himself only through inner sense and therefore only through the appearance of his nature and the way in which his consciousness is affected. But yet he must necessarily assume that beyond his own subject's constitution as composed of nothing but appearances there must be something else as basis, namely, his ego as constituted in itself. Therefore with regard to mere perception and the receptivity of sensations, he must count himself as belonging to the world of sense; but with regard to whatever there may be in him of pure activity (whatever reaches consciousness immediately and not through affecting the senses) he must count himself as belonging to the intellectual world, of which he has, however, no further knowledge.

Such a conclusion must be reached by a reflective
452 man regarding all the things that may be presented to him. It is presumably to be found even in the most ordinary understanding, which, as is well known, is quite prone to expect that behind objects of the senses there is something else invisible and acting of itself. But such understanding spoils all this by making the invisible again sensible, i.e., it wants to make the invisible an object of intuition; and thereby does it become not a bit wiser.

Now man really finds in himself a faculty which distinguishes him from all other things and even from himself insofar as he is affected by objects. That faculty is reason, which as pure spontaneity is elevated even above understanding. For although the latter is also spontaneous and does not, like sense, merely contain representations that arise only when one is affected by things (and is therefore passive), yet understanding can produce by its activity no other concepts than those which merely serve to bring sensuous representations [intuitions] under rules and thereby to unite them in one consciousness. Without this use of sensibility, understanding would think nothing at all. Reason, on the other hand, shows such a pure spontaneity in the case of what are called ideas that it goes far beyond anything that sensibility can offer and shows its highest occupation in distinguishing the world of sense from the world of understanding, thereby prescribing limits to the understanding itself.

Therefore a rational being must regard himself qua intelligence (and hence not from the side of his lower powers) as belonging not to the world of sense but to the world of understanding. Therefore he has two standpoints from which he can regard himself and know laws of the use of his powers and hence of all his actions: first, insofar as he belongs to the world of sense subject to laws of nature (heteronomy); secondly, insofar as he belongs to the intelligible world subject to laws which, independent of nature, are not empirical but are founded only on reason.

As a rational being and hence as belonging to the intelligible world, can man never think of the causality of his own will except under the idea of freedom; for independence from the determining causes of the world of sense (an independence which reason must always attribute to itself) is freedom. Now the idea of freedom is inseparably connected with the concept of autonomy, and this in turn with the universal principle of morality, which ideally is the ground of all 453
actions of rational beings, just as natural law is the ground of all appearances.

The suspicion that we raised earlier is now removed, viz., that there might be a hidden circle involved in our inference from freedom to autonomy, and from this to the moral law—this is to say that we had perhaps laid down the idea of freedom only for the sake of the moral law in order subsequently to infer this law in its turn from freedom, and that we had therefore not been able to assign any ground at all for this law but had only assumed it by begging a principle which well-disposed souls would gladly concede us but which we could never put forward as a demonstrable proposition. But now we see that when we think of ourselves as free, we transfer ourselves into the intelligible world as members and know the autonomy of the will together with its consequence, morality; whereas when we think of ourselves as obligated, we consider ourselves as belonging to the world of sense and yet at the same time to the intelligible world.

How Is a Categorical Imperative Possible?

The rational being counts himself, qua intelligence, as belonging to the intelligible world, and only insofar as he is an efficient cause belonging to the intelligible

world does he call his causality a will. But on the other side, he is conscious of himself as being also a part of the world of sense, where his actions are found as mere appearances of that causality. The possibility of these actions cannot, however, be discerned through such causality, which we do not know; rather, these actions as belonging to the world of sense must be viewed as determined by other appearances, namely, desires and inclinations. Therefore, if I were solely a member of the intelligible world, then all my actions would perfectly conform to the principle of the autonomy of a pure will; if I were solely a part of the world of sense, my actions would have to be taken as in complete conformity with the natural law of desires and inclinations, i.e., with the heteronomy of nature. (My actions would in the first case rest on the supreme principle of morality, in the second case on that of happiness.) But the intelligible world contains the ground of the world of sense and therefore also the ground of its laws; consequently, the intelligible world is (and must be thought of as) directly legislative for my will (which belongs wholly to the intelligible world). Therefore, even though on the one hand I must regard myself as a being belonging to the world of sense, yet on the other hand shall I
454 have to know myself as an intelligence and as subject to the law of the intelligible world, i.e., to reason, which contains this law in the idea of freedom, and hence to know myself as subject to the autonomy of the will. Consequently, I must regard the laws of the intelligible world as imperatives for me, and the actions conforming to this principle as duties.

And thus are categorical imperatives possible because the idea of freedom makes me a member of an intelligible world. Now if I were a member of only that world, all my actions *would* always accord with autonomy of the will. But since I intuit myself at the same time as a member of the world of sense, my actions *ought* so to accord. This categorical *ought* presents a synthetic a priori proposition, whereby in addition to my will as affected by sensuous desires there is added further the idea of the same will, but as belonging to the intelligible world, pure and practical of itself, and as containing the supreme condition of the former will insofar as reason is concerned. All this is similar to the way in which concepts [categories] of the understanding, which of themselves signify nothing but the form of law in general, are added to intuitions of the world of sense and thus make possible synthetic a priori propositions, upon which all knowledge of nature rests.

The practical use of ordinary human reason bears out the correctness of this deduction. There is no one, not even the meanest villain, provided only that he is otherwise accustomed to the use of reason, who, when presented with examples of honesty of purpose, of steadfastness in following good maxims, and of sympathy and general benevolence (even when involved with great sacrifices of advantages and comfort) does not wish that he might also possess these qualities. Yet he cannot attain these in himself only because of his inclinations and impulses; but at the same time he wishes to be free from such inclinations which are a burden to him. He thereby proves that by having a will free of sensuous impulses he transfers himself in thought into an order of things entirely different from that of his desires in the field of sensibility. Since he cannot expect to obtain by the aforementioned wish any gratification of his desires or any condition that would satisfy any of his actual or even conceivable inclinations (inasmuch as through such an expectation the very idea that elicited the wish would be deprived of its preeminence) he can only expect a greater intrinsic worth of his own person. This better person he believes himself to be when he transfers himself to the standpoint of a 455
member of the intelligible world, to which he is involuntarily forced by the idea of freedom, i.e., of being independent of determination by causes of the world of sense. From this standpoint he is conscious of having a good will, which by his own admission constitutes the law for the bad will belonging to him as a member of the world of sense—a law whose authority he acknowledges even while he transgresses it. The moral *ought* is, therefore, a necessary *would* insofar as he is a member of the intelligible world, and is thought by him as an *ought* only insofar as he regards himself as being at the same time a member of the world of sense.

Concerning the Extreme Limit of All Practical Philosophy

All men think of themselves as free as far as their will is concerned. Hence arise all judgments upon actions as being such as ought to have been done, even

though they were not done. But this freedom is not a concept of experience, nor can it be such, since it always holds, even though experience shows the opposite of those requirements represented as necessary under the presupposition of freedom. On the other hand, it is just as necessary that whatever happens should be determined without any exception according to laws of nature; and this necessity of nature is likewise no concept of experience, just because it involves the concept of necessity and thus of a priori knowledge. But this concept of nature is confirmed by experience and must inevitably be presupposed if there is to be possible experience, which is coherent knowledge of the objects of sense in accordance with universal laws. Freedom is, therefore, only an idea of reason whose objective reality is in itself questionable; but nature is a concept of the understanding, which proves, and necessarily must prove, its reality by examples from experience.

There arises from this a dialectic of reason, since the freedom attributed to the will seems to contradict the necessity of nature. And even though at this parting of the ways reason for speculative purposes finds the road of natural necessity much better worn and more serviceable than that of freedom, yet for practical purposes the footpath of freedom is the only one
456 upon which it is possible to make use of reason in our conduct. Therefore, it is just as impossible for the most subtle philosophy as for the most ordinary human reason to argue away freedom. Hence philosophy must assume that no real contradiction will be found between freedom and natural necessity in the same human actions, for it cannot give up the concept of nature any more than that of freedom.

Nevertheless, even though one might never be able to comprehend how freedom is possible, yet this apparent contradiction must at least be removed in a convincing manner. For if the thought of freedom contradicts itself or nature, which is equally necessary, then freedom would have to be completely given up in favor of natural necessity.

It would, however, be impossible to escape this contradiction if the subject, deeming himself free, were to think of himself in the same sense or in the very same relationship when he calls himself free as when he assumes himself subject to the law of nature regarding the same action. Therefore, an unavoidable problem of speculative philosophy is at least to show that its illusion regarding the contradiction rests on our thinking of man in a different sense and relation when we call him free from when we regard him as being a part of nature and hence as subject to the laws of nature. Hence it must show not only that both can coexist very well, but that both must be thought of as necessarily united in the same subject; for otherwise no explanation could be given as to why reason should be burdened with an idea which involves us in a perplexity that is sorely embarrassing to reason in its theoretic use, even though it may without contradiction be united with another idea that is sufficiently established. This duty, however, is incumbent solely on speculative philosophy in order that it may clear the way for practical philosophy. Thus the philosopher has no option as to whether he will remove the apparent contradiction or leave it untouched; for in the latter case the theory regarding this could be *bonum vacans*,[56] into the possession of which the fatalist can justifiably enter and chase all morality out of its supposed property as occupying it without title.

Nevertheless, one cannot here say as yet that the boundary of practical philosophy begins. For the settlement of the controversy does not belong to practical philosophy; the latter only requires speculative reason to put an end to the dissension in which it is entangled 457
as regards theoretical questions in order that practical reason may have rest and security from external attacks that might make disputable the ground upon which it wants to build.

The just claim to freedom of the will made even by ordinary human reason is founded on the consciousness and the admitted presupposition that reason is independent of mere subjective determination by causes which together make up what belongs only to sensation and comes under the general designation of sensibility. Regarding himself in this way as intelligence, man thereby puts himself into another order of things. And when he thinks of himself as intelligence endowed with a will and consequently with causality, he puts himself into relation with determining grounds of a kind altogether different from the kind when he perceives himself as a phenomenon in the

56. [vacant property]

world of sense (as he really is also) and subjects his causality to external determination according to laws of nature. Now he soon realizes that both can—and indeed must—hold good at the same time. For there is not the slightest contradiction involved in saying that a thing as appearance (belonging to the world of sense) is subject to certain laws, while it is independent of those laws when regarded as a thing or being in itself. That man must represent and think of himself in this twofold way rests, on the one hand, upon the consciousness of himself as an object affected through the senses and, on the other hand, upon the consciousness of himself as intelligence, i.e., as independent of sensuous impulses in his use of reason (and hence as belonging to the intelligible world).

And hence man claims that he has a will which reckons to his account nothing that belongs merely to his desires and inclinations, and which, on the contrary, thinks of actions that can be performed only by disregarding all desires and sensuous incitements as being possible and as indeed being necessary for him. The causality of such actions lies in man as intelligence and lies in the laws of such effects and actions as are in accordance with principles of an intelligible world, of which he knows nothing more than that in such a world reason alone, and indeed pure reason independently of sensibility, gives the law. Furthermore, since he is in such a world his proper self only as intelligence (whereas regarded as a human being he is merely an appearance of himself), those laws apply to him immediately and categorically. Consequently, incitements from inclinations and impulses (and hence from the whole nature of the world of sense) cannot impair the laws of his
458 willing insofar as he is intelligence. Indeed he does not even hold himself responsible for such inclinations and impulses or ascribe them to his proper self, i.e., his will, although he does ascribe to his will any indulgence which he might extend to them if he allowed them any influence on his maxims to the detriment of the rational laws of his will.

When practical reason thinks itself into an intelligible world, it does not in the least thereby transcend its limits, as it would if it tried to enter it by intuition or sensation. The thought of an intelligible world is merely negative as regards the world of sense. The latter world does not give reason any laws for determining the will and is positive only in this single point, viz., it simultaneously combines freedom as negative determination with a positive faculty and even a causality of reason. This causality is designated as a will to act in such a way that the principle of actions may accord with the essential character of a rational cause, i.e., with the condition that the maxim of these actions have universal validity as a law. But if practical reason were to bring in an object of the will, i.e., a motive of action, from the intelligible world, then it would overstep its boundaries and pretend to be acquainted with something of which it knows nothing. The concept of an intelligible world is thus only a point of view which reason sees itself compelled to take outside of appearances in order to think of itself as practical. If the influences of sensibility were determining for man, reason would not be able to take this point of view, which is nonetheless necessary if he is not to be denied the consciousness of himself as intelligence and hence as a rational cause that is active through reason, i.e., free in its operation. This thought certainly involves the idea of an order and a legislation different from that of the mechanism of nature which applies to the world of sense; and it makes necessary the concept of an intelligible world (i.e., the whole of rational beings as things in themselves). But it makes not the slightest claim to anything more than to think of such a world as regards merely its formal condition—i.e., the universality of the will's maxims as laws and thus the will's autonomy, which alone is consistent with freedom. On the contrary, all laws determined by reference to an object yield heteronomy, which can be found only in laws of nature and can apply only to the world of sense.

But reason would overstep all its bounds if it undertook to explain how pure reason can be practical. 459
This is exactly the same problem as explaining how freedom is possible.

For we can explain nothing but what we can reduce to laws whose object can be given in some possible experience. But freedom is a mere idea, whose objective reality can in no way be shown in accordance with laws of nature and consequently not in any possible experience. Therefore, the idea of freedom can never admit of comprehension or even of insight, because it cannot by any analogy have an example falling

under it. It holds only as a necessary presupposition of reason in a being who believes himself conscious of a will, i.e., of a faculty distinct from mere desire (namely, a faculty of determining himself to action as intelligence and hence in accordance with laws of reason independently of natural instincts). But where determination according to laws of nature ceases, there likewise ceases all explanation and nothing remains but defense, i.e., refutation of the objections of those who profess to have seen deeper into the essence of things and thereupon boldly declare freedom to be impossible. One can only show them that their supposed discovery of a contradiction lies nowhere but here: in order to make the law of nature applicable to human actions, they have necessarily had to regard man as an appearance; and now when they are required to think of man qua intelligence as thing in himself as well, they still persist in regarding him as appearance. In that case, to be sure, the exemption of man's causality (i.e., his will) from all the natural laws of the world of sense would, as regards one and the same subject, give rise to a contradiction. But this disappears if they would but bethink themselves and admit, as is reasonable, that behind appearances there must lie as their ground also things in themselves (though hidden) and that the laws of their operations cannot be expected to be the same as those that govern their appearances.

The subjective impossibility of explaining freedom
460 of the will is the same as the impossibility of discovering and explaining an interest[57] which man can take in moral laws. Nevertheless, he does indeed take such an interest, the basis of which in us is called moral feeling. Some people have falsely construed this feeling to be the standard of our moral judgment, whereas it must rather be regarded as the subjective effect that the law exercises upon the will, while reason alone furnishes the objective grounds of such moral feeling.

In order to will what reason alone prescribes as an *ought* for sensuously affected rational beings, there certainly must be a power of reason to infuse a feeling of pleasure or satisfaction in the fulfillment of duty, and hence there has to be a causality of reason to determine sensibility in accordance with rational principles. But it is quite impossible to discern, i.e., to make a priori conceivable, how a mere thought which itself contains nothing sensuous can produce a sensation of pleasure or displeasure. For here is a special kind of causality regarding which, as with all causality, we can determine nothing a priori but must consult experience alone. However, experience can provide us with no relation of cause and effect except between two objects of experience. But in this case pure reason by means of mere ideas (which furnish no object at all for experience) is to be the cause of an effect that admittedly lies in experience. Consequently, there is for us men no possibility at all for an explanation as to how and why the universality of a maxim as a law, and hence morality, interests us. This much only is certain: the moral law is valid for us not because it interests us (for this is heteronomy and the dependence of practical reason on sensibility, viz., on an underlying feeling whereby reason could 461 never be morally legislative; but, rather, the moral law interests us because it is valid for us as men, since it has sprung from our will as intelligence and hence from our proper self. But what belongs to mere appearance is necessarily subordinated by reason to the nature of the thing in itself.

Thus the question as to how a categorical imperative is possible can be answered to the extent that there can be supplied the sole presupposition under which such an imperative is alone possible—namely, the idea of freedom. The necessity of this presupposition is discernible, and this much is sufficient for the

57. Interest is that by which reason becomes practical, i.e., a cause determining the will. Therefore one says of rational beings only that they take an interest in something: non-rational creatures feel only sensuous impulses. Reason takes an immediate interest in the action only when the universal validity of the maxim of the action is a sufficient determining ground of the will. Such an interest alone is pure. But when reason is able to determine the will only by means of another object of desire or under the presupposition of some special feeling in the subject, then reason takes only a mediate interest in the action. And since reason of itself alone without the help of experience can discover neither objects of the will nor a special feeling underlying the will, the latter interest would be only empirical and not a pure rational interest. The logical interest of reason (viz., to extend its insights) is never immediate, but presupposes purposes for which reason might be used.

practical use of reason, i.e., for being convinced as to the validity of this imperative, and hence also of the moral law; but how this presupposition itself is possible can never be discerned by any human reason. However, on the presupposition of freedom of the will of an intelligence, there necessarily follows the will's autonomy as the formal condition under which alone the will can be determined. To presuppose this freedom of the will (without involving any contradiction with the principle of natural necessity in the connection of appearances in the world of sense) is not only quite possible (as speculative philosophy can show), but is without any further condition also necessary for a rational being conscious of his causality through reason and hence conscious of a will (which is different from desires) as he makes such freedom in practice, i.e., in idea, the underlying condition of all his voluntary actions. But how pure reason can be practical by itself without other incentives taken from whatever source—i.e., how the mere principle of the universal validity of all reason's maxims as laws (which would certainly be the form of a pure practical reason) can by itself, without any matter (object) of the will in which some antecedent interest might be taken, furnish an incentive and produce an interest which could be called purely moral; or, in other words, how pure reason could be practical; to explain all this is quite beyond the power of human reason, and all the effort and work of seeking such an explanation is wasted.

It is just the same as if I tried to find out how
462 freedom itself is possible as causality of a will. For I thereby leave the philosophical basis of explanation, and I have no other basis. Now I could indeed flutter about in the world of intelligences, i.e., in the intelligible world still remaining to me. But even though I have an idea of such a world—an idea which has its own good grounds—yet I have not the slightest acquaintance with such a world and can never attain such acquaintance by all the efforts of my natural faculty of reason. This intelligible world signifies only a something that remains over when I have excluded from the determining grounds of my will everything that belongs to the world of sense, so as to restrict the principle of having all motives come from the field of sensibility. By so doing I set bounds to this field and show that it does not contain absolutely everything within itself but that beyond it there is still something more, regarding which, however, I have no further acquaintance. After the exclusion of all matter, i.e., cognition of objects, from pure reason which thinks this ideal, nothing remains over for me except such reason's form, viz., the practical law of the universal validity of maxims; and in conformity with this law I think of reason in its relation to a pure intelligible world as a possible efficient cause, i.e., as a cause determining the will. An incentive must in this case be wholly absent; this idea of an intelligible world would here have to be itself the incentive or have to be that in which reason originally took an interest. But to make this conceivable is precisely the problem that we cannot solve.

Here then is the extreme limit of all moral inquiry. To determine this limit is of great importance for the following considerations. On the one hand, reason should not, to the detriment of morals, search around in the world of sense for the supreme motive and for some interest that is conceivable but is nonetheless empirical. On the other hand, reason should not flap its wings impotently, without leaving the spot, in a space that for it is empty, namely, the space of transcendent concepts that is called the intelligible world, and thereby lose itself among mere phantoms of the brain. Furthermore, the idea of a pure intelligible world regarded as a whole of all intelligences to which we ourselves belong as rational beings (even though we are from another standpoint also members of the world of sense) remains always a useful and permissible idea for the purpose of a rational belief, although all knowledge ends at its boundary. This idea produces in us a lively interest in the moral law by means of the splendid ideal of a universal kingdom of ends in themselves (rational beings), to which we can be- 463
long as members only if we carefully conduct ourselves according to maxims of freedom as if they were laws of nature.

Concluding Remark

The speculative use of reason with regard to nature leads to the absolute necessity of some supreme cause of the world. The practical use of reason with reference to freedom leads also to absolute necessity, but only to the necessity of the laws of the actions of a

rational being as such. Now it is an essential principle of all use of our reason to push its knowledge to a consciousness of its necessity (for without necessity there would be no rational knowledge). But there is an equally essential restriction of the same reason that it cannot have insight into the necessity either of what is or what does happen or of what should happen, unless there is presupposed a condition under which it is or does happen or should happen. In this way, however, the satisfaction of reason is only further and further postponed by the continual inquiry after the condition. Reason, therefore, restlessly seeks the unconditionally necessary and sees itself compelled to assume this without having any means of making such necessity conceivable; reason is happy enough if only it can find a concept which is compatible with this assumption. Hence there is no fault in our deduction of the supreme principle of morality, but rather a reproach which must be made against human reason generally, involved in the fact that reason cannot render conceivable the absolute necessity of an unconditioned practical law (such as the categorical imperative must be). Reason cannot be blamed for not being willing to explain this necessity by means of a condition, namely, by basing it on some underlying interest, because in that case the law would no longer be moral, i.e., a supreme law of freedom. And so even though we do not indeed grasp the practical unconditioned necessity of the moral imperative, we do nevertheless grasp its inconceivability. This is all that can be fairly asked of a philosophy which strives in its principles to reach the very limit of human reason.

To Perpetual Peace
A Philosophical Sketch

To Perpetual Peace

Whether this satirical inscription on a certain Dutch shopkeeper's sign, on which a graveyard was painted, holds for *men* in general, or especially for heads of state who can never get enough of war, or perhaps only for philosophers who dream that sweet dream, is not for us to decide. However, the author of this essay does set out one condition: The practical politician tends to look down with great smugness on the political theorist, regarding him as an academic whose empty ideas cannot endanger the nation since the nation must proceed on principles [derived from] experience; consequently, the theorist is allowed to fire his entire volley, without the *worldly-wise* statesman becoming the least bit concerned. Now if he is to be consistent—and this is the condition I set out—the practical politician must not claim, in the event of a dispute with a theorist, to detect some danger to the nation in those views that the political theorist expresses openly and without ulterior motive. By this *clausula salvatoria*, the author of this essay will regard himself to be expressly protected in the best way possible from all malicious interpretation.

FIRST SECTION

Which Contains the Preliminary Articles for Perpetual Peace Among Nations

1. No treaty of peace that tacitly reserves issues for a future war shall be held valid.

From *To Perpetual Peace*, translated by Ted Humphrey (Indianapolis: Hackett Publishing Company, 2003). Copyright © 2003. Reprinted by permission of the publisher.

For if this were the case, it would be a mere truce, a suspension of hostilities, not *peace*, which means the end of all hostilities, so much so that even to modify it by "perpetual" smacks of pleonasm. A peace treaty nullifies all existing causes for war, even if they are unknown to the contracting parties, and even if they are assiduously ferreted out from archival documents. When one or both parties to a peace treaty, being too exhausted to continue the war, has a mental reservation (*reservatio mentalis*) concerning some presently unmentioned pretension that will be revived at the first opportune moment, since ill will between the warring parties still remains, that reservation is a bit of mere Jesuitical casuistry. If we judge such actions in their true character, they are beneath the dignity of a ruler, just as a willingness to indulge in reasoning of this sort is beneath his minister's dignity.

If, however, enlightened concepts of political prudence lead us to believe that the true honor of a nation lies in its continual increase of power by whatever means necessary, this judgment will appear academic and pedantic.

2. No independent nation, be it large or small, may be acquired by another nation by inheritance, exchange, purchase, or gift.

A nation is not (like the ground on which it is located) a possession (*patrimonium*). It is a society of men whom no other than the nation itself can command or dispose of. Since, like a tree, each nation has its own roots, to incorporate it into another nation as a graft, denies its existence as a moral person, turns it into a thing, and thus contradicts the concept of the original contract, without which a people has no rights. [1]

1. A hereditary monarch is not a nation that can be inherited by another nation; only the right to rule it can be inherited by another physical person. Consequently, the

Everyone is aware of the danger that this purported right of acquisition by the marriage of nations to one another—a custom unknown in other parts of the world—has brought to Europe, even in the most recent times. It is a new form of industry, in which influence is increased without expending energy, and territorial possessions are extended merely by establishing family alliances. The hiring out of one nation's troops to another for use against an enemy not common to both of them falls under this principle, for by this practice subjects are used and wasted as mere objects to be manipulated at will.

3. *Standing armies (*miles perpetuus*) shall be gradually abolished.*

For they constantly threaten other nations with war by giving the appearance that they are prepared for it, which goads nations into competing with one another in the number of men under arms, and this practice knows no bounds. And since the costs related to maintaining peace will in this way finally become greater than those of a short war, standing armies are the cause of wars of aggression that are intended to end burdensome expenditures. Moreover, paying men to kill or be killed appears to use them as mere machines and tools in the hand of another (the nation), which is inconsistent with the rights of humanity. The voluntary, periodic military training of citizens so that they can secure their homeland against external aggression is an entirely different matter. The same could be said about the hoarding of treasure (for of the three sorts of power, the *power of an army*, the *power of alliance*, and the *power of money*, the third is the most reliable instrument of war). Thus, except for the difficulty in discovering the amount of wealth another nation possesses, the hoarding of treasure could be regarded as preparation for war that necessitates aggression.

4. *No national debt shall be contracted in connection with the foreign affairs of the nation.*

Seeking either internal or external help for the national economy (e.g., for improvement of roads, new settlements, storage of food against years of bad harvest, and so on) is above suspicion. However, as an instrument in the struggle among powers, the credit system—the ingenious invention of a commercial people [England] during this century—of endlessly growing debts that remain safe against immediate demand (since the demand for payment is not made by all creditors at the same time) is a dangerous financial power. It is a war chest exceeding the treasure of all nations taken together, and it can be exhausted only by an inevitable default in taxes (although it can also be forestalled indefinitely by the economic stimulus that derives from credit's influence on industry and commerce). This ease in making war, combined with the inclination of those in power to do so—an inclination that seems innate in human nature—is a great obstacle to perpetual peace. Thus, forbidding foreign debt must be a preliminary article for perpetual peace, for eventual yet unavoidable national bankruptcy must entangle many innocent nations, and that would clearly injure them. Consequently, other nations are justified in allying themselves against such a nation and its pretensions.

5. *No nation shall forcibly interfere with the constitution and government of another.*

For what can justify its doing so? Perhaps some offense that one nation's subjects give to those of another? Instead, this should serve as a warning by providing an example of the great evil that a people falls into through its lawlessness. Generally, the bad example that one free person furnishes for another (as a *scandalum acceptum*) does not injure the latter. But it would be different if, as a result of internal discord, a nation were divided in two and each part, regarding itself as a separate nation, lay claim to the whole; for (since they are in a condition of anarchy) the aid of a foreign nation to one of the parties could not be regarded as interference by the other in its constitution. So long, however, as this internal conflict remains undecided, a foreign power's interference would violate the rights of an independent people struggling with its internal ills. Doing this would be an obvious offense and would render the autonomy of every nation insecure.

6. *No nation at war with another shall permit such acts of war as shall make mutual trust impossible*

---

nation acquires a ruler, but the ruler as such (i.e., as one who already has another kingdom) does not acquire the nation.

during some future time of peace: Such acts include the use of Assassins (percussores) Poisoners (venefici) breach of surrender, instigation of treason (perduello) *in the opposing nation, etc.*

These are dishonorable stratagems. Some level of trust in the enemy's way of thinking must be preserved even in the midst of war, for otherwise no peace can ever be concluded and the hostilities would become a war of extermination (*bellum internecinum*). Yet war is but a sad necessity in the sate of nature (where no tribunal empowered to make judgments supported by the power of law exists), one that maintains the rights of a nation by mere might, where neither party can be declared an unjust enemy (since this already presupposes a judgment of right) and the outcome of the conflict (as if it were a so-called "judgment of God") determines the side on which justice lies. A war of punishment (*bellum punitivum*) between nations is inconceivable (for there is no relation of superior and inferior between them). From this it follows that a war of extermination—where the destruction of both parties along with all rights is the result—would permit perpetual peace to occur only in the vast graveyard of humanity as a whole. Thus, such a war, including all means used to wage it, must be absolutely prohibited. But that the means named above inexorably lead to such war becomes clear from the following: Once they come into use, these intrinsically despicable, infernal acts cannot long be confined to war alone. This applies to the use of spies (*uti exploratoribus*), where only the dishonorableness *of others* (which can never be entirely eliminated) is exploited; but such activities will also carry over to peacetime and will thus undermine it.

• • •

Although the laws set out above are objectively, i.e., from the perspective of the intention of those in power, merely *prohibitive laws* (*leges prohibitivae*), some of them are of that *strict* kind—that is, of that class of laws that holds regardless of the circumstances (*leges strictae*)—that demands *immediate* implementation (viz., Nos. 1, 5, and 6). However, others (viz., Nos. 2, 3, 4), while not exceptions to the rule of law, do permit, depending on circumstances, some subjective leeway in their *implementation* (*leges latae*) as long as one does not lose sight of their end. This permission, e.g., of the *restoration* of freedom to certain nations in accord with No. 2, cannot be put off until doomsday (or as Augustus was wont to promise, *ad calendas graecas*), that is, we cannot fail to implement them. Delay is permitted only to prevent such premature implementation as might injure the intention of the article. For in the case of the second article, the prohibition concerns only the *mode of acquisition*, which is henceforth forbidden, but not the *state of ownership*, which, though not supported by the necessary title of right, was at the time (of the putative acquisition) accepted as lawful by public opinion in all nations.[2]

2. It has previously been doubted, not unjustifiably, whether in addition to *commands* (*leges praeceptivae*) and *prohibitions* (*leges prohibitivae*) pure reason could provide *permissive laws* (*leges permissivae*). For in general laws contain a foundation of objective practical necessity, while permission only provides a foundation for certain acts that depend on practical contingencies. Thus a *permissive* law would necessitate an action that one cannot be compelled to perform, which, if the object of law has the same sense in both cases, would entail a contradiction. But the permissive law here under consideration only prohibits certain modes of acquiring a right in the future (e.g., through inheritance), while the exception from this prohibition, i.e., the permission, applies to a present state of possession. In the transition from the state of nature to that of civil society, then, this possession, while unjust in itself, may nonetheless be regarded as *honest* (*possessio putativa*) and can continue to endure by virtue of a permissive law derived from natural right. However, as soon as any putative possession comes to be regarded as prohibited in the state of nature, every similar form of acquisition is subsequently prohibited in civil society, and this putative right to continuing possession would not hold if such a supposed acquisition had occurred in the civil state. In that case it would, as an offense against natural law, have to cease existing as soon as its illegality were discovered.

My desire here has been simply to draw the attention of proponents of natural right to the concept of a *lex permissiva*, a concept that reason in its systematically analytic use sets out and that is often used in civil (statutory) law, though with this difference, namely, that the prohibitive part of law stands on its own, while the permissive part is not (as it should be) included in the law as a limiting condition, but is regarded instead as among

SECOND SECTION

Which Contains the Definitive Articles for Perpetual Peace Among Nations

The state of peace among men living in close proximity is not the natural state (*status naturalis*); instead, the natural state is a one of war, which does not just consist in open hostilities, but also in the constant and enduring threat of them. The state of peace must therefore be *established*, for the suspension of hostilities does not provide the security of peace, and unless this security is pledged by one neighbor to another (which can happen only in a state of *lawfulness*), the latter, from whom such security has been requested, can treat the former as an enemy.[3]

First Definitive Article for a Perpetual Peace

The civil constitution of every nation should be republican.

The sole established constitution that follows from the idea of an original contract, the one on which all of a nation's rightful legislation must be based, is republican. For, first, it accords with the principles of the *freedom* of the members of a society (as men), second, it accords with the principles of the *dependence* of everyone on a single, common [source of] legislation (as subjects), and third, it accords with the law of equality of them all (as citizens).[4] Thus, so far

---

the exceptions to it. This means that this or that will be forbidden, *as is the case with* Nos. 1, 2, and 3, and so on indefinitely, for permissions arise only circumstantially, not according to a principle, that is, they arise only in considering specific situations. Otherwise the conditions would have to be stated in the *formulation of the prohibitive laws* and would in that way have to become laws of permission. It is therefore regrettable that the incisive, but unsolved Prize question posed by the wise and acute Count von Windischgrätz [Reichsgraf Joseph Niklaus Windisch-Graetz (1744–1802) proposed a prize question regarding the formulation of contracts in such a way that they could have only a single interpretation, thereby eliminating disputes over the transfer of property], a question that directly concerns this issue, has been forgotten so quickly. For the possibility of a formula (such as exists in mathematics) is the only true criterion of all subsequent legislation, and without it the so-called *ius certum* will forever remain a pious wish. In its absence, we shall merely have *general* laws (which are valid in general), but no universal ones (which are universally valid), and it is the latter that the concept of a law requires.

3. It is commonly assumed that one ought not take hostile action against another unless one has already been actively *injured* by that person and that is entirely correct if both parties live in a state [governed by] *civil law*. For by entering into civil society, each person gives every other (by virtue of the sovereignty that has power over them both) the requisite security. However, a man (or a people) who is merely in a state of nature denies me this security and injures me merely by being in this state. For although he does not actively (*facto*) injure me, he does so by virtue of the lawlessness of his state (*statu iniusto*), by which he constantly threatens me, and I can require him either to enter with me into a state of civil law or to remove himself from my surroundings. Thus, the postulate on which all the following articles rest is: "All men who can mutually influence one another must accept some civil constitution."

Every just constitution, as far as the persons who accept it are concerned, will be one of the three following:

1. one conforming to the civil rights of men in a nation (*ius civitatis*);
2. one conforming to the *rights of nations* in relations to one another;
3. one conforming to the *rights of world citizenship*, so far as men and nations stand in mutually influential relations as citizens of a universal nation of men (*ius cosmopoliticum*). These are not arbitrary divisions, but ones that are necessary in relationship to the idea of perpetual peace. Because if even only one of these [nations] had only physical influence on another, they would be in a state of nature, and consequently they would be bound together in a state of war. Our intention here is to free them from this.

4. *Rightful* (consequently external) *freedom* cannot be defined in the way it usually is, as the privilege to do whatever one wills as long as one does no injustice. For what does privilege mean? The possibility of action as long as one does no wrong. Thus, the clarification would read: Freedom is the possibility of action as long as one does no wrong. One does no wrong (one may thus do what one wills), if only one does no wrong. This is a mere empty tautology. Instead, external (*rightful*) *freedom* is to be clarified as follows: It is the privilege not to obey any external laws except those to which I have been able to

as [the matter of] right is concerned, republicanism is the original foundation of all forms of civil constitution. Thus, the only question remaining is this, does it also provide the only foundation for perpetual peace?

Now in addition to the purity of its origin, a purity whose source is the pure concept of right, the republican constitution also provides for this desirable result, namely, perpetual peace, and the reason for this is as follows: If (as must inevitably be the case, given this form of constitution) the consent of the citizenry is required in order to determine whether or not there will be war, it is natural that they consider all its calamities before committing themselves to so risky a game. (Among these are doing the fighting themselves, paying the costs of war from their own resources, having to repair at great sacrifice the war's devastation, and, finally, the ultimate evil that would make peace itself better, never being able—because of new and constant wars—to expunge the burden of debt.) By contrast, under a nonrepublican constitution, where subjects are not citizens, the easiest thing in the world to do is to declare war. Here the ruler is not a fellow citizen, but the nation's owner, and war does not affect his table, his hunt, his places of pleasure, his court festivals, and so on. Thus, he can decide to go to war for the most meaningless of reasons, as if it were a kind of pleasure party, and he can blithely leave its justification (which decency requires) to his diplomatic corps, who are always prepared for such exercises.

• • •

The following comments are necessary to prevent confusing (as so often happens) the republican form of constitution with the democratic one: The forms of a nation (*civitas*) can be analyzed either on the basis of the persons who possess the highest political authority or on the basis of the way the people are *governed* by their ruler, whoever he may be. The first is called the form of sovereignty (*forma imperii*), of which only three kinds are possible, specifically, where either *one*, or *several* in association, or *all* those together who make up civil society possess the sovereign power (autocracy, aristocracy, and democracy, the power of a monarch, the power of a nobility, the power of a people). The second is the form of government (*forma regiminis*) and concerns the way in which a nation, based on its constitution (the act of the general will whereby a group becomes a people),

---

give my consent. In just the same way external (*rightful*) *equality* in a nation is that relation among citizens whereby no citizen can be bound by a law, unless all are subject to it simultaneously and in the very same way. (The principle of *rightful* dependence requires no clarification, for it is already contained in the concept of a political constitution in general.) The validity of these innate rights that necessarily and inalienably belong to humanity is confirmed and raised to an even higher level by virtue of the principle that man has rightful relations to higher beings (if he believes in them), since by these very same principles he represents himself as a citizen in the supersensuous world. Now so far as my freedom is concerned, I have no obligation even to divine laws knowable only by reason, except only insofar as I am able to consent to them. (For it is through the law of freedom that I am first able rationally to create a concept of the divine will.) But as regards the principle of equality, even the highest worldly being that I can think of (say a great Aeon)—but excepting God—has no reason (assuming I perform my duty in my position, as that Aeon performs his duty in his) to expect it to be my duty only to obey, leaving the right of command to him. This principle of *equality* does not (as does that of freedom) pertain to one's relation to God because God is the sole being excepted from the concept of duty.

Concerning all citizens' right of equality as subjects, one can resolve the issue of whether a hereditary nobility is permissible by asking whether some rank making one citizen superior to another granted by the nation is antecedent to *merit*, or whether merit must precede rank. Now clearly, when rank is tied to birth it is completely uncertain whether merit (skill and integrity in one's office) will accompany it. Consequently, this hereditary arrangement is no different from conferring command on some favorite person who is wholly lacking in merit. This is something that the general will of a people would never agree to in an original contract (which is the principle that underlies all rights). For a nobleman is not, by virtue of that fact alone, a *noble* man. Concerning the *nobility of office* (as one can designate the rank of a higher magistrate, which one must earn by virtue of merit), here rank does not belong to the person, but to the position he holds, and this does not violate [the principle of] equality, because when that person resigns his office he gives up his rank at the same time and again becomes one of the people.

exercises its authority. In this regard, government is either *republican* or *despotic*. *Republicanism* is that political principle whereby executive power (the government) is separated from legislative power. In a despotism the ruler independently executes laws that it has itself made; here rulers have taken hold of the public will and treated it as their own private will. Among the three forms of government, *democracy*, in the proper sense of the term, is necessarily a *despotism*, because it sets up an executive power in which all citizens make decisions about and, if need be, against one (who therefore does not agree); consequently, all, who are not quite all, decide, so that the general will contradicts both itself and freedom.

Every form of government that is not *representative* is properly speaking *without form*, because one and the same person can no more be at one and the same time the legislator and executor of his will (than the universal proposition can serve as the major premise in a syllogism and at the same time be the subsumption of the particular under it in the minor premise). And although the other two forms of political constitution are defective inasmuch as they always leave room for a democratic form of government, it is nonetheless possible that they assume a form of government that accords with the *spirit* of a representative system: As Friederick II [Frederick II (The Great) of Prussia] at least *said*, "I am merely the nation's highest servant."[5] The democratic system makes this impossible, for everyone wants to rule. One can therefore say, the smaller the number of persons who exercise the power of the nation (the number of rulers), the more they represent and the closer the political constitution approximates the possibility of republicanism, and thus, the constitution can hope through gradual reforms finally to become republican. For this reason, attaining this state that embodies a completely just constitution is more difficult in an aristocracy than in a monarchy, and, except by violent revolution, there is no possibility of attaining it in a democracy. Nonetheless, the people are incomparably more concerned with the form of government[6] than with the form of the constitution (although a great deal depends on the degree to which the latter is suited to the goals of the former). But if the form of government is to cohere with the concept of right, it must include the representative system, which is possible only in a republican form of government and without which (no matter what the constitution may be) government is despotic and brutish. None of the ancient so-called republics were aware of this, and consequently they inevitably degenerated into despotism; still, this is more bearable under a single person's rulership than other forms of government are.

Second Definitive Article for a Perpetual Peace

The right of nations shall be based on a federation of free states.

5. People have often criticized the lofty titles that are normally bestowed on a ruler ("the divinely anointed" and "the representative and executor of the divine will on earth") as gross and extravagant flatteries; but it seems to me that this is without basis. Far from stirring arrogance in the ruler of a country, they should instead humble his soul, providing he possesses reason (which one must assume) and has reflected on the fact that he has undertaken an office that is too great for a single man, the holiest one that God has established on earth, the protector of the *rights of mankind*, and he must always be careful not to tread upon this apple of God's eye.

6. In his important sounding but hollow and empty language, Mallet du Pan [Jacques Mallet du Pan (1749–1800) in *Über die französische Revlution and die Ursachen irer Dauer* (1794) (*On the French Revolution and the Causes of Its Duration*). Du Pan was a Swiss-born opponent of the revolution.] Pan boasts of having after many years of experience finally come to be convinced of Pope's well known saying, "For forms of government let fools contest;/Whate're is best administered is best." [Alexander Pope, *Essay on Man* III, 303–4.] If that means that the best administered government is the best administered, then he has, in Swift's expression, "cracked a nut and been rewarded with only a worm." But if it means that it is the best form of government, i.e., political constitution, then it is fundamentally false, for good governments prove nothing about form of government. Who has ruled better than a Titus and a Marcus Aurelius, and yet one was succeeded by a Domitian and the other by Commodus, which could not have happened under a good political constitution, since their unfitness for the post was known early enough and the power of the ruler was sufficient to have excluded them from it.

As nations, peoples can be regarded as single individuals who injure one another through their close proximity while living in the state of nature (i.e., independently of external laws). For the sake of its own security, each nation can and should demand that the others enter into a contract resembling the civil one and guaranteeing the rights of each. This would be a federation of *nations*, but it must not be a nation consisting of nations. The latter would be contradictory, for in every nation there exists the relation of *ruler* (legislator) to *subject* (those who obey, the people); however, many nations in a single nation would constitute only a single nation, which contradicts our assumption (since we are here weighing the rights of *nations* in relation to one another, rather than fusing them into a single nation).

Just as we view with deep disdain the attachment of savages to their lawless freedom—preferring to scuffle without end rather than to place themselves under lawful restraints that they themselves constitute, consequently preferring a mad freedom to a rational one—and consider it barbarous, rude, and brutishly degrading of humanity, so also should we think that civilized peoples (each one united into a nation) would hasten as quickly as possible to escape so similar a state of abandonment. Instead, however, each *nation* sees its majesty (for it is absurd to speak of the majesty of a people) to consist in not being subject to any external legal constraint, and the glory of its ruler consists in being able, without endangering himself, to command many thousands to sacrifice themselves for a matter that does not concern them.[7] The primary difference between European and American savages is this, while many latter tribes have been completely eaten by their enemies, the former know how to make better use of those they have conquered than to consume them: They increase the number of their subjects and thus also the quantity of instruments they have to wage even more extensive wars.

Given the depravity of human nature which is revealed and can be glimpsed in the free relations among nations (though deeply concealed by governmental restraints in law governed civil-society), one must wonder why the word *right* has not been completely discarded from the politics of war as pedantic, or why no nation has openly ventured to declare that it should be. For while, Hugo Grotius, Pufendorf, Vattel [H. Grotius (1583–1645), *De jure belli et pacis*, 1625; Samuel von Pufendorf (1632–1694), *De jure naturae et gentium*, 1672; Emer de Vattel (1714–1767), *Le droit des gens*, 1758], and others whose philosophically and diplomatically formulated codes do not and cannot have the slightest legal force (since nations do not stand under any common external constraints), are always piously cited in justification of a war of aggression (and who therefore provide only cold comfort), no example can be given of a nation having foregone its intention [of going to war] based on the arguments provided by such important men. The homage that every nation pays (at least in words) to the concept of right proves, nonetheless, that there is in man a still greater, though presently dormant, moral aptitude to master the evil principle in himself (a principle he cannot deny) and to hope that others will also overcome it. For otherwise the word *right* would never leave the mouths of those nations that want to make war on one another, unless it were mockingly, as when that Gallic prince declared, "Nature has given the strong the prerogative of making the weak obey them."

Nations can press for their rights only by waging war and never in a trial before an independent tribunal, but war and its favorable consequence, victory, cannot determine the right. And although a *treaty of peace* can put an end to some particular war, it cannot end the state of war (the tendency always to find a new pretext for war). (And this situation cannot straightforwardly be declared unjust, since in this circumstance each nation is judge of its own case.) Nor can one say of nations as regards their rights what one can say concerning the natural rights of men in a state of lawlessness, to wit, that "they should abandon this state." (For as nations they already have an internal, legal constitution and therefore have outgrown the compulsion to subject themselves to another legal constitution that is subject to someone else's concept of right.) Nonetheless, from the throne of its moral legislative power, reason absolutely condemns war as a means of determining the right and makes seeking

7. Thus a Bulgarian prince gave this answer to a Greek emperor who kindly offered to settle a conflict between them by duel: "A smith who has tongs will not use his hands to take the glowing iron from the fire."

the state of peace a matter of unmitigated duty. But without a contract among nations peace can be neither inaugurated nor guaranteed. A league of a special sort must therefore be established, one that we can call a *league of peace* (*foedus pacificum*), which will be distinguished from a *treaty of peace* (*pactum pacis*) because the latter seeks merely to stop one war, while the former seeks to end *all* wars forever. This league does not seek any power of the sort possessed by nations, but only the maintenance and security of each nation's own freedom, as well as that of the other nations leagued with it, without their having thereby to subject themselves to civil laws and their constraints (as men in the state of nature must do). It can be shown that this *idea of federalism* should eventually include all nations and thus lead to perpetual peace. For if good fortune should so dispose matters that a powerful and enlightened people should form a republic (which by its nature must be inclined to seek perpetual peace), it will provide a focal point for a federation association among other nations that will join it in order to guarantee a state of peace among nations that is in accord with the idea of the right of nations, and through several associations of this sort such a federation can extend further and further.

That a people might say, "There should be no war among us, for we want to form ourselves into a nation, i.e., place ourselves under a supreme legislative, executive, and judicial power to resolve our conflicts peacefully," is understandable. But when a nation says, "There should be no war between me and other nations, though I recognize no supreme legislative power to guarantee me my rights and him his," then if there does not exist a surrogate of the union in a civil society, which is a free federation, it is impossible to understand what the basis for so entrusting my rights is. Such a federation is necessarily tied rationally to the concept of the right of nations, at least if this latter notion has any meaning.

The concept of the right of nations as a right to go to war is meaningless (for it would then be the right to determine the right not by independent, universally valid laws that restrict the freedom of everyone, but by one-sided maxims backed by force). Consequently, the concept of the right of nations must be understood as follows: that it serves justly those men who are disposed to seek one another's destruction and thus find perpetual peace in the grave that covers all the horrors of violence and its perpetrators. Reason can provide related nations with no other means for emerging from the state of lawlessness, which consists solely of war, than that they give up their savage (lawless) freedom, just as individual persons do, and, by accommodating themselves to the constraints of common law, establish a *nation of peoples* (*civitas gentium*), that (continuingly growing) will finally include all the people of the earth. But they do not will to do this because it does not conform to their idea of the right of nations, and consequently they discard in *hypothesis* what is true in *thesis*. So (if everything is not to be lost) in place of the positive idea of *a world republic* they put only the *negative* surrogate of an enduring, ever expanding *federation* that prevents war and curbs the tendency of that hostile inclination to defy the law, though there will always be constant danger of their breaking loose. (*Furor impius intus—fremit horridus ore cruento.* Vergil).[8] ["And godless Furor shall sit/ Inside on his frightful weapons, hands bound with a hundred/Brass knots behind him, and roar with bloody mouth. Vergil, *Aeneid* I, 294–6 (Lind translation).]

Third Definitive Article for a Perpetual Peace

Cosmopolitan right shall be limited to conditions of universal hospitality.

8. It would not be inappropriate at the end of a war concluded by peace for a people to set aside, after a festival of thanksgiving, a day of atonement so that in the name of the nation they might ask heaven to forgive them for the great sin that the human race continues to be guilty of by failing to establish a lawful contract in relation to other peoples, preferring instead, through pride in their independence, to employ the barbarous means of war (by use of which they cannot secure what they seek, namely, the rights of each particular nation). The festivals of thanksgiving for victories during war, the hymns that are sung (in good Israelitic fashion) to the *Lord of Lords*, could not stand in greater contrast with the ideas of a Father of men, for besides displaying an indifference to the way in which peoples seek their mutual right (which is sad enough), they actually express joy at having destroyed numerous humans and their happiness.

As in the preceding articles, our concern here is not with philanthropy but with *right*, and in this context *hospitality* (hospitableness) means the right of an alien not to be treated as an enemy upon his arrival in another's country. If it can be done without destroying him, he can be turned away; but, as long as he behaves peaceably he cannot be treated as an enemy. He may request the *right* to be a *permanent visitor* (which would require a special, charitable agreement to make him a fellow inhabitant for a certain period), but the *right to visit*, to associate, belongs to all men by virtue of their common ownership of the earth's surface; for since the earth is a globe, they cannot scatter themselves infinitely, but must, finally, tolerate living in close proximity, because originally no one had a greater right to any region of the earth than anyone else. Uninhabitable parts of this surface—the sea and deserts—separate these communities, and yet ships and camels (the *ships* of the desert) make it possible to approach one another across these unowned regions, and the right to the *earth's surface* that belongs in common to the totality of men makes commerce possible. The inhospitableness that coastal dwellers (e.g., on the Barbary Coast) show by robbing ships in neighboring seas and by making slaves of stranded seafarers, or of desert dwellers (the Arabic Bedouins), who regard their proximity to nomadic peoples as giving them a right to plunder, is contrary to natural right, even though the latter extends the right to hospitality, i.e., the privilege of aliens to enter, only so far as makes attempts at commerce with native inhabitants possible. In this way distant parts of the world can establish with one another peaceable relations that will eventually become matters of public law, and the human race can gradually be brought closer and closer to a cosmopolitan constitution.

Compare this with the inhospitable conduct of civilized nations in our part of the world, especially commercial ones: The injustice that they display towards foreign lands and peoples (which is the same as *conquering* them), is terrifying. When discovered, America, the lands occupied by the blacks, the Spice Islands, the Cape, etc., were regarded as lands belonging to no one because their inhabitants were counted for nothing. Foreign soldiers were imported into East India under the pretext of merely establishing economic relations, and with them came subjection of the natives, incitement of various nations to widespread wars among themselves, famine, rebellion, treachery, and the entire litany of evils that can afflict the human race.

China[9] and Japan (*Nippon*), which have had experience with such guests, have therefore wisely

9. [For the reasons why] we should call this great kingdom by the name it gives itself (namely, China, not Sina, or anything similar), one has only to consult Georgi's *Alpha [betum] Tibet [anum]*, pp. 651–4, especially note b. According to the observation of Professor Fischer of Petersburg, there is actually no determinate name that it uses in reference to itself. The most common one is the word "*Kin*," namely, gold (which the Tibetans call "*Ser*"), and therefore the emperor is called the king of *Gold* (i.e., of the most magnificent country in the world). In the kingdom itself, this word is probably pronounced "*Chen*," but is pronounced "*Kin*" by the Italian missionaries (who cannot make the guttural sound). From this one can see that the Roman's so-called "Land of Seres" was China, and silk was brought from there to Europe across *Greater Tibet* (probably through *Lesser Tibet*, Bukhara, Persia, and so on). This leads to many speculations concerning the antiquity of this amazing nation in comparison with that of Hindustan, as well as regarding its connections with Tibet and also with Japan. But the name Sina or Tshina, which neighbors of this land give it, leads nowhere. Perhaps this also allows us to clarify the very ancient but never properly understood commerce of Europe with Tibet from what *Hysichius* has recorded about the hierophant's cry "Κονε Ομπαξ" (*Konx Ompax*) in the Eleusinian mysteries. (See *Travels of the Young Anacharsis*, Part V, p. 447f.) For according to Georgi's *Alph. Tibet.*, the word "*Concoia*" means *God*, which has a striking resemblance to Knox.*Pah-cio* (*ibid.*, p. 520), which the Greeks might well have pronounced *pax*, means the *promulgator legis*, the divinity that pervades all of nature (also called *Cencresi*, p. 177). However, *Om*, which La Croze translated *benedictus*, *blessed*, can be related to divinity, but probably means nothing other than the *beatified*, p. 507. Now Fr. Franz Horatius often asked the Tibetan Lamas what they understood God (*Concioa*) to be and always received this answer, "It is the gathering of all the Saints" (i.e., the gathering of all blessed ones who, according to the Lama's doctrine of rebirth, have finally returned, after many migrations through all sorts of bodies, to the divinity, or *Burchane*, i.e., souls metamorphosed into being that is worthy of worship, p. 233). Thus that mysterious term *Konx Ompax* might well refer to that *holy* (*Konx*), *blessed* (*Om*), and

restricted contact with them. China only permits contact with a single European people, the Dutch, whom they nonetheless exclude as if they were prisoners from associating with the natives. The worst (or, considered from the perspective of a moral judge, the best) consequence of all this is that such violence profits these trading companies not at all and that all of them are at the point of near collapse. The Sugar Islands, the seat of the cruellest and most ingenious slavery, yield no true profit, but serve only the indirect and not very profitable purpose of training sailors for ships of war, which in turn aids the pursuit of wars in Europe. And this is the action of powers who, while imbibing injustice like water, make much of their piety and who in matters of orthodoxy want to be regarded as the elect.

Because a (narrower or wider) community widely prevails among the Earth's peoples, a transgression of rights in *one* place in the world is felt *everywhere*; consequently, the idea of cosmopolitan right is not fantastic and exaggerated, but rather an amendment to the unwritten code of national and international rights, necessary to the public rights of men in general. Only such amendment allows us to flatter ourselves with the thought that we are making continual progress towards perpetual peace.

First Supplement on the Guarantee of Perpetual Peace

Perpetual peace is *insured* (guaranteed) by nothing less than that great artist *nature* (*natura daedala rerum*) ["every need/pours from the lap of earth and magic nature." Lucretius, *The Nature of Things*, V, 233–4 (Copley translation)] whose mechanical process makes her purposiveness visibly manifest, permitting harmony to emerge among men through their discord, even against their wills. If we regard this design as a compulsion resulting from one of her causes whose laws of operation are unknown to us, we call it *fate*, while, if we reflect on nature's purposiveness in the flow of world events, and regard it to be the underlying wisdom of a higher cause that directs the human race toward its objective goal and predetermines the world's course, we call it *providence*.[10] We

wise (*Pax*) supreme Being who pervades the world (nature personified), and its use in the Greek *Mystery religions* may have signified a monotheism to the Epopts that contrasted with the polytheism of the people, though Fr. Horatius (among others) detected an *atheism* in it. But just how that mysterious term made its way from Tibet to Greece may apparently be explained in the foregoing way, as well as Europe's early commerce with China (which may have begun earlier than with Hindustan) through Tibet.

10. There is manifest in the mechanism of nature to which man (as a sensory being) belongs a form that is fundamental to its existence, a form that we cannot conceive except insofar as it underlies the purpose of a predetermining creator of the world. We call this predetermination (divine) *providence* in general; so far as it is established at the *beginning* of the world, we call it *grounding providence* (*providentia conditrix*; *semel iussit, semper parent*, Augustine); ["Providence conditions; once she commands, they always obey."] where this purposiveness in nature's course is maintained through universal laws, we call it *ruling providence* (*providentia gubernatrix*); where it leads to specific ends that men cannot foresee but can only infer from its results, we call it *guiding providence* (*providentia directrix*); finally, where we regard particular events as divine ends, we no longer speak of providence but of *dispensation* (*directio extraordinaria*). However, it is a foolish presumption for men to want to be able to recognize these latter for what they are (for in fact they are miracles, even though the events are not described in that way). No matter how pious and humble such language may be, it is absurd and altogether self-conceited to make an inference from some single event to some special principle as its efficient cause (so that this event is [regarded as] an end and not merely the natural and mechanical consequence of some other end completely unknown to us). In the same way, applying the distinction between *universal* and *special* providence (considered *materially*) to *objects* in the world is unjustifiable and self-contradictory (as when, for example, one claims that nature is concerned to preserve the species, but leaves individuals to chance); for the point of saying that providence applies universally is that no single thing is taken into consideration. Presumably, one intends by this to distinguish between the ways in which providence (considered *formally*) carries out its intentions, that is, in ordinary [fashion] (e.g., the annual death and revival of nature in accordance with the change of seasons) or in *extraordinary* fashion (e.g., the transport of wood by ocean currents to icebound coasts, where it cannot grow, so as to provide for the needs of

cannot actually have *cognitive* knowledge of these intricate designs in nature, nor can we *infer* their actual existence from it, but (as with all relations between the forms of things and purposes in general) we can and must *attribute* them to objects only in thought so as to conceive of their possibility on an analogy with mankind's productive activities. The relationship of objects to and their conformity with the purposes that reason itself sets out for us (the end of morality) can be represented from a *theoretical* point of view as a transcendent idea, but from the practical point of view (where, e.g., it is employed in relation to our concept of duty regarding *perpetual peace*), it is represented as a dogmatic idea and it is here that its reality is properly established. When, as in the context of this essay, our concern is entirely theoretical (and not religious) it is most appropriate to the limits of human reason to use the term *nature* (for in reflecting on the relations of effects to their causes, human reason must remain within the bounds of possible experience); the term *nature* is less *pretentious* than a term connoting that there is a *providence* of which we can have cognitive knowledge, and on which we take flight as on Icarus's wings in order more closely to approach the secrets of some unfathomable intention.

Before we define this guarantee [of perpetual peace] more closely, we must examine the state in which nature has placed her actors on her vast stage, a state that ultimately and necessarily secures their peace—then we shall see how she guarantees the latter.

Nature's provisional arrangement consists of the following: 1. She has taken care that men can live in all regions of the world. 2. Through *war* she has driven them everywhere, even into the most inhospitable regions in order to populate them. 3. Also through war she has constrained them to establish more or less legal relationships. It is truly wonderful that moss grows even in the cold wastes by the Arctic Ocean and that *reindeer* can dig it from beneath the snow so that they can become food or transportation for the Ostiak or Samoyed; or that the salt deserts are inhabited by the *camel*, which appears to have been created for traveling over them, so that the deserts do not go unused. But purpose is even more clearly evident when one realizes that not only do furbearing animals exist on the shores of the Arctic Ocean, but also seals, walruses, and whales, whose flesh provides food and whose blubber provides warmth for the inhabitants. However, what most arouses our wonder is nature's care to bring (in what way we do not really know) driftwood to these barren regions, for without this material the natives could have neither their canoes and spears nor their huts to dwell in. In these regions they are sufficiently occupied with their war against animals that they live in peace among themselves. But it was probably nothing but war that *drove*

---

their natives, who could not live without it). Here, while we can readily explain the physical and mechanical causes of these appearances to ourselves (e.g., by the fact that the banks of rivers in temperate lands are heavily wooded so that trees fall into them and are carried off by the Gulf Stream), we must nonetheless not overlook teleological causes, which indicate the care of a wisdom that governs nature. Only the scholastic concept of a divine *participation* in or concurrence (*concursus*) with every effect experienced in the world of sense must be given up. *First*, that scholastic view attempts to conjoin dissimilar kinds of things (*gryphes iungere equis*) ["griffins may yet mate with mares." Vergil, *Eclogues*, VIII, 27 (Lewis translation)] and it is self-contradictory to let that which is itself the wholly sufficient cause of all changes in the world supplement its own predetermining providence in the course of the world (implying that providence must originally have therefore been lacking). It is, for example, self-contradictory to say that *after God*, the physician assisted in curing the illness. For *causa solitaria non iuvat* [a single cause suffices]. God creates the physician and all his medicines, and if we want to go back to the highest, but theoretically inconceivable, original cause we must ascribe the action entirely to Him. Of course, if we explain this event as following from the chain of causes in the world and in accordance with the natural order, one can ascribe healing to the physician alone. *Second*, with that scholastic way of thinking we give up all determinant principles for making judgments about an effect. But from a *morally-practical* perspective (which is wholly directed to the supersensuous)—e.g., in the belief that if only our interactions are pure, God will compensate for our own injustices by means that are inconceivable to us and that we should not, therefore, give up our striving to do good—the concept of a divine *concursus* is entirely appropriate and even necessary. But it is self-evident that one must not attempt to *explain* a good action (as an event in the world) in this way, for that is a vain and consequently absurd attempt at theoretical knowledge of the supersensuous.

them there. Among all the animals, the *horse* was the first that man learned to tame and to domesticate in the process of populating the earth and the first *instrument of war* (for the elephant belongs to a later period, to the luxury of already established nations). The art of cultivating certain kinds of grasses, called *grains*, whose original characteristics are no longer known, as well as the propagation and refinement of various *fruits* by transplanting and grafting (in Europe perhaps only two species, the crab apple and the wild pear), could arise only under conditions provided by already established nations, where property was secure; and it could occur only after men had already undergone the transition from the lawless freedom of hunting,[11] fishing, and herding to the life of *agriculture*. *Salt* and *iron* were discovered next, and these were probably the first articles of trade sought far and wide by different peoples. In this way they entered into *peaceful relations* with one another, and from this common understanding, community of interest and peaceful relations arose with the most distant peoples.

In taking care that men *could* live everywhere on earth, nature has also despotically chosen that they *should* live everywhere, even against their inclinations, and without presupposing that this should rest on a concept of duty that binds men as a moral law; instead, she has chosen war as the means whereby this purpose is to be fulfilled. Specifically, we see peoples whose unity of language reveals the unity of their origins, for instance, the *Samoyeds* of the Arctic Ocean, on the one hand, and a people with a similar language living two hundred miles distant, in the Altai Mountains, on the other; between them lives another people, of Mongolian origin, who are adept at horsemanship and, consequently, war and who drove the two parts of the other race into inhospitable arctic regions, where they would certainly not have gone of their own inclination.[12] Similarly, in the northern-most regions of Europe, Gothic and Sarmitic peoples, who pushed their way in, separated the *Finns*, called *Lapps*, by an equal distance from the linguistically related *Hungarians*. And what else but war—which nature uses as a means to populate the entire earth—could have driven the Eskimos (who are perhaps very ancient European adventurers, and totally distinct as a race from all Americans) to the north, and the Pescherais to the south of America, to Tierra del Fuego. Nonetheless, war itself requires no particular motivation, but appears to be ingrained in human nature and is even valued as something noble; indeed, the desire for glory inspires men to it, even independently of selfish motives. Consequently, *courage in war* (among American Indians as well as during Europe's chivalric period) is judged to be of immediate and great worth not only *during war* (as is reasonable), but also in order that *war might be*, and often war is begun only as a means to display courage. As a result, an intrinsic worth is bestowed on war, even to the extent that philosophers, unmindful of that Greek saying, "War is a bad bet because it produces more evil people than it eliminates," have praised it as having a certain ennobling influence on mankind. So much for what nature does to further *her own ends* in respect to the human race as a class of animal.

11. Of all forms of life, the *life of the hunter* is without doubt most contrary to a civilized constitution, for, having to live separately, families soon become estranged and, dispersed as they become in immense forest, also soon become enemies, for each requires a great deal of room in order to provide for its nourishment and clothing. The Noachic prohibition against blood (Gen. 9:4–5) (is repeated often, and Jewish Christians imposed it on pagans newly converted to Christianity as a condition of their acceptance, though for different reasons, Acts 15:20, 21:25) appears originally to have been nothing other than a command against the *hunting life*, since the latter often required eating raw flesh, and when the latter is forbidden, the other must also be.

12. One could ask, if nature has chosen that these icy coasts should not remain uninhabited and if (as we can expect) nature no longer provides them with driftwood, what will become of their inhabitants? For one must believe that as culture progresses, the natives in the temperate zone might make better use of the wood that grows on the banks of their rivers if they did not allow it to fall into rivers and float away into the sea. I answer: Those who dwell along the Ob, the Yenisei, the Lena, etc., will provide it through trade, exchanging it for products from the animal kingdom, in which the sea along the Arctic coasts abounds—but only if she (nature) first compels them to peace.

Our concern now is the most important question regarding the objective of perpetual peace: How does nature further this purpose that man's own reason sets out as a duty for him, i.e., how does she foster his *moral objective*, and how has it been guaranteed that what man ought to do through the laws of freedom, but does not, he shall, notwithstanding his freedom, do through nature's constraint? This question arises with respect to all three aspects of public right, *civil, international, and cosmopolitan right.* When I say of nature that she *wills* that this or that happen, that does not mean that she sets it out as a duty that we do it (because only practical reason, which is free of constraint, can do that); rather, she does it herself whether or not we will it (*fata volentem ducunt, nolentem trahunt*). ["The fates lead him who is willing, but drag him who is unwilling." Seneca, *Epist. Mor.* XVIII, 4.]

1. Even if a people were not constrained by internal discord to submit to public laws, war would make them do it, for according to the natural arrangement explained above, every people finds itself neighbor to another people that threatens it, and it must form itself into a *nation* so as to be able to prepare itself to meet this threat with *military might*. Now the republican constitution is the only one wholly compatible with the rights of men, but it is also the most difficult to establish and still harder to maintain, so much so that many contend that a republic must be a nation of *angels*, for men's self-seeking inclinations make them incapable of adhering to so sublime a form of government. But now nature comes to the aid of that revered but practically impotent general will, which is grounded in reason. Indeed, this aid comes directly from those self-seeking inclinations, and it is merely by organizing the nation well (which is certainly within man's capacities) that they are able to direct their power against one another, and one inclination is able to check or cancel the destructive tendencies of the others. The result for reason is the same as if neither sets of opposing inclinations existed, and so man, even though he is not morally good, is forced to be a good citizen. As hard as it may sound, the problem of organizing a nation is solvable even for a people comprised of devils (if only they possess understanding). The problem can be stated in this way: "So order and organize a group of rational beings who require universal laws for their preservation—though each is secretly inclined to exempt himself from such laws—that, while their private attitudes conflict, these nonetheless so cancel one another that these beings behave publicly just as if they had no evil attitudes." This kind of problem must be *solvable*. For it does not require the moral improvement of man; it requires only that we know how to apply the mechanism of nature to men so as to organize the conflict of hostile attitudes present in a people in such a way that they must compel one another to submit to coercive laws and thus to enter into a state of peace, where laws have power. One can see that although the inner core of morality is certainly not its cause, presently existing but still very imperfectly organized nations have in their foreign relations already approached what the idea of right prescribes (so that a good national constitution cannot be expected to arise from morality, but, rather, quite the opposite, a people's good moral condition is to be expected only under a good constitution). Consequently, the mechanism of nature, in which self-seeking inclinations naturally counteract one another in their external relations, can be used by reason as a means to prepare the way for its own end, the rule of right, as well as to promote and secure the nation's internal and external peace. This means that nature irresistibly *wills* that right should finally triumph. What one neglects to do will ultimately occur of its own accord, though with a great deal of inconvenience. "If one bends the reed too much, it breaks; and whoever wills too much, wills nothing" [Friedrich Bouterwek (1766–1828)].

2. The idea of international right presupposes the existence of many *separate*, independent, adjoining nations; and although such a situation is in itself a state of war (assuming that a federative union among them does not prevent the outbreak of hostilities), yet this situation is rationally preferable to their being overrun by a superior power that melds them into a universal monarchy. For laws invariably lose their impact with the expansion of their domain of governance, and after it has uprooted the soul of good a soulless despotism finally degenerates into anarchy. Nonetheless, the desire of every nation (or its ruler) is to establish an enduring peace, hoping, if possible, to

dominate the entire world. But nature *wills* otherwise. She uses two means to prevent peoples from intermingling and to separate them, differences in *language* and *religion*,[13] which do indeed dispose men to mutual hatred and to pretexts for war. But the growth of culture and men's gradual progress toward greater agreement regarding their principles lead to mutual understanding and peace. Unlike that peace that despotism (in the graveyard of freedom) brings about by vitiating all powers, this one is produced and secured by an equilibrium of the liveliest competing powers.

3. Just as nature wisely separates peoples that the will of every nation, based on principles of international right, would gladly unite through cunning or force, so also by virtue of their mutual interest does nature unite peoples against violence and war, for the concept of cosmopolitan right does not protect them from it. The *spirit of trade* cannot coexist with war, and sooner or later this spirit dominates every people. For among all those powers (or means) that belong to a nation, financial power may be the most reliable in forcing nations to pursue the noble cause of peace (though not from moral motives); and wherever in the world war threatens to break out, they will try to head it off through mediation, just as if they were permanently leagued for this purpose. By the very nature of things, large alliances for [purposes of waging] war are very rare and are even more rarely successful. In this fashion nature guarantees perpetual peace by virtue of the mechanism of man's inclinations themselves; to be sure, it does not do so with a certainty sufficient to *prophesy* it from a theoretical point of view, but we can do so from a practical one, which makes it our duty to work toward bringing about this goal (which is not a chimerical one).

13. *Differences in religion:* an odd expression! Just as if one spoke of different *moralities*. No doubt there can be different kinds of historical *faiths*, though these do not pertain to religion, but only to the history of the means used to promote it, and these are the province of learned investigation; the same holds of different religious *books* (*Zendavesta*, the *Vedas*, *Koran*, and so on). But there is only a single *religion*, valid for all men in all times. Those [faiths and books] can thus be nothing more than the accidental vehicles of religion and can only thereby be different in different times and places.

Second Supplement
Secret Article for Perpetual Peace

Objectively, i.e., in the terms of its content, a secret article in proceedings concerning public right is a contradiction; but subjectively, i.e., judged from the perspective of the kind of person who dictates it, an article can certainly contain a secret [provision], for a person may find it beneath his dignity to declare openly that he is its author.

The sole article of this kind is contained in this sentence: *The maxims of philosophers concerning the conditions under which public peace is possible shall be consulted by nations armed for war.*

While it seems humiliating for the legislative authority of a nation, to whom we must naturally ascribe the greatest wisdom, to seek instruction from *subjects* (the philosophers) concerning the principles on which it should act toward other nations, yet it is very advisable to do so. Thus, the nation will *silently* (that is secretly) *seek their advice*, which is to say, it will *allow* them *to speak* freely and publicly about the universal maxims concerning the conduct of war and the search for peace (for they do it of their own accord already, if only one does not forbid it). And an arrangement concerning this issue among nations does not require a special agreement, since it is already present as an obligation in universal (morally legislative) human reason. This does not, however, mean that the nation must give the principles of the philosophers precedence over the decisions of the jurist (the representatives of national power), but only that they be *heard*. The jurist, who has adopted as his symbol not only the *scales* of right but also the *sword* of justice, normally uses the latter not merely to keep the alien influences away from the former, but when one side of the scales will not sink, to throw the sword into it (*vae victis*) [Woe to the vanquished]. Every jurist who is not at the same time a philosopher (even in morality), is severely tempted by this practice; but his only function is to apply existing laws and to investigate whether they require improvement, even though, because his function is invested with power (as are the other two), he regards it as the higher one, when, in fact, it is the lower. The philosophical faculty occupies a very low position in the face of the combined power of the other two. Thus it is said, for

example, that philosophy is the *handmaid* of theology (and this is said of the two others as well). But one does not rightly know "whether this handmaid carries the torch before her gracious lady or bears her train behind her." That kings should be philosophers, or philosophers kings is neither to be expected nor to be desired, for the possession of power inevitably corrupts reason's free judgment. However, that kings or sovereign peoples (who rule themselves by laws of equality) should not allow the class of philosophers to disappear or to be silent, but should permit them to speak publicly is indispensable to the enlightenment of their affairs. And because this class is by nature incapable of sedition and of forming cliques, it cannot be suspected of being the formulator of *propaganda*.

APPENDIX

I

On the Disagreement between Morals and Politics in Relation to Perpetual Peace

Taken objectively, morality is in itself practical, for it is the totality of unconditionally binding laws according to which we *ought* to act, and once one has acknowledged the authority of its concept of duty, it would be utterly absurd to continue wanting to say that one *cannot* do his duty. For if that were so, then this concept would disappear from morality (*ultra posse nemo obligatur*) [beyond possibility there is no obligation]; consequently, there can be no conflict between politics as an applied doctrine of right and morals as a theoretical doctrine of right (thus no conflict between practice and theory). [If such a conflict were to occur], one would have to understand morality as a universal *doctrine of prudence*, i.e., a theory of maxims by which to choose the most efficient means of furthering one's own interests, which is to deny that morality exists at all.

Politics says, *"Be ye wise as serpents," to which morality adds (as a limiting condition), "and innocent as doves"* [Matt. 10:16]. Where both of these maxims cannot coexist in a command, there one finds an actual conflict between politics and morality; but if the two are completely united the concept of opposition is absurd, and the question as to how the conflict is to be resolved cannot even be posed as a problem. However, the proposition, *"Honesty is the best policy,"* is beyond all refutation, and is the indispensable condition of all policy. The divinity who protects the boundaries of morality does not yield to Jupiter (the protector of power), for the latter is still subject to fate. That is, reason is not yet sufficiently enlightened that it can survey the series of predetermining causes and predict with certainty what the happy or unhappy consequences that follow in accord with nature's mechanism from men's activities will be (though one can hope that they come out as one wishes). But with respect to everything we have to do in order to remain on the path of duty (according to rules of wisdom), reason does provide us with enlightenment sufficient to pursue our ultimate goals.

Now even if the practical man (for whom morality is mere theory) admits that we can do what we ought to do, he bases his disconsolate rejection of our fond hope on the following consideration: He asserts that, human nature being what it is, we can predict that man will never want to do what is required to achieve the goal of perpetual peace. Certainly, the will of all *individual* men (the *distributive* unity of the wills of *all*) to live under a lawful constitution that accords with principles of freedom is not sufficient to attain this goal; only the will of *all together* (the *collective* unity of combined wills) is. The solution to so difficult a task requires that civil society become a whole. Implementing this state of right (in practice) can begin only with *force*, and this coercion will subsequently provide a basis for public right, because an additional unifying cause must be superimposed on the differences among each person's particular desires in order to transform them into a common will—and this is something no single person can do. Furthermore, in actual experience we can certainly anticipate great deviations from that (theoretical) idea of right (for we can hardly expect the legislator to have such moral sensibilities that having united the wild mass into a people, he will then allow them to create a legal constitution through their general will).

For this reason it is said that he who once has power in hand will not have laws prescribed to him by the people. And once a nation is no longer subject to

external laws it will not allow itself to be subjected to the judgment of other nations regarding the way in which it should seek to uphold its rights against them. Even a continent that feels itself to be superior to another, regardless of whether or not the latter stands in the way of the former, will not fail to exercise the means of increasing its power, plundering and conquering. Thus, all theoretical plans for civil, international, and cosmopolitan rights dissolve into empty, impractical ideals; by contrast, a practice that is based on empirical principles of human nature and that does not regard it demeaning to formulate its maxims in accord with the way of the world can alone hope to find a secure foundation for its structure of political prudence.

To be sure, if neither freedom nor the moral law that is based on it exist, and if everything that happens or can happen is mere mechanism of nature, then politics (as the art of using that mechanism to govern men) would be the whole of practical wisdom, and the concept of right would be contentless thought. But if we find it absolutely necessary to couple politics with the concept of right, and even to make the latter a limiting condition of politics, the compatibility of the two must be conceded. I can actually think of a *moral politician*, i.e., one who so interprets the principles of political prudence that they can be coherent with morality, but I cannot think of a *political moralist*, i.e., one who forges a morality to suit the statesman's advantage.

The moral politician will make it a principle that once a fault that could not have been anticipated is found in a nation's constitution or in its relations with other nations, it becomes a duty, particularly for the rulers of nations, to consider how it can be corrected as soon as possible and in such a way as to conform with natural right, which stands in our eyes as a model presented by an idea of reason; and this ought to be done even at the cost of self-sacrifice. Since it is contrary to all political prudence consistent with morality to sever a bond of political or cosmopolitan union before a better constitution is prepared to put in its place, it would also be truly absurd that such a fault be immediately and violently repaired. However, it can be required of those in power that they at least take to heart the maxim that such changes are necessary so as continuously to approach the goal (of the constitution most in accord with the laws of right). A nation may already possess republican rule, even if under its present constitution it has a despotic *ruling power*, until gradually the people are capable of being influenced by the mere idea of the law's authority (just as if it possessed physical power) and thus is found able to be its own legislator (which [ability] is originally based on [natural] right). If—through a violent *revolution* caused by a bad constitution—a constitution conforming to law were introduced by illegal means, it must not be permissible to lead the people back to the old one, even though everyone who violently or covertly participated in the revolution would rightly have been subject to the punishment due rebels. But as to the external relations among nations, it cannot be expected that a nation will give up its constitution, even if despotic (which is the stronger in relation to foreign enemies), so long as it risks the danger of being overrun by other nations; consequently, it is permissible to delay the intention to implement improvements until a better opportunity arises.[14]

It may be that despotic moralists (those who fail in practice) violate rules of political prudence in many ways (by adopting or proposing premature measures); still, experience will gradually bring them to give up their opposition to nature and to follow a better course. By contrast with this, the moralizing politician attempts, on the pretext that human nature is not *capable* of attaining the good as prescribed in the idea of reason, to extenuate political principles that are contrary to right, and thus these principles make progress *impossible* and perpetuate the violation of right.

14. These are permissive laws of reason: To allow a condition of public right afflicted with injustice to continue until everything is either of itself or through peaceful means ripe for a complete transformation, for any *legal* constitution, even if it conforms with right only to a small degree, is better than none, and the latter fate (anarchy) would result from *premature* reform. Political wisdom, therefore, will make it a duty, given the present state of things, to evaluate reforms against the ideal of public right. Revolutions brought about by nature itself will not find excuses for still greater oppression, but will use revolution as nature's call to create a lawful constitution based on principles of freedom, for only this fundamental reform is enduring.

Instead of employing the practical science that these politically prudent men make so much of, they use devious *practices* to influence the current ruling power (so as to insure their own private advantage), even at the expense of the people and, where possible, the entire world, acting just like lawyers (for whom law is a *trade*, not a matter of *legislation*) when they go into politics. For since it is not their business to be overly concerned with legislation, but rather to carry out momentary commands under the law of the land, they must always regard every existing legal constitution as best—and when it is amended in higher places, they regard these amendments as for the best, too; in that way, everything follows in its proper mechanical order. But, granted that this deftness at being all things to all men gives the politically prudent the illusion of being able to judge a *national constitution* in general against concepts of right (consequently, *a priori*, not empirically); and granted that they make a great to do of knowing *men* (which is certainly to be expected, since they deal with so many of them), though without knowing *man* and what can be made of him (for which a high standpoint of anthropological observation is required); nonetheless, if, as reason prescribes, they attempt to use these concepts in civil and international law, they cannot make the transition except in a spirit of charlatanism. For they will continue to follow their customary procedure (of mechanically applying despotically imposed laws of coercion) in an area where the concepts of reason only permit lawful compulsion that accords with principles of freedom, and it is under such principles alone that a rightful and enduring constitution is possible. The supposed practical man believes he can ignore the idea of right and solve this problem empirically, the solution being based on his experience of the national constitutions that have heretofore been most lasting, though oftentimes contrary to right. The maxims that he uses to this end (though he does not make them public) consist, roughly speaking, of the following sophistries.

1. *Fac et excusa* [Act first, then justify]. Seize every favorable opportunity for arbitrary usurpation (of a right of a nation either over its own people or over another neighboring people); the justification can be presented far more easily and elegantly *after the fact*, and the violence more easily glossed over (especially in the first case, where the supreme internal power is also the legislative authority, which one must obey without argument), than if one first thinks out convincing reasons and waits for objections to them. This audacity itself gives a certain appearance of an inner conviction that the act is right, and after the fact the god of success, *bonus eventus*, is the best advocate.

2. *Si fecisti, nega* [If you are the perpetrator, deny it]. Whatever crime you have committed—e.g., that you have reduced your people to despair and hence brought them to rebellion—deny that the guilt is *yours*; instead, maintain that it is the obstinacy of the subjects, or, if you have conquered a neighboring people, that the guilt belongs to human nature, for if one does not forestall others by using force, one can surely count on their anticipating it and becoming one's conqueror.

3. *Divide et impera* [Divide and conquer]. That is, if there are certain privileged persons among your people who have merely chosen you to be their leader (*primus inter pares*) [first among equals], destroy their unity and separate them from the people; and if, in turn, the people have delusions of greater freedom, everyone will depend on your unchecked will. Or if you are concerned with foreign nations, then sowing discord among them is a relatively certain method of subjecting them one after another to your will, all the while appearing to defend the weaker.

Certainly no one will be taken in by these political maxims, for all of them are widely known; nor are men ashamed of them, as if their injustice were altogether too apparent. For great powers never heed the judgment of the masses, feeling shame only in the face of others like them; and as regards the foregoing principles, not their becoming public knowledge, but only their *failure* can make those powers feel ashamed (for among themselves they agree on the morality of the maxims). And in this way their *political* honor, on which they can always count, is retained, namely, by the expansion of their power by whatever means they choose.[15]

15. Although we might doubt the existence of a certain inherent wickedness in *men* who live together within a nation, and instead might plausibly point to the lack of a sufficiently advanced culture (barbarism) as the cause of the unlawful aspects of their way of thinking, this

• • •

From all these twistings and turnings of an immoral doctrine of prudence regarding how men are to be brought out of the warlike state of nature into the state of peace, we receive at least this much illumination: Men can no more escape the concept of right in their private relations than in their public ones; nor can they properly risk basing their politics on the handiwork of prudence alone, and, consequently, they cannot altogether refuse obedience to the concept of public right (which is particularly important in the case of international right). Instead, they give this concept all due honor, even if they also invent a hundred excuses and evasions to avoid observing it in practice, attributing to cunning force the authority that is the original source and bond of right. In order to end this sophistry (if not the injustice that it glosses over) and to force the false representatives of those in earthly power to confess that rather than right it is might that they advocate—a fact that is clear from the tone they adopt, as if they were entitled to give orders—it will do well to expose the fraud to which they subject themselves and others and to reveal the highest principle from which perpetual peace as an end proceeds. We will show that all the evil that stands in the way of perpetual peace derives from the fact that the political moralist begins where the moral politician rightly stops; and, since the former subordinates his principles to his ends (i.e., puts the cart before the horse), he defeats his own purpose of effecting an agreement between politics and morals.

In order to bring practical philosophy into harmony with itself, it is first necessary to resolve this question: In problems of practical reason, must we begin from *material principles*, the end (as object of the will), or from its *formal* one, i.e., the one (which rests only on freedom in external relations) that is expressed thus: "Act so that you can will that your maxim ought to become a universal law (no matter what the end may be)"?

Without doubt the latter principle must take precedence, because as a principle of right it has unconditioned necessity, whereas the former is necessary only if one assumes the existence of those empirical conditions through which the proposed end can be realized. And if this end (e.g., perpetual peace) were also a duty, it must itself be derived from the formal principle of external action. Now the first principle, that of the *political moralists* (concerning the problem of civil, international, and cosmopolitan right), proposes a mere *technical task* (*problema technicum*); by contrast, the second is the principle of the *moral politician*, for whom it is a *moral task* (*problema morale*), and its method of pursuing perpetual peace—which one now desires not merely as a physical good, but also as a condition that arises from acknowledging one's duty—is completely distinct.

Solving the first problem, namely, the problem that political prudence proposes, requires considerable natural knowledge so that one can use nature's mechanism to attain the desired end; yet it is uncertain how this mechanism will function as far as its consequences for perpetual peace are concerned; and this is so in all three areas of public right. Whether the people's obedience and prosperity will be better preserved over a long period of time by harshness or

---

wickedness is still completely and incontrovertibly apparent in foreign relations among *nations*. Within each nation this wickedness is concealed by the coercive power of civil law, for the citizens' inclination toward violence against one another is counteracted by a greater power, namely, that of the government. Not only does this provide a veneer of morality (*causae non causae*), but by placing these inclinations toward outbreaks of lawlessness behind bars, it also actually makes it easier to develop the moral capacity for direct and immediate respect for the law. Everyone believes of himself that he would truly venerate and abide by the concept of right, if only he could expect the same from everyone else, which it is government's part to insure; and by this means a large step towards morality is taken (although it is still not a moral step)—a large step towards willing the concept of duty for its own sake, without regard for any reciprocity. But since all persons have a good opinion of themselves but presuppose evil intentions in everyone else, they mutually have this opinion of one another, that they are all in point of *fact*, of little worth (though how this might be remains inexplicable, since it cannot be blamed on the *nature* of man as a free being). Since, however, respect for the concept of right, which no man is capable of denying, provides the most solemn sanction for the theory that man has the ability to act according to it, everyone sees that for one's own part one must act in accord with it, no matter how others may act.

by appeals to vanity, by granting supreme power to a single ruler or to several united ones, or, perhaps, merely by a devoted aristocracy or by the power of the people is uncertain. History furnishes examples of the opposite effects being produced by all forms of government (with the singular exception of true republicanism, which alone can appeal to the sensibility of a moral politician). Still more uncertainty arises in the area of *international right*—a form of right purportedly based on statutes worked out by ministers—for in fact it is a term without content, and it rests on contracts whose very act of conclusion contains the secret reservation for their violation. By contrast, the solution to the second problem, the problem of *political wisdom*, impresses itself on us, as it were, for it obviously puts all artificiality to shame, and leads directly to the end. Yet prudence cautions us not to employ power in direct pursuit of it, but rather to approach it indirectly through those conditions presented by favorable circumstances.

Thus, it may be said: "Seek first the kingdom of pure practical reason and its *righteousness*, and your end (the blessing of perpetual peace) will come to you of itself" [Matt. 6:33]. For this characteristic is inherent in morals—especially as regards its fundamental principle of public right (consequently, in relation to a politics that is *a priori* knowable)—that the less it makes conduct depend on the proposed end, be it a physical or moral advantage, the more conduct will in general harmonize with morality. And this is because such conduct derives directly from the general will that is given *a priori* (in a single people or in the relations of different peoples to one another), which alone determines what is right among men. If only it is acted on in a consistent way, this unity of the will of all can, along with the mechanism of nature, be the cause of the desired result and can make the concept of right effective. So, for example, it is a fundamental principle of moral politics that in uniting itself into a nation a people ought to subscribe to freedom and equality as the sole constituents of its concept of right, and this is not a principle of prudence, but is founded on duty. By contrast, political moralists do not even deserve a hearing, no matter how much they argue that the natural mechanism of a group of people who enter into society invalidates that fundamental principle and vitiates its intention, or seek to substantiate their contentions by use of ancient and modern examples of badly organized constitutions (e.g., of democracies without systems of representation). This is especially so since such a damaging theory may bring about the evil that it prophesies, for in it man is thrown into the same class as other living machines, which need only to become conscious that they are not free in order to become in their own eyes the most wretched of all the earth's creatures.

The true, albeit somewhat boastful proverb, *Fiat iustia, pereat mundus*—"Let justice reign, even if all the rogues in the world should perish"—is a sound principle of right that cuts across the sinuous paths of deceit and power. But it must not be misunderstood nor, perhaps, taken as permission simply to press with the utmost vigour for one's own right (for that would conflict with moral duty); instead, those in power should understand it to pose an obligation not to deny or diminish anyone's rights through either dislike or sympathy. Above all, this requires that the nation have an internal constitution founded on principles of right and that it also unite itself (analogously to a universal nation) with other neighboring and distant nations so they can settle their differences legally. This proposition means only that adherence to political maxims must not be based on the benefit or happiness that each nation anticipates from so doing—thus, not on the end that each nation makes an object (of its desire) and its supreme (though empirical) principle of political wisdom; instead, adherence must derive from the pure concept of the duty of right (from the *ought*, whose principle is given *a priori* through pure reason), let the physical consequences be what they may. The world will certainly not cease to exist if there are fewer bad men. The intrinsic characteristic of moral evil is that its aims (especially in relation to other like-minded persons) are self-contradictory and self-destructive, and it thus makes way for the (moral) principle of goodness, even if progress in doing so is slow.

• • •

Objectively (i.e., in theory) there is utterly no conflict between morality and politics. But subjectively (in the self-seeking inclinations of men, which, because they are not based on maxims of reason, must not

be called the [sphere of] practice) this conflict will always remain, as well it should; for it serves as the whetstone of virtue, whose true courage (according to the principle, *"tu ne cede malis, sed contra audentior ito"*) ["do not yield to misfortune, but press on more boldly/Than your fortune allows you." Vergil, *Aeneid*, VI, 95 (Lind translation)] in the present case consists not so much in resolutely standing up to the evils and sacrifices that must be taken on; rather, it consists in detecting, squarely facing, and conquering the deceit of the evil principle in ourselves, which is the more dangerously devious and treacherous because it excuses all our transgressions with an appeal to human nature's frailty.

In fact, the political moralist can say that the ruler and the people, or the people and the people, do not treat *one another* wrong if, through violence and fraud they war against one another, although they do in general act wrong when they deny respect to the concept of right, on which alone peace can be perpetually based. When one person violates the rights of another who is just as lawlessly disposed towards him, then whatever *happens* to them as they destroy themselves is entirely right; enough of their race will always survive so that this game will not cease, even into the remotest age, and they can serve as a warning to later generations. In this manner, the course of world events justifies providence. For the moral principle in man never dies out, and with the continuous progress of culture, reason, which is able pragmatically to apply the ideas of right in accordance with the moral principle, grows through its persistence in doing so, and guilt for transgressions grows concomitantly. (Given that the human race never can and never will be in a better condition) it seems impossible to be able to use a theodicy to provide any justification whatsoever for creation, namely, that such a race of generally corrupt beings should have been put on earth. We will be unavoidably driven to such skeptical conclusions, if we do not assume that pure principles of right have objective reality, i.e., that they permit themselves to be applied and that peoples in nations and even nations in their relations with one another must for their parts behave in conformity with them, no matter how objectionable empirical politics may find them. Thus, true politics cannot progress without paying homage to morality; and although politics by itself is a difficult art, its union with morality is not art at all, for this union cuts through the [Gordian] knot that politics cannot solve when politics and morality come into conflict. The rights of men must be held sacred, however great the cost of sacrifice may be to those in power. Here one cannot go halfway, cooking up hybrid, pragmatically conditioned rights (which are somewhere between the right and the expedient); instead, all politics must bend its knee before morality, and by so doing it can hope to reach, though but gradually, the stage where it will shine in light perpetual.

II

On the Agreement between Politics and Morality under the Transcendental Concept of Public Right

If, in thinking about public right as jurists customarily do, I abstract from its *matter* (i.e., the different empirically given relations among men in a nation or among nations), the *form of publicity*, whose possibility every claim of right intrinsically contains, still remains, and unless every such claim has this form there can be no justice (that can be regarded as *publicly knowable*), thus no right either, since the right can be conferred only through justice. Every claim of right must have this capacity for publicity, and since one can easily judge whether or not it is present in a particular case, i.e., whether or not publicity is compatible with the agent's principles, it provides us with a readily applicable criterion that is found *a priori* in reason; for the purported claim's (*praetensio iuris*) falseness (contrariness to right) is immediately recognized by an experiment of pure reason. Having abstracted in this way from everything empirical contained in the concept of national and international right (such as the wickedness in human nature that makes coercion necessary), one can call the following proposition the *transcendental formula* of public right:

> "All actions that affect the rights of other men are wrong if their maxim is not consistent with publicity."

This principle is to be considered not only *ethical* (as belonging to the doctrine of virtue), but also *ju-*

ridical (as pertaining to the rights of men). If my maxim cannot be *openly divulged* without at the same time defeating my own intention, i.e., must be kept *secret* for it to succeed, or if I cannot *publicly acknowledge* it without thereby inevitably arousing everyone's opposition to my plan, then this necessary and universal, and thus *a priori* foreseeable, opposition of all to me could not have come from anything other than the injustice with which it threatens everyone. Further, it is merely *negative*, i.e., it serves only as a means for recognizing what is *not right* in regard to others. Like any axiom, it is seen in the following examples of public right.

1. In regard to *civil right* (*ius civitas*), namely, rights internal to a nation, the following question arises, one that many believe is difficult to answer, but that the transcendental principle of publicity solves with utter ease: "May a people rightfully use rebellion to overthrow the oppressive power of a so-called tyrant (*nontitulo, sed exercitio talis*)?" The rights of the people are injured, and no injustice comes to him (the tyrant) who is deposed, of that there is no doubt. Nonetheless, it remains wrong in the highest degree for the subjects to pursue their rights in this way, and they can in no way complain of injustice if they are defeated in this conflict and must subsequently suffer the harshest punishment for it.

A great many arguments can be offered on both sides when one attempts to settle this issue by a dogmatic deduction of the foundations of right. Only the transcendental principle of the publicity of public right will spare us this long-windedness. According to this principle, before establishing the social contract, the people have to ask whether it dare make known the maxim of its intention to revolt in some circumstances. One can readily see, first, that if one were to make revolt a condition of the establishment of a nation's constitution that force might then in certain circumstances be used against the ruler and, second, that the people must in such an instance claim some rightful power over the ruler. In that case, he would not be the ruler; or if as a condition of establishing the nation, both the people and the ruler were given power, there would be no possibility whatsoever of doing what it was the people's intention to do. The wrongness of revolt revealed by the fact that the maxim through which one *publicly declares it* renders one's own intention impossible. One must therefore necessarily keep it secret. This secrecy, however, is not necessary on the part of the nation's ruler. He can say quite openly that he will punish with death the ringleader of every rebellion, even if they believe that he has been the first to transgress the fundamental law. For if he knows that he possesses *irresistibly* supreme power (which must be assumed in every civil constitution, since he who lacks sufficient might to protect each of his people against every other, also does not have the right to give orders), he does not have to worry that his own intention will be defeated if his maxim becomes known. It is perfectly consistent with this view that if the people's revolt succeeds, the ruler, returning to the status of a subject, cannot begin a new revolt to return himself to power, nor should he have to fear being called to account for his previous administration of the nation.

2. *Concerning international right:* There can be talk of international right only on the assumption that a state of law-governedness exists (i.e., that external condition under which a right can actually be accorded man). For as a public right, its concept already contains the public recognition of a general will that determines the rights of everyone, and this *status iuridicus* must proceed from some contract that cannot be founded on coercive laws (like those from which the nation springs), but can at best be an *enduring free* association, like the federation of different nations mentioned above. For in the state of nature, in the absence of a state of law-governedness, only private right can exist. Here another conflict between politics and morality (considering the latter as a doctrine of right) arises, to which, however, the criterion of the publicity of maxims finds easy application, though only if the contract binds the nations for the sole purpose of maintaining peace among themselves and between them and other nations, and not with the intention of conquest. This introduces the following instances of antinomy between politics and morality, along with their solution.

(a) "If one of these nations has promised something to another, be it aid, cession of certain territories, or subsidies, and so on, it may be asked whether, in those cases where the nation's well-being is at stake, it can be released from its promise by maintaining that it must be considered to have two roles: first, that of a

sovereign, who is answerable to no one in the nation; and, on the other hand, merely that of the highest *political official*, who must give an account of his actions to the nation. From this we draw the following conclusion, that what the nation had bound itself to by virtue of its first role, it frees itself from in its second." But if a nation (or its ruler) were to allow its maxim to be known, then all others would quite naturally either flee from it or would unite with others in order to oppose its arrogance. This proves that, given all its cunning, politics would in this way (through openness) defeat its end; consequently, that maxim is wrong.

(b) "If a neighboring power grows so formidably great (*potentia tremenda*) as to cause anxiety, can one assume that it will want to oppress others because it *can*; and does this give the lesser powers a right to (unified) attack on it, even without previous injury?" A nation that *let it be known* that it affirmed this maxim would suffer evil even more certainly and quickly. For the greater power would beat the lesser ones to the punch, and, as far as concerns the union of the latter, that would only be a feeble reed against one who knew how to employ the maxim *divide et impera*.

(c) "If a smaller nation is so located that it divides some territory that a larger one regards as necessary to its preservation, is not the latter justified in subjugating the smaller one and incorporating it into itself?" One can easily see that the larger must not allow it to become known that it has adopted such a maxim; for either the smaller nations would unite very early, or other powers would fight over the prey, and, consequently, openness would render the maxim ineffectual, a sign that it is wrong, and, indeed, perhaps to a very high degree. For a small object of wrong [action] does not prevent the wrong done to it from being very great.

3. Here I silently pass over the issue of *cosmopolitan right*, for, given its analogy with international right, its maxims are easy to adduce and validate.

• • •

In the principle of the incompatibility between the maxims of international right and publicity one has a good indication of the *incommensurability* of politics and morality (as a doctrine of right). But one now needs also to become aware of the conditions under which the maxims of politics agree with the right of peoples. For it cannot be conversely concluded that whatever maxims are compatible with publicity are also for that reason right, for he who has decisively supreme power, has no need to keep his maxims secret. The condition underlying the possibility of international right in general is that there first exist a *state of right*. For without this there is no public right, and all right other than this (in the state of nature) that one can think of is merely private right. Now we have seen above that a federative state of nations whose only purpose is to prevent war is the only state of *right* compatible with their *freedom*. Thus, it is possible to make politics commensurable with morality only in a federative union (which is therefore necessary and given *a priori* in conformity with the principles of right); and the foundation of right underlying all political prudence is the establishment of this union to the greatest possible extent, for without this as an end all the sophistry of political prudence is contrary to wisdom, hence mere veiled wrong. The *casuistry* of this pseudopolitics is unsurpassed by the best of the Jesuit scholars, including as it does the *reservatio*, i.e., formulating public contracts in such terms (e.g., the distinction between a *status quo* of *fact* and of *right*) that, whatever the occasion, one can interpret them in one's own favor; including, further, the *probabilismus*, i.e., attributing evil intentions to others, or making the likelihood of their possible superior power into a justification of the right to undercut other, peaceful nations; and, finally, the *peccatum philosophicum* (*peccatillum*, *baggatelle*), i.e., maintaining it to be an easily dismissible triviality to devour a *small* nation when some purportedly very much *greater* benefit to the world is a result.[16]

16. Documentation for such maxims can be found in Counselor Garve's treatise "*Über die Verbindung der Moral mit der Politik*," [*On the Unity of Morality and Politics*], 1788 [Christian Garve (1742–1798), *Treatise on the Connection of Morality with Politics, or Some Questions on the Extent to Which It Is Possible for the Governments of Nations to Observe Morality in Private Lives* (Breslau, 1788)]. This worthy scholar admits at the outset that he is unable to give an adequate answer to

Politics' duplicitous relation to morality by first using one of its branches and then the other in pursuit of its purposes is fed by this casuistry. Both the love of man and the respect for the rights of man are our duty; the former is only *conditional*, while the latter is an *unconditional*, absolutely imperative duty, a duty that one must be completely certain of not having transgressed, if one is to be able to enjoy the sweet sense of having done right. Politics readily agrees with morality in the first sense (as ethics) for both surrender men's rights to their rulers. But with regard to morality in the second sense (as doctrine of right), before which it must bend the knee, politics finds it advisable not to enter into any relation whatsoever and, unfortunately, denies all reality to morality and reduces all duties to mere benevolence. This ruse of a secretive politics could be easily defeated were philosophy to give publicity to the maxims of politics, if politicians would only allow philosophers to give publicity to their own.

With this in mind, I propose another transcendental and affirmative principle of right, whose formula is:

> "All maxims that *require* publicity (in order not to fail of their end) agree with both politics and morality."

For if they can achieve their end only through publicity, they must also conform to the universal public end (happiness), and it is the singular task of politics to establish this (to make the public satisfied with its state). But if this end can be attained only by publicity, i.e., by removing all mistrust of the maxims through which it is to be achieved, these maxims must harmonize with public right, for in this latter alone is the unity of all ends possible. I must postpone the further development and explanation of this principle for another occasion. But that it is a transcendental formula can be seen from the absence of all empirical conditions (of the doctrine of happiness), as material of the law, and from the reference it makes to the mere form of universal lawfulness.

If it is a duty to make the state of public right actual, though only through an unending process of approximation to it, and if at the same time there is a well founded hope that we can do it, then *perpetual peace*, which will follow the hitherto falsely so-called treaties of peace (but which are really only suspension of war), is no empty idea, but a task that, gradually completed, steadily approaches its goal (since the times during which equal progress occurs will, we hope, become ever shorter).

---

this question. But to approve of this union while granting that one cannot fully meet the objections that can be brought against it seems to be more forbearing than is advisable toward those who will most tend to misuse it.

JOHN STUART MILL

John Stuart Mill (1806–1873) was born in London on May 20, 1806. His father, James Mill, was a journalist and an official of the East India Company. Two years after John Stuart Mill's birth, his father met the philosopher and reformer Jeremy Bentham; for the remainder of his life he was Bentham's devoted friend, disciple, and spokesman. His commitment to the utilitarian creed involved his son, whom James Mill chose to educate at home in order to cultivate the perfect utilitarian individual.

Mill tells the story of his remarkable education in his *Autobiography*, published after his death by his stepdaughter Helen Taylor in 1873. By age three, Mill had studied Greek and, by eight, Latin. He began philosophy and logic at twelve, spent a year in France, and returned to England at fifteen to study law with the famous legal thinker John Austin. Throughout this process Mill conversed with his father's Benthamite friends on philosophical, political, and economic issues and engaged in drills, recitations, and debates under his father's severe direction.

In 1823 Mill completed his education and was employed by the East India Company, where he remained until his retirement in 1858. In 1856 he was appointed to the office of Chief Examiner, the company's second highest post, and two years later refused government employment when the company was dissolved by Act of Parliament.

In 1826, at the age of twenty, Mill was the victim of an intellectual crisis. Later he would recall the event as the beginning of his intellectual independence from Bentham. He had once been so totally committed to Bentham's utilitarianism that it served for him as a virtual religion; he was student, disciple, and even evangelist of this rational, humanistic faith, founding the Utilitarian Society, editing the Benthamite journal, the *Westminster Review*, and leading the "Philosophical Radicals," the young Benthamite organization. But at twenty he came to recognize his lack of emotion and feeling; he had become a pawn of reason, without tenderness or sensitivity. He turned to Wordsworth and Coleridge, the great romantic poets, for guidance in those feelings without which life could not be whole and fulfilled.

In 1831 Mill met Mrs. Harriet Taylor, the young wife of a wealthy merchant; she became his closest friend and confidant. As the years passed, the Platonic relationship deepened, and eventually, shortly after her husband's death in 1849, the two married. Mill's praise for Harriet Taylor's intelligence, imagination, and tenderness of soul was boundless; he was devoted to her and acknowledged her profound influence on his thinking and his life. To her, Mill would say, should be ascribed the human element in his writings and the sensitive application of principle to the issues of the day. In 1858 she died in Avignon, while on a vacation.

Perhaps the outstanding result of their collaboration—and Mill's most famous political work—is *On Liberty*, published in 1859. At least from 1854 they had worked on this account of the significance of individual self-development, enriched by Mill's study of Wordsworth and Coleridge, and the limitations of social and governmental control over the individual. In it Mill famously argues that creative self-development is central to personal character and that only self-protection justifies limitations on individual freedom. As one modern commentator has put it, *On Liberty* "is such a deeply felt defence of the right of individuals to be left alone unless they are causing real damage to other people that hardly anyone puts it down without reading it straight through." When Harriet died, the book had not received its final revisions, but Mill sent it to the publisher, without further alteration and dedicated to her.

After Harriet's death and his retirement, Mill wrote extensively, bringing to fruition many projects that he had begun during the eight years of their marriage. Among these were the *Considerations on Representative*

Government, published in 1861, and *The Subjection of Women*, his revolutionary defense of women's capacity for self-development, which was written in 1861 but appeared only in 1869.

In October, November, and December of 1861 Mill published three essays in a prominent intellectual monthly, *Fraser's Magazine*. It was his attempt to appeal to an educated lay audience about some fundamental matters concerning morality, religion, reason, pleasure, and duty. These essays, reworked into five chapters and published in book form as *Utilitarianism* in 1863, are an act of radical reform, an effort to defend the integrity of a benevolent, rational moral view that was humane and that would encourage positive change. The book was also an attack—on Kant and intuitionist moral theorists and on Bentham, whose conception of the goal of utility was too narrow and intellectualist for Mill. It remains to this day a classic formulation of instrumentalist moral theory.

Two years later Mill was elected to Parliament from Westminster, serving three years, until 1868. From then until his death on May 8, 1873, he wrote and avoided those who sought him. Tended in these last years by his stepdaughter Helen, Mill died quietly and was buried in Avignon, alongside his beloved Harriet.

On Liberty

Contents

Chapter I. Introductory.
Chapter II. Of the Liberty of Thought and Discussion.
Chapter III. Of Individuality, as One of the Elements of Well-Being.
Chapter IV. Of the Limits to the Authority of Society over the Individual.
Chapter V. Applications.

The grand, leading principle, towards which every argument unfolded in these pages directly converges, is the absolute and essential importance of human development in its richest diversity.

—Wilhelm von Humboldt:
Sphere and Duties of Government.

To the beloved and deplored memory of her who was the inspirer, and in part the author, of all that is best in my writings—the friend and wife whose exalted sense of truth and right was my strongest incitement, and whose approbation was my chief reward—I dedicate this volume. Like all that I have written for many years, it belongs as much to her as to me; but the work as it stands has had, in a very insufficient degree, the inestimable advantage of her revision; some of the most important portions having been reserved for a more careful re-examination, which they are now never destined to receive. Were I but capable of interpreting to the world one half the great thoughts and noble feelings which are buried in her grave, I should be the medium of a greater benefit to it, than is ever likely to arise from anything that I can write, unprompted and unassisted by her all but unrivalled wisdom.

This edition of *On Liberty* was drawn from the 1869 4th edition Longmans, Green, Reader, and Dyer.

On Liberty

CHAPTER I

Introductory

The subject of this Essay is not the so-called Liberty of the Will, so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated, and hardly ever discussed, in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognised as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as nec-

essary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defence against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks, by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. *That* (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it, had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion, that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of an usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the

community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as 'self-government,' and 'the power of the people over themselves,' do not express the true state of the case. The 'people' who exercise the power are not always the same people with those over whom it is exercised; and the 'self-government' spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active *part* of the people; the majority, or those who succeed in making themselves accepted as the majority; the people, consequently, *may* desire to oppress a part of their number; and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations 'the tyranny of the majority' is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly, held in dread, chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively, over the separate individuals who compose it—its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practises a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compel all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence: and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done. All that makes existence valuable to any one, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the operation of law. What these rules should be, is the principal question in human affairs; but if we except a few of the most obvious cases, it is one of those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were a subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and self-justifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only, as the proverb says, a second nature, but is continually mistaken for the first. The effect of custom, in preventing any misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others, or by each to himself. People are accustomed to believe, and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this

nature, are better than reasons, and render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathizes, would like them to act. No one, indeed, acknowledges to himself that his standard of judgment is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blameable, are affected by all the multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which determine their wishes on any other subject. Sometimes their reason—at other times their prejudices or superstitions: often their social affections, not seldom their antisocial ones, their envy or jealousy, their arrogance or contemptuousness: but most commonly, their desires or fears for themselves—their legitimate or illegitimate self-interest. Wherever there is an ascendant class, a large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots, between planters and negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings: and the sentiments thus generated, react in turn upon the moral feelings of the members of the ascendant class, in their relations among themselves. Where, on the other hand, a class, formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters, or of their gods. This servility, though essentially selfish, is not hypocrisy; it gives rise to perfectly genuine sentiments of abhorrence; it made men burn magicians and heretics. Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments: less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them: and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically determined the rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavouring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defence of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief: a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense: for the *odium theologicum*, in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were

under the necessity of pleading to those whom they could not convert, for permission to differ. It is accordingly on this battle field, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients, openly controverted. The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realized, except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or an Unitarian; another, every one who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power, with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; insomuch that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognised principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to bear almost any amount of social evil, rather than add one to the departments of human interests amenable to governmental control. And men range themselves on one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do, or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other; the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even

right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him, must be calculated to produce evil to some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forego any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others which he may rightfully be compelled to perform; such as, to give evidence in a court of justice; to bear his fair share in the common defence, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow-creature's life, or interposing to protect the defenceless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others, is the rule; to make him answerable for not preventing evil, is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of

responsibility, the conscience of the agent himself should step into the vacant judgment seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow-creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance: for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency, will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow-creatures, so long as what we do does not harm them, even though they should think our conduct foolish, perverse, or wrong. Thirdly, from this liberty of each individual, follows the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal, as of social excellence. The ancient commonwealths thought themselves entitled to practise, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens; a mode of thinking which may have been admissible in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal, that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in strongest opposition to the religions of the past, have been noway behind either churches or sects in their assertion of the right of spiritual domination: M. Comte, in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by

moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation: and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow-citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, in the present circumstances of the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is, if not fully, yet to a certain point, recognised by the current opinions. This one branch is the Liberty of Thought: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion, as might have been expected. Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which for now three centuries has been so often discussed, I venture on one discussion more.

CHAPTER II

Of the Liberty of Thought and Discussion

The time, it is to be hoped, is gone by, when any defence would be necessary of the 'liberty of the press' as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety;[1] and, speaking generally, it is not,

1. These words had scarcely been written, when, as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill-judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and, in the second, they were never, properly speaking, political prosecutions. The offence charged was not that of criticising institutions, or the acts or persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of Tyrannicide.

If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would, therefore, be irrelevant and out of place to examine here, whether the doctrine of Tyrannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment

in constitutional countries, to be apprehended, that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavouring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgment, which is always allowed to it in theory; for while every one well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually defer: for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose, with implicit trust, on the infallibility of 'the world' in general. And the world, to each individual, means the part of it with which he comes in contact; his party, his sect, his church, his class of society: the man may be called, by comparison, almost liberal and large-minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right

---

or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connexion can be established between the act and the instigation. Even then, it is not a foreign government, but the very government assailed, which alone, in the exercise of self-defence, can legitimately punish attacks directed against its own existence.

against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions, now general, will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument, would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct, can be no valid objection to any conduct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake: but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it is assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion, is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it, for one who is capable; and the capacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument: but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment,

depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognisant of all that can, at least obviously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a 'devil's advocate.' The holiest of men, it appears, cannot be admitted to posthumous honours, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for, have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth, as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being 'pushed to an extreme;' not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as 'destitute of faith, but terrified at scepticism'—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs, so useful, not to say indispensable to well-being, that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments, to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire

to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practise. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much, as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions, never fail to take all possible advantage of this plea; you do not find *them* handling the question of utility as if it could be completely abstracted from that of truth: on the contrary, it is, above all, because their doctrine is the 'truth,' that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness, when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favourable to me—in which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground, gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), Are these the doctrines which you do not deem sufficiently certain to be taken under the protection of law? Is the belief in a God one of the opinions, to feel sure of which, you hold to be assuming infallibility? But I must be permitted to observe, that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question *for others*, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less, if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his country or his contemporaries, he prevents the opinion from being heard in its defence, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes, which excite the astonishment and horror of posterity. It is among such that we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have survived to be (as if in mockery) invoked, in defence of similar conduct towards those who dissent from *them*, or from their received interpretation.

Mankind can hardly be too often reminded, that

there was once a man named Socrates, between whom and the legal authorities and public opinion of his time, there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while we know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, '*i maestri di color che sanno*,' the two headsprings of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious—was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognised by the State; indeed his accuser asserted (see the Apologia) that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a 'corruptor of youth.' Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved best of mankind, to be put to death as a criminal.

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation, such an impression of his moral grandeur, that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety, which they themselves are now held to be, for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the later of the two, render them extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments when the words were pronounced, which, according to all the ideas of his country, constituted the blackest guilt, was in all probability quite as sincere in his horror and indignation, as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his contemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him, were all on the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word, than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces;

and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine. But it would be equally unjust to him and false to truth, to deny, that no one plea which can be urged for punishing anti-Christian teaching, was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more single-minded in his devotion to it when found;—let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions, by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson, that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass, and always passes successfully, legal penalties being, in the end, powerless against truth, though sometimes beneficially effective against mischievous errors. This is a form of the argument for religious intolerance, sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover to the world something which deeply concerns it, and of which it was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow-creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom; that their reward should be to be dealt with as the vilest of criminals, is not, upon this theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors, cannot be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that new truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution, is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed for ever, it may be thrown back for centuries. To speak only of religious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of

Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Hussites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain, Italy, Flanders, the Austrian empire, Protestantism was rooted out; and, most likely, would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman Empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error, of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has, consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favourable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

It will be said, that we do not now put to death the introducers of new opinions: we are not like our fathers who slew the prophets, we even build sepulchres to them. It is true we no longer put heretics to death; and the amount of penal infliction which modern feeling would probably tolerate, even against the most obnoxious opinions, is not sufficient to extirpate them. But let us not flatter ourselves that we are yet free from the stain even of legal persecution. Penalties for opinion, or at least for its expression, still exist by law; and their enforcement is not, even in these times, so unexampled as to make it at all incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man,[2] said to be of unexceptionable conduct in all relations of life, was sentenced to twenty-one months' imprisonment, for uttering, and writing on a gate, some offensive words concerning Christianity. Within a month of the same time, at the Old Bailey, two persons, on two separate occasions,[3] were rejected as jurymen, and one of them grossly insulted by the judge and by one of the counsel, because they honestly declared that they had no theological belief; and a third, a foreigner,[4] for the same reason, was denied justice against a thief. This refusal of redress took place in virtue of the legal doctrine, that no person can be allowed to give evidence in a court of justice, who does not profess belief in a God (any god is sufficient) and in a future state; which is equivalent to declaring such persons to be outlaws, excluded from the protection of the tribunals; who may not only be robbed or assaulted with impunity, if no one but themselves, or persons of similar opinions, be present, but any one else may be robbed or assaulted with impunity, if the proof of the fact depends on their evidence. The assumption on which this is grounded, is that the oath is worthless, of a person who does not believe in a future state; a proposition which betokens much ignorance of history in those who assent to it (since it is historically true that a large proportion of infidels in all ages have been persons of distinguished integrity and honour); and would be maintained by no one who had the smallest conception how many of the persons in greatest repute with the world, both for virtues and for attainments, are well known, at least to their intimates, to be unbelievers. The rule, besides, is suicidal, and cuts away its own foundation. Under pretence that atheists must be liars, it admits the testimony of all atheists who are willing to lie, and rejects only those who brave the obloquy of publicly confessing a detested creed rather than affirm a falsehood. A rule thus self-convicted of absurdity so far as regards its professed

2. Thomas Pooley, Bodmin Assizes, July 31, 1857. In December following, he received a free pardon from the Crown.

3. George Jacob Holyoake, August 17, 1857; Edward Truelove, July, 1857.

4. Baron de Gleichen, Marlborough-street Police Court, August 4, 1857.

purpose, can be kept in force only as a badge of hatred, a relic of persecution; a persecution, too, having the peculiarity, that the qualification for undergoing it, is the being clearly proved not to deserve it. The rule, and the theory it implies, are hardly less insulting to believers than to infidels. For if he who does not believe in a future state, necessarily lies, it follows that they who do believe are only prevented from lying, if prevented they are, by the fear of hell. We will not do the authors and abettors of the rule the injury of supposing, that the conception which they have formed of Christian virtue is drawn from their own consciousness.

These, indeed, are but rags and remnants of persecution, and may be thought to be not so much an indication of the wish to persecute, as an example of that very frequent infirmity of English minds, which makes them take a preposterous pleasure in the assertion of a bad principle, when they are no longer bad enough to desire to carry it really into practice. But unhappily there is no security in the state of the public mind, that the suspension of worse forms of legal persecution, which has lasted for about the space of a generation, will continue. In this age the quiet surface of routine is as often ruffled by attempts to resuscitate past evils, as to introduce new benefits. What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution.[5] For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important, which makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England, than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the good will of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as excluded from the means of earning their bread. Those whose bread is already secured, and who desire no favours from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mould to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we do not now inflict so much evil on those who think differently from us, as it was formerly our custom to do, it may be that we do ourselves as much evil as ever by our

5. Ample warning may be drawn from the large infusion of the passions of a persecutor, which mingled with the general display of the worst parts of our national character on the occasion of the Sepoy insurrection. The ravings of fanatics or charlatans from the pulpit may be unworthy of notice; but the heads of the Evangelical party have announced as their principle for the government of Hindoos and Mahomedans, that no schools be supported by public money in which the Bible is not taught, and by necessary consequence that no public employment be given to any but real or pretended Christians. An Under-Secretary of State, in a speech delivered to his constituents on the 12th of November, 1857, is reported to have said: 'Toleration of their faith' (the faith of a hundred millions of British subjects), 'the superstition which they called religion, by the British Government, had had the effect of retarding the ascendancy of the British name, and preventing the salutary growth of Christianity. . . . Toleration was the great corner-stone of the religious liberties of this country; but do not let them abuse that precious word toleration. As he understood it, it meant the complete liberty to all, freedom of worship, *among Christians, who worshipped upon the same foundation*. It meant toleration of all sects and denominations of *Christians who believed in the one mediation*.' I desire to call attention to the fact, that a man who has been deemed fit to fill a high office in the government of this country, under a liberal Ministry, maintains the doctrine that all who do not believe in the divinity of Christ are beyond the pale of toleration. Who, after this imbecile display, can indulge the illusion that religious persecution has passed away, never to return?

treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance kills no one, roots out no opinions, but induces men to disguise them, or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain, or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smoulder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process of fining or imprisoning anybody, it maintains all prevailing opinions outwardly undisturbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already. But the price paid for this sort of intellectual pacification, is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to commonplace, or time-servers for truth, whose arguments on all great subjects are meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by narrowing their thoughts and interest to things which can be spoken of without venturing within the region of principles, that is, to small practical matters, which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then: while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eyes this reticence on the part of heretics is no evil, should consider in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated most, by the ban placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the world loses in the multitude of promising intellects combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtle and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognise, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable, to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers, in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere, an intellectually active people. When any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that princi-

ples are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times immediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethian and Fichtean period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each, an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or other of them. Appearances have for some time indicated that all three impulses are well nigh spent; and we can expect no fresh start, until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that however true it may be, if it is not fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defence of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, 'Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them.' Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is, that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets

of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts; some geocentric theory instead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one: and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favour some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not with still greater, intensity than even his own. What Cicero practised as the means of forensic success, requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavoured to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be

answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognises a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognisant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it, cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favour. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognise, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and

the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character, which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively—when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience; until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, incrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other, a set of every-day judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbour as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect, they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words to the things signified, and forces the mind to take *them* in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, 'See how these Christians love one another' (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since.

And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries, is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The sayings of Christ coexist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognised sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsayers. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally speaking, of all traditional doctrines—those of prudence and knowledge of life, as well as of morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning, when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion: there are many truths of which the full meaning *cannot* be realized, until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of 'the deep slumber of a decided opinion.'

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error, to enable any to realize the truth? Does a belief cease to be real and vital as soon as it is generally received—and is a proposition never thoroughly understood and felt unless some doubt of it remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths: and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavouring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great questions of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the commonplaces of received opinion, that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to attain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the middle ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect, that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the 'Socratici viri:' but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place either of the one or of the other. A person who derives all his instruction from teachers or books, even if he escape the besetting temptation of contenting himself with cram, is under no compulsion to hear both sides; accordingly it is far from a frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defence of his opinion, is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd it is to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labour for ourselves.

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjoined from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions

of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided asserters too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favour; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favourable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all

sides of the truth. When there are persons to be found, who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, 'But *some* received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if any one teaches a morality which varies from it, he is wholly in error.' As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the middle ages, each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it, that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good: in its precepts (as has been well said) 'thou shalt not' predominates unduly over 'thou shalt.' In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—'A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State.' What little recognition the idea of obligation to the public obtains in modern morality, is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honour, is

derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognised, is that of obedience.

I am as far as any one from pretending that these defects are necessarily inherent in the Christian ethics, in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain, do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all, that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this, to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance, which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the value of the moral training and instruction, which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind, the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity, men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil; there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into

prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognised the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take some notice of those who say, that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offence to those whose opinion is attacked, I think experience testifies that this offence is given whenever the attack is telling and powerful, and that every opponent who pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offences of the kind are such as it is mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible on adequate grounds conscientiously to stamp the misrepresentation as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is commonly meant by intemperate discussion, namely invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use, is greatest when they are employed against the comparatively defenceless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offence of this kind which can be committed by a polemic, is to stigmatize those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and uninfluential, and nobody but themselves feels much interested in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it

with safety to themselves, nor, if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offence, from which they hardly ever deviate even in a slight degree without losing ground: while unmeasured vituperation employed on the side of the prevailing opinion, really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity, than on religion. It is, however, obvious that law and authority have no business with restraining either, while opinion ought, in every instance, to determine its verdict by the circumstances of the individual case; condemning every one, on whichever side of the argument he places himself, in whose mode of advocacy either want of candour, or malignity, bigotry, or intolerance of feeling manifest themselves; but not inferring these vices from the side which a person takes, though it be the contrary side of the question to our own: and giving merited honour to every one, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells, or can be supposed to tell, in their favour. This is the real morality of public discussion: and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

CHAPTER III

Of Individuality, as One of the Elements of Well-Being

Such being the reasons which make it imperative that human beings should be free to form opinions, and to express their opinions without reserve; and such the baneful consequences to the intellectual, and through that to the moral nature of man, unless this liberty is either conceded, or asserted in spite of prohibition; let us next examine whether the same reasons do not require that men should be free to act upon their opinions—to carry these out in their lives, without hindrance, either physical or moral, from their fellow-men, so long as it is at their own risk and peril. This last proviso is of course indispensable. No one pretends that actions should be as free as opinions. On the contrary, even opinions lose their immunity, when the circumstances in which they are expressed are such as to constitute their expression a positive instigation to some mischievous act. An opinion that corn-dealers are starvers of the poor, or that private property is robbery, ought to be unmolested when simply circulated through the press, but may justly incur punishment when delivered orally to an excited mob assembled before the house of a corn-dealer, or when handed about among the same mob in the form of a placard. Acts, of whatever kind, which, without justifiable cause, do harm to others, may be, and in the more important cases absolutely require to be, controlled by the unfavourable sentiments, and, when needful, by the active interference of mankind. The liberty of the individual must be thus far limited; he must not make himself a nuisance to other people. But if he refrains from molesting others in what concerns them, and merely acts according to his own inclination and judgment in things which concern himself, the same reasons which show that opinion should be free, prove also that he should be allowed, without molestation, to carry his opinions into practice at his own cost. That mankind are not infallible; that their truths, for the most part, are only half-truths; that unity of opinion, unless resulting from the fullest and freest comparison of opposite opinions, is not desirable, and diversity not an evil, but a good, until mankind are much more capable than at present of recognising all sides of the truth, are principles applicable to men's modes of action, not less than to their opinions. As it is useful that while mankind are imperfect there should be different opinions, so is it that there should be different experiments of living; that free scope should be given to varieties of character, short of injury to others; and that the worth of different modes of life should be proved practically, when any one thinks fit to try them. It is desirable,

in short, that in things which do not primarily concern others, individuality should assert itself. Where, not the person's own character, but the traditions or customs of other people are the rule of conduct, there is wanting one of the principal ingredients of human happiness, and quite the chief ingredient of individual and social progress.

In maintaining this principle, the greatest difficulty to be encountered does not lie in the appreciation of means towards an acknowledged end, but in the indifference of persons in general to the end itself. If it were felt that the free development of individuality is one of the leading essentials of well-being; that it is not only a co-ordinate element with all that is designated by the terms civilization, instruction, education, culture, but is itself a necessary part and condition of all those things; there would be no danger that liberty should be undervalued, and the adjustment of the boundaries between it and social control would present no extraordinary difficulty. But the evil is, that individual spontaneity is hardly recognised by the common modes of thinking, as having any intrinsic worth, or deserving any regard on its own account. The majority, being satisfied with the ways of mankind as they now are (for it is they who make them what they are), cannot comprehend why those ways should not be good enough for everybody; and what is more, spontaneity forms no part of the ideal of the majority of moral and social reformers, but is rather looked on with jealousy, as a troublesome and perhaps rebellious obstruction to the general acceptance of what these reformers, in their own judgment, think would be best for mankind. Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm Von Humboldt, so eminent both as a *savant* and as a politician, made the text of a treatise—that 'the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole;' that, therefore, the object 'towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow-men must ever keep their eyes, is the individuality of power and development;' that for this there are two requisites, 'freedom, and variety of situations;' and that from the union of these arise 'individual vigour and manifold diversity,' which combine themselves in 'originality.'[6]

Little, however, as people are accustomed to a doctrine like that of Von Humboldt, and surprising as it may be to them to find so high a value attached to individuality, the question, one must nevertheless think, can only be one of degree. No one's idea of excellence in conduct is that people should do absolutely nothing but copy one another. No one would assert that people ought not to put into their mode of life, and into the conduct of their concerns, any impress whatever of their own judgment, or of their own individual character. On the other hand, it would be absurd to pretend that people ought to live as if nothing whatever had been known in the world before they came into it; as if experience had as yet done nothing towards showing that one mode of existence, or of conduct, is preferable to another. Nobody denies that people should be so taught and trained in youth, as to know and benefit by the ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught *them*; presumptive evidence, and as such, have a claim to his deference: but, in the first place, their experience may be too narrow; or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct, but unsuitable to him. Customs are made for customary circumstances, and customary characters; and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him, yet to conform to custom, merely as custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human faculties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it

6. *The Sphere and Duties of Government*, from the German of Baron Wilhelm von Humboldt, pp. 11–13.

is the custom, makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it, no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened, by his adopting it: and if the inducements to an act are not such as are consentaneous to his own feelings and character (where affection, or the rights of others, are not concerned) it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

He who lets the world, or his own portion of it, choose his plan of life for him, has no need of any other faculty than the ape-like one of imitation. He who chooses his plan for himself, employs all his faculties. He must use observation to see, reasoning and judgment to foresee, activity to gather materials for decision, discrimination to decide, and when he has decided, firmness and self-control to hold to his deliberate decision. And these qualities he requires and exercises exactly in proportion as the part of his conduct which he determines according to his own judgment and feelings is a large one. It is possible that he might be guided in some good path, and kept out of harm's way, without any of these things. But what will be his comparative worth as a human being? It really is of importance, not only what men do, but also what manner of men they are that do it. Among the works of man, which human life is rightly employed in perfecting and beautifying, the first in importance surely is man himself. Supposing it were possible to get houses built, corn grown, battles fought, causes tried, and even churches erected and prayers said, by machinery—by automatons in human form—it would be a considerable loss to exchange for these automatons even the men and women who at present inhabit the more civilized parts of the world, and who assuredly are but starved specimens of what nature can and will produce. Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develope itself on all sides, according to the tendency of the inward forces which make it a living thing.

It will probably be conceded that it is desirable people should exercise their understandings, and that an intelligent following of custom, or even occasionally an intelligent deviation from custom, is better than a blind and simply mechanical adhesion to it. To a certain extent it is admitted, that our understanding should be our own: but there is not the same willingness to admit that our desires and impulses should be our own likewise; or that to possess impulses of our own, and of any strength, is anything but a peril and a snare. Yet desires and impulses are as much a part of a perfect human being, as beliefs and restraints: and strong impulses are only perilous when not properly balanced; when one set of aims and inclinations is developed into strength, while others, which ought to co-exist with them, remain weak and inactive. It is not because men's desires are strong that they act ill; it is because their consciences are weak. There is no natural connexion between strong impulses and a weak conscience. The natural connexion is the other way. To say that one person's desires and feelings are stronger and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good. Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature, than of an indolent and impassive one. Those who have most natural feeling, are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest self-control. It is through the cultivation of these, that society both does its duty and protects its interests: not by rejecting the stuff of which heroes are made, because it knows not how to make them. A person whose desires and impulses are his own—are the expression of his own nature, as it has been developed and modified by his own culture—is said to have a character. One whose desires and impulses are not his own, has no character, no more than a steam-engine has a character. If, in addition to being his own, his impulses are strong, and are under the government of a strong will, he has an energetic character. Whoever thinks that individuality of desires and

impulses should not be encouraged to unfold itself, must maintain that society has no need of strong natures—is not the better for containing many persons who have much character—and that a high general average of energy is not desirable.

In some early states of society, these forces might be, and were, too much ahead of the power which society then possessed of disciplining and controlling them. There has been a time when the element of spontaneity and individuality was in excess, and the social principle had a hard struggle with it. The difficulty then was, to induce men of strong bodies or minds to pay obedience to any rules which required them to control their impulses. To overcome this difficulty, law and discipline, like the Popes struggling against the Emperors, asserted a power over the whole man, claiming to control all his life in order to control his character—which society had not found any other sufficient means of binding. But society has now fairly got the better of individuality; and the danger which threatens human nature is not the excess, but the deficiency, of personal impulses and preferences. Things are vastly changed, since the passions of those who were strong by station or by personal endowment were in a state of habitual rebellion against laws and ordinances, and required to be rigorously chained up to enable the persons within their reach to enjoy any particle of security. In our times, from the highest class of society down to the lowest, every one lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual or the family do not ask themselves—what do I prefer? or, what would suit my character and disposition? or, what would allow the best and highest in me to have fair play, and enable it to grow and thrive? They ask themselves, what is suitable to my position? what is usually done by persons of my station and pecuniary circumstances? or (worse still) what is usually done by persons of a station and circumstances superior to mine? I do not mean that they choose what is customary, in preference to what suits their own inclination. It does not occur to them to have any inclination, except for what is customary. Thus the mind itself is bowed to the yoke: even in what people do for pleasure, conformity is the first thing thought of; they like in crowds; they exercise choice only among things commonly done: peculiarity of taste, eccentricity of conduct, are shunned equally with crimes: until by dint of not following their own nature, they have no nature to follow: their human capacities are withered and starved: they become incapable of any strong wishes or native pleasures, and are generally without either opinions or feelings of home growth, or properly their own. Now is this, or is it not, the desirable condition of human nature?

It is so, on the Calvinistic theory. According to that, the one great offence of man is self-will. All the good of which humanity is capable, is comprised in obedience. You have no choice; thus you must do, and no otherwise: 'whatever is not a duty, is a sin.' Human nature being radically corrupt, there is no redemption for any one until human nature is killed within him. To one holding this theory of life, crushing out any of the human faculties, capacities, and susceptibilities, is no evil: man needs no capacity, but that of surrendering himself to the will of God: and if he uses any of his faculties for any other purpose but to do that supposed will more effectually, he is better without them. This is the theory of Calvinism; and it is held, in a mitigated form, by many who do not consider themselves Calvinists; the mitigation consisting in giving a less ascetic interpretation to the alleged will of God; asserting it to be his will that mankind should gratify some of their inclinations; of course not in the manner they themselves prefer, but in the way of obedience, that is, in a way prescribed to them by authority; and, therefore, by the necessary conditions of the case, the same for all.

In some such insidious form there is at present a strong tendency to this narrow theory of life, and to the pinched and hidebound type of human character which it patronizes. Many persons, no doubt, sincerely think that human beings thus cramped and dwarfed, are as their Maker designed them to be; just as many have thought that trees are a much finer thing when clipped into pollards, or cut out into figures of animals, than as nature made them. But if it be any part of religion to believe that man was made by a good Being, it is more consistent with that faith to believe, that this Being gave all human faculties that they might be cultivated and unfolded, not rooted out and consumed, and that he takes delight in every nearer approach made by his creatures to the ideal conception embodied in

them, every increase in any of their capabilities of comprehension, of action, or of enjoyment. There is a different type of human excellence from the Calvinistic; a conception of humanity as having its nature bestowed on it for other purposes than merely to be abnegated. 'Pagan self-assertion' is one of the elements of human worth, as well as 'Christian self-denial.'[7] There is a Greek ideal of self-development, which the Platonic and Christian ideal of self-government blends with, but does not supersede. It may be better to be a John Knox than an Alcibiades, but it is better to be a Pericles than either; nor would a Pericles, if we had one in these days, be without anything good which belonged to John Knox.

It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation; and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevating feelings, and strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to. In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others. There is a greater fulness of life about his own existence, and when there is more life in the units there is more in the mass which is composed of them. As much compression as is necessary to prevent the stronger specimens of human nature from encroaching on the rights of others, cannot be dispensed with; but for this there is ample compensation even in the point of view of human development. The means of development which the individual loses by being prevented from gratifying his inclinations to the injury of others, are chiefly obtained at the expense of the development of other people. And even to himself there is a full equivalent in the better development of the social part of his nature, rendered possible by the restraint put upon the selfish part. To be held to rigid rules of justice for the sake of others, developes the feelings and capacities which have the good of others for their object. But to be restrained in things not affecting their good, by their mere displeasure, developes nothing valuable, except such force of character as may unfold itself in resisting the restraint. If acquiesced in, it dulls and blunts the whole nature. To give any fair play to the nature of each, it is essential that different persons should be allowed to lead different lives. In proportion as this latitude has been exercised in any age, has that age been noteworthy to posterity. Even despotism does not produce its worst effects, so long as individuality exists under it; and whatever crushes individuality is despotism, by whatever name it may be called, and whether it professes to be enforcing the will of God or the injunctions of men.

Having said that individuality is the same thing with development, and that it is only the cultivation of individuality which produces, or can produce, well-developed human beings, I might here close the argument: for what more or better can be said of any condition of human affairs, than that it brings human beings themselves nearer to the best thing they can be? or what worse can be said of any obstruction to good, than that it prevents this? Doubtless, however, these considerations will not suffice to convince those who most need convincing; and it is necessary further to show, that these developed human beings are of some use to the undeveloped—to point out to those who do not desire liberty, and would not avail themselves of it, that they may be in some intelligible manner rewarded for allowing other people to make use of it without hindrance.

In the first place, then, I would suggest that they might possibly learn something from them. It will not be denied by anybody, that originality is a valuable element in human affairs. There is always need of persons not only to discover new truths, and point out when what were once truths are true no longer, but also to commence new practices, and set the example of more enlightened conduct, and better taste and sense in human life. This cannot well be gainsaid by anybody who does not believe that the world has already attained perfection in all its ways and practices. It is true that this benefit is not capable of being rendered by everybody alike: there are but few persons, in comparison with the whole of mankind,

7. Sterling's *Essays*.

whose experiments, if adopted by others, would be likely to be any improvement on established practice. But these few are the salt of the earth; without them, human life would become a stagnant pool. Not only is it they who introduce good things which did not before exist; it is they who keep the life in those which already existed. If there were nothing new to be done, would human intellect cease to be necessary? Would it be a reason why those who do the old things should forget why they are done, and do them like cattle, not like human beings? There is only too great a tendency in the best beliefs and practices to degenerate into the mechanical; and unless there were a succession of persons whose ever-recurring originality prevents the grounds of those beliefs and practices from becoming merely traditional, such dead matter would not resist the smallest shock from anything really alive, and there would be no reason why civilization should not die out, as in the Byzantine Empire. Persons of genius, it is true, are, and are always likely to be, a small minority; but in order to have them, it is necessary to preserve the soil in which they grow. Genius can only breathe freely in an *atmosphere* of freedom. Persons of genius are, *ex vi termini*, *more* individual than any other people—less capable, consequently, of fitting themselves, without hurtful compression, into any of the small number of moulds which society provides in order to save its members the trouble of forming their own character. If from timidity they consent to be forced into one of these moulds, and to let all that part of themselves which cannot expand under the pressure remain unexpanded, society will be little the better for their genius. If they are of a strong character, and break their fetters, they become a mark for the society which has not succeeded in reducing them to commonplace, to point at with solemn warning as 'wild,' 'erratic,' and the like; much as if one should complain of the Niagara river for not flowing smoothly between its banks like a Dutch canal.

I insist thus emphatically on the importance of genius, and the necessity of allowing it to unfold itself freely both in thought and in practice, being well aware that no one will deny the position in theory, but knowing also that almost every one, in reality, is totally indifferent to it. People think genius a fine thing if it enables a man to write an exciting poem, or paint a picture. But in its true sense, that of originality in thought and action, though no one says that it is not a thing to be admired, nearly all, at heart, think that they can do very well without it. Unhappily this is too natural to be wondered at. Originality is the one thing which unoriginal minds cannot feel the use of. They cannot see what it is to do for them: how should they? If they could see what it would do for them, it would not be originality. The first service which originality has to render them, is that of opening their eyes: which being once fully done, they would have a chance of being themselves original. Meanwhile, recollecting that nothing was ever yet done which some one was not the first to do, and that all good things which exist are the fruits of originality, let them be modest enough to believe that there is something still left for it to accomplish, and assure themselves that they are more in need of originality, the less they are conscious of the want.

In sober truth, whatever homage may be professed, or even paid, to real or supposed mental superiority, the general tendency of things throughout the world is to render mediocrity the ascendant power among mankind. In ancient history, in the middle ages, and in a diminishing degree through the long transition from feudality to the present time, the individual was a power in himself; and if he had either great talents or a high social position, he was a considerable power. At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as in public transactions. Those whose opinions go by the name of public opinion, are not always the same sort of public: in America they are the whole white population; in England, chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is a still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers. I am not complaining of all this. I do not assert that anything

better is compatible, as a general rule, with the present low state of the human mind. But that does not hinder the government of mediocrity from being mediocre government. No government by a democracy or a numerous aristocracy, either in its political acts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign. Many have let themselves be guided (which in their best times they always have done) by the counsels and influence of a more highly gifted and instructed One or Few. The initiation of all wise or noble things, comes and must come from individuals; generally at first from some one individual. The honour and glory of the average man is that he is capable of following that initiative; that he can respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of 'hero-worship' which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it, is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be, the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not only differently, but better. In this age, the mere example of nonconformity, the mere refusal to bend the knee to custom, is itself a service. Precisely because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has generally been proportional to the amount of genius, mental vigour, and moral courage which it contained. That so few now dare to be eccentric, marks the chief danger of the time.

I have said that it is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs. But independence of action, and disregard of custom, are not solely deserving of encouragement for the chance they afford that better modes of action, and customs more worthy of general adoption, may be struck out; nor is it only persons of decided mental superiority who have a just claim to carry on their lives in their own way. There is no reason that all human existence should be constructed on some one or some small number of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are not like sheep; and even sheep are not undistinguishably alike. A man cannot get a coat or a pair of boots to fit him, unless they are either made to his measure, or he has a whole warehouseful to choose from: and is it easier to fit him with a life than with a coat, or are human beings more like one another in their whole physical and spiritual conformation than in the shape of their feet? If it were only that people have diversities of taste, that is reason enough for not attempting to shape them all after one model. But different persons also require different conditions for their spiritual development; and can no more exist healthily in the same moral, than all the variety of plants can in the same physical, atmosphere and climate. The same things which are helps to one person towards the cultivation of his higher nature, are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burthen, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and aesthetic stature of which their nature is capable. Why then should tolerance, as far as the public sentiment is concerned, extend only to tastes and modes of life which extort acquiescence by the multitude of their

adherents? Nowhere (except in some monastic institutions) is diversity of taste entirely unrecognised; a person may, without blame, either like or dislike rowing, or smoking, or music, or athletic exercises, or chess, or cards, or study, because both those who like each of these things, and those who dislike them, are too numerous to be put down. But the man, and still more the woman, who can be accused either of doing 'what nobody does,' or of not doing 'what everybody does,' is the subject of as much depreciatory remark as if he or she had committed some grave moral delinquency. Persons require to possess a title, or some other badge of rank, or of the consideration of people of rank, to be able to indulge somewhat in the luxury of doing as they like without detriment to their estimation. To indulge somewhat, I repeat: for whoever allow themselves much of that indulgence, incur the risk of something worse than disparaging speeches—they are in peril of a commission *de lunatico*, and of having their property taken from them and given to their relations.[8]

8. There is something both contemptible and frightful in the sort of evidence on which, of late years, any person can be judicially declared unfit for the management of his affairs; and after his death, his disposal of his property can be set aside, if there is enough of it to pay the expenses of litigation—which are charged on the property itself. All the minute details of his daily life are pried into, and whatever is found which, seen through the medium of the perceiving and describing faculties of the lowest of the low, bears an appearance unlike absolute commonplace, is laid before the jury as evidence of insanity, and often with success; the jurors being little, if at all, less vulgar and ignorant than the witnesses; while the judges, with that extraordinary want of knowledge of human nature and life which continually astonishes us in English lawyers, often help to mislead them. These trials speak volumes as to the state of feeling and opinion among the vulgar with regard to human liberty. So far from setting any value on individuality—so far from respecting the right of each individual to act, in things indifferent, as seems good to his own judgment and inclinations, judges and juries cannot even conceive that a person in a state of sanity can desire such freedom. In former days, when it was proposed to burn atheists, charitable people used to suggest putting them in a madhouse instead: it would be nothing surprising now-a-days were we to see this done, and the doers applauding themselves, because, instead of persecuting for religion, they had adopted so humane and Christian a mode of treating these unfortunates, not without a silent satisfaction at their having thereby obtained their deserts.

There is one characteristic of the present direction of public opinion, peculiarly calculated to make it intolerant of any marked demonstration of individuality. The general average of mankind are not only moderate in intellect, but also moderate in inclinations: they have no tastes or wishes strong enough to incline them to do anything unusual, and they consequently do not understand those who have, and class all such with the wild and intemperate whom they are accustomed to look down upon. Now, in addition to this fact which is general, we have only to suppose that a strong movement has set in towards the improvement of morals, and it is evident what we have to expect. In these days such a movement has set in; much has actually been effected in the way of increased regularity of conduct, and discouragement of excesses; and there is a philanthropic spirit abroad, for the exercise of which there is no more inviting field than the moral and prudential improvement of our fellow-creatures. These tendencies of the times cause the public to be more disposed than at most former periods to prescribe general rules of conduct, and endeavour to make every one conform to the approved standard. And that standard, express or tacit, is to desire nothing strongly. Its ideal of character is to be without any marked character; to maim by compression, like a Chinese lady's foot, every part of human nature which stands out prominently, and tends to make the person markedly dissimilar in outline to commonplace humanity.

As is usually the case with ideals which exclude one-half of what is desirable, the present standard of approbation produces only an inferior imitation of the other half. Instead of great energies guided by vigorous reason, and strong feelings strongly controlled by a conscientious will, its result is weak feelings and weak energies, which therefore can be kept in outward conformity to rule without any strength either of will or of reason. Already energetic characters on any large scale are becoming merely traditional. There is now scarcely any outlet for energy in this country except business. The energy expended in this

may still be regarded as considerable. What little is left from that employment, is expended on some hobby; which may be a useful, even a philanthropic hobby, but is always some one thing, and generally a thing of small dimensions. The greatness of England is now all collective: individually small, we only appear capable of anything great by our habit of combining; and with this our moral and religious philanthropists are perfectly contented. But it was men of another stamp than this that made England what it has been; and men of another stamp will be needed to prevent its decline.

The despotism of custom is everywhere the standing hindrance to human advancement, being in unceasing antagonism to that disposition to aim at something better than customary, which is called, according to circumstances, the spirit of liberty, or that of progress or improvement. The spirit of improvement is not always a spirit of liberty, for it may aim at forcing improvements on an unwilling people; and the spirit of liberty, in so far as it resists such attempts, may ally itself locally and temporarily with the opponents of improvement; but the only unfailing and permanent source of improvement is liberty, since by it there are as many possible independent centres of improvement as there are individuals. The progressive principle, however, in either shape, whether as the love of liberty or of improvement, is antagonistic to the sway of Custom, involving at least emancipation from that yoke; and the contest between the two constitutes the chief interest of the history of mankind. The greater part of the world has, properly speaking, no history, because the despotism of Custom is complete. This is the case over the whole East. Custom is there, in all things, the final appeal; justice and right mean conformity to custom; the argument of custom no one, unless some tyrant intoxicated with power, thinks of resisting. And we see the result. Those nations must once have had originality; they did not start out of the ground populous, lettered, and versed in many of the arts of life; they made themselves all this, and were then the greatest and most powerful nations of the world. What are they now? The subjects or dependents of tribes whose forefathers wandered in the forests when theirs had magnificent palaces and gorgeous temples, but over whom custom exercised only a divided rule with liberty and progress. A people, it appears, may be progressive for a certain length of time, and then stop: when does it stop? When it ceases to possess individuality. If a similar change should befall the nations of Europe, it will not be in exactly the same shape: the despotism of custom with which these nations are threatened is not precisely stationariness. It proscribes singularity, but it does not preclude change, provided all change together. We have discarded the fixed costumes of our forefathers; every one must still dress like other people, but the fashion may change once or twice a year. We thus take care that when there is change it shall be for change's sake, and not from any idea of beauty or convenience; for the same idea of beauty or convenience would not strike all the world at the same moment, and be simultaneously thrown aside by all at another moment. But we are progressive as well as changeable: we continually make new inventions in mechanical things, and keep them until they are again superseded by better; we are eager for improvement in politics, in education, even in morals, though in this last our idea of improvement chiefly consists in persuading or forcing other people to be as good as ourselves. It is not progress that we object to; on the contrary, we flatter ourselves that we are the most progressive people who ever lived. It is individuality that we war against: we should think we had done wonders if we had made ourselves all alike; forgetting that the unlikeness of one person to another is generally the first thing which draws the attention of either to the imperfection of his own type, and the superiority of another, or the possibility, by combining the advantages of both, of producing something better than either. We have a warning example in China—a nation of much talent, and, in some respects, even wisdom, owing to the rare good fortune of having been provided at an early period with a particularly good set of customs, the work, in some measure, of men to whom even the most enlightened European must accord, under certain limitations, the title of sages and philosophers. They are remarkable, too, in the excellence of their apparatus for impressing, as far as possible, the best wisdom they possess upon every mind in the community, and securing that those who have appropriated most of it shall occupy the posts of honour and power. Surely the people who

did this have discovered the secret of human progressiveness, and must have kept themselves steadily at the head of the movement of the world. On the contrary, they have become stationary—have remained so for thousands of years; and if they are ever to be farther improved, it must be by foreigners. They have succeeded beyond all hope in what English philanthropists are so industriously working at—in making a people all alike, all governing their thoughts and conduct by the same maxims and rules; and these are the fruits. The modern *régime* of public opinion is, in an unorganized form, what the Chinese educational and political systems are in an organized; and unless individuality shall be able successfully to assert itself against this yoke, Europe, notwithstanding its noble antecedents and its professed Christianity, will tend to become another China.

What is it that has hitherto preserved Europe from this lot? What has made the European family of nations an improving, instead of a stationary portion of mankind? Not any superior excellence in them, which, when it exists, exists as the effect, not as the cause; but their remarkable diversity of character and culture. Individuals, classes, nations, have been extremely unlike one another: they have struck out a great variety of paths, each leading to something valuable; and although at every period those who travelled in different paths have been intolerant of one another, and each would have thought it an excellent thing if all the rest could have been compelled to travel his road, their attempts to thwart each other's development have rarely had any permanent success, and each has in time endured to receive the good which the others have offered. Europe is, in my judgment, wholly indebted to this plurality of paths for its progressive and many-sided development. But it already begins to possess this benefit in a considerably less degree. It is decidedly advancing towards the Chinese ideal of making all people alike. M. de Tocqueville, in his last important work, remarks how much more the Frenchmen of the present day resemble one another, than did those even of the last generation. The same remark might be made of Englishmen in a far greater degree. In a passage already quoted from Wilhelm von Humboldt, he points out two things as necessary conditions of human development, because necessary to render people unlike one another; namely, freedom, and variety of situations. The second of these two conditions is in this country every day diminishing. The circumstances which surround different classes and individuals, and shape their characters, are daily becoming more assimilated. Formerly, different ranks, different neighbourhoods, different trades and professions, lived in what might be called different worlds; at present, to a great degree in the same. Comparatively speaking, they now read the same things, listen to the same things, see the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them. Great as are the differences of position which remain, they are nothing to those which have ceased. And the assimilation is still proceeding. All the political changes of the age promote it, since they all tend to raise the low and to lower the high. Every extension of education promotes it, because education brings people under common influences, and gives them access to the general stock of facts and sentiments. Improvements in the means of communication promote it, by bringing the inhabitants of distant places into personal contact, and keeping up a rapid flow of changes of residence between one place and another. The increase of commerce and manufactures promotes it, by diffusing more widely the advantages of easy circumstances, and opening all objects of ambition, even the highest, to general competition, whereby the desire of rising becomes no longer the character of a particular class, but of all classes. A more powerful agency than even all these, in bringing about a general similarity among mankind, is the complete establishment, in this and other free countries, of the ascendancy of public opinion in the State. As the various social eminences which enabled persons entrenched on them to disregard the opinion of the multitude, gradually become levelled; as the very idea of resisting the will of the public, when it is positively known that they have a will, disappears more and more from the minds of practical politicians; there ceases to be any social support for nonconformity—any substantive power in society, which, itself opposed to the ascendancy of numbers, is interested in taking under its protection opinions and tendencies at variance with those of the public.

The combination of all these causes forms so great

a mass of influences hostile to Individuality, that it is not easy to see how it can stand its ground. It will do so with increasing difficulty, unless the intelligent part of the public can be made to feel its value—to see that it is good there should be differences, even though not for the better, even though, as it may appear to them, some should be for the worse. If the claims of Individuality are ever to be asserted, the time is now, while much is still wanting to complete the enforced assimilation. It is only in the earlier stages that any stand can be successfully made against the encroachment. The demand that all other people shall resemble ourselves, grows by what it feeds on. If resistance waits till life is reduced *nearly* to one uniform type, all deviations from that type will come to be considered impious, immoral, even monstrous and contrary to nature. Mankind speedily become unable to conceive diversity, when they have been for some time unaccustomed to see it.

CHAPTER IV

Of the Limits to the Authority of Society over the Individual

What, then, is the rightful limit to the sovereignty of the individual over himself? Where does the authority of society begin? How much of human life should be assigned to individuality, and how much to society?

Each will receive its proper share, if each has that which more particularly concerns it. To individuality should belong the part of life in which it is chiefly the individual that is interested; to society, the part which chiefly interests society.

Though society is not founded on a contract, and though no good purpose is answered by inventing a contract in order to deduce social obligations from it, every one who receives the protection of society owes a return for the benefit, and the fact of living in society renders it indispensable that each should be bound to observe a certain line of conduct towards the rest. This conduct consists first, in not injuring the interests of one another; or rather certain interests, which, either by express legal provision or by tacit understanding, ought to be considered as rights; and secondly, in each person's bearing his share (to be fixed on some equitable principle) of the labours and sacrifices incurred for defending the society or its members from injury and molestation. These conditions society is justified in enforcing at all costs to those who endeavour to withhold fulfilment. Nor is this all that society may do. The acts of an individual may be hurtful to others, or wanting in due consideration for their welfare, without going the length of violating any of their constituted rights. The offender may then be justly punished by opinion, though not by law. As soon as any part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will or will not be promoted by interfering with it, becomes open to discussion. But there is no room for entertaining any such question when a person's conduct affects the interests of no persons besides himself, or needs not affect them unless they like (all the persons concerned being of full age, and the ordinary amount of understanding). In all such cases there should be perfect freedom, legal and social, to do the action and stand the consequences.

It would be a great misunderstanding of this doctrine to suppose that it is one of selfish indifference, which pretends that human beings have no business with each other's conduct in life, and that they should not concern themselves about the well-doing or well-being of one another, unless their own interest is involved. Instead of any diminution, there is need of a great increase of disinterested exertion to promote the good of others. But disinterested benevolence can find other instruments to persuade people to their good, than whips and scourges, either of the literal or the metaphorical sort. I am the last person to undervalue the self-regarding virtues; they are only second in importance, if even second, to the social. It is equally the business of education to cultivate both. But even education works by conviction and persuasion as well as by compulsion, and it is by the former only that, when the period of education is past, the self-regarding virtues should be inculcated. Human beings owe to each other help to distinguish the better from the worse, and encouragement to choose the former and avoid the latter. They should be for ever stimulating each other to increased exercise of their higher faculties, and increased direction of their feelings and aims towards wise instead of

foolish, elevating instead of degrading, objects and contemplations. But neither one person, nor any number of persons, is warranted in saying to another human creature of ripe years, that he shall not do with his life for his own benefit what he chooses to do with it. He is the person most interested in his own well-being: the interest which any other person, except in cases of strong personal attachment, can have in it, is trifling, compared with that which he himself has; the interest which society has in him individually (except as to his conduct to others) is fractional, and altogether indirect: while, with respect to his own feelings and circumstances, the most ordinary man or woman has means of knowledge immeasurably surpassing those that can be possessed by any one else. The interference of society to overrule his judgment and purposes in what only regards himself, must be grounded on general presumptions; which may be altogether wrong, and even if right, are as likely as not to be misapplied to individual cases, by persons no better acquainted with the circumstances of such cases than those are who look at them merely from without. In this department, therefore, of human affairs, Individuality has its proper field of action. In the conduct of human beings towards one another, it is necessary that general rules should for the most part be observed, in order that people may know what they have to expect; but in each person's own concerns, his individual spontaneity is entitled to free exercise. Considerations to aid his judgment, exhortations to strengthen his will, may be offered to him, even obtruded on him, by others; but he himself is the final judge. All errors which he is likely to commit against advice and warning, are far outweighed by the evil of allowing others to constrain him to what they deem his good.

I do not mean that the feelings with which a person is regarded by others, ought not to be in any way affected by his self-regarding qualities or deficiencies. This is neither possible nor desirable. If he is eminent in any of the qualities which conduce to his own good, he is, so far, a proper object of admiration. He is so much the nearer to the ideal perfection of human nature. If he is grossly deficient in those qualities, a sentiment the opposite of admiration will follow. There is a degree of folly, and a degree of what may be called (though the phrase is not unobjectionable) lowness or depravation of taste, which, though it cannot justify doing harm to the person who manifests it, renders him necessarily and properly a subject of distaste, or, in extreme cases, even of contempt: a person could not have the opposite qualities in due strength without entertaining these feelings. Though doing no wrong to any one, a person may so act as to compel us to judge him, and feel to him, as a fool, or as a being of an inferior order: and since this judgment and feeling are a fact which he would prefer to avoid, it is doing him a service to warn him of it beforehand, as of any other disagreeable consequence to which he exposes himself. It would be well, indeed, if this good office were much more freely rendered than the common notions of politeness at present permit, and if one person could honestly point out to another that he thinks him in fault, without being considered unmannerly or presuming. We have a right, also, in various ways, to act upon our unfavourable opinion of any one, not to the oppression of his individuality, but in the exercise of ours. We are not bound, for example, to seek his society; we have a right to avoid it (though not to parade the avoidance), for we have a right to choose the society most acceptable to us. We have a right, and it may be our duty, to caution others against him, if we think his example or conversation likely to have a pernicious effect on those with whom he associates. We may give others a preference over him in optional good offices, except those which tend to his improvement. In these various modes a person may suffer very severe penalties at the hands of others, for faults which directly concern only himself; but he suffers these penalties only in so far as they are the natural, and, as it were, the spontaneous consequences of the faults themselves, not because they are purposely inflicted on him for the sake of punishment. A person who shows rashness, obstinacy, self-conceit — who cannot live within moderate means — who cannot restrain himself from hurtful indulgences — who pursues animal pleasures at the expense of those of feeling and intellect — must expect to be lowered in the opinion of others, and to have a less share of their favourable sentiments; but of this he has no right to complain, unless he has merited their favour by special excellence in his social relations, and has thus established a title to their good offices, which is not affected by his demerits towards himself.

What I contend for is, that the inconveniences which are strictly inseparable from the unfavourable judgment of others, are the only ones to which a person should ever be subjected for that portion of his conduct and character which concerns his own good, but which does not affect the interests of others in their relations with him. Acts injurious to others require a totally different treatment. Encroachment on their rights; infliction on them of any loss or damage not justified by his own rights; falsehood or duplicity in dealing with them; unfair or ungenerous use of advantages over them; even selfish abstinence from defending them against injury—these are fit objects of moral reprobation, and, in grave cases, of moral retribution and punishment. And not only these acts, but the dispositions which lead to them, are properly immoral, and fit subjects of disapprobation which may rise to abhorrence. Cruelty of disposition; malice and ill-nature; that most anti-social and odious of all passions, envy; dissimulation and insincerity; irascibility on insufficient cause, and resentment disproportioned to the provocation; the love of domineering over others; the desire to engross more than one's share of advantages (the *pleonexia* of the Greeks); the pride which derives gratification from the abasement of others; the egotism which thinks self and its concerns more important than everything else, and decides all doubtful questions in its own favour;—these are moral vices, and constitute a bad and odious moral character: unlike the self-regarding faults previously mentioned, which are not properly immoralities, and to whatever pitch they may be carried, do not constitute wickedness. They may be proofs of any amount of folly, or want of personal dignity and self-respect; but they are only a subject of moral reprobation when they involve a breach of duty to others, for whose sake the individual is bound to have care for himself. What are called duties to ourselves are not socially obligatory, unless circumstances render them at the same time duties to others. The term duty to oneself, when it means anything more than prudence, means self-respect or self-development; and for none of these is any one accountable to his fellow creatures, because for none of them is it for the good of mankind that he be held accountable to them.

The distinction between the loss of consideration which a person may rightly incur by defect of prudence or of personal dignity, and the reprobation which is due to him for an offence against the rights of others, is not a merely nominal distinction. It makes a vast difference both in our feelings and in our conduct towards him, whether he displeases us in things in which we think we have a right to control him, or in things in which we know that we have not. If he displeases us, we may express our distaste, and we may stand aloof from a person as well as from a thing that displeases us; but we shall not therefore feel called on to make his life uncomfortable. We shall reflect that he already bears, or will bear, the whole penalty of his error; if he spoils his life by mismanagement, we shall not, for that reason, desire to spoil it still further: instead of wishing to punish him, we shall rather endeavour to alleviate his punishment, by showing him how he may avoid or cure the evils his conduct tends to bring upon him. He may be to us an object of pity, perhaps of dislike, but not of anger or resentment; we shall not treat him like an enemy of society: the worst we shall think ourselves justified in doing is leaving him to himself, if we do not interfere benevolently by showing interest or concern for him. It is far otherwise if he has infringed the rules necessary for the protection of his fellow-creatures, individually or collectively. The evil consequences of his acts do not then fall on himself, but on others; and society, as the protector of all its members, must retaliate on him; must inflict pain on him for the express purpose of punishment, and must take care that it be sufficiently severe. In the one case, he is an offender at our bar, and we are called on not only to sit in judgment on him, but, in one shape or another, to execute our own sentence: in the other case, it is not our part to inflict any suffering on him, except what may incidentally follow from our using the same liberty in the regulation of our own affairs, which we allow to him in his.

The distinction here pointed out between the part of a person's life which concerns only himself, and that which concerns others, many persons will refuse to admit. How (it may be asked) can any part of the conduct of a member of society be a matter of indifference to the other members? No person is an entirely isolated being; it is impossible for a person to do anything seriously or permanently hurtful to himself, without mischief reaching at least to his near

connexions, and often far beyond them. If he injures his property, he does harm to those who directly or indirectly derived support from it, and usually diminishes, by a greater or less amount, the general resources of the community. If he deteriorates his bodily or mental faculties, he not only brings evil upon all who depended on him for any portion of their happiness, but disqualifies himself for rendering the services which he owes to his fellow creatures generally; perhaps becomes a burthen on their affection or benevolence; and if such conduct were very frequent, hardly any offence that is committed would detract more from the general sum of good. Finally, if by his vices or follies a person does no direct harm to others, he is nevertheless (it may be said) injurious by his example; and ought to be compelled to control himself, for the sake of those whom the sight or knowledge of his conduct might corrupt or mislead.

And even (it will be added) if the consequences of misconduct could be confined to the vicious or thoughtless individual, ought society to abandon to their own guidance those who are manifestly unfit for it? If protection against themselves is confessedly due to children and persons under age, is not society equally bound to afford it to persons of mature years who are equally incapable of self-government? If gambling, or drunkenness, or incontinence, or idleness, or uncleanliness, are as injurious to happiness, and as great a hindrance to improvement, as many or most of the acts prohibited by law, why (it may be asked) should not law, so far as is consistent with practicability and social convenience, endeavour to repress these also? And as a supplement to the unavoidable imperfections of law, ought not opinion at least to organize a powerful police against these vices, and visit rigidly with social penalties those who are known to practise them? There is no question here (it may be said) about restricting individuality, or impeding the trial of new and original experiments in living. The only things it is sought to prevent are things which have been tried and condemned from the beginning of the world until now; things which experience has shown not to be useful or suitable to any person's individuality. There must be some length of time and amount of experience, after which a moral or prudential truth may be regarded as established: and it is merely desired to prevent generation after generation from falling over the same precipice which has been fatal to their predecessors.

I fully admit that the mischief which a person does to himself may seriously affect, both through their sympathies and their interests, those nearly connected with him, and in a minor degree, society at large. When, by conduct of this sort, a person is led to violate a distinct and assignable obligation to any other person or persons, the case is taken out of the self-regarding class, and becomes amenable to moral disapprobation in the proper sense of the term. If, for example, a man, through intemperance or extravagance, becomes unable to pay his debts, or, having undertaken the moral responsibility of a family, becomes from the same cause incapable of supporting or educating them, he is deservedly reprobated, and might be justly punished; but it is for the breach of duty to his family or creditors, not for the extravagance. If the resources which ought to have been devoted to them, had been diverted from them for the most prudent investment, the moral culpability would have been the same. George Barnwell murdered his uncle to get money for his mistress, but if he had done it to set himself up in business, he would equally have been hanged. Again, in the frequent case of a man who causes grief to his family by addiction to bad habits, he deserves reproach for his unkindness or ingratitude; but so he may for cultivating habits not in themselves vicious, if they are painful to those with whom he passes his life, or who from personal ties are dependent on him for their comfort. Whoever fails in the consideration generally due to the interests and feelings of others, not being compelled by some more imperative duty, or justified by allowable self-preference, is a subject of moral disapprobation for that failure, but not for the cause of it, nor for the errors, merely personal to himself, which may have remotely led to it. In like manner, when a person disables himself, by conduct purely self-regarding, from the performance of some definite duty incumbent on him to the public, he is guilty of a social offence. No person ought to be punished simply for being drunk; but a soldier or a policeman should be punished for being drunk on duty. Whenever, in short, there is a definite damage, or a definite risk of damage, either to an individual or to the public, the case is taken out of the province of liberty, and placed in that of morality or law.

But with regard to the merely contingent, or, as it may be called, constructive injury which a person causes to society, by conduct which neither violates any specific duty to the public, nor occasions perceptible hurt to any assignable individual except himself; the inconvenience is one which society can afford to bear, for the sake of the greater good of human freedom. If grown persons are to be punished for not taking proper care of themselves, I would rather it were for their own sake, than under pretence of preventing them from impairing their capacity of rendering to society benefits which society does not pretend it has a right to exact. But I cannot consent to argue the point as if society had no means of bringing its weaker members up to its ordinary standard of rational conduct, except waiting till they do something irrational, and then punishing them, legally or morally, for it. Society has had absolute power over them during all the early portion of their existence: it has had the whole period of childhood and nonage in which to try whether it could make them capable of rational conduct in life. The existing generation is master both of the training and the entire circumstances of the generation to come; it cannot indeed make them perfectly wise and good, because it is itself so lamentably deficient in goodness and wisdom; and its best efforts are not always, in individual cases, its most successful ones; but it is perfectly well able to make the rising generation, as a whole, as good as, and a little better than, itself. If society lets any considerable number of its members grow up mere children, incapable of being acted on by rational consideration of distant motives, society has itself to blame for the consequences. Armed not only with all the powers of education, but with the ascendancy which the authority of a received opinion always exercises over the minds who are least fitted to judge for themselves; and aided by the natural penalties which cannot be prevented from falling on those who incur the distaste or the contempt of those who know them; let not society pretend that it needs, besides all this, the power to issue commands and enforce obedience in the personal concerns of individuals, in which, on all principles of justice and policy, the decision ought to rest with those who are to abide the consequences. Nor is there anything which tends more to discredit and frustrate the better means of influencing conduct, than a resort to the worse. If there be among those whom it is attempted to coerce into prudence or temperance, any of the material of which vigorous and independent characters are made, they will infallibly rebel against the yoke. No such person will ever feel that others have a right to control him in his concerns, such as they have to prevent him from injuring them in theirs; and it easily comes to be considered a mark of spirit and courage to fly in the face of such usurped authority, and do with ostentation the exact opposite of what it enjoins; as in the fashion of grossness which succeeded, in the time of Charles II., to the fanatical moral intolerance of the Puritans. With respect to what is said of the necessity of protecting society from the bad example set to others by the vicious or the self-indulgent; it is true that bad example may have a pernicious effect, especially the example of doing wrong to others with impunity to the wrong-doer. But we are now speaking of conduct which, while it does no wrong to others, is supposed to do great harm to the agent himself: and I do not see how those who believe this, can think otherwise than that the example, on the whole, must be more salutary than hurtful, since, if it displays the misconduct, it displays also the painful or degrading consequences which, if the conduct is justly censured, must be supposed to be in all or most cases attendant on it.

But the strongest of all the arguments against the interference of the public with purely personal conduct, is that when it does interfere, the odds are that it interferes wrongly, and in the wrong place. On questions of social morality, of duty to others, the opinion of the public, that is, of an overruling majority, though often wrong, is likely to be still oftener right; because on such questions they are only required to judge of their own interests; of the manner in which some mode of conduct, if allowed to be practised, would affect themselves. But the opinion of a similar majority, imposed as a law on the minority, on questions of self-regarding conduct, is quite as likely to be wrong as right; for in these cases public opinion means, at the best, some people's opinion of what is good or bad for other people; while very often it does not even mean that; the public, with the most perfect indifference, passing over the pleasure or convenience of those whose conduct they censure,

and considering only their own preference. There are many who consider as an injury to themselves any conduct which they have a distaste for, and resent it as an outrage to their feelings; as a religious bigot, when charged with disregarding the religious feelings of others, has been known to retort that they disregard his feelings, by persisting in their abominable worship or creed. But there is no parity between the feeling of a person for his own opinion, and the feeling of another who is offended at his holding it; no more than between the desire of a thief to take a purse, and the desire of the right owner to keep it. And a person's taste is as much his own peculiar concern as his opinion or his purse. It is easy for any one to imagine an ideal public, which leaves the freedom and choice of individuals in all uncertain matters undisturbed, and only requires them to abstain from modes of conduct which universal experience has condemned. But where has there been seen a public which set any such limit to its censorship? or when does the public trouble itself about universal experience? In its interferences with personal conduct it is seldom thinking of anything but the enormity of acting or feeling differently from itself; and this standard of judgment, thinly disguised, is held up to mankind as the dictate of religion and philosophy, by nine-tenths of all moralists and speculative writers. These teach that things are right because they are right; because we feel them to be so. They tell us to search in our own minds and hearts for laws of conduct binding on ourselves and on all others. What can the poor public do but apply these instructions, and make their own personal feelings of good and evil, if they are tolerably unanimous in them, obligatory on all the world?

The evil here pointed out is not one which exists only in theory; and it may perhaps be expected that I should specify the instances in which the public of this age and country improperly invests its own preferences with the character of moral laws. I am not writing an essay on the aberrations of existing moral feeling. That is too weighty a subject to be discussed parenthetically, and by way of illustration. Yet examples are necessary, to show that the principle I maintain is of serious and practical moment, and that I am not endeavouring to erect a barrier against imaginary evils. And it is not difficult to show, by abundant instances, that to extend the bounds of what may be called moral police, until it encroaches on the most unquestionably legitimate liberty of the individual, is one of the most universal of all human propensities.

As a first instance, consider the antipathies which men cherish on no better grounds than that persons whose religious opinions are different from theirs, do not practise their religious observances, especially their religious abstinences. To cite a rather trivial example, nothing in the creed or practice of Christians does more to envenom the hatred of Mahomedans against them, than the fact of their eating pork. There are few acts which Christians and Europeans regard with more unaffected disgust, than Mussulmans regard this particular mode of satisfying hunger. It is, in the first place, an offence against their religion; but this circumstance by no means explains either the degree or the kind of their repugnance; for wine also is forbidden by their religion, and to partake of it is by all Mussulmans accounted wrong, but not disgusting. Their aversion to the flesh of the 'unclean beast' is, on the contrary, of that peculiar character, resembling an instinctive antipathy, which the idea of uncleanness, when once it thoroughly sinks into the feelings, seems always to excite even in those whose personal habits are anything but scrupulously cleanly, and of which the sentiment of religious impurity, so intense in the Hindoos, is a remarkable example. Suppose now that in a people, of whom the majority were Mussulmans, that majority should insist upon not permitting pork to be eaten within the limits of the country. This would be nothing new in Mahomedan countries.[9] Would it be a legitimate exer-

9. The case of the Bombay Parsees is a curious instance in point. When this industrious and enterprising tribe, the descendants of the Persian fire-worshippers, flying from their native country before the Caliphs, arrived in Western India, they were admitted to toleration by the Hindoo sovereigns, on condition of not eating beef. When those regions afterwards fell under the dominion of Mahomedan conquerors, the Parsees obtained from them a continuance of indulgence, on condition of refraining from pork. What was at first obedience to authority became a second nature, and the Parsees to this day abstain both from beef and pork. Though not required by their religion, the double abstinence has had time to

cise of the moral authority of public opinion? and if not, why not? The practice is really revolting to such a public. They also sincerely think that it is forbidden and abhorred by the Deity. Neither could the prohibition be censured as religious persecution. It might be religious in its origin, but it would not be persecution for religion, since nobody's religion makes it a duty to eat pork. The only tenable ground of condemnation would be, that with the personal tastes and self-regarding concerns of individuals the public has no business to interfere.

To come somewhat nearer home: the majority of Spaniards consider it a gross impiety, offensive in the highest degree to the Supreme Being, to worship him in any other manner than the Roman Catholic; and no other public worship is lawful on Spanish soil. The people of all Southern Europe look upon a married clergy as not only irreligious, but unchaste, indecent, gross, disgusting. What do Protestants think of these perfectly sincere feelings, and of the attempt to enforce them against non-Catholics? Yet, if mankind are justified in interfering with each other's liberty in things which do not concern the interests of others, on what principle is it possible consistently to exclude these cases? or who can blame people for desiring to suppress what they regard as a scandal in the sight of God and man? No stronger case can be shown for prohibiting anything which is regarded as a personal immorality, than is made out for suppressing these practices in the eyes of those who regard them as impieties; and unless we are willing to adopt the logic of persecutors, and to say that we may persecute others because we are right, and that they must not persecute us because they are wrong, we must beware of admitting a principle of which we should resent as a gross injustice the application to ourselves.

The preceding instances may be objected to, although unreasonably, as drawn from contingencies impossible among us: opinion, in this country, not being likely to enforce abstinence from meats, or to interfere with people for worshipping, and for either marrying or not marrying, according to their creed or inclination. The next example, however, shall be taken from an interference with liberty which we have by no means passed all danger of. Wherever the Puritans have been sufficiently powerful, as in New England, and in Great Britain at the time of the Commonwealth, they have endeavoured, with considerable success, to put down all public, and nearly all private, amusements: especially music, dancing, public games, or other assemblages for purposes of diversion, and the theatre. There are still in this country large bodies of persons by whose notions of morality and religion these recreations are condemned; and those persons belonging chiefly to the middle class, who are the ascendant power in the present social and political condition of the kingdom, it is by no means impossible that persons of these sentiments may at some time or other command a majority in Parliament. How will the remaining portion of the community like to have the amusements that shall be permitted to them regulated by the religious and moral sentiments of the stricter Calvinists and Methodists? Would they not, with considerable peremptoriness, desire these intrusively pious members of society to mind their own business? This is precisely what should be said to every government and every public, who have the pretension that no person shall enjoy any pleasure which they think wrong. But if the principle of the pretension be admitted, no one can reasonably object to its being acted on in the sense of the majority, or other preponderating power in the country; and all persons must be ready to conform to the idea of a Christian commonwealth, as understood by the early settlers in New England, if a religious profession similar to theirs should ever succeed in regaining its lost ground, as religions supposed to be declining have so often been known to do.

To imagine another contingency, perhaps more likely to be realized than the one last mentioned. There is confessedly a strong tendency in the modern world towards a democratic constitution of society, accompanied or not by popular political institutions. It is affirmed that in the country where this tendency is most completely realized—where both society and the government are most democratic—the United States—the feeling of the majority, to whom any appearance of a more showy or costly style of living than they can hope to rival is disagreeable, operates as a tolerably effectual sumptuary law, and that in many parts of the Union it is really difficult for a

---

grow into a custom of their tribe; and custom, in the East, is a religion.

person possessing a very large income, to find any mode of spending it, which will not incur popular disapprobation. Though such statements as these are doubtless much exaggerated as a representation of existing facts, the state of things they describe is not only a conceivable and possible, but a probable result of democratic feeling, combined with the notion that the public has a right to a veto on the manner in which individuals shall spend their incomes. We have only further to suppose a considerable diffusion of Socialist opinions, and it may become infamous in the eyes of the majority to possess more property than some very small amount, or any income not earned by manual labour. Opinions similar in principle to these, already prevail widely among the artizan class, and weigh oppressively on those who are amenable to the opinion chiefly of that class, namely, its own members. It is known that the bad workmen who form the majority of the operatives in many branches of industry, are decidedly of opinion that bad workmen ought to receive the same wages as good, and that no one ought to be allowed, through piecework or otherwise, to earn by superior skill or industry more than others can without it. And they employ a moral police, which occasionally becomes a physical one, to deter skilful workmen from receiving, and employers from giving, a larger remuneration for a more useful service. If the public have any jurisdiction over private concerns, I cannot see that these people are in fault, or that any individual's particular public can be blamed for asserting the same authority over his individual conduct, which the general public asserts over people in general.

But, without dwelling upon supposititious cases, there are, in our own day, gross usurpations upon the liberty of private life actually practised, and still greater ones threatened with some expectation of success, and opinions propounded which assert an unlimited right in the public not only to prohibit by law everything which it thinks wrong, but in order to get at what it thinks wrong, to prohibit any number of things which it admits to be innocent.

Under the name of preventing intemperance, the people of one English colony, and of nearly half the United States, have been interdicted by law from making any use whatever of fermented drinks, except for medical purposes: for prohibition of their sale is in fact, as it is intended to be, prohibition of their use. And though the impracticability of executing the law has caused its repeal in several of the States which had adopted it, including the one from which it derives its name, an attempt has notwithstanding been commenced, and is prosecuted with considerable zeal by many of the professed philanthropists, to agitate for a similar law in this country. The association, or 'Alliance' as it terms itself, which has been formed for this purpose, has acquired some notoriety through the publicity given to a correspondence between its Secretary and one of the very few English public men who hold that a politician's opinions ought to be founded on principles. Lord Stanley's share in this correspondence is calculated to strengthen the hopes already built on him, by those who know how rare such qualities as are manifested in some of his public appearances, unhappily are among those who figure in political life. The organ of the Alliance, who would 'deeply deplore the recognition of any principle which could be wrested to justify bigotry and persecution,' undertakes to point out the 'broad and impassable barrier' which divides such principles from those of the association. 'All matters relating to thought, opinion, conscience, appear to me,' he says, 'to be without the sphere of legislation; all pertaining to social act, habit, relation, subject only to a discretionary power vested in the State itself, and not in the individual, to be within it.' No mention is made of a third class, different from either of these, viz. acts and habits which are not social, but individual; although it is to this class, surely, that the act of drinking fermented liquors belongs. Selling fermented liquors, however, is trading, and trading is a social act. But the infringement complained of is not on the liberty of the seller, but on that of the buyer and consumer; since the State might just as well forbid him to drink wine, as purposely make it impossible for him to obtain it. The Secretary, however, says, 'I claim, as a citizen, a right to legislate whenever my social rights are invaded by the social act of another.' And now for the definition of these 'social rights.' 'If anything invades my social rights, certainly the traffic in strong drink does. It destroys my primary right of security, by constantly creating and stimulating social disorder. It invades my right of equality, by deriving a profit from the creation of a misery I am taxed to support.

It impedes my right to free moral and intellectual development, by surrounding my path with dangers, and by weakening and demoralizing society, from which I have a right to claim mutual aid and intercourse.' A theory of 'social rights,' the like of which probably never before found its way into distinct language: being nothing short of this—that it is the absolute social right of every individual, that every other individual shall act in every respect exactly as he ought; that whosoever fails thereof in the smallest particular, violates my social right, and entitles me to demand from the legislature the removal of the grievance. So monstrous a principle is far more dangerous than any single interference with liberty; there is no violation of liberty which it would not justify; it acknowledges no right to any freedom whatever, except perhaps to that of holding opinions in secret, without ever disclosing them: for, the moment an opinion which I consider noxious passes any one's lips, it invades all the 'social rights' attributed to me by the Alliance. The doctrine ascribes to all mankind a vested interest in each other's moral, intellectual, and even physical perfection, to be defined by each claimant according to his own standard.

Another important example of illegitimate interference with the rightful liberty of the individual, not simply threatened, but long since carried into triumphant effect, is Sabbatarian legislation. Without doubt, abstinence on one day in the week, so far as the exigencies of life permit, from the usual daily occupation, though in no respect religiously binding on any except Jews, is a highly beneficial custom. And inasmuch as this custom cannot be observed without a general consent to that effect among the industrious classes, therefore, in so far as some persons by working may impose the same necessity on others, it may be allowable and right that the law should guarantee to each the observance by others of the custom, by suspending the greater operations of industry on a particular day. But this justification, grounded on the direct interest which others have in each individual's observance of the practice, does not apply to the self-chosen occupations in which a person may think fit to employ his leisure; nor does it hold good, in the smallest degree, for legal restrictions on amusements. It is true that the amusement of some is the day's work of others; but the pleasure, not to say the useful recreation, of many, is worth the labour of a few, provided the occupation is freely chosen, and can be freely resigned. The operatives are perfectly right in thinking that if all worked on Sunday, seven days' work would have to be given for six days' wages: but so long as the great mass of employments are suspended, the small number who for the enjoyment of others must still work, obtain a proportional increase of earnings; and they are not obliged to follow those occupations, if they prefer leisure to emolument. If a further remedy is sought, it might be found in the establishment by custom of a holiday on some other day of the week for those particular classes of persons. The only ground, therefore, on which restrictions on Sunday amusements can be defended, must be that they are religiously wrong; a motive of legislation which never can be too earnestly protested against. '*Deorum injuriae Diis curae*.' It remains to be proved that society or any of its officers holds a commission from on high to avenge any supposed offence to Omnipotence, which is not also a wrong to our fellow creatures. The notion that it is one man's duty that another should be religious, was the foundation of all the religious persecutions ever perpetrated, and if admitted, would fully justify them. Though the feeling which breaks out in the repeated attempts to stop railway travelling on Sunday, in the resistance to the opening of Museums, and the like, has not the cruelty of the old persecutors, the state of mind indicated by it is fundamentally the same. It is a determination not to tolerate others in doing what is permitted by their religion, because it is not permitted by the persecutor's religion. It is a belief that God not only abominates the act of the misbeliever, but will not hold us guiltless if we leave him unmolested.

I cannot refrain from adding to these examples of the little account commonly made of human liberty, the language of downright persecution which breaks out from the press of this country, whenever it feels called on to notice the remarkable phenomenon of Mormonism. Much might be said on the unexpected and instructive fact, that an alleged new revelation, and a religion founded on it, the product of palpable imposture, not even supported by the *prestige* of extraordinary qualities in its founder, is believed by hundreds of thousands, and has been made the

foundation of a society, in the age of newspapers, railways, and the electric telegraph. What here concerns us is, that this religion, like other and better religions, has its martyrs; that its prophet and founder was, for his teaching, put to death by a mob; that others of its adherents lost their lives by the same lawless violence; that they were forcibly expelled, in a body, from the country in which they first grew up; while, now that they have been chased into a solitary recess in the midst of a desert, many in this country openly declare that it would be right (only that it is not convenient) to send an expedition against them, and compel them by force to conform to the opinions of other people. The article of the Mormonite doctrine which is the chief provocative to the antipathy which thus breaks through the ordinary restraints of religious tolerance, is its sanction of polygamy; which, though permitted to Mahomedans, and Hindoos, and Chinese, seems to excite unquenchable animosity when practised by persons who speak English, and profess to be a kind of Christians. No one has a deeper disapprobation than I have of this Mormon institution; both for other reasons, and because, far from being in any way countenanced by the principle of liberty, it is a direct infraction of that principle, being a mere rivetting of the chains of one half of the community, and an emancipation of the other from reciprocity of obligation towards them. Still, it must be remembered that this relation is as much voluntary on the part of the women concerned in it, and who may be deemed the sufferers by it, as is the case with any other form of the marriage institution; and however surprising this fact may appear, it has its explanation in the common ideas and customs of the world, which teaching women to think marriage the one thing needful, make it intelligible that many a woman should prefer being one of several wives, to not being a wife at all. Other countries are not asked to recognise such unions, or release any portion of their inhabitants from their own laws on the score of Mormonite opinions. But when the dissentients have conceded to the hostile sentiments of others, far more than could justly be demanded; when they have left the countries to which their doctrines were unacceptable, and established themselves in a remote corner of the earth, which they have been the first to render habitable to human beings; it is difficult to see on what principles but those of tyranny they can be prevented from living there under what laws they please, provided they commit no aggression on other nations, and allow perfect freedom of departure to those who are dissatisfied with their ways. A recent writer, in some respects of considerable merit, proposes (to use his own words) not a crusade, but a *civilizade*, against this polygamous community, to put an end to what seems to him a retrograde step in civilization. It also appears so to me, but I am not aware that any community has a right to force another to be civilized. So long as the sufferers by the bad law do not invoke assistance from other communities, I cannot admit that persons entirely unconnected with them ought to step in and require that a condition of things with which all who are directly interested appear to be satisfied, should be put an end to because it is a scandal to persons some thousands of miles distant, who have no part or concern in it. Let them send missionaries, if they please, to preach against it; and let them, by any fair means (of which silencing the teachers is not one,) oppose the progress of similar doctrines among their own people. If civilization has got the better of barbarism when barbarism had the world to itself, it is too much to profess to be afraid lest barbarism, after having been fairly got under, should revive and conquer civilization. A civilization that can thus succumb to its vanquished enemy, must first have become so degenerate, that neither its appointed priests and teachers, nor anybody else, has the capacity, or will take the trouble, to stand up for it. If this be so, the sooner such a civilization receives notice to quit, the better. It can only go on from bad to worse, until destroyed and regenerated (like the Western Empire) by energetic barbarians.

CHAPTER V

Applications

The principles asserted in these pages must be more generally admitted as the basis for discussion of details, before a consistent application of them to all the various departments of government and morals

can be attempted with any prospect of advantage. The few observations I propose to make on questions of detail, are designed to illustrate the principles, rather than to follow them out to their consequences. I offer, not so much applications, as specimens of application; which may serve to bring into greater clearness the meaning and limits of the two maxims which together form the entire doctrine of this Essay, and to assist the judgment in holding the balance between them, in the cases where it appears doubtful which of them is applicable to the case.

The maxims are, first, that the individual is not accountable to society for his actions, in so far as these concern the interests of no person but himself. Advice, instruction, persuasion, and avoidance by other people if thought necessary by them for their own good, are the only measures by which society can justifiably express its dislike or disapprobation of his conduct. Secondly, that for such actions as are prejudicial to the interests of others, the individual is accountable, and may be subjected either to social or to legal punishment, if society is of opinion that the one or the other is requisite for its protection.

In the first place, it must by no means be supposed, because damage, or probability of damage, to the interests of others, can alone justify the interference of society, that therefore it always does justify such interference. In many cases, an individual, in pursuing a legitimate object, necessarily and therefore legitimately causes pain or loss to others, or intercepts a good which they had a reasonable hope of obtaining. Such oppositions of interest between individuals often arise from bad social institutions, but are unavoidable while those institutions last; and some would be unavoidable under any institutions. Whoever succeeds in an overcrowded profession, or in a competitive examination; whoever is preferred to another in any contest for an object which both desire, reaps benefit from the loss of others, from their wasted exertion and their disappointment. But it is, by common admission, better for the general interest of mankind, that persons should pursue their objects undeterred by this sort of consequences. In other words, society admits no right, either legal or moral, in the disappointed competitors, to immunity from this kind of suffering; and feels called on to interfere, only when means of success have been employed which it is contrary to the general interest to permit—namely, fraud or treachery, and force.

Again, trade is a social act. Whoever undertakes to sell any description of goods to the public, does what affects the interest of other persons, and of society in general; and thus his conduct, in principle, comes within the jurisdiction of society: accordingly, it was once held to be the duty of governments, in all cases which were considered of importance, to fix prices, and regulate the processes of manufacture. But it is now recognised, though not till after a long struggle, that both the cheapness and the good quality of commodities are most effectually provided for by leaving the producers and sellers perfectly free, under the sole check of equal freedom to the buyers for supplying themselves elsewhere. This is the so-called doctrine of Free Trade, which rests on grounds different from, though equally solid with, the principle of individual liberty asserted in this Essay. Restrictions on trade, or on production for purposes of trade, are indeed restraints; and all restraint, *qua* restraint, is an evil: but the restraints in question affect only that part of conduct which society is competent to restrain, and are wrong solely because they do not really produce the results which it is desired to produce by them. As the principle of individual liberty is not involved in the doctrine of Free Trade, so neither is it in most of the questions which arise respecting the limits of that doctrine; as for example, what amount of public control is admissible for the prevention of fraud by adulteration; how far sanitary precautions, or arrangements to protect workpeople employed in dangerous occupations, should be enforced on employers. Such questions involve considerations of liberty, only in so far as leaving people to themselves is always better, *caeteris paribus*, than controlling them: but that they may be legitimately controlled for these ends, is in principle undeniable. On the other hand, there are questions relating to interference with trade, which are essentially questions of liberty; such as the Maine Law, already touched upon; the prohibition of the importation of opium into China; the restriction of the sale of poisons; all cases, in short, where the object of the interference is to make it impossible or difficult

to obtain a particular commodity. These interferences are objectionable, not as infringements on the liberty of the producer or seller, but on that of the buyer.

One of these examples, that of the sale of poisons, opens a new question; the proper limits of what may be called the functions of police; how far liberty may legitimately be invaded for the prevention of crime, or of accident. It is one of the undisputed functions of government to take precautions against crime before it has been committed, as well as to detect and punish it afterwards. The preventive function of government, however, is far more liable to be abused, to the prejudice of liberty, than the punitory function; for there is hardly any part of the legitimate freedom of action of a human being which would not admit of being represented, and fairly too, as increasing the facilities for some form or other of delinquency. Nevertheless, if a public authority, or even a private person, sees any one evidently preparing to commit a crime, they are not bound to look on inactive until the crime is committed, but may interfere to prevent it. If poisons were never bought or used for any purpose except the commission of murder, it would be right to prohibit their manufacture and sale. They may, however, be wanted not only for innocent but for useful purposes, and restrictions cannot be imposed in the one case without operating in the other. Again, it is a proper office of public authority to guard against accidents. If either a public officer or any one else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back, without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore, (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty) he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it. Similar considerations, applied to such a question as the sale of poisons, may enable us to decide which among the possible modes of regulation are or are not contrary to principle. Such a precaution, for example, as that of labelling the drug with some word expressive of its dangerous character, may be enforced without violation of liberty: the buyer cannot wish not to know that the thing he possesses has poisonous qualities. But to require in all cases the certificate of a medical practitioner, would make it sometimes impossible, always expensive, to obtain the article for legitimate uses. The only mode apparent to me, in which difficulties may be thrown in the way of crime committed through this means, without any infringement, worth taking into account, upon the liberty of those who desire the poisonous substance for other purposes, consists in providing what, in the apt language of Bentham, is called 'preappointed evidence.' This provision is familiar to every one in the case of contracts. It is usual and right that the law, when a contract is entered into, should require as the condition of its enforcing performance, that certain formalities should be observed, such as signatures, attestation of witnesses, and the like, in order that in case of subsequent dispute, there may be evidence to prove that the contract was really entered into, and that there was nothing in the circumstances to render it legally invalid: the effect being, to throw great obstacles in the way of fictitious contracts, or contracts made in circumstances which, if known, would destroy their validity. Precautions of a similar nature might be enforced in the sale of articles adapted to be instruments of crime. The seller, for example, might be required to enter in a register the exact time of the transaction, the name and address of the buyer, the precise quality and quantity sold; to ask the purpose for which it was wanted, and record the answer he received. When there was no medical prescription, the presence of some third person might be required, to bring home the fact to the purchaser, in case there should afterwards be reason to believe that the article had been applied to criminal purposes. Such regulations would in general be no material impediment to obtaining the article, but a very considerable one to making an improper use of it without detection.

The right inherent in society, to ward off crimes against itself by antecedent precautions, suggests the obvious limitations to the maxim, that purely self-regarding misconduct cannot properly be meddled

with in the way of prevention or punishment. Drunkenness, for example, in ordinary cases, is not a fit subject for legislative interference; but I should deem it perfectly legitimate that a person, who had once been convicted of any act of violence to others under the influence of drink, should be placed under a special legal restriction, personal to himself; that if he were afterwards found drunk, he should be liable to a penalty, and that if when in that state he committed another offence, the punishment to which he would be liable for that other offence should be increased in severity. The making himself drunk, in a person whom drunkenness excites to do harm to others, is a crime against others. So, again, idleness, except in a person receiving support from the public, or except when it constitutes a breach of contract, cannot without tyranny be made a subject of legal punishment; but if, either from idleness or from any other avoidable cause, a man fails to perform his legal duties to others, as for instance to support his children, it is no tyranny to force him to fulfil that obligation, by compulsory labour, if no other means are available.

Again, there are many acts which, being directly injurious only to the agents themselves, ought not to be legally interdicted, but which, if done publicly, are a violation of good manners, and coming thus within the category of offences against others, may rightfully be prohibited. Of this kind are offences against decency; on which it is unnecessary to dwell, the rather as they are only connected indirectly with our subject, the objection to publicity being equally strong in the case of many actions not in themselves condemnable, nor supposed to be so.

There is another question to which an answer must be found, consistent with the principles which have been laid down. In cases of personal conduct supposed to be blameable, but which respect for liberty precludes society from preventing or punishing, because the evil directly resulting falls wholly on the agent; what the agent is free to do, ought other persons to be equally free to counsel or instigate? This question is not free from difficulty. The case of a person who solicits another to do an act, is not strictly a case of self-regarding conduct. To give advice or offer inducements to any one, is a social act, and may, therefore, like actions in general which affect others, be supposed amenable to social control. But a little reflection corrects the first impression, by showing that if the case is not strictly within the definition of individual liberty, yet the reasons on which the principle of individual liberty is grounded, are applicable to it. If people must be allowed, in whatever concerns only themselves, to act as seems best to themselves at their own peril, they must equally be free to consult with one another about what is fit to be so done; to exchange opinions, and give and receive suggestions. Whatever it is permitted to do, it must be permitted to advise to do. The question is doubtful, only when the instigator derives a personal benefit from his advice; when he makes it his occupation, for subsistence or pecuniary gain, to promote what society and the State consider to be an evil. Then, indeed, a new element of complication is introduced; namely, the existence of classes of persons with an interest opposed to what is considered as the public weal, and whose mode of living is grounded on the counteraction of it. Ought this to be interfered with, or not? Fornication, for example, must be tolerated, and so must gambling; but should a person be free to be a pimp, or to keep a gambling-house? The case is one of those which lie on the exact boundary line between two principles, and it is not at once apparent to which of the two it properly belongs. There are arguments on both sides. On the side of toleration it may be said, that the fact of following anything as an occupation, and living or profiting by the practice of it, cannot make that criminal which would otherwise be admissible; that the act should either be consistently permitted or consistently prohibited; that if the principles which we have hitherto defended are true, society has no business, as society, to decide anything to be wrong which concerns only the individual; that it cannot go beyond dissuasion, and that one person should be as free to persuade, as another to dissuade. In opposition to this it may be contended, that although the public, or the State, are not warranted in authoritatively deciding, for purposes of repression or punishment, that such or such conduct affecting only the interests of the individual is good or bad, they are fully justified in assuming, if they regard it as bad, that its being so or not is at least a disputable question: That, this being supposed, they cannot be acting wrongly in endeavouring to exclude the influence of solicitations which are not disinterested, of instigators

who cannot possibly be impartial—who have a direct personal interest on one side, and that side the one which the State believes to be wrong, and who confessedly promote it for personal objects only. There can surely, it may be urged, be nothing lost, no sacrifice of good, by so ordering matters that persons shall make their election, either wisely or foolishly, on their own prompting, as free as possible from the arts of persons who stimulate their inclinations for interested purposes of their own. Thus (it may be said) though the statutes respecting unlawful games are utterly indefensible—though all persons should be free to gamble in their own or each other's houses, or in any place of meeting established by their own subscriptions, and open only to the members and their visitors—yet public gambling-houses should not be permitted. It is true that the prohibition is never effectual, and that, whatever amount of tyrannical power may be given to the police, gambling-houses can always be maintained under other pretences; but they may be compelled to conduct their operations with a certain degree of secrecy and mystery, so that nobody knows anything about them but those who seek them; and more than this, society ought not to aim at. There is considerable force in these arguments. I will not venture to decide whether they are sufficient to justify the moral anomaly of punishing the accessary, when the principal is (and must be) allowed to go free; of fining or imprisoning the procurer, but not the fornicator, the gambling-house keeper, but not the gambler. Still less ought the common operations of buying and selling to be interfered with on analogous grounds. Almost every article which is bought and sold may be used in excess, and the sellers have a pecuniary interest in encouraging that excess; but no argument can be founded on this, in favour, for instance, of the Maine Law; because the class of dealers in strong drinks, though interested in their abuse, are indispensably required for the sake of their legitimate use. The interest, however, of these dealers in promoting intemperance is a real evil, and justifies the State in imposing restrictions and requiring guarantees which, but for that justification, would be infringements of legitimate liberty.

A further question is, whether the State, while it permits, should nevertheless indirectly discourage conduct which it deems contrary to the best interests of the agent; whether, for example, it should take measures to render the means of drunkenness more costly, or add to the difficulty of procuring them by limiting the number of the places of sale. On this as on most other practical questions, many distinctions require to be made. To tax stimulants for the sole purpose of making them more difficult to be obtained, is a measure differing only in degree from their entire prohibition; and would be justifiable only if that were justifiable. Every increase of cost is a prohibition, to those whose means do not come up to the augmented price; and to those who do, it is a penalty laid on them for gratifying a particular taste. Their choice of pleasures, and their mode of expending their income, after satisfying their legal and moral obligations to the State and to individuals, are their own concern, and must rest with their own judgment. These considerations may seem at first sight to condemn the selection of stimulants as special subjects of taxation for purposes of revenue. But it must be remembered that taxation for fiscal purposes is absolutely inevitable; that in most countries it is necessary that a considerable part of that taxation should be indirect; that the State, therefore, cannot help imposing penalties, which to some persons may be prohibitory, on the use of some articles of consumption. It is hence the duty of the State to consider, in the imposition of taxes, what commodities the consumers can best spare; and *a fortiori*, to select in preference those of which it deems the use, beyond a very moderate quantity, to be positively injurious. Taxation, therefore, of stimulants, up to the point which produces the largest amount of revenue (supposing that the State needs all the revenue which it yields) is not only admissible, but to be approved of.

The question of making the sale of these commodities a more or less exclusive privilege, must be answered differently, according to the purposes to which the restriction is intended to be subservient. All places of public resort require the restraint of a police, and places of this kind peculiarly, because offences against society are especially apt to originate there. It is, therefore, fit to confine the power of selling these commodities (at least for consumption on the spot) to persons of known or vouched-for respectability of conduct; to make such regulations respecting hours of opening and closing as may be requisite for public surveil-

lance, and to withdraw the licence if breaches of the peace repeatedly take place through the connivance or incapacity of the keeper of the house, or if it becomes a rendezvous for concocting and preparing offences against the law. Any further restriction I do not conceive to be, in principle, justifiable. The limitation in number, for instance, of beer and spirit houses, for the express purpose of rendering them more difficult of access, and diminishing the occasions of temptation, not only exposes all to an inconvenience because there are some by whom the facility would be abused, but is suited only to a state of society in which the labouring classes are avowedly treated as children or savages, and placed under an education of restraint, to fit them for future admission to the privileges of freedom. This is not the principle on which the labouring classes are professedly governed in any free country; and no person who sets due value on freedom will give his adhesion to their being so governed, unless after all efforts have been exhausted to educate them for freedom and govern them as freemen, and it has been definitively proved that they can only be governed as children. The bare statement of the alternative shows the absurdity of supposing that such efforts have been made in any case which needs be considered here. It is only because the institutions of this country are a mass of inconsistencies, that things find admittance into our practice which belong to the system of despotic, or what is called paternal, government, while the general freedom of our institutions precludes the exercise of the amount of control necessary to render the restraint of any real efficacy as a moral education.

It was pointed out in an early part of this Essay, that the liberty of the individual, in things wherein the individual is alone concerned, implies a corresponding liberty in any number of individuals to regulate by mutual agreement such things as regard them jointly, and regard no persons but themselves. This question presents no difficulty, so long as the will of all the persons implicated remains unaltered; but since that will may change, it is often necessary, even in things in which they alone are concerned, that they should enter into engagements with one another; and when they do, it is fit, as a general rule, that those engagements should be kept. Yet, in the laws, probably, of every country, this general rule has some exceptions. Not only persons are not held to engagements which violate the rights of third parties, but it is sometimes considered a sufficient reason for releasing them from an engagement, that it is injurious to themselves. In this and most other civilized countries, for example, an engagement by which a person should sell himself, or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at the least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling himself for a slave, he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favour, that would be afforded by his voluntarily remaining in it. The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom. These reasons, the force of which is so conspicuous in this peculiar case, are evidently of far wider application; yet a limit is everywhere set to them by the necessities of life, which continually require, not indeed that we should resign our freedom, but that we should consent to this and the other limitation of it. The principle, however, which demands uncontrolled freedom of action in all that concerns only the agents themselves, requires that those who have become bound to one another, in things which concern no third party, should be able to release one another from the engagement: and even without such voluntary release, there are perhaps no contracts or engagements, except those that relate to money or money's worth, of which one can venture to say that there ought to be no liberty whatever of retractation. Baron Wilhelm von Humboldt, in the excellent essay from which I have already quoted, states it as his conviction, that engagements which involve personal relations or services, should never

be legally binding beyond a limited duration of time; and that the most important of these engagements, marriage, having the peculiarity that its objects are frustrated unless the feelings of both the parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it. This subject is too important, and too complicated, to be discussed in a parenthesis, and I touch on it only so far as is necessary for purposes of illustration. If the conciseness and generality of Baron Humboldt's dissertation had not obliged him in this instance to content himself with enunciating his conclusion without discussing the premises, he would doubtless have recognised that the question cannot be decided on grounds so simple as those to which he confines himself. When a person, either by express promise or by conduct, has encouraged another to rely upon his continuing to act in a certain way—to build expectations and calculations, and stake any part of his plan of life upon that supposition—a new series of moral obligations arises on his part towards that person, which may possibly be overruled, but cannot be ignored. And again, if the relation between two contracting parties has been followed by consequences to others; if it has placed third parties in any peculiar position, or, as in the case of marriage, has even called third parties into existence, obligations arise on the part of both the contracting parties towards those third persons, the fulfilment of which, or at all events the mode of fulfilment, must be greatly affected by the continuance or disruption of the relation between the original parties to the contract. It does not follow, nor can I admit, that these obligations extend to requiring the fulfilment of the contract at all costs to the happiness of the reluctant party; but they are a necessary element in the question; and even if, as von Humboldt maintains, they ought to make no difference in the *legal* freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make *much* difference), they necessarily make a great difference in the *moral* freedom. A person is bound to take all these circumstances into account, before resolving on a step which may affect such important interests of others; and if he does not allow proper weight to those interests, he is morally responsible for the wrong. I have made these obvious remarks for the better illustration of the general principle of liberty, and not because they are at all needed on the particular question, which, on the contrary, is usually discussed as if the interest of children was everything, and that of grown persons nothing.

I have already observed that, owing to the absence of any recognised general principles, liberty is often granted where it should be withheld, as well as withheld where it should be granted; and one of the cases in which, in the modern European world, the sentiment of liberty is the strongest, is a case where, in my view, it is altogether misplaced. A person should be free to do as he likes in his own concerns; but he ought not to be free to do as he likes in acting for another, under the pretext that the affairs of the other are his own affairs. The State, while it respects the liberty of each in what specially regards himself, is bound to maintain a vigilant control over his exercise of any power which it allows him to possess over others. This obligation is almost entirely disregarded in the case of the family relations, a case, in its direct influence on human happiness, more important than all others taken together. The almost despotic power of husbands over wives needs not be enlarged upon here, because nothing more is needed for the complete removal of the evil, than that wives should have the same rights, and should receive the protection of law in the same manner, as all other persons; and because, on this subject, the defenders of established injustice do not avail themselves of the plea of liberty, but stand forth openly as the champions of power. It is in the case of children, that misapplied notions of liberty are a real obstacle to the fulfilment by the State of its duties. One would almost think that a man's children were supposed to be literally, and not metaphorically, a part of himself, so jealous is opinion of the smallest interference of law with his absolute and exclusive control over them; more jealous than of almost any interference with his own freedom of action: so much less do the generality of mankind value liberty than power. Consider, for example, the case of education. Is it not almost a self-evident axiom, that the State should require and compel the education, up to a certain standard, of every human being who is born its citizen? Yet who is there that is not afraid to recognise and assert this truth? Hardly any one indeed will deny that it is one of the most sacred

duties of the parents (or, as law and usage now stand, the father), after summoning a human being into the world, to give to that being an education fitting him to perform his part well in life towards others and towards himself. But while this is unanimously declared to be the father's duty, scarcely anybody, in this country, will bear to hear of obliging him to perform it. Instead of his being required to make any exertion or sacrifice for securing education to the child, it is left to his choice to accept it or not when it is provided gratis! It still remains unrecognised, that to bring a child into existence without a fair prospect of being able, not only to provide food for its body, but instruction and training for its mind, is a moral crime, both against the unfortunate offspring and against society; and that if the parent does not fulfil this obligation, the State ought to see it fulfilled, at the charge, as far as possible, of the parent.

Were the duty of enforcing universal education once admitted, there would be an end to the difficulties about what the State should teach, and how it should teach, which now convert the subject into a mere battle-field for sects and parties, causing the time and labour which should have been spent in educating, to be wasted in quarrelling about education. If the government would make up its mind to *require* for every child a good education, it might save itself the trouble of *providing* one. It might leave to parents to obtain the education where and how they pleased, and content itself with helping to pay the school fees of the poorer classes of children, and defraying the entire school expenses of those who have no one else to pay for them. The objections which are urged with reason against State education, do not apply to the enforcement of education by the State, but to the State's taking upon itself to direct that education: which is a totally different thing. That the whole or any large part of the education of the people should be in State hands, I go as far as any one in deprecating. All that has been said of the importance of individuality of character, and diversity in opinions and modes of conduct, involves, as of the same unspeakable importance, diversity of education. A general State education is a mere contrivance for moulding people to be exactly like one another: and as the mould in which it casts them is that which pleases the predominant power in the government, whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body. An education established and controlled by the State should only exist, if it exist at all, as one among many competing experiments, carried on for the purpose of example and stimulus, to keep the others up to a certain standard of excellence. Unless, indeed, when society in general is in so backward a state that it could not or would not provide for itself any proper institutions of education, unless the government undertook the task: then, indeed, the government may, as the less of two great evils, take upon itself the business of schools and universities, as it may that of joint stock companies, when private enterprise, in a shape fitted for undertaking great works of industry, does not exist in the country. But in general, if the country contains a sufficient number of persons qualified to provide education under government auspices, the same persons would be able and willing to give an equally good education on the voluntary principle, under the assurance of remuneration afforded by a law rendering education compulsory, combined with State aid to those unable to defray the expense.

The instrument for enforcing the law could be no other than public examinations, extending to all children, and beginning at an early age. An age might be fixed at which every child must be examined, to ascertain if he (or she) is able to read. If a child proves unable, the father, unless he has some sufficient ground of excuse, might be subjected to a moderate fine, to be worked out, if necessary, by his labour, and the child might be put to school at his expense. Once in every year the examination should be renewed, with a gradually extending range of subjects, so as to make the universal acquisition, and what is more, retention, of a certain minimum of general knowledge, virtually compulsory. Beyond that minimum, there should be voluntary examinations on all subjects, at which all who come up to a certain standard of proficiency might claim a certificate. To prevent the State from exercising, through these arrangements, an improper influence over opinion, the knowledge required for passing an examination (beyond the merely instrumental parts of knowledge,

such as languages and their use) should, even in the higher classes of examinations, be confined to facts and positive science exclusively. The examinations on religion, politics, or other disputed topics, should not turn on the truth or falsehood of opinions, but on the matter of fact that such and such an opinion is held, on such grounds, by such authors, or schools, or churches. Under this system, the rising generation would be no worse off in regard to all disputed truths, than they are at present; they would be brought up either churchmen or dissenters as they now are, the State merely taking care that they should be instructed churchmen, or instructed dissenters. There would be nothing to hinder them from being taught religion, if their parents chose, at the same schools where they were taught other things. All attempts by the State to bias the conclusions of its citizens on disputed subjects, are evil; but it may very properly offer to ascertain and certify that a person possesses the knowledge, requisite to make his conclusions, on any given subject, worth attending to. A student of philosophy would be the better for being able to stand an examination both in Locke and in Kant, whichever of the two he takes up with, or even if with neither: and there is no reasonable objection to examining an atheist in the evidences of Christianity, provided he is not required to profess a belief in them. The examinations, however, in the higher branches of knowledge should, I conceive, be entirely voluntary. It would be giving too dangerous a power to governments, were they allowed to exclude any one from professions, even from the profession of teacher, for alleged deficiency of qualifications: and I think, with Wilhelm von Humboldt, that degrees, or other public certificates of scientific or professional acquirements, should be given to all who present themselves for examination, and stand the test; but that such certificates should confer no advantage over competitors, other than the weight which may be attached to their testimony by public opinion.

It is not in the matter of education only, that misplaced notions of liberty prevent moral obligations on the part of parents from being recognised, and legal obligations from being imposed, where there are the strongest grounds for the former always, and in many cases for the latter also. The fact itself, of causing the existence of a human being, is one of the most responsible actions in the range of human life. To undertake this responsibility—to bestow a life which may be either a curse or a blessing—unless the being on whom it is to be bestowed will have at least the ordinary chances of a desirable existence, is a crime against that being. And in a country either over-peopled or threatened with being so, to produce children, beyond a very small number, with the effect of reducing the reward of labour by their competition, is a serious offence against all who live by the remuneration of their labour. The laws which, in many countries on the Continent, forbid marriage unless the parties can show that they have the means of supporting a family, do not exceed the legitimate powers of the State: and whether such laws be expedient or not (a question mainly dependent on local circumstances and feelings), they are not objectionable as violations of liberty. Such laws are interferences of the State to prohibit a mischievous act—an act injurious to others, which ought to be a subject of reprobation, and social stigma, even when it is not deemed expedient to superadd legal punishment. Yet the current ideas of liberty, which bend so easily to real infringements of the freedom of the individual in things which concern only himself, would repel the attempt to put any restraint upon his inclinations when the consequence of their indulgence is a life or lives of wretchedness and depravity to the offspring, with manifold evils to those sufficiently within reach to be in any way affected by their actions. When we compare the strange respect of mankind for liberty, with their strange want of respect for it, we might imagine that a man had an indispensable right to do harm to others, and no right at all to please himself without giving pain to any one.

I have reserved for the last place a large class of questions respecting the limits of government interference, which, though closely connected with the subject of this Essay, do not, in strictness, belong to it. These are cases in which the reasons against interference do not turn upon the principle of liberty: the question is not about restraining the actions of individuals, but about helping them: it is asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually, or in voluntary combination.

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently enlarged upon by political economists, and is not particularly related to the principles of this Essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them, rather than by the government, as a means to their own mental education—a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns—habituating them to act from public or semi-public motives, and guide their conduct by aims which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved; as is exemplified by the too-often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the localities, and of the great enterprises of industry by the union of those who voluntarily supply the pecuniary means, is further recommended by all the advantages which have been set forth in this Essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What the State can usefully do, is to make itself a central depository, and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others; instead of tolerating no experiments but its own.

The third, and most cogent reason for restricting the interference of government, is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government, causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employees of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skilful the arrangements for obtaining the best qualified hands and heads with which to work it. In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for those employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents, is that the occupation of a permanent official servant of the State does not

hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career in the professions, or in the service of companies and other public bodies. One would not have been surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety-valve of the proposed system. If indeed all the high talent of the country *could* be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practised intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: the multitude for direction and dictation in all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this regime, not only is the outside public ill-qualified, for want of practical experience, to criticize or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no reform can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian empire, as shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit, the public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only leave to do it, but even how it is to be done, naturally hold the State responsible for all evil which befals them, and when the evil exceeds their amount of patience, they rise against the government and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place.

A very different spectacle is exhibited among a people accustomed to transact their own business. In France, a large part of the people having been engaged in military service, many of whom have held at least the rank of non-commissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action. What the French are in military affairs, the Americans are in every kind of civil business; let them be left without a government, every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men because these are able to seize and pull the reins of the central administration. No bureaucracy can hope to make such a people as this do or undergo anything that they do not like. But where everything is done through the bureaucracy, nothing to which the bureaucracy is really adverse can be done at all. The constitution of such countries is an organization of the experience and practical ability of the nation, into a disciplined body for the purpose of governing the rest; and the more perfect that organization is in itself, the more successful in drawing to itself and educating for itself the persons of greatest capacity from all ranks of the community, the more complete is the bondage of all, the members of the bureaucracy included. For the governors are as much the slaves of their organization and discipline, as the governed are of the governors. A Chinese mandarin is as much the tool and creature of a despotism as the humblest cultivator. An individual Jesuit is to the utmost degree of abasement the slave of his order, though the order itself exists for the collective power and importance of its members.

It is not, also, to be forgotten, that the absorption

of all the principal ability of the country into the governing body is fatal, sooner or later, to the mental activity and progressiveness of the body itself. Banded together as they are—working a system which, like all systems, necessarily proceeds in a great measure by fixed rules—the official body are under the constant temptation of sinking into indolent routine, or, if they now and then desert that mill-horse round, of rushing into some half-examined crudity which has struck the fancy of some leading member of the corps: and the sole check to these closely allied, though seemingly opposite, tendencies, the only stimulus which can keep the ability of the body itself up to a high standard, is liability to the watchful criticism of equal ability outside the body. It is indispensable, therefore, that the means should exist, independently of the government, of forming such ability, and furnishing it with the opportunities and experience necessary for a correct judgment of great practical affairs. If we would possess permanently a skilful and efficient body of functionaries—above all a body able to originate and willing to adopt improvements; if we would not have our bureaucracy degenerate into a pedantocracy, this body must not engross all the occupations which form and cultivate the faculties required for the government of mankind.

To determine the point at which evils, so formidable to human freedom and advancement, begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognised chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralized power and intelligence, as can be had without turning into governmental channels too great a proportion of the general activity—is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest possible centralization of information, and diffusion of it from the centre. Thus, in municipal administration, there would be, as in the New England States, a very minute division among separate officers, chosen by the localities, of all business which is not better left to the persons directly interested; but besides this, there would be, in each department of local affairs, a central superintendence, forming a branch of the general government. The organ of this superintendence would concentrate, as in a focus, the variety of information and experience derived from the conduct of that branch of public business in all the localities, from everything analogous which is done in foreign countries, and from the general principles of political science. This central organ should have a right to know all that is done, and its special duty should be that of making the knowledge acquired in one place available for others. Emancipated from the petty prejudices and narrow views of a locality by its elevated position and comprehensive sphere of observation, its advice would naturally carry much authority; but its actual power, as a permanent institution, should, I conceive, be limited to compelling the local officers to obey the laws laid down for their guidance. In all things not provided for by general rules, those officers should be left to their own judgment, under responsibility to their constituents. For the violation of rules, they should be responsible to law, and the rules themselves should be laid down by the legislature; the central administrative authority only watching over their execution, and if they were not properly carried into effect, appealing, according to the nature of the case, to the tribunals to enforce the law, or to the constituencies to dismiss the functionaries who had not executed it according to its spirit. Such, in its general conception, is the central superintendence which the Poor Law Board is intended to exercise over the administrators of the Poor Rate throughout the country. Whatever powers the Board exercises beyond this limit, were right and necessary in that peculiar case, for the cure of rooted habits of maladministration in matters deeply affecting not the localities merely, but the whole community; since no locality has a moral right to make itself by mismanagement a nest of pauperism, necessarily overflowing into other localities, and impairing the moral and physical condition of the whole labouring community. The powers of administrative coercion and subordinate legislation possessed by the Poor Law

Board (but which, owing to the state of opinion on the subject, are very scantily exercised by them), though perfectly justifiable in a case of first-rate national interest, would be wholly out of place in the superintendence of interests purely local. But a central organ of information and instruction for all the localities, would be equally valuable in all departments of administration. A government cannot have too much of the kind of activity which does not impede, but aids and stimulates, individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion, denouncing, it makes them work in fetters, or bids them stand aside and does their work instead of them. The worth of a State, in the long run, is the worth of the individuals composing it; and a State which postpones the interests of *their* mental expansion and elevation, to a little more of administrative skill, or of that semblance of it which practice gives, in the details of business; a State which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything, will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

CHAPTER I

General Remarks

There are few circumstances among those which make up the present condition of human knowledge, more unlike what might have been expected, or more significant of the backward state in which speculation on the most important subjects still lingers, than the little progress which has been made in the decision of the controversy respecting the criterion of right and wrong. From the dawn of philosophy, the question concerning the *summum bonum*, or, what is the same thing, concerning the foundation of morality, has been accounted the main problem in speculative thought, has occupied the most gifted intellects, and divided them into sects and schools, carrying on a vigorous warfare against one another. And after more than two thousand years the same discussions continue, philosophers are still ranged under the same contending banners, and neither thinkers nor mankind at large seem nearer to being unanimous on the subject, than when the youth Socrates listened to the old Protagoras, and asserted (if Plato's dialogue be grounded on a real conversation) the theory of utilitarianism against the popular morality of the so-called sophist.

It is true that similar confusion and uncertainty, and in some cases similar discordance, exist respecting the first principles of all the sciences, not excepting that which is deemed the most certain of them, mathematics; without much impairing, generally indeed without impairing at all, the trustworthiness of the conclusions of those sciences. An apparent anomaly, the explanation of which is, that the detailed doctrines of a science are not usually deduced from, nor depend for their evidence upon, what are called its first principles. Were it not so, there would be no science more precarious, or whose conclusions were more insufficiently made out, than algebra; which derives none of its certainty from what are commonly taught to learners as its elements, since these, as laid down by some of its most eminent teachers, are as full of fictions as English law, and of mysteries as theology. The truths which are ultimately accepted as the first principles of a science, are really the last results of metaphysical analysis, practised on the elementary notions with which the science is conversant; and their relation to the science is not that of foundations to an edifice, but of roots to a tree, which may perform their office equally well though they be never dug down to and exposed to light. But though in science the particular truths precede the general theory, the contrary might be expected to be the case with a practical art, such as morals or legislation. All action is for the sake of some end, and rules of action, it seems natural to suppose, must take their whole character and colour from the end to which they are subservient. When we engage in a pursuit, a clear and precise conception of what we are pursuing would seem to be the first thing we need, instead of the last we are to look forward to. A test of right and wrong must be the means, one would think, of ascertaining what is right or wrong, and not a consequence of having already ascertained it.

This edition of *Utilitarianism* was drawn from the 1871 4th edition Longmans, Green, Reader, and Dyer.

The difficulty is not avoided by having recourse to the popular theory of a natural faculty, a sense or instinct, informing us of right and wrong. For—besides that the existence of such a moral instinct is itself one of the matters in dispute—those believers in it who have any pretensions to philosophy, have been obliged to abandon the idea that it discerns what is right or wrong in the particular case in hand, as our other senses discern the sight or sound actually present. Our moral faculty, according to all those of its interpreters who are entitled to the name of thinkers, supplies us only with the general principles of moral judgments; it is a branch of our reason, not of our sensitive faculty; and must be looked to for the abstract doctrines of morality, not for perception of it in the concrete. The intuitive, no less than what may be termed the inductive, school of ethics, insists on the necessity of general laws. They both agree that the morality of an individual action is not a question of direct perception, but of the application of a law to an individual case. They recognise also, to a great extent, the same moral laws; but differ as to their evidence, and the source from which they derive their authority. According to the one opinion, the principles of morals are evident *a priori*, requiring nothing to command assent, except that the meaning of the terms be understood. According to the other doctrine, right and wrong, as well as truth and falsehood, are questions of observation and experience. But both hold equally that morality must be deduced from principles; and the intuitive school affirm as strongly as the inductive, that there is a science of morals. Yet they seldom attempt to make out a list of the *a priori* principles which are to serve as the premises of the science; still more rarely do they make any effort to reduce those various principles to one first principle, or common ground of obligation. They either assume the ordinary precepts of morals as of *a priori* authority, or they lay down as the common groundwork of those maxims, some generality much less obviously authoritative than the maxims themselves, and which has never succeeded in gaining popular acceptance. Yet to support their pretensions there ought either to be some one fundamental principle or law, at the root of all morality, or if there be several, there should be a determinate order of precedence among them; and the one principle, or the rule for deciding between the various principles when they conflict, ought to be self-evident.

To inquire how far the bad effects of this deficiency have been mitigated in practice, or to what extent the moral beliefs of mankind have been vitiated or made uncertain by the absence of any distinct recognition of an ultimate standard, would imply a complete survey and criticism of past and present ethical doctrine. It would, however, be easy to show that whatever steadiness or consistency these moral beliefs have attained, has been mainly due to the tacit influence of a standard not recognised. Although the non-existence of acknowledged first principle has made ethics not so much a guide as a consecration of men's actual sentiments, still, as men's sentiments, both of favour and of aversion, are greatly influenced by what they suppose to be the effects of things upon their happiness, the principle of utility, or as Bentham latterly called it, the greatest happiness principle, has had a large share in forming the moral doctrines even of those who most scornfully reject its authority. Nor is there any school of thought which refuses to admit that the influence of actions on happiness is a most material and even predominant consideration in many of the details of morals, however unwilling to acknowledge it as the fundamental principle of morality, and the source of moral obligation. I might go much further, and say that to all those *a priori* moralists who deem it necessary to argue at all, utilitarian arguments are indispensable. It is not my present purpose to criticize these thinkers; but I cannot help referring, for illustration, to a systematic treatise by one of the most illustrious of them, the *Metaphysics of Ethics*, by Kant. This remarkable man, whose system of thought will long remain one of the landmarks in the history of philosophical speculation, does, in the treatise in question, lay down an universal first principle as the origin and ground of moral obligation; it is this:—'So act, that the rule on which thou actest would admit of being adopted as a law by all rational beings.' But when he begins to deduce from this precept any of the actual duties of morality, he fails, almost grotesquely, to show that there would be any contradiction, any logical (not to say physical) impossibility, in the adoption by all rational beings of the most outrageously immoral rules of conduct. All he shows is that the *consequences* of

their universal adoption would be such as no one would choose to incur.

On the present occasion, I shall, without further discussion of the other theories, attempt to contribute something towards the understanding and appreciation of the Utilitarian or Happiness theory, and towards such proof as it is susceptible of. It is evident that this cannot be proof in the ordinary and popular meaning of the term. Questions of ultimate ends are not amenable to direct proof. Whatever can be proved to be good, must be so by being shown to be a means to something admitted to be good without proof. The medical art is proved to be good, by its conducing to health; but how is it possible to prove that health is good? The art of music is good, for the reason, among others, that it produces pleasure; but what proof is it possible to give that pleasure is good? If, then, it is asserted that there is a comprehensive formula, including all things which are in themselves good, and that whatever else is good, is not so as an end, but as a mean, the formula may be accepted or rejected, but is not a subject of what is commonly understood by proof. We are not, however, to infer that its acceptance or rejection must depend on blind impulse, or arbitrary choice. There is a larger meaning of the word proof, in which this question is as amenable to it as any other of the disputed questions of philosophy. The subject is within the cognizance of the rational faculty; and neither does that faculty deal with it solely in the way of intuition. Considerations may be presented capable of determining the intellect either to give or withhold its assent to the doctrine; and this is equivalent to proof.

We shall examine presently of what nature are these considerations; in what manner they apply to the case, and what rational grounds, therefore, can be given for accepting or rejecting the utilitarian formula. But it is a preliminary condition of rational acceptance or rejection, that the formula should be correctly understood. I believe that the very imperfect notion ordinarily formed of its meaning, is the chief obstacle which impedes its reception; and that could it be cleared, even from only the grosser misconceptions, the question would be greatly simplified, and a large proportion of its difficulties removed. Before, therefore, I attempt to enter into the philosophical grounds which can be given for assenting to the utilitarian standard, I shall offer some illustrations of the doctrine itself; with the view of showing more clearly what it is, distinguishing it from what it is not, and disposing of such of the practical objections to it as either originate in, or are closely connected with, mistaken interpretations of its meaning. Having thus prepared the ground, I shall afterwards endeavour to throw such light as I can upon the question, considered as one of philosophical theory.

CHAPTER II

What Utilitarianism Is

A passing remark is all that needs be given to the ignorant blunder of supposing that those who stand up for utility as the test of right and wrong, use the term in that restricted and merely colloquial sense in which utility is opposed to pleasure. An apology is due to the philosophical opponents of utilitarianism, for even the momentary appearance of confounding them with any one capable of so absurd a misconception; which is the more extraordinary, inasmuch as the contrary accusation, of referring everything to pleasure, and that too in its grossest form, is another of the common charges against utilitarianism: and, as has been pointedly remarked by an able writer, the same sort of persons, and often the very same persons, denounce the theory 'as impracticably dry when the word utility precedes the word pleasure, and as too practicably voluptuous when the word pleasure precedes the word utility.' Those who know anything about the matter are aware that every writer, from Epicurus to Bentham, who maintained the theory of utility, meant by it, not something to be contradistinguished from pleasure, but pleasure itself, together with exemption from pain; and instead of opposing the useful to the agreeable or the ornamental, have always declared that the useful means these, among other things. Yet the common herd, including the herd of writers, not only in newspapers and periodicals, but in books of weight and pretension, are perpetually falling into this shallow mistake. Having caught up the word utilitarian, while knowing nothing whatever about it but its sound, they habitually express by it the rejection, or the neglect, of pleasure

in some of its forms; of beauty, of ornament, or of amusement. Nor is the term thus ignorantly misapplied solely in disparagement, but occasionally in compliment; as though it implied superiority to frivolity and the mere pleasures of the moment. And this perverted use is the only one in which the word is popularly known, and the one from which the new generation are acquiring their sole notion of its meaning. Those who introduced the word, but who had for many years discontinued it as a distinctive appellation, may well feel themselves called upon to resume it, if by doing so they can hope to contribute anything towards rescuing it from this utter degradation.[1]

The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure, and the absence of pain; by unhappiness, pain, and the privation of pleasure. To give a clear view of the moral standard set up by the theory, much more requires to be said; in particular, what things it includes in the ideas of pain and pleasure; and to what extent this is left an open question. But these supplementary explanations do not affect the theory of life on which this theory of morality is grounded—namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things (which are as numerous in the utilitarian as in any other scheme) are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.

Now, such a theory of life excites in many minds, and among them in some of the most estimable in feeling and purpose, inveterate dislike. To suppose that life has (as they express it) no higher end than pleasure—no better and nobler object of desire and pursuit—they designate as utterly mean and grovelling; as a doctrine worthy only of swine, to whom the followers of Epicurus were, at a very early period, contemptuously likened; and modern holders of the doctrine are occasionally made the subject of equally polite comparisons by its German, French, and English assailants.

When thus attacked, the Epicureans have always answered, that it is not they, but their accusers, who represent human nature in a degrading light; since the accusation supposes human beings to be capable of no pleasures except those of which swine are capable. If this supposition were true, the charge could not be gainsaid, but would then be no longer an imputation; for if the sources of pleasure were precisely the same to human beings and to swine, the rule of life which is good enough for the one would be good enough for the other. The comparison of the Epicurean life to that of beasts is felt as degrading, precisely because a beast's pleasures do not satisfy a human being's conceptions of happiness. Human beings have faculties more elevated than the animal appetites, and when once made conscious of them, do not regard anything as happiness which does not include their gratification. I do not, indeed, consider the Epicureans to have been by any means faultless in drawing out their scheme of consequences from the utilitarian principle. To do this in any sufficient manner, many Stoic, as well as Christian elements require to be included. But there is no known Epicurean theory of life which does not assign to the pleasures of the intellect, of the feelings and imagination, and of the moral sentiments, a much higher value as pleasures than to those of mere sensation. It must be admitted, however, that utilitarian writers in general have placed the superiority of mental over bodily pleasures chiefly in the greater permanency, safety, uncostliness, &c., of the former—that is, in their circumstantial advantages rather than in their intrinsic nature. And on all these points utilitarians have fully proved their case; but they might have taken the other, and, as it may be called, higher ground, with entire consistency. It is quite compatible with the principle

1. The author of this essay has reason for believing himself to be the first person who brought the word utilitarian into use. He did not invent it, but adopted it from a passing expression in Mr. Galt's *Annals of the Parish*. After using it as a designation for several years, he and others abandoned it from a growing dislike to anything resembling a badge or watchword of sectarian distinction. But as a name for one single opinion, not a set of opinions—to denote the recognition of utility as a standard, not any particular way of applying it—the term supplies a want in the language, and offers, in many cases, a convenient mode of avoiding tiresome circumlocution.

of utility to recognise the fact, that some *kinds* of pleasure are more desirable and more valuable than others. It would be absurd that while, in estimating all other things, quality is considered as well as quantity, the estimation of pleasures should be supposed to depend on quantity alone.

If I am asked, what I mean by difference of quality in pleasures, or what makes one pleasure more valuable than another, merely as a pleasure, except its being greater in amount, there is but one possible answer. Of two pleasures, if there be one to which all or almost all who have experience of both give a decided preference, irrespective of any feeling of moral obligation to prefer it, that is the more desirable pleasure. If one of the two is, by those who are competently acquainted with both, placed so far above the other that they prefer it, even though knowing it to be attended with a greater amount of discontent, and would not resign it for any quantity of the other pleasure which their nature is capable of, we are justified in ascribing to the preferred enjoyment a superiority in quality, so far outweighing quantity as to render it, in comparison, of small account.

Now it is an unquestionable fact that those who are equally acquainted with, and equally capable of appreciating and enjoying, both, do give a most marked preference to the manner of existence which employs their higher faculties. Few human creatures would consent to be changed into any of the lower animals, for a promise of the fullest allowance of a beast's pleasures; no intelligent human being would consent to be a fool, no instructed person would be an ignoramus, no person of feeling and conscience would be selfish and base, even though they should be persuaded that the fool, the dunce, or the rascal is better satisfied with his lot than they are with theirs. They would not resign what they possess more than he, for the most complete satisfaction of all the desires which they have in common with him. If they ever fancy they would, it is only in cases of unhappiness so extreme, that to escape from it they would exchange their lot for almost any other, however undesirable in their own eyes. A being of higher faculties requires more to make him happy, is capable probably of more acute suffering, and is certainly accessible to it at more points, than one of an inferior type; but in spite of these liabilities, he can never really wish to sink into what he feels to be a lower grade of existence. We may give what explanation we please of this unwillingness; we may attribute it to pride, a name which is given indiscriminately to some of the most and to some of the least estimable feelings of which mankind are capable; we may refer it to the love of liberty and personal independence, an appeal to which was with the Stoics one of the most effective means for the inculcation of it; to the love of power, or to the love of excitement, both of which do really enter into and contribute to it: but its most appropriate appellation is a sense of dignity, which all human beings possess in one form or other, and in some, though by no means in exact, proportion to their higher faculties, and which is so essential a part of the happiness of those in whom it is strong, that nothing which conflicts with it could be, otherwise than momentarily, an object of desire to them. Whoever supposes that this preference takes place at a sacrifice of happiness—that the superior being, in anything like equal circumstances, is not happier than the inferior—confounds the two very different ideas, of happiness, and content. It is indisputable that the being whose capacities of enjoyment are low, has the greatest chance of having them fully satisfied; and a highly-endowed being will always feel that any happiness which he can look for, as the world is constituted, is imperfect. But he can learn to bear its imperfections, if they are at all bearable; and they will not make him envy the being who is indeed unconscious of the imperfections, but only because he feels not at all the good which those imperfections qualify. It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied. And if the fool, or the pig, is of a different opinion, it is because they only know their own side of the question. The other party to the comparison knows both sides.

It may be objected, that many who are capable of the higher pleasures, occasionally, under the influence of temptation, postpone them to the lower. But this is quite compatible with a full appreciation of the intrinsic superiority of the higher. Men often, from infirmity of character, make their election for the nearer good, though they know it to be the less valuable; and this no less when the choice is between two bodily pleasures, than when it is between bodily and mental. They pursue sensual indulgences to the

injury of health, though perfectly aware that health is the greater good. It may be further objected, that many who begin with youthful enthusiasm for everything noble, as they advance in years sink into indolence and selfishness. But I do not believe that those who undergo this very common change, voluntarily choose the lower description of pleasures in preference to the higher. I believe that before they devote themselves exclusively to the one, they have already become incapable of the other. Capacity for the nobler feelings is in most natures a very tender plant, easily killed, not only by hostile influences, but by mere want of sustenance; and in the majority of young persons it speedily dies away if the occupations to which their position in life has devoted them, and the society into which it has thrown them, are not favourable to keeping that higher capacity in exercise. Men lose their high aspirations as they lose their intellectual tastes, because they have not time or opportunity for indulging them; and they addict themselves to inferior pleasures, not because they deliberately prefer them, but because they are either the only ones to which they have access, or the only ones which they are any longer capable of enjoying. It may be questioned whether any one who has remained equally susceptible to both classes of pleasures, ever knowingly and calmly preferred the lower; though many, in all ages, have broken down in an ineffectual attempt to combine both.

From this verdict of the only competent judges, I apprehend there can be no appeal. On a question which is the best worth having of two pleasures, or which of two modes of existence is the most grateful to the feelings, apart from its moral attributes and from its consequences, the judgment of those who are qualified by knowledge of both, or, if they differ, that of the majority among them, must be admitted as final. And there needs be the less hesitation to accept this judgment respecting the quality of pleasures, since there is no other tribunal to be referred to even on the question of quantity. What means are there of determining which is the acutest of two pains, or the intensest of two pleasurable sensations, except the general suffrage of those who are familiar with both? Neither pains nor pleasures are homogeneous, and pain is always heterogeneous with pleasure. What is there to decide whether a particular pleasure is worth purchasing at the cost of a particular pain, except the feelings and judgment of the experienced? When, therefore, those feelings and judgment declare the pleasures derived from the higher faculties to be preferable *in kind*, apart from the question of intensity, to those of which the animal nature, disjoined from the higher faculties, is susceptible, they are entitled on this subject to the same regard.

I have dwelt on this point, as being a necessary part of a perfectly just conception of Utility or Happiness, considered as the directive rule of human conduct. But it is by no means an indispensable condition to the acceptance of the utilitarian standard; for that standard is not the agent's own greatest happiness, but the greatest amount of happiness altogether; and if it may possibly be doubted whether a noble character is always the happier for its nobleness, there can be no doubt that it makes other people happier, and that the world in general is immensely a gainer by it. Utilitarianism, therefore, could only attain its end by the general cultivation of nobleness of character, even if each individual were only benefited by the nobleness of others, and his own, so far as happiness is concerned, were a sheer deduction from the benefit. But the bare enunciation of such an absurdity as this last, renders refutation superfluous.

According to the Greatest Happiness Principle, as above explained, the ultimate end, with reference to and for the sake of which all other things are desirable (whether we are considering our own good or that of other people), is an existence exempt as far as possible from pain, and as rich as possible in enjoyments, both in point of quantity and quality; the test of quality, and the rule for measuring it against quantity, being the preference felt by those who in their opportunities of experience, to which must be added their habits of self-consciousness and self-observation, are best furnished with the means of comparison. This, being, according to the utilitarian opinion, the end of human action, is necessarily also the standard of morality; which may accordingly be defined, the rules and precepts for human conduct, by the observance of which an existence such as has been described might be, to the greatest extent possible, secured to all mankind; and not to them only, but, so far as the nature of things admits, to the whole sentient creation.

Against this doctrine, however, arises another class

of objectors, who say that happiness, in any form, cannot be the rational purpose of human life and action; because, in the first place, it is unattainable: and they contemptuously ask, What right hast thou to be happy? a question which Mr. Carlyle clenches by the addition, What right, a short time ago, hadst thou even *to be*? Next, they say, that men can do *without* happiness; that all noble human beings have felt this, and could not have become noble but by learning the lesson of *Entsagen*, or renunciation; which lesson, thoroughly learnt and submitted to, they affirm to be the beginning and necessary condition of all virtue.

The first of these objections would go to the root of the matter were it well founded; for if no happiness is to be had at all by human beings, the attainment of it cannot be the end of morality, or of any rational conduct. Though, even in that case, something might still be said for the utilitarian theory; since utility includes not solely the pursuit of happiness, but the prevention or mitigation of unhappiness; and if the former aim be chimerical, there will be all the greater scope and more imperative need for the latter, so long at least as mankind think fit to live, and do not take refuge in the simultaneous act of suicide recommended under certain conditions by Novalis. When, however, it is thus positively asserted to be impossible that human life should be happy, the assertion, if not something like a verbal quibble, is at least an exaggeration. If by happiness be meant a continuity of highly pleasurable excitement, it is evident enough that this is impossible. A state of exalted pleasure lasts only moments, or in some cases, and with some intermissions, hours or days, and is the occasional brilliant flash of enjoyment, not its permanent and steady flame. Of this the philosophers who have taught that happiness is the end of life were as fully aware as those who taunt them. The happiness which they meant was not a life of rapture; but moments of such, in an existence made up of few and transitory pains, many and various pleasures, with a decided predominance of the active over the passive, and having as the foundation of the whole, not to expect more from life than it is capable of bestowing. A life thus composed, to those who have been fortunate enough to obtain it, has always appeared worthy of the name of happiness. And such an existence is even now the lot of many, during some considerable portion of their lives. The present wretched education, and wretched social arrangements, are the only real hindrance to its being attainable by almost all.

The objectors perhaps may doubt whether human beings, if taught to consider happiness as the end of life, would be satisfied with such a moderate share of it. But great numbers of mankind have been satisfied with much less. The main constituents of a satisfied life appear to be two, either of which by itself is often found sufficient for the purpose: tranquillity, and excitement. With much tranquillity, many find that they can be content with very little pleasure: with much excitement, many can reconcile themselves to a considerable quantity of pain. There is assuredly no inherent impossibility in enabling even the mass of mankind to unite both; since the two are so far from being incompatible that they are in natural alliance, the prolongation of either being a preparation for, and exciting a wish for, the other. It is only those in whom indolence amounts to a vice, that do not desire excitement after an interval of repose; it is only those in whom the need of excitement is a disease, that feel the tranquillity which follows excitement dull and insipid, instead of pleasurable in direct proportion to the excitement which preceded it. When people who are tolerably fortunate in their outward lot do not find in life sufficient enjoyment to make it valuable to them, the cause generally is, caring for nobody but themselves. To those who have neither public nor private affections, the excitements of life are much curtailed, and in any case dwindle in value as the time approaches when all selfish interests must be terminated by death: while those who leave after them objects of personal affection, and especially those who have also cultivated a fellow-feeling with the collective interests of mankind, retain as lively an interest in life on the eve of death as in the vigour of youth and health. Next to selfishness, the principal cause which makes life unsatisfactory is want of mental cultivation. A cultivated mind—I do not mean that of a philosopher, but any mind to which the fountains of knowledge have been opened, and which has been taught, in any tolerable degree, to exercise its faculties—finds sources of inexhaustible interest in all that surrounds it; in the objects of nature, the achievements of art, the imaginations of poetry, the

incidents of history, the ways of mankind past and present, and their prospects in the future. It is possible, indeed, to become indifferent to all this, and that too without having exhausted a thousandth part of it; but only when one has had from the beginning no moral or human interest in these things, and has sought in them only the gratification of curiosity.

Now there is absolutely no reason in the nature of things why an amount of mental culture sufficient to give an intelligent interest in these objects of contemplation, should not be the inheritance of every one born in a civilized country. As little is there an inherent necessity that any human being should be a selfish egotist, devoid of every feeling or care but those which centre in his own miserable individuality. Something far superior to this is sufficiently common even now, to give ample earnest of what the human species may be made. Genuine private affections, and a sincere interest in the public good, are possible, though in unequal degrees, to every rightly brought up human being. In a world in which there is so much to interest, so much to enjoy, and so much also to correct and improve, every one who has this moderate amount of moral and intellectual requisites is capable of an existence which may be called enviable; and unless such a person, through bad laws, or subjection to the will of others, is denied the liberty to use the sources of happiness within his reach, he will not fail to find this enviable existence, if he escape the positive evils of life, the great sources of physical and mental suffering—such as indigence, disease, and the unkindness, worthlessness, or premature loss of objects of affection. The main stress of the problem lies, therefore, in the contest with these calamities, from which it is a rare good fortune entirely to escape; which, as things now are, cannot be obviated, and often cannot be in any material degree mitigated. Yet no one whose opinion deserves a moment's consideration can doubt that most of the great positive evils of the world are in themselves removable, and will, if human affairs continue to improve, be in the end reduced within narrow limits. Poverty, in any sense implying suffering, may be completely extinguished by the wisdom of society, combined with the good sense and providence of individuals. Even that most intractable of enemies, disease, may be indefinitely reduced in dimensions by good physical and moral education, and proper control of noxious influences; while the progress of science holds out a promise for the future of still more direct conquests over this detestable foe. And every advance in that direction relieves us from some, not only of the chances which cut short our own lives, but, what concerns us still more, which deprive us of those in whom our happiness is wrapt up. As for vicissitudes of fortune, and other disappointments connected with worldly circumstances, these are principally the effect either of gross imprudence, of ill-regulated desires, or of bad or imperfect social institutions. All the grand sources, in short, of human suffering are in a great degree, many of them almost entirely, conquerable by human care and effort; and though their removal is grievously slow—though a long succession of generations will perish in the breach before the conquest is completed, and this world becomes all that, if will and knowledge were not wanting, it might easily be made—yet every mind sufficiently intelligent and generous to bear a part, however small and unconspicuous, in the endeavour, will draw a noble enjoyment from the contest itself, which he would not for any bribe in the form of selfish indulgence consent to be without.

And this leads to the true estimation of what is said by the objectors concerning the possibility, and the obligation, of learning to do without happiness. Unquestionably it is possible to do without happiness; it is done involuntarily by nineteen-twentieths of mankind, even in those parts of our present world which are least deep in barbarism; and it often has to be done voluntarily by the hero or the martyr, for the sake of something which he prizes more than his individual happiness. But this something, what is it, unless the happiness of others, or some of the requisites of happiness? It is noble to be capable of resigning entirely one's own portion of happiness, or chances of it: but, after all, this self-sacrifice must be for some end; it is not its own end; and if we are told that its end is not happiness, but virtue, which is better than happiness, I ask, would the sacrifice be made if the hero or martyr did not believe that it would earn for others immunity from similar sacrifices? Would it be made if he thought that his renunciation of happiness for himself would produce no fruit for any of his fellow creatures, but to make their lot like his, and place them also in the condition of persons who have

renounced happiness? All honour to those who can abnegate for themselves the personal enjoyment of life, when by such renunciation they contribute worthily to increase the amount of happiness in the world; but he who does it, or professes to do it, for any other purpose, is no more deserving of admiration than the ascetic mounted on his pillar. He may be an inspiriting proof of what men *can* do, but assuredly not an example of what they *should*.

Though it is only in a very imperfect state of the world's arrangements that any one can best serve the happiness of others by the absolute sacrifice of his own, yet so long as the world is in that imperfect state, I fully acknowledge that the readiness to make such a sacrifice is the highest virtue which can be found in man. I will add, that in this condition of the world, paradoxical as the assertion may be, the conscious ability to do without happiness gives the best prospect of realizing such happiness as is attainable. For nothing except that consciousness can raise a person above the chances of life, by making him feel that, let fate and fortune do their worst, they have not power to subdue him: which, once felt, frees him from excess of anxiety concerning the evils of life, and enables him, like many a Stoic in the worst times of the Roman Empire, to cultivate in tranquillity the sources of satisfaction accessible to him, without concerning himself about the uncertainty of their duration, any more than about their inevitable end.

Meanwhile, let utilitarians never cease to claim the morality of self-devotion as a possession which belongs by as good a right to them, as either to the Stoic or to the Transcendentalist. The utilitarian morality does recognise in human beings the power of sacrificing their own greatest good for the good of others. It only refuses to admit that the sacrifice is itself a good. A sacrifice which does not increase, or tend to increase, the sum total of happiness, it considers as wasted. The only self-renunciation which it applauds, is devotion to the happiness, or to some of the means of happiness, of others; either of mankind collectively, or of individuals within the limits imposed by the collective interests of mankind.

I must again repeat, what the assailants of utilitarianism seldom have the justice to acknowledge, that the happiness which forms the utilitarian standard of what is right in conduct, is not the agent's own happiness, but that of all concerned. As between his own happiness and that of others, utilitarianism requires him to be as strictly impartial as a disinterested and benevolent spectator. In the golden rule of Jesus of Nazareth, we read the complete spirit of the ethics of utility. To do as one would be done by, and to love one's neighbour as oneself, constitute the ideal perfection of utilitarian morality. As the means of making the nearest approach to this ideal, utility would enjoin, first, that laws and social arrangements should place the happiness, or (as speaking practically it may be called) the interest, of every individual, as nearly as possible in harmony with the interest of the whole; and secondly, that education and opinion, which have so vast a power over human character, should so use that power as to establish in the mind of every individual an indissoluble association between his own happiness and the good of the whole; especially between his own happiness and the practice of such modes of conduct, negative and positive, as regard for the universal happiness prescribes: so that not only he may be unable to conceive the possibility of happiness to himself, consistently with conduct opposed to the general good, but also that a direct impulse to promote the general good may be in every individual one of the habitual motives of action, and the sentiments connected therewith may fill a large and prominent place in every human being's sentient existence. If the impugners of the utilitarian morality represented it to their own minds in this its true character, I know not what recommendation possessed by any other morality they could possibly affirm to be wanting to it: what more beautiful or more exalted developments of human nature any other ethical system can be supposed to foster, or what springs of action, not accessible to the utilitarian, such systems rely on for giving effect to their mandates.

The objectors to utilitarianism cannot always be charged with representing it in a discreditable light. On the contrary, those among them who entertain anything like a just idea of its disinterested character, sometimes find fault with its standard as being too high for humanity. They say it is exacting too much to require that people shall always act from the inducement of promoting the general interests of society. But this is to mistake the very meaning of a

standard of morals, and to confound the rule of action with the motive of it. It is the business of ethics to tell us what are our duties, or by what test we may know them; but no system of ethics requires that the sole motive of all we do shall be a feeling of duty; on the contrary, ninety-nine hundredths of all our actions are done from other motives, and rightly so done, if the rule of duty does not condemn them. It is the more unjust to utilitarianism that this particular misapprehension should be made a ground of objection to it, inasmuch as utilitarian moralists have gone beyond almost all others in affirming that the motive has nothing to do with the morality of the action, though much with the worth of the agent. He who saves a fellow creature from drowning does what is morally right, whether his motive be duty, or the hope of being paid for his trouble: he who betrays the friend that trusts him, is guilty of a crime, even if his object be to serve another friend to whom he is under greater obligations.[2] But to speak only of actions done from the motive of duty, and in direct obedience to principle: it is a misapprehension of the utilitarian mode of thought, to conceive it as implying that people should fix their minds upon so wide a generality as the world, or society at large. The great majority of good actions are intended, not for the benefit of the world, but for that of individuals, of which the good of the world is made up; and the thoughts of the most virtuous man need not on these occasions travel beyond the particular persons concerned, except so far as is necessary to assure himself that in benefiting them he is not violating the rights—that is, the legitimate and authorized expectations—of any one else. The multiplication of happiness is, according to the utilitarian ethics, the object of virtue: the occasions on which any person (except one in a thousand) has it in his power to do this on an extended scale, in other words, to be a public benefactor, are but exceptional; and on these occasions alone is he called on to consider public utility; in every other case, private utility, the interest or happiness of some few persons, is all he has to attend to. Those alone the influence of whose actions extends to society in general, need concern themselves habitually about so large an object. In the case of abstinences indeed—of things which people forbear to do, from moral considerations, though the consequences in the particular case might be beneficial—it would be unworthy of an intelligent agent not to be consciously aware that the action is of a class which, if practised generally, would be generally injurious, and that this is the ground of the obligation to abstain from it. The amount of regard for the public interest implied in this recognition, is no greater than is demanded by every system of mor-

2. An opponent, whose intellectual and moral fairness it is a pleasure to acknowledge (the Rev. J. Llewellyn Davies), has objected to this passage, saying, "Surely the rightness or wrongness of saving a man from drowning does depend very much upon the motive with which it is done. Suppose that a tyrant, when his enemy jumped into the sea to escape from him, saved him from drowning simply in order that he might inflict upon him more exquisite tortures, would it tend to clearness to speak of that rescue as 'a morally right action?' Or suppose again, according to one of the stock illustrations of ethical inquiries, that a man betrayed a trust received from a friend, because the discharge of it would fatally injure that friend himself or some one belonging to him, would utilitarianism compel one to call the betrayal 'a crime' as much as if it had been done from the meanest motive?"

I submit, that he who saves another from drowning in order to kill him by torture afterwards, does not differ only in motive from him who does the same thing from duty or benevolence; the act itself is different. The rescue of the man is, in the case supposed, only the necessary first step of an act far more atrocious than leaving him to drown would have been. Had Mr. Davies said, "The rightness or wrongness of saving a man from drowning does depend very much"—not upon the motive, but—"upon the *intention*," no utilitarian would have differed from him. Mr. Davies, by an oversight too common not to be quite venial, has in this case confounded the very different ideas of Motive and Intention. There is no point which utilitarian thinkers (and Bentham pre-eminently) have taken more pains to illustrate than this. The morality of the action depends entirely upon the intention—that is, upon what the agent *wills to do*. But the motive, that is, the feeling which makes him will so to do, when it makes no difference in the act, makes none in the morality: though it makes a great difference in our moral estimation of the agent, especially if it indicates a good or a bad habitual *disposition*—a bent of character from which useful, or from which hurtful actions are likely to arise.

als; for they all enjoin to abstain from whatever is manifestly pernicious to society.

The same considerations dispose of another reproach against the doctrine of utility, founded on a still grosser misconception of the purpose of a standard of morality, and of the very meaning of the words right and wrong. It is often affirmed that utilitarianism renders men cold and unsympathizing; that it chills their moral feelings towards individuals; that it makes them regard only the dry and hard consideration of the consequences of actions, not taking into their moral estimate the qualities from which those actions emanate. If the assertion means that they do not allow their judgment respecting the rightness or wrongness of an action to be influenced by their opinion of the qualities of the person who does it, this is a complaint not against utilitarianism, but against having any standard of morality at all; for certainly no known ethical standard decides an action to be good or bad because it is done by a good or a bad man, still less because done by an amiable, a brave, or a benevolent man, or the contrary. These considerations are relevant, not to the estimation of actions, but of persons; and there is nothing in the utilitarian theory inconsistent with the fact that there are other things which interest us in persons besides the rightness and wrongness of their actions. The Stoics, indeed, with the paradoxical misuse of language which was part of their system, and by which they strove to raise themselves above all concern about anything but virtue, were fond of saying that he who has that has everything; that he, and only he, is rich, is beautiful, is a king. But no claim of this description is made for the virtuous man by the utilitarian doctrine. Utilitarians are quite aware that there are other desirable possessions and qualities besides virtue, and are perfectly willing to allow to all of them their full worth. They are also aware that a right action does not necessarily indicate a virtuous character, and that actions which are blameable often proceed from qualities entitled to praise. When this is apparent in any particular case, it modifies their estimation, not certainly of the act, but of the agent. I grant that they are, notwithstanding, of opinion, that in the long run the best proof of a good character is good actions; and resolutely refuse to consider any mental disposition as good, of which the predominant tendency is to produce bad conduct. This makes them unpopular with many people; but it is an unpopularity which they must share with every one who regards the distinction between right and wrong in a serious light; and the reproach is not one which a conscientious utilitarian need be anxious to repel.

If no more be meant by the objection than that many utilitarians look on the morality of actions, as measured by the utilitarian standard, with too exclusive a regard, and do not lay sufficient stress upon the other beauties of character which go towards making a human being loveable or admirable, this may be admitted. Utilitarians who have cultivated their moral feelings, but not their sympathies nor their artistic perceptions, do fall into this mistake; and so do all other moralists under the same conditions. What can be said in excuse for other moralists is equally available for them, namely, that if there is to be any error, it is better that it should be on that side. As a matter of fact, we may affirm that among utilitarians as among adherents of other systems, there is every imaginable degree of rigidity and of laxity in the application of their standard: some are even puritanically rigorous, while others are as indulgent as can possibly be desired by sinner or by sentimentalist. But on the whole, a doctrine which brings prominently forward the interest that mankind have in the repression and prevention of conduct which violates the moral law, is likely to be inferior to no other in turning the sanctions of opinion against such violations. It is true, the question, What does violate the moral law? is one on which those who recognise different standards of morality are likely now and then to differ. But difference of opinion on moral questions was not first introduced into the world by utilitarianism, while that doctrine does supply, if not always an easy, at all events a tangible and intelligible mode of deciding such differences.

It may not be superfluous to notice a few more of the common misapprehensions of utilitarian ethics, even those which are so obvious and gross that it might appear impossible for any person of candour and intelligence to fall into them: since persons, even of considerable mental endowments, often give themselves so little trouble to understand the bearings of any opinion against which they entertain a prejudice, and men are in general so little conscious of this voluntary ignorance as a defect, that the vulgarest

misunderstandings of ethical doctrines are continually met with in the deliberate writings of persons of the greatest pretensions both to high principle and to philosophy. We not uncommonly hear the doctrine of utility inveighed against as a *godless* doctrine. If it be necessary to say anything at all against so mere an assumption, we may say that the question depends upon what idea we have formed of the moral character of the Deity. If it be a true belief that God desires, above all things, the happiness of his creatures, and that this was his purpose in their creation, utility is not only not a godless doctrine, but more profoundly religious than any other. If it be meant that utilitarianism does not recognise the revealed will of God as the supreme law of morals, I answer, that an utilitarian who believes in the perfect goodness and wisdom of God, necessarily believes that whatever God has thought fit to reveal on the subject of morals, must fulfil the requirements of utility in a supreme degree. But others besides utilitarians have been of opinion that the Christian revelation was intended, and is fitted, to inform the hearts and minds of mankind with a spirit which should enable them to find for themselves what is right, and incline them to do it when found, rather than to tell them, except in a very general way, what it is: and that we need a doctrine of ethics, carefully followed out, to *interpret* to us the will of God. Whether this opinion is correct or not, it is superfluous here to discuss; since whatever aid religion, either natural or revealed, can afford to ethical investigation, is as open to the utilitarian moralist as to any other. He can use it as the testimony of God to the usefulness or hurtfulness of any given course of action, by as good a right as others can use it for the indication of a transcendental law, having no connexion with usefulness or with happiness.

Again, Utility is often summarily stigmatized as an immoral doctrine by giving it the name of Expediency, and taking advantage of the popular use of that term to contrast it with Principle. But the Expedient, in the sense in which it is opposed to the Right, generally means that which is expedient for the particular interest of the agent himself; as when a minister sacrifices the interest of his country to keep himself in place. When it means anything better than this, it means that which is expedient for some immediate object, some temporary purpose, but which violates a rule whose observance is expedient in a much higher degree. The Expedient, in this sense, instead of being the same thing with the useful, is a branch of the hurtful. Thus, it would often be expedient, for the purpose of getting over some momentary embarrassment, or attaining some object immediately useful to ourselves or others, to tell a lie. But inasmuch as the cultivation in ourselves of a sensitive feeling on the subject of veracity, is one of the most useful, and the enfeeblement of that feeling one of the most hurtful, things to which our conduct can be instrumental; and inasmuch as any, even unintentional, deviation from truth, does that much towards weakening the trustworthiness of human assertion, which is not only the principal support of all present social well-being, but the insufficiency of which does more than any one thing that can be named to keep back civilization, virtue, everything on which human happiness on the largest scale depends; we feel that the violation, for a present advantage, of a rule of such transcendant expediency, is not expedient, and that he who, for the sake of a convenience to himself or to some other individual, does what depends on him to deprive mankind of the good, and inflict upon them the evil, involved in the greater or less reliance which they can place in each other's word, acts the part of one of their worst enemies. Yet that even this rule, sacred as it is, admits of possible exceptions, is acknowledged by all moralists; the chief of which is when the withholding of some fact (as of information from a malefactor, or of bad news from a person dangerously ill) would preserve some one (especially a person other than oneself) from great and unmerited evil, and when the withholding can only be effected by denial. But in order that the exception may not extend itself beyond the need, and may have the least possible effect in weakening reliance on veracity, it ought to be recognised, and, if possible, its limits defined; and if the principle of utility is good for anything, it must be good for weighing these conflicting utilities against one another, and marking out the region within which one or the other preponderates.

Again, defenders of utility often find themselves called upon to reply to such objections as this—that there is not time, previous to action, for calculating and weighing the effects of any line of conduct on the general happiness. This is exactly as if any one

were to say that it is impossible to guide our conduct by Christianity, because there is not time, on every occasion on which anything has to be done, to read through the Old and New Testaments. The answer to the objection is, that there has been ample time, namely, the whole past duration of the human species. During all that time mankind have been learning by experience the tendencies of actions; on which experience all the prudence, as well as all the morality of life, is dependent. People talk as if the commencement of this course of experience had hitherto been put off, and as if, at the moment when some man feels tempted to meddle with the property or life of another, he had to begin considering for the first time whether murder and theft are injurious to human happiness. Even then I do not think that he would find the question very puzzling; but, at all events, the matter is now done to his hand. It is truly a whimsical supposition that if mankind were agreed in considering utility to be the test of morality, they would remain without any agreement as to what is useful, and would take no measures for having their notions on the subject taught to the young, and enforced by law and opinion. There is no difficulty in proving any ethical standard whatever to work ill, if we suppose universal idiocy to be conjoined with it; but on any hypothesis short of that, mankind must by this time have acquired positive beliefs as to the effects of some actions on their happiness; and the beliefs which have thus come down are the rules of morality for the multitude, and for the philosopher until he has succeeded in finding better. That philosophers might easily do this, even now, on many subjects; that the received code of ethics is by no means of divine right; and that mankind have still much to learn as to the effects of actions on the general happiness, I admit, or rather, earnestly maintain. The corollaries from the principle of utility, like the precepts of every practical art, admit of indefinite improvement, and, in a progressive state of the human mind, their improvement is perpetually going on. But to consider the rules of morality as improvable, is one thing; to pass over the intermediate generalizations entirely, and endeavour to test each individual action directly by the first principle, is another. It is a strange notion that the acknowledgment of a first principle is inconsistent with the admission of secondary ones. To inform a traveller respecting the place of his ultimate destination, is not to forbid the use of landmarks and direction-posts on the way. The proposition that happiness is the end and aim of morality, does not mean that no road ought to be laid down to that goal, or that persons going thither should not be advised to take one direction rather than another. Men really ought to leave off talking a kind of nonsense on this subject, which they would neither talk nor listen to on other matters of practical concernment. Nobody argues that the art of navigation is not founded on astronomy, because sailors cannot wait to calculate the Nautical Almanack. Being rational creatures, they go to sea with it ready calculated; and all rational creatures go out upon the sea of life with their minds made up on the common questions of right and wrong, as well as on many of the far more difficult questions of wise and foolish. And this, as long as foresight is a human quality, it is to be presumed they will continue to do. Whatever we adopt as the fundamental principle of morality, we require subordinate principles to apply it by: the impossibility of doing without them, being common to all systems, can afford no argument against any one in particular: but gravely to argue as if no such secondary principles could be had, and as if mankind had remained till now, and always must remain, without drawing any general conclusions from the experience of human life, is as high a pitch, I think, as absurdity has ever reached in philosophical controversy.

The remainder of the stock arguments against utilitarianism mostly consist in laying to its charge the common infirmities of human nature, and the general difficulties which embarrass conscientious persons in shaping their course through life. We are told that an utilitarian will be apt to make his own particular case an exception to moral rules, and, when under temptation, will see an utility in the breach of a rule, greater than he will see in its observance. But is utility the only creed which is able to furnish us with excuses for evil doing, and means of cheating our own conscience? They are afforded in abundance by all doctrines which recognise as a fact in morals the existence of conflicting considerations; which all doctrines do, that have been believed by sane persons. It is not the fault of any creed, but of the complicated nature of human affairs, that rules of conduct cannot be so

framed as to require no exceptions, and that hardly any kind of action can safely be laid down as either always obligatory or always condemnable. There is no ethical creed which does not temper the rigidity of its laws, by giving a certain latitude, under the moral responsibility of the agent, for accommodation to peculiarities of circumstances; and under every creed, at the opening thus made, self-deception and dishonest casuistry get in. There exists no moral system under which there do not arise unequivocal cases of conflicting obligation. These are the real difficulties, the knotty points both in the theory of ethics, and in the conscientious guidance of personal conduct. They are overcome practically with greater or with less success according to the intellect and virtue of the individual; but it can hardly be pretended that any one will be the less qualified for dealing with them, from possessing an ultimate standard to which conflicting rights and duties can be referred. If utility is the ultimate source of moral obligations, utility may be invoked to decide between them when their demands are incompatible. Though the application of the standard may be difficult, it is better than none at all: while in other systems, the moral laws all claiming independent authority, there is no common umpire entitled to interfere between them; their claims to precedence one over another rest on little better than sophistry, and unless determined, as they generally are, by the unacknowledged influence of considerations of utility, afford a free scope for the action of personal desires and partialities. We must remember that only in these cases of conflict between secondary principles is it requisite that first principles should be appealed to. There is no case of moral obligation in which some secondary principle is not involved; and if only one, there can seldom be any real doubt which one it is, in the mind of any person by whom the principle itself is recognised.

CHAPTER III

Of the Ultimate Sanction of the Principle of Utility

The question is often asked, and properly so, in regard to any supposed moral standard—What is its sanction? what are the motives to obey it? or more specifically, what is the source of its obligation? whence does it derive its binding force? It is a necessary part of moral philosophy to provide the answer to this question; which, though frequently assuming the shape of an objection to the utilitarian morality, as if it had some special applicability to that above others, really arises in regard to all standards. It arises, in fact, whenever a person is called on to *adopt* a standard, or refer morality to any basis on which he has not been accustomed to rest it. For the customary morality, that which education and opinion have consecrated, is the only one which presents itself to the mind with the feeling of being *in itself* obligatory; and when a person is asked to believe that this morality *derives* its obligation from some general principle round which custom has not thrown the same halo, the assertion is to him a paradox; the supposed corollaries seem to have a more binding force than the original theorem; the superstructure seems to stand better without, than with, what is represented as its foundation. He says to himself, I feel that I am bound not to rob or murder, betray or deceive; but why am I bound to promote the general happiness? If my own happiness lies in something else, why may I not give that the preference?

If the view adopted by the utilitarian philosophy of the nature of the moral sense be correct, this difficulty will always present itself, until the influences which form moral character have taken the same hold of the principle which they have taken of some of the consequences—until, by the improvement of education, the feeling of unity with our fellow creatures shall be (what it cannot be doubted that Christ intended it to be) as deeply rooted in our character, and to our own consciousness as completely a part of our nature, as the horror of crime is in an ordinarily well-brought up young person. In the mean time, however, the difficulty has no peculiar application to the doctrine of utility, but is inherent in every attempt to analyse morality and reduce it to principles; which, unless the principle is already in men's minds invested with as much sacredness as any of its applications, always seems to divest them of a part of their sanctity.

The principle of utility either has, or there is no reason why it might not have, all the sanctions which belong to any other system of morals. Those sanctions are either external or internal. Of the external sanc-

tions it is not necessary to speak at any length. They are, the hope of favour and the fear of displeasure from our fellow creatures or from the Ruler of the Universe, along with whatever we may have of sympathy or affection for them, or of love and awe of Him, inclining us to do his will independently of selfish consequences. There is evidently no reason why all these motives for observance should not attach themselves to the utilitarian morality, as completely and as powerfully as to any other. Indeed, those of them which refer to our fellow creatures are sure to do so, in proportion to the amount of general intelligence; for whether there be any other ground of moral obligation than the general happiness or not, men do desire happiness; and however imperfect may be their own practice, they desire and commend all conduct in others towards themselves, by which they think their happiness is promoted. With regard to the religious motive, if men believe, as most profess to do, in the goodness of God, those who think that conduciveness to the general happiness is the essence, or even only the criterion, of good, must necessarily believe that it is also that which God approves. The whole force therefore of external reward and punishment, whether physical or moral, and whether proceeding from God or from our fellow men, together with all that the capacities of human nature admit, of disinterested devotion to either, become available to enforce the utilitarian morality, in proportion as that morality is recognised; and the more powerfully, the more the appliances of education and general cultivation are bent to the purpose.

So far as to external sanctions. The internal sanction of duty, whatever our standard of duty may be, is one and the same—a feeling in our own mind; a pain, more or less intense, attendant on violation of duty, which in properly-cultivated moral natures rises, in the more serious cases, into shrinking from it as an impossibility. This feeling, when disinterested, and connecting itself with the pure idea of duty, and not with some particular form of it, or with any of the merely accessory circumstances, is the essence of Conscience; though in that complex phenomenon as it actually exists, the simple fact is in general all encrusted over with collateral associations, derived from sympathy, from love, and still more from fear; from all the forms of religious feeling; from the recollections of childhood and of all our past life; from self-esteem, desire of the esteem of others, and occasionally even self-abasement. This extreme complication is, I apprehend, the origin of the sort of mystical character which, by a tendency of the human mind of which there are many other examples, is apt to be attributed to the idea of moral obligation, and which leads people to believe that the idea cannot possibly attach itself to any other objects than those which, by a supposed mysterious law, are found in our present experience to excite it. Its binding force, however, consists in the existence of a mass of feeling which must be broken through in order to do what violates our standard of right, and which, if we do nevertheless violate that standard, will probably have to be encountered afterwards in the form of remorse. Whatever theory we have of the nature or origin of conscience, this is what essentially constitutes it.

The ultimate sanction, therefore, of all morality (external motives apart) being a subjective feeling in our own minds, I see nothing embarrassing to those whose standard is utility, in the question, what is the sanction of that particular standard? We may answer, the same as of all other moral standards—the conscientious feelings of mankind. Undoubtedly this sanction has no binding efficacy on those who do not possess the feelings it appeals to; but neither will these persons be more obedient to any other moral principle than to the utilitarian one. On them morality of any kind has no hold but through the external sanctions. Meanwhile the feelings exist, a fact in human nature, the reality of which, and the great power with which they are capable of acting on those in whom they have been duly cultivated, are proved by experience. No reason has ever been shown why they may not be cultivated to as great intensity in connexion with the utilitarian, as with any other rule of morals.

There is, I am aware, a disposition to believe that a person who sees in moral obligation a transcendental fact, an objective reality belonging to the province of 'Things in themselves,' is likely to be more obedient to it than one who believes it to be entirely subjective, having its seat in human consciousness only. But whatever a person's opinion may be on this point of Ontology, the force he is really urged by is his own subjective feeling, and is exactly measured by its

strength. No one's belief that Duty is an objective reality is stronger than the belief that God is so; yet the belief in God, apart from the expectation of actual reward and punishment, only operates on conduct through, and in proportion to, the subjective religious feeling. The sanction, so far as it is disinterested, is always in the mind itself; and the notion therefore of the transcendental moralists must be, that this sanction will not exist *in* the mind unless it is believed to have its root out of the mind; and that if a person is able to say to himself, This which is restraining me, and which is called my conscience, is only a feeling in my own mind, he may possibly draw the conclusion that when the feeling ceases the obligation ceases, and that if he find the feeling inconvenient, he may disregard it, and endeavour to get rid of it. But is this danger confined to the utilitarian morality? Does the belief that moral obligation has its seat outside the mind make the feeling of it too strong to be got rid of? The fact is so far otherwise, that all moralists admit and lament the ease with which, in the generality of minds, conscience can be silenced or stifled. The question, Need I obey my conscience? is quite as often put to themselves by persons who never heard of the principle of utility, as by its adherents. Those whose conscientious feelings are so weak as to allow of their asking this question, if they answer it affirmatively, will not do so because they believe in the transcendental theory, but because of the external sanctions.

It is not necessary, for the present purpose, to decide whether the feeling of duty is innate or implanted. Assuming it to be innate, it is an open question to what objects it naturally attaches itself; for the philosophic supporters of that theory are now agreed that the intuitive perception is of principles of morality, and not of the details. If there be anything innate in the matter, I see no reason why the feeling which is innate should not be that of regard to the pleasures and pains of others. If there is any principle of morals which is intuitively obligatory, I should say it must be that. If so, the intuitive ethics would coincide with the utilitarian, and there would be no further quarrel between them. Even as it is, the intuitive moralists, though they believe that there are other intuitive moral obligations, do already believe this to be one; for they unanimously hold that a large *portion* of morality turns upon the consideration due to the interests of our fellow creatures. Therefore, if the belief in the transcendental origin of moral obligation gives any additional efficacy to the internal sanction, it appears to me that the utilitarian principle has already the benefit of it.

On the other hand, if, as is my own belief, the moral feelings are not innate, but acquired, they are not for that reason the less natural. It is natural to man to speak, to reason, to build cities, to cultivate the ground, though these are acquired faculties. The moral feelings are not indeed a part of our nature, in the sense of being in any perceptible degree present in all of us; but this, unhappily, is a fact admitted by those who believe the most strenuously in their transcendental origin. Like the other acquired capacities above referred to, the moral faculty, if not a part of our nature, is a natural outgrowth from it; capable, like them, in a certain small degree, of springing up spontaneously; and susceptible of being brought by cultivation to a high degree of development. Unhappily it is also susceptible, by a sufficient use of the external sanctions and of the force of early impressions, of being cultivated in almost any direction: so that there is hardly anything so absurd or so mischievous that it may not, by means of these influences, be made to act on the human mind with all the authority of conscience. To doubt that the same potency might be given by the same means to the principle of utility, even if it had no foundation in human nature, would be flying in the face of all experience.

But moral associations which are wholly of artificial creation, when intellectual culture goes on, yield by degrees to the dissolving force of analysis: and if the feeling of duty, when associated with utility, would appear equally arbitrary; if there were no leading department of our nature, no powerful class of sentiments, with which that association would harmonize, which would make us feel it congenial, and incline us not only to foster it in others (for which we have abundant interested motives), but also to cherish it in ourselves; if there were not, in short, a natural basis of sentiment for utilitarian morality, it might well happen that this association also, even after it had been implanted by education, might be analysed away.

But there *is* this basis of powerful natural sentiment; and this it is which, when once the general happiness is recognised as the ethical standard, will constitute

the strength of the utilitarian morality. This firm foundation is that of the social feelings of mankind; the desire to be in unity with our fellow creatures, which is already a powerful principle in human nature, and happily one of those which tend to become stronger, even without express inculcation, from the influences of advancing civilization. The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction, he never conceives himself otherwise than as a member of a body; and this association is riveted more and more, as mankind are further removed from the state of savage independence. Any condition, therefore, which is essential to a state of society, becomes more and more an inseparable part of every person's conception of the state of things which he is born into, and which is the destiny of a human being. Now, society between human beings, except in the relation of master and slave, is manifestly impossible on any other footing than that the interests of all are to be consulted. Society between equals can only exist on the understanding that the interests of all are to be regarded equally. And since in all states of civilization, every person, except an absolute monarch, has equals, every one is obliged to live on these terms with somebody; and in every age some advance is made towards a state in which it will be impossible to live permanently on other terms with anybody. In this way people grow up unable to conceive as possible to them a state of total disregard of other people's interests. They are under a necessity of conceiving themselves as at least abstaining from all the grosser injuries, and (if only for their own protection) living in a state of constant protest against them. They are also familiar with the fact of co-operating with others, and proposing to themselves a collective, not an individual, interest, as the aim (at least for the time being) of their actions. So long as they are co-operating, their ends are identified with those of others; there is at least a temporary feeling that the interests of others are their own interests. Not only does all strengthening of social ties, and all healthy growth of society, give to each individual a stronger personal interest in practically consulting the welfare of others; it also leads him to identify his *feelings* more and more with their good, or at least with an ever greater degree of practical consideration for it. He comes, as though instinctively, to be conscious of himself as a being who *of course* pays regard to others. The good of others becomes to him a thing naturally and necessarily to be attended to, like any of the physical conditions of our existence. Now, whatever amount of this feeling a person has, he is urged by the strongest motives both of interest and of sympathy to demonstrate it, and to the utmost of his power encourage it in others; and even if he has none of it himself, he is as greatly interested as any one else that others should have it. Consequently the smallest germs of the feeling are laid hold of and nourished by the contagion of sympathy and the influences of education; and a complete web of corroborative association is woven round it, by the powerful agency of the external sanctions. This mode of conceiving ourselves and human life, as civilization goes on, is felt to be more and more natural. Every step in political improvement renders it more so, by removing the sources of opposition of interest, and levelling those inequalities of legal privilege between individuals or classes, owing to which there are large portions of mankind whose happiness it is still practicable to disregard. In an improving state of the human mind, the influences are constantly on the increase, which tend to generate in each individual a feeling of unity with all the rest; which feeling, if perfect, would make him never think of, or desire, any beneficial condition for himself, in the benefits of which they are not included. If we now suppose this feeling of unity to be taught as a religion, and the whole force of education, of institutions, and of opinion, directed, as it once was in the case of religion, to make every person grow up from infancy surrounded on all sides both by the profession and by the practice of it, I think that no one, who can realize this conception, will feel any misgiving about the sufficiency of the ultimate sanction for the Happiness morality. To any ethical student who finds the realization difficult, I recommend, as a means of facilitating it, the second of M. Comte's two principal works, the *Système de Politique Positive*. I entertain the strongest objections to the system of politics and morals set forth in that treatise; but I think it has superabundantly shown the possibility of giving to the service of humanity, even without the aid of belief in a Providence, both the psychical power and the social efficacy of a religion;

making it take hold of human life, and colour all thought, feeling, and action, in a manner of which the greatest ascendancy ever exercised by any religion may be but a type and foretaste; and of which the danger is, not that it should be insufficient, but that it should be so excessive as to interfere unduly with human freedom and individuality.

Neither is it necessary to the feeling which constitutes the binding force of the utilitarian morality on those who recognise it, to wait for those social influences which would make its obligation felt by mankind at large. In the comparatively early state of human advancement in which we now live, a person cannot indeed feel that entireness of sympathy with all others, which would make any real discordance in the general direction of their conduct in life impossible; but already a person in whom the social feeling is at all developed, cannot bring himself to think of the rest of his fellow creatures as struggling rivals with him for the means of happiness, whom he must desire to see defeated in their object in order that he may succeed in his. The deeply-rooted conception which every individual even now has of himself as a social being, tends to make him feel it one of his natural wants that there should be harmony between his feelings and aims and those of his fellow creatures. If differences of opinion and of mental culture make it impossible for him to share many of their actual feelings—perhaps make him denounce and defy those feelings—he still needs to be conscious that his real aim and theirs do not conflict; that he is not opposing himself to what they really wish for, namely, their own good, but is, on the contrary, promoting it. This feeling in most individuals is much inferior in strength to their selfish feelings, and is often wanting altogether. But to those who have it, it possesses all the characters of a natural feeling. It does not present itself to their minds as a superstition of education, or a law despotically imposed by the power of society, but as an attribute which it would not be well for them to be without. This conviction is the ultimate sanction of the greatest happiness morality. This it is which makes any mind, of well-developed feelings, work with, and not against, the outward motives to care for others, afforded by what I have called the external sanctions; and when those sanctions are wanting, or act in an opposite direction, constitutes in itself a powerful internal binding force, in proportion to the sensitiveness and thoughtfulness of the character; since few but those whose mind is a moral blank, could bear to lay out their course of life on the plan of paying no regard to others except so far as their own private interest compels.

CHAPTER IV

Of What Sort of Proof the Principle of Utility Is Susceptible

It has already been remarked, that questions of ultimate ends do not admit of proof, in the ordinary acceptation of the term. To be incapable of proof by reasoning is common to all first principles; to the first premises of our knowledge, as well as to those of our conduct. But the former, being matters of fact, may be the subject of a direct appeal to the faculties which judge of fact—namely, our senses, and our internal consciousness. Can an appeal be made to the same faculties on questions of practical ends? Or by what other faculty is cognizance taken of them?

Questions about ends are, in other words, questions what things are desirable. The utilitarian doctrine is, that happiness is desirable, and the only thing desirable, as an end; all other things being only desirable as means to that end. What ought to be required of this doctrine—what conditions is it requisite that the doctrine should fulfil—to make good its claim to be believed?

The only proof capable of being given that an object is visible, is that people actually see it. The only proof that a sound is audible, is that people hear it: and so of the other sources of our experience. In like manner, I apprehend, the sole evidence it is possible to produce that anything is desirable, is that people do actually desire it. If the end which the utilitarian doctrine proposes to itself were not, in theory and in practice, acknowledged to be an end, nothing could ever convince any person that it was so. No reason can be given why the general happiness is desirable, except that each person, so far as he believes it to be attainable, desires his own happiness. This, however, being a fact, we have not only all the proof which the case admits of, but all which it is possible to require, that happiness is a good:

that each person's happiness is a good to that person, and the general happiness, therefore, a good to the aggregate of all persons. Happiness has made out its title as *one* of the ends of conduct, and consequently one of the criteria of morality.

But it has not, by this alone, proved itself to be the sole criterion. To do that, it would seem, by the same rule, necessary to show, not only that people desire happiness, but that they never desire anything else. Now it is palpable that they do desire things which, in common language, are decidedly distinguished from happiness. They desire, for example, virtue, and the absence of vice, no less really than pleasure and the absence of pain. The desire of virtue is not as universal, but it is as authentic a fact, as the desire of happiness. And hence the opponents of the utilitarian standard deem that they have a right to infer that there are other ends of human action besides happiness, and that happiness is not the standard of approbation and disapprobation.

But does the utilitarian doctrine deny that people desire virtue, or maintain that virtue is not a thing to be desired? The very reverse. It maintains not only that virtue is to be desired, but that it is to be desired disinterestedly, for itself. Whatever may be the opinion of utilitarian moralists as to the original conditions by which virtue is made virtue; however they may believe (as they do) that actions and dispositions are only virtuous because they promote another end than virtue; yet this being granted, and it having been decided, from considerations of this description, what is virtuous, they not only place virtue at the very head of the things which are good as means to the ultimate end, but they also recognise as a psychological fact the possibility of its being, to the individual, a good in itself, without looking to any end beyond it; and hold, that the mind is not in a right state, not in a state conformable to Utility, not in the state most conducive to the general happiness, unless it does love virtue in this manner—as a thing desirable in itself, even although, in the individual instance, it should not produce those other desirable consequences which it tends to produce, and on account of which it is held to be virtue. This opinion is not, in the smallest degree, a departure from the Happiness principle. The ingredients of happiness are very various, and each of them is desirable in itself, and not merely when considered as swelling an aggregate. The principle of utility does not mean that any given pleasure, as music, for instance, or any given exemption from pain, as for example health, are to be looked upon as means to a collective something termed happiness, and to be desired on that account. They are desired and desirable in and for themselves; besides being means, they are a part of the end. Virtue, according to the utilitarian doctrine, is not naturally and originally part of the end, but it is capable of becoming so; and in those who love it disinterestedly it has become so, and is desired and cherished, not as a means to happiness, but as a part of their happiness.

To illustrate this farther, we may remember that virtue is not the only thing, originally a means, and which if it were not a means to anything else, would be and remain indifferent, but which by association with what it is a means to, comes to be desired for itself, and that too with the utmost intensity. What, for example, shall we say of the love of money? There is nothing originally more desirable about money than about any heap of glittering pebbles. Its worth is solely that of the things which it will buy; the desires for other things than itself, which it is a means of gratifying. Yet the love of money is not only one of the strongest moving forces of human life, but money is, in many cases, desired in and for itself; the desire to possess it is often stronger than the desire to use it, and goes on increasing when all the desires which point to ends beyond it, to be compassed by it, are falling off. It may be then said truly, that money is desired not for the sake of an end, but as part of the end. From being a means to happiness, it has come to be itself a principal ingredient of the individual's conception of happiness. The same may be said of the majority of the great objects of human life—power, for example, or fame; except that to each of these there is a certain amount of immediate pleasure annexed, which has at least the semblance of being naturally inherent in them; a thing which cannot be said of money. Still, however, the strongest natural attraction, both of power and of fame, is the immense aid they give to the attainment of our other wishes; and it is the strong association thus generated between them and all our objects of desire, which gives to the direct desire of them the intensity it often assumes, so as in some characters to surpass in strength all other

desires. In these cases the means have become a part of the end, and a more important part of it than any of the things which they are means to. What was once desired as an instrument for the attainment of happiness, has come to be desired for its own sake. In being desired for its own sake it is, however, desired as *part* of happiness. The person is made, or thinks he would be made, happy by its mere possession; and is made unhappy by failure to obtain it. The desire of it is not a different thing from the desire of happiness, any more than the love of music, or the desire of health. They are included in happiness. They are some of the elements of which the desire of happiness is made up. Happiness is not an abstract idea, but a concrete whole; and these are some of its parts. And the utilitarian standard sanctions and approves their being so. Life would be a poor thing, very ill provided with sources of happiness, if there were not this provision of nature, by which things originally indifferent, but conducive to, or otherwise associated with, the satisfaction of our primitive desires, become in themselves sources of pleasure more valuable than the primitive pleasures, both in permanency, in the space of human existence that they are capable of covering, and even in intensity.

Virtue, according to the utilitarian conception, is a good of this description. There was no original desire of it, or motive to it, save its conduciveness to pleasure, and especially to protection from pain. But through the association thus formed, it may be felt a good in itself, and desired as such with as great intensity as any other good; and with this difference between it and the love of money, of power, or of fame, that all of these may, and often do, render the individual noxious to the other members of the society to which he belongs, whereas there is nothing which makes him so much a blessing to them as the cultivation of the disinterested love of virtue. And consequently, the utilitarian standard, while it tolerates and approves those other acquired desires, up to the point beyond which they would be more injurious to the general happiness than promotive of it, enjoins and requires the cultivation of the love of virtue up to the greatest strength possible, as being above all things important to the general happiness.

It results from the preceding considerations, that there is in reality nothing desired except happiness. Whatever is desired otherwise than as a means to some end beyond itself, and ultimately to happiness, is desired as itself a part of happiness, and is not desired for itself until it has become so. Those who desire virtue for its own sake, desire it either because the consciousness of it is a pleasure, or because the consciousness of being without it is a pain, or for both reasons united; as in truth the pleasure and pain seldom exist separately, but almost always together, the same person feeling pleasure in the degree of virtue attained, and pain in not having attained more. If one of these gave him no pleasure, and the other no pain, he would not love or desire virtue, or would desire it only for the other benefits which it might produce to himself or to persons whom he cared for.

We have now, then, an answer to the question, of what sort of proof the principle of utility is susceptible. If the opinion which I have now stated is psychologically true—if human nature is so constituted as to desire nothing which is not either a part of happiness or a means of happiness, we can have no other proof, and we require no other, that these are the only things desirable. If so, happiness is the sole end of human action, and the promotion of it the test by which to judge of all human conduct; from whence it necessarily follows that it must be the criterion of morality, since a part is included in the whole.

And now to decide whether this is really so; whether mankind do desire nothing for itself but that which is a pleasure to them, or of which the absence is a pain; we have evidently arrived at a question of fact and experience, dependent, like all similar questions, upon evidence. It can only be determined by practised self-consciousness and self-observation, assisted by observation of others. I believe that these sources of evidence, impartially consulted, will declare that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical impossibility.

So obvious does this appear to me, that I expect it will hardly be disputed: and the objection made will be, not that desire can possibly be directed to anything

ultimately except pleasure and exemption from pain, but that the will is a different thing from desire; that a person of confirmed virtue, or any other person whose purposes are fixed, carries out his purposes without any thought of the pleasure he has in contemplating them, or expects to derive from their fulfilment; and persists in acting on them, even though these pleasures are much diminished, by changes in his character or decay of his passive sensibilities, or are outweighed by the pains which the pursuit of the purposes may bring upon him. All this I fully admit, and have stated it elsewhere, as positively and emphatically as any one. Will, the active phenomenon, is a different thing from desire, the state of passive sensibility, and though originally an offshoot from it, may in time take root and detach itself from the parent stock; so much so, that in the case of an habitual purpose, instead of willing the thing because we desire it, we often desire it only because we will it. This, however, is but an instance of that familiar fact, the power of habit, and is nowise confined to the case of virtuous actions. Many indifferent things, which men originally did from a motive of some sort, they continue to do from habit. Sometimes this is done unconsciously, the consciousness coming only after the action: at other times with conscious volition, but volition which has become habitual, and is put into operation by the force of habit, in opposition perhaps to the deliberate preference, as often happens with those who have contracted habits of vicious or hurtful indulgence. Third and last comes the case in which the habitual act of will in the individual instance is not in contradiction to the general intention prevailing at other times, but in fulfilment of it; as in the case of the person of confirmed virtue, and of all who pursue deliberately and consistently any determinate end. The distinction between will and desire thus understood, is an authentic and highly important psychological fact; but the fact consists solely in this—that will, like all other parts of our constitution, is amenable to habit, and that we may will from habit what we no longer desire for itself, or desire only because we will it. It is not the less true that will, in the beginning, is entirely produced by desire; including in that term the repelling influence of pain as well as the attractive one of pleasure. Let us take into consideration, no longer the person who has a confirmed will to do right, but him in whom that virtuous will is still feeble, conquerable by temptation, and not to be fully relied on; by what means can it be strengthened? How can the will to be virtuous, where it does not exist in sufficient force, be implanted or awakened? Only by making the person *desire* virtue—by making him think of it in a pleasurable light, or of its absence in a painful one. It is by associating the doing right with pleasure, or the doing wrong with pain, or by eliciting and impressing and bringing home to the person's experience the pleasure naturally involved in the one or the pain in the other, that it is possible to call forth that will to be virtuous, which, when confirmed, acts without any thought of either pleasure or pain. Will is the child of desire, and passes out of the dominion of its parent only to come under that of habit. That which is the result of habit affords no presumption of being intrinsically good; and there would be no reason for wishing that the purpose of virtue should become independent of pleasure and pain, were it not that the influence of the pleasurable and painful associations which prompt to virtue is not sufficiently to be depended on for unerring constancy of action until it has acquired the support of habit. Both in feeling and in conduct, habit is the only thing which imparts certainty; and it is because of the importance to others of being able to rely absolutely on one's feelings and conduct, and to oneself of being able to rely on one's own, that the will to do right ought to be cultivated into this habitual independence. In other words, this state of the will is a means to good, not intrinsically a good; and does not contradict the doctrine that nothing is a good to human beings but in so far as it is either itself pleasurable, or a means of attaining pleasure or averting pain.

But if this doctrine be true, the principle of utility is proved. Whether it is so or not, must now be left to the consideration of the thoughtful reader.

CHAPTER V

On the Connexion between Justice and Utility

In all ages of speculation, one of the strongest obstacles to the reception of the doctrine that Utility or Happiness is the criterion of right and wrong, has

been drawn from the idea of Justice. The powerful sentiment, and apparently clear perception, which that word recalls with a rapidity and certainty resembling an instinct, have seemed to the majority of thinkers to point to an inherent quality in things; to show that the Just must have an existence in Nature as something absolute, generically distinct from every variety of the Expedient, and, in idea, opposed to it, though (as is commonly acknowledged) never, in the long run, disjoined from it in fact.

In the case of this, as of our other moral sentiments, there is no necessary connexion between the question of its origin, and that of its binding force. That a feeling is bestowed on us by Nature, does not necessarily legitimate all its promptings. The feeling of justice might be a peculiar instinct, and might yet require, like our other instincts, to be controlled and enlightened by a higher reason. If we have intellectual instincts, leading us to judge in a particular way, as well as animal instincts that prompt us to act in a particular way, there is no necessity that the former should be more infallible in their sphere than the latter in theirs: it may as well happen that wrong judgments are occasionally suggested by those, as wrong actions by these. But though it is one thing to believe that we have natural feelings of justice, and another to acknowledge them as an ultimate criterion of conduct, these two opinions are very closely connected in point of fact. Mankind are always predisposed to believe that any subjective feeling, not otherwise accounted for, is a revelation of some objective reality. Our present object is to determine whether the reality, to which the feeling of justice corresponds, is one which needs any such special revelation; whether the justice or injustice of an action is a thing intrinsically peculiar, and distinct from all its other qualities, or only a combination of certain of those qualities, presented under a peculiar aspect. For the purpose of this inquiry, it is practically important to consider whether the feeling itself, of justice and injustice, is *sui generis* like our sensations of colour and taste, or a derivative feeling, formed by a combination of others. And this it is the more essential to examine, as people are in general willing enough to allow, that objectively the dictates of justice coincide with a part of the field of General Expediency; but inasmuch as the subjective mental feeling of Justice is different from that which commonly attaches to simple expediency, and, except in extreme cases of the latter, is far more imperative in its demands, people find it difficult to see, in Justice, only a particular kind or branch of general utility, and think that its superior binding force requires a totally different origin.

To throw light upon this question, it is necessary to attempt to ascertain what is the distinguishing character of justice, or of injustice: what is the quality, or whether there is any quality, attributed in common to all modes of conduct designated as unjust (for justice, like many other moral attributes, is best defined by its opposite), and distinguishing them from such modes of conduct as are disapproved, but without having that particular epithet of disapprobation applied to them. If in everything which men are accustomed to characterize as just or unjust, some one common attribute or collection of attributes is always present, we may judge whether this particular attribute or combination of attributes would be capable of gathering round it a sentiment of that peculiar character and intensity by virtue of the general laws of our emotional constitution, or whether the sentiment is inexplicable, and requires to be regarded as a special provision of Nature. If we find the former to be the case, we shall, in resolving this question, have resolved also the main problem: if the latter, we shall have to seek for some other mode of investigating it.

To find the common attributes of a variety of objects, it is necessary to begin by surveying the objects themselves in the concrete. Let us therefore advert successively to the various modes of action, and arrangements of human affairs, which are classed, by universal or widely spread opinion, as Just or as Unjust. The things well known to excite the sentiments associated with those names, are of a very multifarious character. I shall pass them rapidly in review, without studying any particular arrangement.

In the first place, it is mostly considered unjust to deprive any one of his personal liberty, his property, or any other thing which belongs to him by law. Here, therefore, is one instance of the application of the terms just and unjust in a perfectly definite sense, namely, that it is just to respect, unjust to violate, the *legal rights* of any one. But this judgment admits of several exceptions, arising from the other forms in

which the notions of justice and injustice present themselves. For example, the person who suffers the deprivation may (as the phrase is) have *forfeited* the rights which he is so deprived of: a case to which we shall return presently. But also,

Secondly; the legal rights of which he is deprived, may be rights which *ought* not to have belonged to him; in other words, the law which confers on him these rights, may be a bad law. When it is so, or when (which is the same thing for our purpose) it is supposed to be so, opinions will differ as to the justice or injustice of infringing it. Some maintain that no law, however bad, ought to be disobeyed by an individual citizen; that his opposition to it, if shown at all, should only be shown in endeavouring to get it altered by competent authority. This opinion (which condemns many of the most illustrious benefactors of mankind, and would often protect pernicious institutions against the only weapons which, in the state of things existing at the time, have any chance of succeeding against them) is defended, by those who hold it, on grounds of expediency; principally on that of the importance, to the common interest of mankind, of maintaining inviolate the sentiment of submission to law. Other persons, again, hold the directly contrary opinion, that any law, judged to be bad, may blamelessly be disobeyed, even though it be not judged to be unjust, but only inexpedient; while others would confine the licence of disobedience to the case of unjust laws: but again, some say, that all laws which are inexpedient are unjust; since every law imposes some restriction on the natural liberty of mankind, which restriction is an injustice, unless legitimated by tending to their good. Among these diversities of opinion, it seems to be universally admitted that there may be unjust laws, and that law, consequently, is not the ultimate criterion of justice, but may give to one person a benefit, or impose on another an evil, which justice condemns. When, however, a law is thought to be unjust, it seems always to be regarded as being so in the same way in which a breach of law is unjust, namely, by infringing somebody's right; which, as it cannot in this case be a legal right, receives a different appellation, and is called a moral right. We may say, therefore, that a second case of injustice consists in taking or withholding from any person that to which he has a *moral right.*

Thirdly, it is universally considered just that each person should obtain that (whether good or evil) which he *deserves;* and unjust that he should obtain a good, or be made to undergo an evil, which he does not deserve. This is, perhaps, the clearest and most emphatic form in which the idea of justice is conceived by the general mind. As it involves the notion of desert, the question arises, what constitutes desert? Speaking in a general way, a person is understood to deserve good if he does right, evil if he does wrong; and in a more particular sense, to deserve good from those to whom he does or has done good, and evil from those to whom he does or has done evil. The precept of returning good for evil has never been regarded as a case of the fulfilment of justice, but as one in which the claims of justice are waived, in obedience to other considerations.

Fourthly, it is confessedly unjust to *break faith* with any one: to violate an engagement, either express or implied, or disappoint expectations raised by our own conduct, at least if we have raised those expectations knowingly and voluntarily. Like the other obligations of justice already spoken of, this one is not regarded as absolute, but as capable of being overruled by a stronger obligation of justice on the other side; or by such conduct on the part of the person concerned as is deemed to absolve us from our obligation to him, and to constitute a *forfeiture* of the benefit which he has been led to expect.

Fifthly, it is, by universal admission, inconsistent with justice to be *partial;* to show favour or preference to one person over another, in matters to which favour and preference do not properly apply. Impartiality, however, does not seem to be regarded as a duty in itself, but rather as instrumental to some other duty; for it is admitted that favour and preference are not always censurable, and indeed the cases in which they are condemned are rather the exception than the rule. A person would be more likely to be blamed than applauded for giving his family or friends no superiority in good offices over strangers, when he could do so without violating any other duty; and no one thinks it unjust to seek one person in preference to another as a friend, connexion, or companion. Impartiality where rights are concerned is of course obligatory, but this is involved in the more general obligation of giving to every one his right. A tribunal,

for example, must be impartial, because it is bound to award, without regard to any other consideration, a disputed object to the one of two parties who has the right to it. There are other cases in which impartiality means, being solely influenced by desert; as with those who, in the capacity of judges, preceptors, or parents, administer reward and punishment as such. There are cases, again, in which it means, being solely influenced by consideration for the public interest; as in making a selection among candidates for a government employment. Impartiality, in short, as an obligation of justice, may be said to mean, being exclusively influenced by the considerations which it is supposed ought to influence the particular case in hand; and resisting the solicitation of any motives which prompt to conduct different from what those considerations would dictate.

Nearly allied to the idea of impartiality, is that of *equality*; which often enters as a component part both into the conception of justice and into the practice of it, and, in the eyes of many persons, constitutes its essence. But in this, still more than in any other case, the notion of justice varies in different persons, and always conforms in its variations to their notion of utility. Each person maintains that equality is the dictate of justice, except where he thinks that expediency requires inequality. The justice of giving equal protection to the rights of all, is maintained by those who support the most outrageous inequality in the rights themselves. Even in slave countries it is theoretically admitted that the rights of the slave, such as they are, ought to be as sacred as those of the master; and that a tribunal which fails to enforce them with equal strictness is wanting in justice; while, at the same time, institutions which leave to the slave scarcely any rights to enforce, are not deemed unjust, because they are not deemed inexpedient. Those who think that utility requires distinctions of rank, do not consider it unjust that riches and social privileges should be unequally dispensed; but those who think this inequality inexpedient, think it unjust also. Whoever thinks that government is necessary, sees no injustice in as much inequality as is constituted by giving to the magistrate powers not granted to other people. Even among those who hold levelling doctrines, there are as many questions of justice as there are differences of opinion about expediency. Some Communists consider it unjust that the produce of the labour of the community should be shared on any other principle than that of exact equality; others think it just that those should receive most whose needs are greatest; while others hold that those who work harder, or who produce more, or whose services are more valuable to the community, may justly claim a larger quota in the division of the produce. And the sense of natural justice may be plausibly appealed to in behalf of every one of these opinions.

Among so many diverse applications of the term Justice, which yet is not regarded as ambiguous, it is a matter of some difficulty to seize the mental link which holds them together, and on which the moral sentiment adhering to the term essentially depends. Perhaps, in this embarrassment, some help may be derived from the history of the word, as indicated by its etymology.

In most, if not in all, languages, the etymology of the word which corresponds to Just, points to an origin connected either with positive law, or with that which was in most cases the primitive form of law—authoritative custom. *Justum* is a form of *jussum*, that which has been ordered. *Jus* is of the same origin. *Dikaion* comes from *dike*, of which the principal meaning, at least in the historical ages of Greece, was a suit at law. Originally, indeed, it meant only the mode or *manner* of doing things, but it early came to mean the *prescribed* manner; that which the recognised authorities, patriarchal, judicial, or political, would enforce. *Recht*, from which came *right* and *righteous*, is synonymous with law. The original meaning indeed of *recht* did not point to law, but to physical straightness; as *wrong* and its Latin equivalents meant twisted or *tortuous;* and from this it is argued that right did not originally mean law, but on the contrary law meant right. But however this may be, the fact that *recht* and *droit* became restricted in their meaning to positive law, although much which is not required by law is equally necessary to moral straightness or rectitude, is as significant of the original character of moral ideas as if the derivation had been the reverse way. The courts of justice, the administration of justice, are the courts and the administration of law. *La justice*, in French, is the established term for judicature. There can, I think, be no doubt that the *idée mère*, the primitive element, in the formation of the

notion of justice, was conformity to law. It constituted the entire idea among the Hebrews, up to the birth of Christianity; as might be expected in the case of a people whose laws attempted to embrace all subjects on which precepts were required, and who believed those laws to be a direct emanation from the Supreme Being. But other nations, and in particular the Greeks and Romans, who knew that their laws had been made originally, and still continued to be made, by men, were not afraid to admit that those men might make bad laws; might do, by law, the same things, and from the same motives, which, if done by individuals without the sanction of law, would be called unjust. And hence the sentiment of injustice came to be attached, not to all violations of law, but only to violations of such laws as *ought* to exist, including such as ought to exist but do not; and to laws themselves, if supposed to be contrary to what ought to be law. In this manner the idea of law and of its injunctions was still predominant in the notion of justice, even when the laws actually in force ceased to be accepted as the standard of it.

It is true that mankind consider the idea of justice and its obligations as applicable to many things which neither are, nor is it desired that they should be, regulated by law. Nobody desires that laws should interfere with the whole detail of private life; yet every one allows that in all daily conduct a person may and does show himself to be either just or unjust. But even here, the idea of the breach of what ought to be law, still lingers in a modified shape. It would always give us pleasure, and chime in with our feelings of fitness, that acts which we deem unjust should be punished, though we do not always think it expedient that this should be done by the tribunals. We forego that gratification on account of incidental inconveniences. We should be glad to see just conduct enforced and injustice repressed, even in the minutest details, if we were not, with reason, afraid of trusting the magistrate with so unlimited an amount of power over individuals. When we think that a person is bound in justice to do a thing, it is an ordinary form of language to say, that he ought to be compelled to do it. We should be gratified to see the obligation enforced by anybody who had the power. If we see that its enforcement by law would be inexpedient, we lament the impossibility, we consider the impunity given to injustice as an evil, and strive to make amends for it by bringing a strong expression of our own and the public disapprobation to bear upon the offender. Thus the idea of legal constraint is still the generating idea of the notion of justice, though undergoing several transformations before that notion, as it exists in an advanced state of society, becomes complete.

The above is, I think, a true account, as far as it goes, of the origin and progressive growth of the idea of justice. But we must observe, that it contains, as yet, nothing to distinguish that obligation from moral obligation in general. For the truth is, that the idea of penal sanction, which is the essence of law, enters not only into the conception of injustice, but into that of any kind of wrong. We do not call anything wrong, unless we mean to imply that a person ought to be punished in some way or other for doing it; if not by law, by the opinion of his fellow creatures; if not by opinion, by the reproaches of his own conscience. This seems the real turning point of the distinction between morality and simple expediency. It is a part of the notion of Duty in every one of its forms, that a person may rightfully be compelled to fulfil it. Duty is a thing which may be *exacted* from a person, as one exacts a debt. Unless we think that it might be exacted from him, we do not call it his duty. Reasons of prudence, or the interest of other people, may militate against actually exacting it; but the person himself, it is clearly understood, would not be entitled to complain. There are other things, on the contrary, which we wish that people should do, which we like or admire them for doing, perhaps dislike or despise them for not doing, but yet admit that they are not bound to do; it is not a case of moral obligation; we do not blame them, that is, we do not think that they are proper objects of punishment. How we come by these ideas of deserving and not deserving punishment, will appear, perhaps, in the sequel; but I think there is no doubt that this distinction lies at the bottom of the notions of right and wrong; that we call any conduct wrong, or employ, instead, some other term of dislike or disparagement, according as we think that the person ought, or ought not, to be punished for it; and we say that it would be right to do so and so, or merely that it would be desirable or laudable, according as we would wish to see the person

whom it concerns, compelled, or only persuaded and exhorted, to act in that manner.[3]

This, therefore, being the characteristic difference which marks off, not justice, but morality in general, from the remaining provinces of Expediency and Worthiness; the character is still to be sought which distinguishes justice from other branches of morality. Now it is known that ethical writers divide moral duties into two classes, denoted by the ill-chosen expressions, duties of perfect and of imperfect obligation; the latter being those in which, though the act is obligatory, the particular occasions of performing it are left to our choice; as in the case of charity or beneficence, which we are indeed bound to practise, but not towards any definite person, nor at any prescribed time. In the more precise language of philosophic jurists, duties of perfect obligation are those duties in virtue of which a correlative *right* resides in some person or persons; duties of imperfect obligation are those moral obligations which do not give birth to any right. I think it will be found that this distinction exactly coincides with that which exists between justice and the other obligations of morality. In our survey of the various popular acceptations of justice, the term appeared generally to involve the idea of a personal right—a claim on the part of one or more individuals, like that which the law gives when it confers a proprietary or other legal right. Whether the injustice consists in depriving a person of a possession, or in breaking faith with him, or in treating him worse than he deserves, or worse than other people who have no greater claims, in each case the supposition implies two things—a wrong done, and some assignable person who is wronged. Injustice may also be done by treating a person better than others; but the wrong in this case is to his competitors, who are also assignable persons. It seems to me that this feature in the case—a right in some person, correlative to the moral obligation—constitutes the specific difference between justice, and generosity or beneficence. Justice implies something which it is not only right to do, and wrong not to do, but which some individual person can claim from us as his moral right. No one has a moral right to our generosity or beneficence, because we are not morally bound to practise those virtues towards any given individual. And it will be found with respect to this as with respect to every correct definition, that the instances which seem to conflict with it are those which most confirm it. For if a moralist attempts, as some have done, to make out that mankind generally, though not any given individual, have a right to all the good we can do them, he at once, by that thesis, includes generosity and beneficence within the category of justice. He is obliged to say, that our utmost exertions are *due* to our fellow creatures, thus assimilating them to a debt; or that nothing less can be a sufficient *return* for what society does for us, thus classing the case as one of gratitude; both of which are acknowledged cases of justice. Wherever there is a right, the case is one of justice, and not of the virtue of beneficence: and whoever does not place the distinction between justice and morality in general, where we have now placed it, will be found to make no distinction between them at all, but to merge all morality in justice.

Having thus endeavoured to determine the distinctive elements which enter into the composition of the idea of justice, we are ready to enter on the inquiry, whether the feeling, which accompanies the idea, is attached to it by a special dispensation of nature, or whether it could have grown up, by any known laws, out of the idea itself; and in particular, whether it can have originated in considerations of general expediency.

I conceive that the sentiment itself does not arise from anything which would commonly, or correctly, be termed an idea of expediency; but that though the sentiment does not, whatever is moral in it does.

We have seen that the two essential ingredients in the sentiment of justice are, the desire to punish a person who has done harm, and the knowledge or belief that there is some definite individual or individuals to whom harm has been done.

Now it appears to me, that the desire to punish a person who has done harm to some individual, is a spontaneous outgrowth from two sentiments, both in the highest degree natural, and which either are or

3. See this point enforced and illustrated by Professor Bain, in an admirable chapter (entitled "The Ethical Emotions, or the Moral Sense"), of the second of the two treatises composing his elaborate and profound work on the Mind.

resemble instincts; the impulse of self-defence, and the feeling of sympathy.

It is natural to resent, and to repel or retaliate, any harm done or attempted against ourselves, or against those with whom we sympathize. The origin of this sentiment it is not necessary here to discuss. Whether it be an instinct or a result of intelligence, it is, we know, common to all animal nature; for every animal tries to hurt those who have hurt, or who it thinks are about to hurt, itself or its young. Human beings, on this point, only differ from other animals in two particulars. First, in being capable of sympathizing, not solely with their offspring, or, like some of the more noble animals, with some superior animal who is kind to them, but with all human, and even with all sentient, beings. Secondly, in having a more developed intelligence, which gives a wider range to the whole of their sentiments, whether self-regarding or sympathetic. By virtue of his superior intelligence, even apart from his superior range of sympathy, a human being is capable of apprehending a community of interest between himself and the human society of which he forms a part, such that any conduct which threatens the security of the society generally, is threatening to his own, and calls forth his instinct (if instinct it be) of self-defence. The same superiority of intelligence, joined to the power of sympathizing with human beings generally, enables him to attach himself to the collective idea of his tribe, his country, or mankind, in such a manner that any act hurtful to them rouses his instinct of sympathy, and urges him to resistance.

The sentiment of justice, in that one of its elements which consists of the desire to punish, is thus, I conceive, the natural feeling of retaliation or vengeance, rendered by intellect and sympathy applicable to those injuries, that is, to those hurts, which wound us through, or in common with, society at large. This sentiment, in itself, has nothing moral in it; what is moral is, the exclusive subordination of it to the social sympathies, so as to wait on and obey their call. For the natural feeling tends to make us resent indiscriminately whatever any one does that is disagreeable to us; but when moralized by the social feeling, it only acts in the directions conformable to the general good: just persons resenting a hurt to society, though not otherwise a hurt to themselves, and not resenting a hurt to themselves, however painful, unless it be of the kind which society has a common interest with them in the repression of.

It is no objection against this doctrine to say, that when we feel our sentiment of justice outraged, we are not thinking of society at large, or of any collective interest, but only of the individual case. It is common enough certainly, though the reverse of commendable, to feel resentment merely because we have suffered pain; but a person whose resentment is really a moral feeling, that is, who considers whether an act is blameable before he allows himself to resent it—such a person, though he may not say expressly to himself that he is standing up for the interest of society, certainly does feel that he is asserting a rule which is for the benefit of others as well as for his own. If he is not feeling this—if he is regarding the act solely as it affects him individually—he is not consciously just; he is not concerning himself about the justice of his actions. This is admitted even by anti-utilitarian moralists. When Kant (as before remarked) propounds as the fundamental principle of morals, 'So act, that thy rule of conduct might be adopted as a law by all rational beings,' he virtually acknowledges that the interest of mankind collectively, or at least of mankind indiscriminately, must be in the mind of the agent when conscientiously deciding on the morality of the act. Otherwise he uses words without a meaning: for, that a rule even of utter selfishness could not *possibly* be adopted by all rational beings—that there is any insuperable obstacle in the nature of things to its adoption—cannot be even plausibly maintained. To give any meaning to Kant's principle, the sense put upon it must be, that we ought to shape our conduct by a rule which all rational beings might adopt *with benefit to their collective interest.*

To recapitulate: the idea of justice supposes two things; a rule of conduct, and a sentiment which sanctions the rule. The first must be supposed common to all mankind, and intended for their good. The other (the sentiment) is a desire that punishment may be suffered by those who infringe the rule. There is involved, in addition, the conception of some definite person who suffers by the infringement; whose rights (to use the expression appropriated to the case) are violated by it. And the sentiment of justice appears to me to be, the animal desire to repel or retaliate a

hurt or damage to oneself, or to those with whom one sympathizes, widened so as to include all persons, by the human capacity of enlarged sympathy, and the human conception of intelligent self-interest. From the latter elements, the feeling derives its morality; from the former, its peculiar impressiveness, and energy of self-assertion.

I have, throughout, treated the idea of a *right* residing in the injured person, and violated by the injury, not as a separate element in the composition of the idea and sentiment, but as one of the forms in which the other two elements clothe themselves. These elements are, a hurt to some assignable person or persons on the one hand, and a demand for punishment on the other. An examination of our own minds, I think, will show, that these two things include all that we mean when we speak of violation of a right. When we call anything a person's right, we mean that he has a valid claim on society to protect him in the possession of it, either by the force of law, or by that of education and opinion. If he has what we consider a sufficient claim, on whatever account, to have something guaranteed to him by society, we say that he has a right to it. If we desire to prove that anything does not belong to him by right, we think this done as soon as it is admitted that society ought not to take measures for securing it to him, but should leave it to chance, or to his own exertions. Thus, a person is said to have a right to what he can earn in fair professional competition; because society ought not to allow any other person to hinder him from endeavouring to earn in that manner as much as he can. But he has not a right to three hundred a-year, though he may happen to be earning it; because society is not called on to provide that he shall earn that sum. On the contrary, if he owns ten thousand pounds three per cent stock, he *has* a right to three hundred a-year; because society has come under an obligation to provide him with an income of that amount.

To have a right, then, is, I conceive, to have something which society ought to defend me in the possession of. If the objector goes on to ask why it ought, I can give him no other reason than general utility. If that expression does not seem to convey a sufficient feeling of the strength of the obligation, nor to account for the peculiar energy of the feeling, it is because there goes to the composition of the sentiment, not a rational only but also an animal element, the thirst for retaliation; and this thirst derives its intensity, as well as its moral justification, from the extraordinarily important and impressive kind of utility which is concerned. The interest involved is that of security, to every one's feelings the most vital of all interests. Nearly all other earthly benefits are needed by one person, not needed by another; and many of them can, if necessary, be cheerfully foregone, or replaced by something else; but security no human being can possibly do without; on it we depend for all our immunity from evil, and for the whole value of all and every good, beyond the passing moment; since nothing but the gratification of the instant could be of any worth to us, if we could be deprived of everything the next instant by whoever was momentarily stronger than ourselves. Now this most indispensable of all necessaries, after physical nutriment, cannot be had, unless the machinery for providing it is kept unintermittedly in active play. Our notion, therefore, of the claim we have on our fellow creatures to join in making safe for us the very groundwork of our existence, gathers feelings round it so much more intense than those concerned in any of the more common cases of utility, that the difference in degree (as is often the case in psychology) becomes a real difference in kind. The claim assumes that character of absoluteness, that apparent infinity, and incommensurability with all other considerations, which constitute the distinction between the feeling of right and wrong and that of ordinary expediency and inexpediency. The feelings concerned are so powerful, and we count so positively on finding a responsive feeling in others (all being alike interested), that *ought* and *should* grow into *must*, and recognised indispensability becomes a moral necessity, analogous to physical, and often not inferior to it in binding force.

If the preceding analysis, or something resembling it, be not the correct account of the notion of justice; if justice be totally independent of utility, and be a standard *per se*, which the mind can recognise by simple introspection of itself; it is hard to understand why that internal oracle is so ambiguous, and why so many things appear either just or unjust, according to the light in which they are regarded.

We are continually informed that Utility is an un-

certain standard, which every different person interprets differently, and that there is no safety but in the immutable, ineffaceable, and unmistakeable dictates of Justice, which carry their evidence in themselves, and are independent of the fluctuations of opinion. One would suppose from this that on questions of justice there could be no controversy; that if we take that for our rule, its application to any given case could leave us in as little doubt as a mathematical demonstration. So far is this from being the fact, that there is as much difference of opinion, and as fierce discussion, about what is just, as about what is useful to society. Not only have different nations and individuals different notions of justice, but in the mind of one and the same individual, justice is not some one rule, principle, or maxim, but many, which do not always coincide in their dictates, and in choosing between which, he is guided either by some extraneous standard, or by his own personal predilections.

For instance, there are some who say, that it is unjust to punish any one for the sake of example to others; that punishment is just, only when intended for the good of the sufferer himself. Others maintain the extreme reverse, contending that to punish persons who have attained years of discretion, for their own benefit, is despotism and injustice, since if the matter at issue is solely their own good, no one has a right to control their own judgment of it; but that they may justly be punished to prevent evil to others, this being an exercise of the legitimate right of self-defence. Mr. Owen, again, affirms that it is unjust to punish at all; for the criminal did not make his own character; his education, and the circumstances which surround him, have made him a criminal, and for these he is not responsible. All these opinions are extremely plausible; and so long as the question is argued as one of justice simply, without going down to the principles which lie under justice and are the source of its authority, I am unable to see how any of these reasoners can be refuted. For in truth every one of the three builds upon rules of justice confessedly true. The first appeals to the acknowledged injustice of singling out an individual, and making him a sacrifice, without his consent, for other people's benefit. The second relies on the acknowledged justice of self-defence, and the admitted injustice of forcing one person to conform to another's notions of what constitutes his good. The Owenite invokes the admitted principle, that it is unjust to punish any one for what he cannot help. Each is triumphant so long as he is not compelled to take into consideration any other maxims of justice than the one he has selected; but as soon as their several maxims are brought face to face, each disputant seems to have exactly as much to say for himself as the others. No one of them can carry out his own notion of justice without trampling upon another equally binding. These are difficulties; they have always been felt to be such; and many devices have been invented to turn rather than to overcome them. As a refuge from the last of the three, men imagined what they called the freedom of the will; fancying that they could not justify punishing a man whose will is in a thoroughly hateful state, unless it be supposed to have come into that state through no influence of anterior circumstances. To escape from the other difficulties, a favourite contrivance has been the fiction of a contract, whereby at some unknown period all the members of society engaged to obey the laws, and consented to be punished for any disobedience to them; thereby giving to their legislators the right, which it is assumed they would not otherwise have had, of punishing them, either for their own good or for that of society. This happy thought was considered to get rid of the whole difficulty, and to legitimate the infliction of punishment, in virtue of another received maxim of justice, *Volenti non fit injuria*; that is not unjust which is done with the consent of the person who is supposed to be hurt by it. I need hardly remark, that even if the consent were not a mere fiction, this maxim is not superior in authority to the others which it is brought in to supersede. It is, on the contrary, an instructive specimen of the loose and irregular manner in which supposed principles of justice grow up. This particular one evidently came into use as a help to the coarse exigencies of courts of law, which are sometimes obliged to be content with very uncertain presumptions, on account of the greater evils which would often arise from any attempt on their part to cut finer. But even courts of law are not able to adhere consistently to the maxim, for they allow voluntary engagements to be set aside on the ground of fraud, and sometimes on that of mere mistake or misinformation.

Again, when the legitimacy of inflicting punishment is admitted, how many conflicting conceptions of justice come to light in discussing the proper apportionment of punishment to offences. No rule on this subject recommends itself so strongly to the primitive and spontaneous sentiment of justice, as the *lex talionis*, an eye for an eye and a tooth for a tooth. Though this principle of the Jewish and of the Mahomedan law has been generally abandoned in Europe as a practical maxim, there is, I suspect, in most minds, a secret hankering after it; and when retribution accidentally falls on an offender in that precise shape, the general feeling of satisfaction evinced, bears witness how natural is the sentiment to which this repayment in kind is acceptable. With many the test of justice in penal infliction is that the punishment should be proportioned to the offence; meaning that it should be exactly measured by the moral guilt of the culprit (whatever be their standard for measuring moral guilt): the consideration, what amount of punishment is necessary to deter from the offence, having nothing to do with the question of justice, in their estimation: while there are others to whom that consideration is all in all; who maintain that it is not just, at least for man, to inflict on a fellow creature, whatever may be his offences, any amount of suffering beyond the least that will suffice to prevent him from repeating, and others from imitating, his misconduct.

To take another example from a subject already once referred to. In a co-operative industrial association, is it just or not that talent or skill should give a title to superior remuneration? On the negative side of the question it is argued, that whoever does the best he can, deserves equally well, and ought not in justice to be put in a position of inferiority for no fault of his own; that superior abilities have already advantages more than enough, in the admiration they excite, the personal influence they command, and the internal sources of satisfaction attending them, without adding to these a superior share of the world's goods; and that society is bound in justice rather to make compensation to the less favoured, for this unmerited inequality of advantages, than to aggravate it. On the contrary side it is contended, that society receives more from the more efficient labourer; that his services being more useful, society owes him a larger return for them; that a greater share of the joint result is actually his work, and not to allow his claim to it is a kind of robbery; that if he is only to receive as much as others, he can only be justly required to produce as much, and to give a smaller amount of time and exertion, proportioned to his superior efficiency. Who shall decide between these appeals to conflicting principles of justice? Justice has in this case two sides to it, which it is impossible to bring into harmony, and the two disputants have chosen opposite sides; the one looks to what it is just that the individual should receive, the other to what it is just that the community should give. Each, from his own point of view, is unanswerable; and any choice between them, on grounds of justice, must be perfectly arbitrary. Social utility alone can decide the preference.

How many, again, and how irreconcileable, are the standards of justice to which reference is made in discussing the repartition of taxation. One opinion is, that payment to the State should be in numerical proportion to pecuniary means. Others think that justice dictates what they term graduated taxation; taking a higher percentage from those who have more to spare. In point of natural justice a strong case might be made for disregarding means altogether, and taking the same absolute sum (whenever it could be got) from every one: as the subscribers to a mess, or to a club, all pay the same sum for the same privileges, whether they can all equally afford it or not. Since the protection (it might be said) of law and government is afforded to, and is equally required by all, there is no injustice in making all buy it at the same price. It is reckoned justice, not injustice, that a dealer should charge to all customers the same price for the same article, not a price varying according to their means of payment. This doctrine, as applied to taxation, finds no advocates, because it conflicts strongly with men's feelings of humanity and perceptions of social expediency; but the principle of justice which it invokes is as true and as binding as those which can be appealed to against it. Accordingly, it exerts a tacit influence on the line of defence employed for other modes of assessing taxation. People feel obliged to argue that the State does more for the rich than for the poor, as a justification for its taking more from them: though this is in reality not true, for the rich would be far better able to protect themselves, in the

absence of law or government, than the poor, and indeed would probably be successful in converting the poor into their slaves. Others, again, so far defer to the same conception of justice, as to maintain that all should pay an equal capitation tax for the protection of their persons (these being of equal value to all), and an unequal tax for the protection of their property, which is unequal. To this others reply, that the all of one man is as valuable to him as the all of another. From these confusions there is no other mode of extrication than the utilitarian.

Is, then, the difference between the Just and the Expedient a merely imaginary distinction? Have mankind been under a delusion in thinking that justice is a more sacred thing than policy, and that the latter ought only to be listened to after the former has been satisfied? By no means. The exposition we have given of the nature and origin of the sentiment, recognises a real distinction; and no one of those who profess the most sublime contempt for the consequences of actions as an element in their morality, attaches more importance to the distinction than I do. While I dispute the pretensions of any theory which sets up an imaginary standard of justice not grounded on utility, I account the justice which is grounded on utility to be the chief part, and incomparably the most sacred and binding part, of all morality. Justice is a name for certain classes of moral rules, which concern the essentials of human well-being more nearly, and are therefore of more absolute obligation, than any other rules for the guidance of life; and the notion which we have found to be of the essence of the idea of justice, that of a right residing in an individual, implies and testifies to this more binding obligation.

The moral rules which forbid mankind to hurt one another (in which we must never forget to include wrongful interference with each other's freedom) are more vital to human well-being than any maxims, however important, which only point out the best mode of managing some department of human affairs. They have also the peculiarity, that they are the main element in determining the whole of the social feelings of mankind. It is their observance which alone preserves peace among human beings: if obedience to them were not the rule, and disobedience the exception, every one would see in every one else a probable enemy, against whom he must be perpetually guarding himself. What is hardly less important, these are the precepts which mankind have the strongest and the most direct inducements for impressing upon one another. By merely giving to each other prudential instruction or exhortation, they may gain, or think they gain, nothing: in inculcating on each other the duty of positive beneficence they have an unmistakeable interest, but far less in degree: a person may possibly not need the benefits of others; but he always needs that they should not do him hurt. Thus the moralities which protect every individual from being harmed by others, either directly or by being hindered in his freedom of pursuing his own good, are at once those which he himself has most at heart, and those which he has the strongest interest in publishing and enforcing by word and deed. It is by a person's observance of these, that his fitness to exist as one of the fellowship of human beings, is tested and decided; for on that depends his being a nuisance or not to those with whom he is in contact. Now it is these moralities primarily, which compose the obligations of justice. The most marked cases of injustice, and those which give the tone to the feeling of repugnance which characterizes the sentiment, are acts of wrongful aggression, or wrongful exercise of power over some one; the next are those which consist in wrongfully withholding from him something which is his due; in both cases, inflicting on him a positive hurt, either in the form of direct suffering, or of the privation of some good which he had reasonable ground, either of a physical or of a social kind, for counting upon.

The same powerful motives which command the observance of these primary moralities, enjoin the punishment of those who violate them; and as the impulses of self-defence, of defence of others, and of vengeance, are all called forth against such persons, retribution, or evil for evil, becomes closely connected with the sentiment of justice, and is universally included in the idea. Good for good is also one of the dictates of justice; and this, though its social utility is evident, and though it carries with it a natural human feeling, has not at first sight that obvious connexion with hurt or injury, which, existing in the most elementary cases of just and unjust, is the source of the characteristic intensity of the sentiment. But the connexion, though less obvious, is not less real.

He who accepts benefits, and denies a return of them when needed, inflicts a real hurt, by disappointing one of the most natural and reasonable of expectations, and one which he must at least tacitly have encouraged, otherwise the benefits would seldom have been conferred. The important rank, among human evils and wrongs, of the disappointment of expectation, is shown in the fact that it constitutes the principal criminality of two such highly immoral acts as a breach of friendship and a breach of promise. Few hurts which human beings can sustain are greater, and none wound more, than when that on which they habitually and with full assurance relied, fails them in the hour of need; and few wrongs are greater than this mere withholding of good; none excite more resentment, either in the person suffering, or in a sympathizing spectator. The principle, therefore, of giving to each what they deserve, that is, good for good as well as evil for evil, is not only included within the idea of Justice as we have defined it, but is a proper object of that intensity of sentiment, which places the Just, in human estimation, above the simply Expedient.

Most of the maxims of justice current in the world, and commonly appealed to in its transactions, are simply instrumental to carrying into effect the principles of justice which we have now spoken of. That a person is only responsible for what he has done voluntarily, or could voluntarily have avoided; that it is unjust to condemn any person unheard; that the punishment ought to be proportioned to the offence, and the like, are maxims intended to prevent the just principle of evil for evil from being perverted to the infliction of evil without that justification. The greater part of these common maxims have come into use from the practice of courts of justice, which have been naturally led to a more complete recognition and elaboration than was likely to suggest itself to others, of the rules necessary to enable them to fulfil their double function, of inflicting punishment when due, and of awarding to each person his right.

That first of judicial virtues, impartiality, is an obligation of justice, partly for the reason last mentioned; as being a necessary condition of the fulfilment of the other obligations of justice. But this is not the only source of the exalted rank, among human obligations, of those maxims of equality and impartiality, which, both in popular estimation and in that of the most enlightened, are included among the precepts of justice. In one point of view, they may be considered as corollaries from the principles already laid down. If it is a duty to do to each according to his deserts, returning good for good as well as repressing evil by evil, it necessarily follows that we should treat all equally well (when no higher duty forbids) who have deserved equally well of us, and that society should treat all equally well who have deserved equally well of it, that is, who have deserved equally well absolutely. This is the highest abstract standard of social and distributive justice; towards which all institutions, and the efforts of all virtuous citizens, should be made in the utmost possible degree to converge. But this great moral duty rests upon a still deeper foundation, being a direct emanation from the first principle of morals, and not a mere logical corollary from secondary or derivative doctrines. It is involved in the very meaning of Utility, or the Greatest-Happiness Principle. That principle is a mere form of words without rational signification, unless one person's happiness, supposed equal in degree (with the proper allowance made for kind), is counted for exactly as much as another's. Those conditions being supplied, Bentham's dictum, 'everybody to count for one, nobody for more than one,' might be written under the principle of utility as an explanatory commentary.[4] The equal claim of everybody to happiness in the estimation of the moralist

4. This implication, in the first principle of the utilitarian scheme, of perfect impartiality between persons, is regarded by Mr. Herbert Spencer (in his 'Social Statics') as a disproof of the pretensions of utility to be a sufficient guide to right; since (he says) the principle of utility presupposes the anterior principle, that everybody has an equal right to happiness. It may be more correctly described as supposing that equal amounts of happiness are equally desirable, whether felt by the same or by different persons. This, however, is not a presupposition; not a premise needful to support the principle of utility, but the very principle itself; for what is the principle of utility, if it be not that 'happiness' and 'desirable' are synonymous terms? If there is any anterior principle implied, it can be no other than this, that the truths of arithmetic are applicable to the valuation of happiness, as of all other measurable quantities.

[Mr. Herbert Spencer, in a private communication

and the legislator, involves an equal claim to all the means of happiness, except in so far as the inevitable conditions of human life, and the general interest, in which that of every individual is included, set limits to the maxim; and those limits ought to be strictly construed. As every other maxim of justice, so this, is by no means applied or held applicable universally; on the contrary, as I have already remarked, it bends to every person's ideas of social expediency. But in whatever case it is deemed applicable at all, it is held to be the dictate of justice. All persons are deemed to have a *right* to equality of treatment, except when some recognised social expediency requires the reverse. And hence all social inequalities which have ceased to be considered expedient, assume the character not of simple inexpediency, but of injustice, and appear so tyrannical, that people are apt to wonder how they ever could have been tolerated; forgetful that they themselves perhaps tolerate other inequalities under an equally mistaken notion of expediency, the correction of which would make that which they approve seem quite as monstrous as what they have at last learnt to condemn. The entire history of social improvement has been a series of transitions, by which one custom or institution after another, from being a supposed primary necessity of social existence, has passed into the rank of an universally stigmatized injustice and tyranny. So it has been with the distinctions of slaves and freemen, nobles and serfs, patricians and plebeians; and so it will be, and in part already is, with the aristocracies of colour, race, and sex.

It appears from what has been said, that justice is a name for certain moral requirements, which, regarded collectively, stand higher in the scale of social utility, and are therefore of more paramount obligation, than any others; though particular cases may occur in which some other social duty is so important, as to overrule any one of the general maxims of justice. Thus, to save a life, it may not only be allowable, but a duty, to steal, or take by force, the necessary food or medicine, or to kidnap, and compel to officiate, the only qualified medical practitioner. In such cases, as we do not call anything justice which is not a virtue, we usually say, not that justice must give way to some other moral principle, but that what is just in ordinary cases is, by reason of that other principle, not just in the particular case. By this useful accommodation of language, the character of indefeasibility attributed to justice is kept up, and we are saved from the necessity of maintaining that there can be laudable injustice.

The considerations which have now been adduced resolve, I conceive, the only real difficulty in the utilitarian theory of morals. It has always been evident that all cases of justice are also cases of expediency: the difference is in the peculiar sentiment which attaches to the former, as contradistinguished from the latter. If this characteristic sentiment has been sufficiently accounted for; if there is no necessity to assume for it any peculiarity of origin; if it is simply the natural feeling of resentment, moralized by being made coextensive with the demands of social good; and if this feeling not only does but ought to exist in all the classes of cases to which the idea of justice corresponds; that idea no longer presents itself as a stumbling-block to the utilitarian ethics. Justice

---

on the subject of the preceding Note, objects to being considered an opponent of Utilitarianism, and states that he regards happiness as the ultimate end of morality; but deems that end only partially attainable by empirical generalizations from the observed results of conduct, and completely attainable only by deducing, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. With the exception of the word "necessarily," I have no dissent to express from this doctrine; and (omitting that word) I am not aware that any modern advocate of utilitarianism is of a different opinion. Bentham, certainly, to whom in the *Social Statics* Mr. Spencer particularly referred, is, least of all writers, chargeable with unwillingness to deduce the effect of actions on happiness from the laws of human nature and the universal conditions of human life. The common charge against him is of relying too exclusively upon such deductions, and declining altogether to be bound by the generalizations from specific experience which Mr. Spencer thinks that utilitarians generally confine themselves to. My own opinion (and, as I collect, Mr. Spencer's) is, that in ethics, as in all other branches of scientific study, the consilience of the results of both these processes, each corroborating and verifying the other, is requisite to give to any general proposition the kind and degree of evidence which constitutes scientific proof.]

remains the appropriate name for certain social utilities which are vastly more important, and therefore more absolute and imperative, than any others are as a class (though not more so than others may be in particular cases); and which, therefore, ought to be, as well as naturally are, guarded by a sentiment not only different in degree, but also in kind; distinguished from the milder feeling which attaches to the mere idea of promoting human pleasure or convenience, at once by the more definite nature of its commands, and by the sterner character of its sanctions.

The Subjection of Women

CHAPTER 1

The object of this Essay is to explain as clearly as I am able, the grounds of an opinion which I have held from the very earliest period when I had formed any opinions at all on social or political matters, and which, instead of being weakened or modified, has been constantly growing stronger by the progress of reflection and the experience of life: That the principle which regulates the existing social relations between the two sexes—the legal subordination of one sex to the other—is wrong in itself, and now one of the chief hindrances to human improvement; and that it ought to be replaced by a principle of perfect equality, admitting no power or privilege on the one side, nor disability on the other.

The very words necessary to express the task I have undertaken, show how arduous it is. But it would be a mistake to suppose that the difficulty of the case must lie in the insufficiency or obscurity of the grounds of reason on which my conviction rests. The difficulty is that which exists in all cases in which there is a mass of feeling to be contended against. So long as an opinion is strongly rooted in the feelings, it gains rather than loses in stability by having a preponderating weight of argument against it. For if it were accepted as a result of argument, the refutation of the argument might shake the solidity of the conviction; but when it rests solely on feeling, the worse it fares in argumentative contest, the more persuaded its adherents are that their feeling must have some deeper ground, which the arguments do not reach; and while the feeling remains, it is always throwing up fresh intrenchments of argument to repair any breach made in the old. And there are so many causes tending to make the feelings connected with this subject the most intense and most deeply-rooted of all those which gather round and protect old institutions and customs, that we need not wonder to find them as yet less undermined and loosened than any of the rest by the progress of the great modern spiritual and social transition; nor suppose that the barbarisms to which men cling longest must be less barbarisms than those which they earlier shake off.

In every respect the burthen is hard on those who attack an almost universal opinion. They must be very fortunate as well as unusually capable if they obtain a hearing at all. They have more difficulty in obtaining a trial, than any other litigants have in getting a verdict. If they do extort a hearing, they are subjected to a set of logical requirements totally different from those exacted from other people. In all other cases, the burthen of proof is supposed to lie with the affirmative. If a person is charged with a murder, it rests with those who accuse him to give proof of his guilt, not with himself to prove his innocence. If there is a difference of opinion about the reality of any alleged historical event, in which the feelings of men in general are not much interested, as the Siege of Troy for example, those who maintain that the event took place are expected to produce their proofs, before those who take the other side can be required to say anything; and at no time are these required to do more than show that the evidence produced by the others is of no value. Again, in practical matters, the burthen of proof is supposed to be with those who are against liberty; who contend for any restriction or prohibition; either any limitation of the general freedom of human action, or any disqualification or disparity of privilege affecting one person or kind of persons, as compared with others. The *à priori* presumption is in favour of freedom and impartiality. It is held that there should be no restraint

This edition of *The Subjection of Women* was drawn from the 1870 3rd edition of Longmans, Green, Reader, and Dyer. Footnotes from John Stuart Mill, *The Subjection of Women*, edited by Susan M. Okin (Indianapolis: Hackett Publishing Company, 1988). Copyright © 1988. Reprinted by permission of the publisher.

not required by the general good, and that the law should be no respecter of persons, but should treat all alike, save where dissimilarity of treatment is required by positive reasons, either of justice or of policy. But of none of these rules of evidence will the benefit be allowed to those who maintain the opinion I profess. It is useless for me to say that those who maintain the doctrine that men have a right to command and women are under an obligation to obey, or that men are fit for government and women unfit, are on the affirmative side of the question, and that they are bound to show positive evidence for the assertions, or submit to their rejection. It is equally unavailing for me to say that those who deny to women any freedom or privilege rightly allowed to men, having the double presumption against them that they are opposing freedom and recommending partiality, must be held to the strictest proof of their case, and unless their success be such as to exclude all doubt, the judgment ought to go against them. These would be thought good pleas in any common case; but they will not be thought so in this instance. Before I could hope to make any impression, I should be expected not only to answer all that has ever been said by those who take the other side of the question, but to imagine all that could be said by them—to find them in reasons, as well as answer all I find: and besides refuting all arguments for the affirmative, I shall be called upon for invincible positive arguments to prove a negative. And even if I could do all this, and leave the opposite party with a host of unanswered arguments against them, and not a single unrefuted one on their side, I should be thought to have done little; for a cause supported on the one hand by universal usage, and on the other by so great a preponderance of popular sentiment, is supposed to have a presumption in its favour, superior to any conviction which an appeal to reason has power to produce in any intellects but those of a high class.

I do not mention these difficulties to complain of them; first, because it would be useless; they are inseparable from having to contend through people's understandings against the hostility of their feelings and practical tendencies: and truly the understandings of the majority of mankind would need to be much better cultivated than has ever yet been the case, before they can be asked to place such reliance in their own power of estimating arguments, as to give up practical principles in which they have been born and bred and which are the basis of much of the existing order of the world, at the first argumentative attack which they are not capable of logically resisting. I do not therefore quarrel with them for having too little faith in argument, but for having too much faith in custom and the general feeling. It is one of the characteristic prejudices of the reaction of the nineteenth century against the eighteenth, to accord to the unreasoning elements in human nature the infallibility which the eighteenth century is supposed to have ascribed to the reasoning elements. For the apotheosis of Reason we have substituted that of Instinct; and we call everything instinct which we find in ourselves and for which we cannot trace any rational foundation. This idolatry, infinitely more degrading than the other, and the most pernicious of the false worships of the present day, of all of which it is now the main support, will probably hold its ground until it gives way before a sound psychology, laying bare the real root of much that is bowed down to as the intention of Nature and the ordinance of God. As regards the present question, I am willing to accept the unfavourable conditions which the prejudice assigns to me. I consent that established custom, and the general feeling, should be deemed conclusive against me, unless that custom and feeling from age to age can be shown to have owed their existence to other causes than their soundness, and to have derived their power from the worse rather than the better parts of human nature. I am willing that judgment should go against me, unless I can show that my judge has been tampered with. The concession is not so great as it might appear; for to prove this, is by far the easiest portion of my task.

The generality of a practice is in some cases a strong presumption that it is, or at all events once was, conducive to laudable ends. This is the case, when the practice was first adopted, or afterwards kept up, as a means to such ends, and was grounded on experience of the mode in which they could be most effectually attained. If the authority of men over women, when first established, had been the result of a conscientious comparison between different modes of constituting the government of society; if, after trying various other modes of social

organization—the government of women over men, equality between the two, and such mixed and divided modes of government as might be invented—it had been decided, on the testimony of experience, that the mode in which women are wholly under the rule of men, having no share at all in public concerns, and each in private being under the legal obligation of obedience to the man with whom she has associated her destiny, was the arrangement most conducive to the happiness and well being of both; its general adoption might then be fairly thought to be some evidence that, at the time when it was adopted, it was the best: though even then the considerations which recommended it may, like so many other primeval social facts of the greatest importance, have subsequently, in the course of ages, ceased to exist. But the state of the case is in every respect the reverse of this. In the first place, the opinion in favour of the present system, which entirely subordinates the weaker sex to the stronger, rests upon theory only; for there never has been trial made of any other: so that experience, in the sense in which it is vulgarly opposed to theory, cannot be pretended to have pronounced any verdict. And in the second place, the adoption of this system of inequality never was the result of deliberation, or forethought, or any social ideas, or any notion whatever of what conduced to the benefit of humanity or the good order of society. It arose simply from the fact that from the very earliest twilight of human society, every woman (owing to the value attached to her by men, combined with her inferiority in muscular strength) was found in a state of bondage to some man. Laws and systems of polity always begin by recognising the relations they find already existing between individuals. They convert what was a mere physical fact into a legal right, give it the sanction of society, and principally aim at the substitution of public and organized means of asserting and protecting these rights, instead of the irregular and lawless conflict of physical strength. Those who had already been compelled to obedience became in this manner legally bound to it. Slavery, from being a mere affair of force between the master and the slave, became regularized and a matter of compact among the masters, who, binding themselves to one another for common protection, guaranteed by their collective strength the private possessions of each, including his slaves. In early times, the great majority of the male sex were slaves, as well as the whole of the female. And many ages elapsed, some of them ages of high cultivation, before any thinker was bold enough to question the rightfulness, and the absolute social necessity, either of the one slavery or of the other. By degrees such thinkers did arise: and (the general progress of society assisting) the slavery of the male sex has, in all the countries of Christian Europe at least (though, in one of them, only within the last few years) been at length abolished,[1] and that of the female sex has been gradually changed into a milder form of dependence. But this dependence, as it exists at present, is not an original institution, taking a fresh start from considerations of justice and social expediency—it is the primitive state of slavery lasting on, through successive mitigations and modifications occasioned by the same causes which have softened the general manners, and brought all human relations more under the control of justice and the influence of humanity. It has not lost the taint of its brutal origin. No presumption in its favour, therefore, can be drawn from the fact of its existence. The only such presumption which it could be supposed to have, must be grounded on its having lasted till now, when so many other things which came down from the same odious source have been done away with. And this, indeed, is what makes it strange to ordinary ears, to hear it asserted that the inequality of rights between men and women has no other source than the law of the strongest.

That this statement should have the effect of a paradox, is in some respects creditable to the progress of civilization, and the improvement of the moral sentiments of mankind. We now live—that is to say, one or two of the most advanced nations of the world now live—in a state in which the law of the strongest seems to be entirely abandoned as the regulating principle of the world's affairs: nobody professes it, and, as regards most of the relations between human beings, nobody is permitted to practise it. When any one succeeds in doing so, it is under cover of some pretext which gives him the semblance of having

1. [Legal chattel slavery was abolished in the British Empire in 1833, in the French West Indies in 1848, and in the United States in 1865.—S.M.O.]

some general social interest on his side. This being the ostensible state of things, people flatter themselves that the rule of mere force is ended; that the law of the strongest cannot be the reason of existence of anything which has remained in full operation down to the present time. However any of our present institutions may have begun, it can only, they think, have been preserved to this period of advanced civilization by a well-grounded feeling of its adaptation to human nature, and conduciveness to the general good. They do not understand the great vitality and durability of institutions which place right on the side of might; how intensely they are clung to; how the good as well as the bad propensities and sentiments of those who have power in their hands, become identified with retaining it; how slowly these bad institutions give way, one at a time, the weakest first, beginning with those which are least interwoven with the daily habits of life; and how very rarely those who have obtained legal power because they first had physical, have ever lost their hold of it until the physical power had passed over to the other side. Such shifting of the physical force not having taken place in the case of women; this fact, combined with all the peculiar and characteristic features of the particular case, made it certain from the first that this branch of the system of right founded on might, though softened in its most atrocious features at an earlier period than several of the others, would be the very last to disappear. It was inevitable that this one case of a social relation grounded on force, would survive through generations of institutions grounded on equal justice, an almost solitary exception to the general character of their laws and customs; but which, so long as it does not proclaim its own origin, and as discussion has not brought out its true character, is not felt to jar with modern civilization, any more than domestic slavery among the Greeks jarred with their notion of themselves as a free people.

The truth is, that people of the present and the last two or three generations have lost all practical sense of the primitive condition of humanity; and only the few who have studied history accurately, or have much frequented the parts of the world occupied by the living representatives of ages long past, are able to form any mental picture of what society then was. People are not aware how entirely, in former ages, the law of superior strength was the rule of life; how publicly and openly it was avowed, I do not say cynically or shamelessly—for these words imply a feeling that there was something in it to be ashamed of, and no such notion could find a place in the faculties of any person in those ages, except a philosopher or a saint. History gives a cruel experience of human nature, in shewing how exactly the regard due to the life, possessions, and entire earthly happiness of any class of persons, was measured by what they had the power of enforcing; how all who made any resistance to authorities that had arms in their hands, however dreadful might be the provocation, had not only the law of force but all other laws, and all the notions of social obligation against them; and in the eyes of those whom they resisted, were not only guilty of crime, but of the worst of all crimes, deserving the most cruel chastisement which human beings could inflict. The first small vestige of a feeling of obligation in a superior to acknowledge any right in inferiors, began when he had been induced, for convenience, to make some promise to them. Though these promises, even when sanctioned by the most solemn oaths, were for many ages revoked or violated on the most trifling provocation or temptation, it is probable that this, except by persons of still worse than the average morality, was seldom done without some twinges of conscience. The ancient republics, being mostly grounded from the first upon some kind of mutual compact, or at any rate formed by an union of persons not very unequal in strength, afforded, in consequence, the first instance of a portion of human relations fenced round, and placed under the dominion of another law than that of force. And though the original law of force remained in full operation between them and their slaves, and also (except so far as limited by express compact) between a commonwealth and its subjects, or other independent commonwealths; the banishment of that primitive law even from so narrow a field, commenced the regeneration of human nature, by giving birth to sentiments of which experience soon demonstrated the immense value even for material interests, and which thenceforward only required to be enlarged, not created. Though slaves were no part of the commonwealth, it was in the free states that slaves were first felt to have rights as human beings. The Stoics were, I believe, the

first (except so far as the Jewish law constitutes an exception) who taught as a part of morality that men were bound by moral obligations to their slaves.[2] No one, after Christianity became ascendant, could ever again have been a stranger to this belief, in theory; nor, after the rise of the Catholic Church, was it ever without persons to stand up for it. Yet to enforce it was the most arduous task which Christianity ever had to perform. For more than a thousand years the Church kept up the contest, with hardly any perceptible success. It was not for want of power over men's minds. Its power was prodigious. It could make kings and nobles resign their most valued possessions to enrich the Church. It could make thousands, in the prime of life and the height of worldly advantages, shut themselves up in convents to work out their salvation by poverty, fasting, and prayer. It could send hundreds of thousands across land and sea, Europe and Asia, to give their lives for the deliverance of the Holy Sepulchre. It could make kings relinquish wives who were the object of their passionate attachment, because the Church declared that they were within the seventh (by our calculation the fourteenth) degree of relationship. All this it did; but it could not make men fight less with one another, nor tyrannize less cruelly over the serfs, and when they were able, over burgesses. It could not make them renounce either of the applications of force; force militant, or force triumphant. This they could never be induced to do until they were themselves in their turn compelled by superior force. Only by the growing power of kings was an end put to fighting except between kings, or competitors for kingship; only by the growth of a wealthy and warlike bourgeoisie in the fortified towns, and of a plebeian infantry which proved more powerful in the field than the undisciplined chivalry, was the insolent tyranny of the nobles over the bourgeoisie and peasantry brought within some bounds. It was persisted in not only until, but long after, the oppressed had obtained a power enabling them often to take conspicuous vengeance; and on the Continent much of it continued to the time of the French Revolution, though in England the earlier and better organization of the democratic classes put an end to it sooner by establishing equal laws and free national institutions.

If people are mostly so little aware how completely, during the greater part of the duration of our species, the law of force was the avowed rule of general conduct, any other being only a special and exceptional consequence of peculiar ties—and from how very recent a date it is that the affairs of society in general have been even pretended to be regulated according to any moral law; as little do people remember or consider, how institutions and customs which never had any ground but the law of force, last on into ages and states of general opinion which never would have permitted their first establishment. Less than forty years ago, Englishmen might still by law hold human beings in bondage as saleable property: within the present century they might kidnap them and carry them off, and work them literally to death. This absolutely extreme case of the law of force, condemned by those who can tolerate almost every other form of arbitrary power, and which, of all others, presents features the most revolting to the feelings of all who look at it from an impartial position, was the law of civilized and Christian England within the memory of persons now living: and in one half of Anglo-Saxon America three or four years ago, not only did slavery exist, but the slave trade, and the breeding of slaves expressly for it, was a general practice between slave states. Yet not only was there a greater strength of sentiment against it, but, in England at least, a less amount either of feeling or of interest in favour of it, than of any other of the customary abuses of force: for its motive was the love of gain, unmixed and undisguised; and those who profited by it were a very small numerical fraction of the country, while the natural feeling of all who were not personally interested in it, was unmitigated abhorrence. So extreme an instance makes it almost superfluous to refer to any other: but consider the long duration of absolute monarchy. In England at present it is the almost universal conviction that military despotism is a case of the law of force, having no other origin or justification. Yet in all the great nations of Europe except England it either still exists, or has only just ceased to exist, and has even now a strong party favourable

2. [Stoicism was a Greek and Roman school of philosophy founded by Zeno about 300 B.C.E. and influential until about 200 C.E. The obligations between rulers and ruled were among the Stoics' central concerns.]

to it in all ranks of the people, especially among persons of station and consequence. Such is the power of an established system, even when far from universal; when not only in almost every period of history there have been great and well-known examples of the contrary system, but these have almost invariably been afforded by the most illustrious and most prosperous communities. In this case, too, the possessor of the undue power, the person directly interested in it, is only one person, while those who are subject to it and suffer from it are literally all the rest. The yoke is naturally and necessarily humiliating to all persons, except the one who is on the throne, together with, at most, the one who expects to succeed to it. How different are these cases from that of the power of men over women! I am not now prejudging the question of its justifiableness. I am showing how vastly more permanent it could not but be, even if not justifiable, than these other dominations which have nevertheless lasted down to our own time. Whatever gratification of pride there is in the possession of power, and whatever personal interest in its exercise, is in this case not confined to a limited class, but common to the whole male sex. Instead of being, to most of its supporters, a thing desirable chiefly in the abstract, or, like the political ends usually contended for by factions, of little private importance to any but the leaders; it comes home to the person and hearth of every male head of a family, and of every one who looks forward to being so. The clodhopper exercises, or is to exercise, his share of the power equally with the highest nobleman. And the case is that in which the desire of power is the strongest: for every one who desires power, desires it most over those who are nearest to him, with whom his life is passed, with whom he has most concerns in common, and in whom any independence of his authority is oftenest likely to interfere with his individual preferences. If, in the other cases specified, powers manifestly grounded only on force, and having so much less to support them, are so slowly and with so much difficulty got rid of, much more must it be so with this, even if it rests on no better foundation than those. We must consider, too, that the possessors of the power have facilities in this case, greater than in any other, to prevent any uprising against it. Every one of the subjects lives under the very eye, and almost, it may be said, in the hands, of one of the masters—in closer intimacy with him than with any of her fellow-subjects; with no means of combining against him, no power of even locally overmastering him, and, on the other hand, with the strongest motives for seeking his favour and avoiding to give him offence. In struggles for political emancipation, everybody knows how often its champions are bought off by bribes, or daunted by terrors. In the case of women, each individual of the subject-class is in a chronic state of bribery and intimidation combined. In setting up the standard of resistance, a large number of the leaders, and still more of the followers, must make an almost complete sacrifice of the pleasures or the alleviations of their own individual lot. If ever any system of privilege and enforced subjection had its yoke tightly riveted on the necks of those who are kept down by it, this has. I have not yet shown that it is a wrong system: but every one who is capable of thinking on the subject must see that even if it is, it was certain to outlast all other forms of unjust authority. And when some of the grossest of the other forms still exist in many civilized countries, and have only recently been got rid of in others, it would be strange if that which is so much the deepest-rooted had yet been perceptibly shaken anywhere. There is more reason to wonder that the protests and testimonies against it should have been so numerous and so weighty as they are.

Some will object, that a comparison cannot fairly be made between the government of the male sex and the forms of unjust power which I have adduced in illustration of it, since these are arbitrary, and the effect of mere usurpation, while it on the contrary is natural. But was there ever any domination which did not appear natural to those who possessed it? There was a time when the division of mankind into two classes, a small one of masters and a numerous one of slaves, appeared, even to the most cultivated minds, to be a natural, and the only natural, condition of the human race. No less an intellect, and one which contributed no less to the progress of human thought, than Aristotle, held this opinion without doubt or misgiving; and rested it on the same premises on which the same assertion in regard to the dominion of men over women is usually based, namely that there are different natures among mankind, free natures, and slave natures; that the Greeks were of a

free nature, the barbarian races of Thracians and Asiatics of a slave nature.[3] But why need I go back to Aristotle? Did not the slaveowners of the Southern United States maintain the same doctrine, with all the fanaticism with which men cling to the theories that justify their passions and legitimate their personal interests? Did they not call heaven and earth to witness that the dominion of white man over the black is natural, that the black race is by nature incapable of freedom, and marked out for slavery? some even going so far as to say that the freedom of manual labourers is an unnatural order of things anywhere. Again, the theorists of absolute monarchy have always affirmed it to be the only natural form of government; issuing from the patriarchal, which was the primitive and spontaneous form of society, framed on the model of the paternal, which is anterior to society itself, and, as they contend, the most natural authority of all. Nay, for that matter, the law of force itself, to those who could not plead any other, has always seemed the most natural of all grounds for the exercise of authority. Conquering races hold it to be Nature's own dictate that the conquered should obey the conquerors, or, as they euphoniously paraphrase it, that the feebler and more unwarlike races should submit to the braver and manlier. The smallest acquaintance with human life in the middle ages, shows how supremely natural the dominion of the feudal nobility over men of low condition appeared to the nobility themselves, and how unnatural the conception seemed, of a person of the inferior class claiming equality with them, or exercising authority over them. It hardly seemed less so to the class held in subjection. The emancipated serfs and burgesses, even in their most vigorous struggles, never made any pretension to a share of authority; they only demanded more or less of limitation to the power of tyrannizing over them. So true is it that unnatural generally means only uncustomary, and that everything which is usual appears natural. The subjection of women to men being a universal custom, any departure from it quite naturally appears unnatural. But how entirely, even in this case, the feeling is dependent on custom, appears by ample experience. Nothing so much astonishes the people of distant parts of the world, when they first learn anything about England, as to be told that it is under a queen: the thing seems to them so unnatural as to be almost incredible. To Englishmen this does not seem in the least degree unnatural, because they are used to it; but they do feel it unnatural that women should be soldiers or members of Parliament. In the feudal ages, on the contrary, war and politics were not thought unnatural to women, because not unusual; it seemed natural that women of the privileged classes should be of manly character, inferior in nothing but bodily strength to their husbands and fathers. The independence of women seemed rather less unnatural to the Greeks than to other ancients, on account of the fabulous Amazons (whom they believed to be historical), and the partial example afforded by the Spartan women; who, though no less subordinate by law than in other Greek states, were more free in fact, and being trained to bodily exercises in the same manner with men, gave ample proof that they were not naturally disqualified for them. There can be little doubt that Spartan experience suggested to Plato, among many other of his doctrines, that of the social and political equality of the two sexes.[4]

But, it will be said, the rule of men over women differs from all these others in not being a rule of force: it is accepted voluntarily; women make no complaint, and are consenting parties to it. In the first place, a great number of women do not accept it. Ever since there have been women able to make their sentiments known by their writings (the only mode of publicity which society permits to them), an increasing number of them have recorded protests against their present social condition: and recently many thousands of them, headed by the most eminent women known to the public, have petitioned Parliament for their admission to the Parliamentary Suffrage.[5] The claim of women to be educated as solidly, and in the same branches of knowledge, as men, is urged with growing intensity, and with a great

prospect of success; while the demand for their admission into professions and occupations hitherto closed against them, becomes every year more urgent. Though there are not in this country, as there are in the United States, periodical Conventions and an organized party to agitate for the Rights of Women, there is a numerous and active Society organized and managed by women, for the more limited object of obtaining the political franchise. Nor is it only in our own country and in America that women are beginning to protest, more or less collectively, against the disabilities under which they labour. France, and Italy, and Switzerland, and Russia now afford examples of the same thing. How many more women there are who silently cherish similar aspirations, no one can possibly know; but there are abundant tokens how many *would* cherish them, were they not so strenuously taught to repress them as contrary to the proprieties of their sex. It must be remembered, also, that no enslaved class ever asked for complete liberty at once. When Simon de Montfort called the deputies of the commons to sit for the first time in Parliament, did any of them dream of demanding that an assembly, elected by their constituents, should make and destroy ministries, and dictate to the king in affairs of state? No such thought entered into the imagination of the most ambitious of them. The nobility had already these pretensions; the commons pretended to nothing but to be exempt from arbitrary taxation, and from the gross individual oppression of the king's officers. It is a political law of nature that those who are under any power of ancient origin, never begin by complaining of the power itself, but only of its oppressive exercise. There is never any want of women who complain of ill usage by their husbands. There would be infinitely more, if complaint were not the greatest of all provocatives to a repetition and increase of the ill usage. It is this which frustrates all attempts to maintain the power but protect the woman against its abuses. In no other case (except that of a child) is the person who has been proved judicially to have suffered an injury, replaced under the physical power of the culprit who inflicted it. Accordingly wives, even in the most extreme and Protracted cases of bodily ill usage, hardly ever dare avail themselves of the laws made for their protection: and if, in a moment of irrepressible indignation, or by the interference of neighbours, they are induced to do so, their whole effort afterwards is to disclose as little as they can, and to beg off their tyrant from his merited chastisement.

All causes, social and natural, combine to make it unlikely that women should be collectively rebellious to the power of men. They are so far in a position different from all other subject classes, that their masters require something more from them than actual service. Men do not want solely the obedience of women, they want their sentiments. All men, except the most brutish, desire to have, in the woman most nearly connected with them, not a forced slave but a willing one, not a slave merely, but a favourite. They have therefore put everything in practice to enslave their minds. The masters of all other slaves rely, for maintaining obedience, on fear; either fear of themselves, or religious fears. The masters of women wanted more than simple obedience, and they turned the whole force of education to effect their purpose. All women are brought up from the very earliest years in the belief that their ideal of character is the very opposite to that of men; not self-will, and government by self-control, but submission, and yielding to the control of others. All the moralities tell them that it is the duty of women, and all the current sentimentalities that it is their nature, to live for others; to make complete abnegation of themselves, and to have no life but in their affections. And by their affections are meant the only ones they are allowed to have—those to the men with whom they are connected, or to the children who constitute an additional and indefeasible tie between them and a man. When we put together three things—first, the natural attraction between opposite sexes; secondly, the wife's entire dependence on the husband, every privilege or pleasure she has being either his gift, or depending entirely on his will; and lastly, that the principal object of human pursuit, consideration, and all objects of social ambition, can in general be sought or obtained by her only through him, it would be a miracle if the object of being attractive to men had not become the polar star of feminine education and formation of character. And, this great means of influence over the minds of women having been acquired, an instinct of selfishness made men avail themselves of it to the utmost as a means of holding women in

subjection, by representing to them meekness, submissiveness, and resignation of all individual will into the hands of a man, as an essential part of sexual attractiveness. Can it be doubted that any of the other yokes which mankind have succeeded in breaking, would have subsisted till now if the same means had existed, and had been as sedulously used, to bow down their minds to it? If it had been made the object of the life of every young plebeian to find personal favour in the eyes of some patrician, of every young serf with some seigneur; if domestication with him, and a share of his personal affections, had been held out as the prize which they all should look out for, the most gifted and aspiring being able to reckon on the most desirable prizes; and if, when this prize had been obtained, they had been shut out by a wall of brass from all interests not centering in him, all feelings and desires but those which he shared or inculcated; would not serfs and seigneurs, plebeians and patricians, have been as broadly distinguished at this day as men and women are? and would not all but a thinker here and there, have believed the distinction to be a fundamental and unalterable fact in human nature?

The preceding considerations are amply sufficient to show that custom, however universal it may be, affords in this case no presumption, and ought not to create any prejudice, in favour of the arrangements which place women in social and political subjection to men. But I may go farther, and maintain that the course of history, and the tendencies of progressive human society, afford not only no presumption in favour of this system of inequality of rights, but a strong one against it; and that, so far as the whole course of human improvement up to this time, the whole stream of modern tendencies, warrants any inference on the subject, it is, that this relic of the past is discordant with the future, and must necessarily disappear.

For, what is the peculiar character of the modern world—the difference which chiefly distinguishes modern institutions, modern social ideas, modern life itself, from those of times long past? It is, that human beings are no longer born to their place in life, and chained down by an inexorable bond to the place they are born to, but are free to employ their faculties, and such favourable chances as offer, to achieve the lot which may appear to them most desirable. Human society of old was constituted on a very different principle. All were born to a fixed social position, and were mostly kept in it by law, or interdicted from any means by which they could emerge from it. As some men are born white and others black, so some were born slaves and others freemen and citizens; some were born patricians, other plebeians; some were born feudal nobles, others commoners and *roturiers*. A slave or serf could never make himself free, nor, except by the will of his master, become so. In most European countries it was not till towards the close of the middle ages, and as a consequence of the growth of regal power, that commoners could be ennobled. Even among nobles, the eldest son was born the exclusive heir to the paternal possessions, and a long time elapsed before it was fully established that the father could disinherit him. Among the industrious classes, only those who were born members of a guild, or were admitted into it by its members, could lawfully practise their calling within its local limits; and nobody could practise any calling deemed important, in any but the legal manner—by processes authoritatively prescribed. Manufacturers have stood in the pillory for presuming to carry on their business by new and improved methods. In modern Europe, and most in those parts of it which have participated most largely in all other modern improvements, diametrically opposite doctrines now prevail. Law and government do not undertake to prescribe by whom any social or industrial operation shall or shall not be conducted, or what modes of conducting them shall be lawful. These things are left to the unfettered choice of individuals. Even the laws which required that workmen should serve an apprenticeship, have in this country been repealed: there being ample assurance that in all cases in which an apprenticeship is necessary, its necessity will suffice to enforce it. The old theory was, that the least possible should be left to the choice of the individual agent; that all he had to do should, as far as practicable, be laid down for him by superior wisdom. Left to himself he was sure to go wrong. The modern conviction, the fruit of a thousand years of experience, is, that things in which the individual is the person directly interested, never go right but as they are left to his own discretion; and that any regulation of them by authority, except

to protect the rights of others, is sure to be mischievous. This conclusion, slowly arrived at, and not adopted until almost every possible application of the contrary theory had been made with disastrous result, now (in the industrial department) prevails universally in the most advanced countries, almost universally in all that have pretensions to any sort of advancement. It is not that all processes are supposed to be equally good, or all persons to be equally qualified for everything; but that freedom of individual choice is now known to be the only thing which procures the adoption of the best processes, and throws each operation into the hands of those who are best qualified for it. Nobody thinks it necessary to make a law that only a strong-armed man shall be a blacksmith. Freedom and competition suffice to make blacksmiths strong-armed men, because the weak-armed can earn more by engaging in occupations for which they are more fit. In consonance with this doctrine, it is felt to be an overstepping of the proper bounds of authority to fix beforehand, on some general presumption, that certain persons are not fit to do certain things. It is now thoroughly known and admitted that if some such presumptions exist, no such presumption is infallible. Even if it be well grounded in a majority of cases, which it is very likely not to be, there will be a minority of exceptional cases in which it does not hold: and in those it is both an injustice to the individuals, and a detriment to society, to place barriers in the way of their using their faculties for their own benefit and for that of others. In the cases, on the other hand, in which the unfitness is real, the ordinary motives of human conduct will on the whole suffice to prevent the incompetent person from making, or from persisting in, the attempt.

If this general principle of social and economical science is not true; if individuals, with such help as they can derive from the opinion of those who know them, are not better judges than the law and the government, of their own capacities and vocation; the world cannot too soon abandon this principle, and return to the old system of regulations and disabilities. But if the principle is true, we ought to act as if we believed it, and not to ordain that to be born a girl instead of a boy, any more than to be born black instead of white, or a commoner instead of a nobleman, shall decide the person's position through all life—shall interdict people from all the more elevated social positions, and from all, except a few, respectable occupations. Even were we to admit the utmost that is ever pretended as to the superior fitness of men for all the functions now reserved to them, the same argument applies which forbids a legal qualification for members of Parliament. If only once in a dozen years the conditions of eligibility exclude a fit person, there is a real loss, while the exclusion of thousands of unfit persons is no gain; for if the constitution of the electoral body disposes them to choose unfit persons, there are always plenty of such persons to choose from. In all things of any difficulty and importance, those who can do them well are fewer than the need, even with the most unrestricted latitude of choice: and any limitation of the field of selection deprives society of some chances of being served by the competent, without ever saving it from the incompetent.

At present, in the more improved countries, the disabilities of women are the only case, save one, in which laws and institutions take persons at their birth, and ordain that they shall never in all their lives be allowed to compete for certain things. The one exception is that of royalty. Persons still are born to the throne; no one, not of the reigning family, can ever occupy it, and no one even of that family can, by any means but the course of hereditary succession, attain it. All other dignities and social advantages are open to the whole male sex: many indeed are only attainable by wealth, but wealth may be striven for by any one, and is actually obtained by many men of the very humblest origin. The difficulties, to the majority, are indeed insuperable without the aid of fortunate accidents; but no male human being is under any legal ban: neither law nor opinion superadd artificial obstacles to the natural ones. Royalty, as I have said, is excepted: but in this case every one feels it to be an exception—an anomaly in the modern world, in marked opposition to its customs and principles, and to be justified only by extraordinary special expediencies, which, though individuals and nations differ in estimating their weight, unquestionably do in fact exist. But in this exceptional case, in which a high social function is, for important reasons, bestowed on birth instead of being put up to competition, all free nations contrive to adhere in substance

to the principle from which they nominally derogate; for they circumscribe this high function by conditions avowedly intended to prevent the person to whom it ostensibly belongs from really performing it; while the person by whom it is performed, the responsible minister, does obtain the post by a competition from which no full-grown citizen of the male sex is legally excluded. The disabilities, therefore, to which women are subject from the mere fact of their birth, are the solitary examples of the kind in modern legislation. In no instance except this, which comprehends half the human race, are the higher social functions closed against any one by a fatality of birth which no exertions, and no change of circumstances, can overcome; for even religious disabilities (besides that in England and in Europe they have practically almost ceased to exist) do not close any career to the disqualified person in case of conversion.

The social subordination of women thus stands out an isolated fact in modern social institutions; a solitary breach of what has become their fundamental law; a single relic of an old world of thought and practice exploded in everything else, but retained in the one thing of most universal interest; as if a gigantic dolmen, or a vast temple of Jupiter Olympius, occupied the site of St. Paul's and received daily worship, while the surrounding Christian churches were only resorted to on fasts and festivals. This entire discrepancy between one social fact and all those which accompany it, and the radical opposition between its nature and the progressive movement which is the boast of the modern world, and which has successively swept away everything else of an analogous character, surely affords, to a conscientious observer of human tendencies, serious matter for reflection. It raises a *primâ facie* presumption on the unfavourable side, far outweighing any which custom and usage could in such circumstances create on the favourable; and should at least suffice to make this, like the choice between republicanism and royalty, a balanced question.

The least that can be demanded is, that the question should not be considered as prejudged by existing fact and existing opinion, but open to discussion on its merits, as a question of justice and expediency: the decision on this, as on any of the other social arrangements of mankind, depending on what an enlightened estimate of tendencies and consequences may show to be most advantageous to humanity in general, without distinction of sex. And the discussion must be a real discussion, descending to foundations, and not resting satisfied with vague and general assertions. It will not do, for instance, to assert in general terms, that the experience of mankind has pronounced in favour of the existing system. Experience cannot possibly have decided between two courses, so long as there has only been experience of one. If it be said that the doctrine of the equality of the sexes rests only on theory, it must be remembered that the contrary doctrine also has only theory to rest upon. All that is proved in its favour by direct experience, is that mankind have been able to exist under it, and to attain the degree of improvement and prosperity which we now see; but whether that prosperity has been attained sooner, or is now greater, than it would have been under the other system, experience does not say. On the other hand, experience does say, that every step in improvement has been so invariably accompanied by a step made in raising the social position of women, that historians and philosophers have been led to adopt their elevation or debasement as on the whole the surest test and most correct measure of the civilization of a people or an age.[6] Through all the progressive period of human history, the condition of women has been approaching nearer to equality with men. This does not of itself prove that the assimilation must go on to complete equality; but it assuredly affords some presumption that such is the case.

Neither does it avail anything to say that the *nature* of the two sexes adapts them to their present functions and position, and renders these appropriate to them. Standing on the ground of common sense and the constitution of the human mind, I deny that any one knows, or can know, the nature of the two sexes, as long as they have only been seen in their present relation to one another. If men had ever been found in society without women, or women without men, or if there had been a society of men and women in which the women were not under the control of the men, something might have been positively known about the mental and moral differences which may

6. [Charles Fourier and Karl Marx were two such philosophers.]

be inherent in the nature of each. What is now called the nature of women is an eminently artificial thing—the result of forced repression in some directions, unnatural stimulation in others. It may be asserted without scruple, that no other class of dependents have had their character so entirely distorted from its natural proportions by their relation with their masters; for, if conquered and slave races have been, in some respects, more forcibly repressed, whatever in them has not been crushed down by an iron heel has generally been let alone, and if left with any liberty of development, it has developed itself according to its own laws; but in the case of women, a hot-house and stove cultivation has always been carried on of some of the capabilities of their nature, for the benefit and pleasure of their masters. Then, because certain products of the general vital force sprout luxuriantly and reach a great development in this heated atmosphere and under this active nurture and watering, while other shoots from the same root, which are left outside in the wintry air, with ice purposely heaped all round them, have a stunted growth, and some are burnt off with fire and disappear; men, with that inability to recognise their own work which distinguishes the unanalytic mind, indolently believe that the tree grows of itself in the way they have made it grow, and that it would die if one half of it were not kept in a vapour bath and the other half in the snow.

Of all difficulties which impede the progress of thought, and the formation of well-grounded opinions on life and social arrangements, the greatest is now the unspeakable ignorance and inattention of mankind in respect to the influences which form human character. Whatever any portion of the human species now are, or seem to be, such, it is supposed, they have a natural tendency to be: even when the most elementary knowledge of the circumstances in which they have been placed, clearly points out the causes that made them what they are. Because a cottier deeply in arrears to his landlord is not industrious, there are people who think that the Irish are naturally idle. Because constitutions can be overthrown when the authorities appointed to execute them turn their arms against them, there are people who think the French incapable of free government. Because the Greeks cheated the Turks, and the Turks only plundered the Greeks, there are persons who think that the Turks are naturally more sincere: and because women, as is often said, care nothing about politics except their personalities, it is supposed that the general good is naturally less interesting to women than to men. History, which is now so much better understood than formerly, teaches another lesson: if only by showing the extraordinary susceptibility of human nature to external influences, and the extreme variableness of those of its manifestations which are supposed to be most universal and uniform. But in history, as in travelling, men usually see only what they already had in their own minds; and few learn much from history, who do not bring much with them to its study.

Hence, in regard to that most difficult question, what are the natural differences between the two sexes—a subject on which it is impossible in the present state of society to obtain complete and correct knowledge—while almost everybody dogmatizes upon it, almost all neglect and make light of the only means by which any partial insight can be obtained into it. This is, an analytic study of the most important department of psychology, the laws of the influence of circumstances on character. For, however great and apparently ineradicable the moral and intellectual differences between men and women might be, the evidence of their being natural differences could only be negative. Those only could be inferred to be natural which could not possibly be artificial—the residuum, after deducting every characteristic of either sex which can admit of being explained from education or external circumstances. The profoundest knowledge of the laws of the formation of character is indispensable to entitle any one to affirm even that there is any difference, much more what the difference is, between the two sexes considered as moral and rational beings; and since no one, as yet, has that knowledge, (for there is hardly any subject which, in proportion to its importance, has been so little studied), no one is thus far entitled to any positive opinion on the subject. Conjectures are all that can at present be made; conjectures more or less probable, according as more or less authorized by such knowledge as we yet have of the laws of psychology, as applied to the formation of character.

Even the preliminary knowledge, what the differences between the sexes now are, apart from all ques-

tion as to how they are made what they are, is still in the crudest and most incomplete state. Medical practitioners and physiologists have ascertained, to some extent, the differences in bodily constitution; and this is an important element to the psychologist: but hardly any medical practitioner is a psychologist. Respecting the mental characteristics of women; their observations are of no more worth than those of common men. It is a subject on which nothing final can be known, so long as those who alone can really know it, women themselves, have given but little testimony, and that little, mostly suborned. It is easy to know stupid women. Stupidity is much the same all the world over. A stupid person's notions and feelings may confidently be inferred from those which prevail in the circle by which the person is surrounded. Not so with those whose opinions and feelings are an emanation from their own nature and faculties. It is only a man here and there who has any tolerable knowledge of the character even of the women of his own family. I do not mean, of their capabilities; these nobody knows, not even themselves, because most of them have never been called out. I mean their actually existing thoughts and feelings. Many a man thinks he perfectly understands women, because he has had amatory relations with several, perhaps with many of them. If he is a good observer, and his experience extends to quality as well as quantity, he may have learnt something of one narrow department of their nature—an important department, no doubt. But of all the rest of it, few persons are generally more ignorant, because there are few from whom it is so carefully hidden. The most favourable case which a man can generally have for studying the character of a woman, is that of his own wife: for the opportunities are greater, and the cases of complete sympathy not so unspeakably rare. And in fact, this is the source from which any knowledge worth having on the subject has, I believe, generally come. But most men have not had the opportunity of studying in this way more than a single case: accordingly one can, to an almost laughable degree, infer what a man's wife is like, from his opinions about women in general. To make even this one case yield any result, the woman must be worth knowing, and the man not only a competent judge, but of a character so sympathetic in itself, and so well adapted to hers, that he can either read her mind by sympathetic intuition, or has nothing in himself which makes her shy of disclosing it. Hardly anything, I believe, can be more rare than this conjunction. It often happens that there is the most complete unity of feeling and community of interests as to all external things, yet the one has as little admission into the internal life of the other as if they were common acquaintance. Even with true affection, authority on the one side and subordination on the other prevent perfect confidence. Though nothing may be intentionally withheld, much is not shown. In the analogous relation of parent and child, the corresponding phenomenon must have been in the observation of every one. As between father and son, how many are the cases in which the father, in spite of real affection on both sides, obviously to all the world does not know, nor suspect, parts of the son's character familiar to his companions and equals. The truth is, that the position of looking up to another is extremely unpropitious to complete sincerity and openness with him. The fear of losing ground in his opinion or in his feelings is so strong, that even in an upright character, there is an unconscious tendency to show only the best side, or the side which, though not the best, is that which he most likes to see: and it may be confidently said that thorough knowledge of one another hardly ever exists, but between persons who, besides being intimates, are equals. How much more true, then, must all this be, when the one is not only under the authority of the other, but has it inculcated on her as a duty to reckon everything else subordinate to his comfort and pleasure, and to let him neither see nor feel anything coming from her, except what is agreeable to him. All these difficulties stand in the way of a man's obtaining any thorough knowledge even of the one woman whom alone, in general, he has sufficient opportunity of studying. When we further consider that to understand one woman is not necessarily to understand any other woman; that even if he could study many women of one rank, or of one country, he would not thereby understand women of other ranks or countries; and even if he did, they are still only the women of a single period of history; we may safely assert that the knowledge which men can acquire of women, even as they have been and are, without reference to what they might be, is wretchedly

imperfect and superficial, and always will be so, until women themselves have told all that they have to tell.

And this time has not come; nor will it come otherwise than gradually. It is but of yesterday that women have either been qualified by literary accomplishments, or permitted by society, to tell anything to the general public. As yet very few of them dare tell anything, which men, on whom their literary success depends, are unwilling to hear. Let us remember in what manner, up to a very recent time, the expression, even by a male author, of uncustomary opinions, or what are deemed eccentric feelings, usually was, and in some degree still is, received; and we may form some faint conception under what impediments a woman, who is brought up to think custom and opinion her sovereign rule, attempts to express in books anything drawn from the depths of her own nature. The greatest woman who has left writings behind her sufficient to give her an eminent rank in the literature of her country, thought it necessary to prefix as a motto to her boldest work, "Un homme peut braver l'opinion; une femme doit s'y soumettre."[7] The greater part of what women write about women is mere sycophancy to men. In the case of unmarried women, much of it seems only intended to increase their chance of a husband. Many, both married and unmarried, overstep the mark, and inculcate a servility beyond what is desired or relished by any man, except the very vulgarest. But this is not so often the case as, even at a quite late period, it still was. Literary women are becoming more freespoken, and more willing to express their real sentiments. Unfortunately, in this country especially, they are themselves such artificial products, that their sentiments are compounded of a small element of individual observation and consciousness, and a very large one of acquired associations. This will be less and less the case, but it will remain true to a great extent, as long as social institutions do not admit the same free development of originality in women which is possible to men. When that time comes, and not before, we shall see, and not merely hear, as much as it is necessary to know of the nature of women, and the adaptation of other things to it.

I have dwelt so much on the difficulties which at present obstruct any real knowledge by men of the true nature of women, because in this as in so many other things "opinio, copiae inter maximas causas inopiae est;"[8] and there is little chance of reasonable thinking on the matter, while people flatter themselves that they perfectly understand a subject of which most men know absolutely nothing, and of which it is at present impossible that any man, or all men taken together, should have knowledge which can qualify them to lay down the law to women as to what is, or is not, their vocation. Happily, no such knowledge is necessary for any practical purpose connected with the position of women in relation to society and life. For, according to all the principles involved in modern society, the question rests with women themselves—to be decided by their own experience, and by the use of their own faculties. There are no means of finding what either one person or many can do, but by trying—and no means by which any one else can discover for them what it is for their happiness to do or leave undone.

One thing we may be certain of—that what is contrary to women's nature to do, they never will be made to do by simply giving their nature free play. The anxiety of mankind to interfere in behalf of nature, for fear lest nature should not succeed in effecting its purpose, is an altogether unnecessary solicitude. What women by nature cannot do, it is quite superfluous to forbid them from doing. What they can do, but not so well as the men who are their competitors, competition suffices to exclude them from; since nobody asks for protective duties and bounties in favour of women; it is only asked that the present bounties and protective duties in favour of men should be recalled. If women have a greater natural inclination for some things than for others, there is no need of laws or social inculcation to make the majority of them do the former in preference to the latter. Whatever women's services are most

7. ["A man can defy prejudice; a woman must submit to it." From the title page of Mme. de Staël's *Delphine* (1802).]

8. ["Popular opinion is deficient on most matters." From Francis Bacon's *Novum Organum* (1620). By using the present *est* instead of the subjunctive *sit*, Mill misquotes Bacon, thereby making a *more* pejorative judgment of the views of the many.]

wanted for, the free play of competition will hold out the strongest inducements to them to undertake. And, as the words imply, they are most wanted for the things for which they are most fit; by the apportionment of which to them, the collective faculties of the two sexes can be applied on the whole with the greatest sum of valuable result.

The general opinion of men is supposed to be, that the natural vocation of a woman is that of a wife and mother. I say, is supposed to be, because, judging from acts—from the whole of the present constitution of society—one might infer that their opinion was the direct contrary. They might be supposed to think that the alleged natural vocation of women was of all things the most repugnant to their nature; insomuch that if they are free to do anything else—if any other means of living, or occupation of their time and faculties, is open, which has any chance of appearing desirable to them—there will not be enough of them who will be willing to accept the condition said to be natural to them. If this is the real opinion of men in general, it would be well that it should be spoken out. I should like to hear somebody openly enunciating the doctrine (it is already implied in much that is written on the subject)—"It is necessary to society that women should marry and produce children. They will not do so unless they are compelled. Therefore it is necessary to compel them." The merits of the case would then be clearly defined. It would be exactly that of the slaveholders of South Carolina and Louisiana. "It is necessary that cotton and sugar should be grown. White men cannot produce them. Negroes will not, for any wages which we choose to give. *Ergo* they must be compelled." An illustration still closer to the point is that of impressment. Sailors must absolutely be had to defend the country. It often happens that they will not voluntarily enlist. Therefore there must be the power of forcing them. How often has this logic been used! and, but for one flaw in it, without doubt it would have been successful up to this day. But it is open to the retort—First pay the sailors the honest value of their labour. When you have made it as well worth their while to serve you, as to work for other employers, you will have no more difficulty than others have in obtaining their services. To this there is no logical answer except "I will not:" and as people are now not only ashamed, but are not desirous, to rob the labourer of his hire, impressment is no longer advocated. Those who attempt to force women into marriage by closing all other doors against them, lay themselves open to a similar retort. If they mean what they say, their opinion must evidently be, that men do not render the married condition so desirable to women, as to induce them to accept it for its own recommendations. It is not a sign of one's thinking the boon one offers very attractive, when one allows only Hobson's choice, "that or none." And here, I believe, is the clue to the feelings of those men, who have a real antipathy to the equal freedom of women. I believe they are afraid, not lest women should be unwilling to marry, for I do not think that any one in reality has that apprehension; but lest they should insist that marriage should be on equal conditions; lest all women of spirit and capacity should prefer doing almost anything else, not in their own eyes degrading, rather than marry, when marrying is giving themselves a master, and a master too of all their earthly possessions. And truly, if this consequence were necessarily incident to marriage, I think that the apprehension would be very well founded. I agree in thinking it probable that few women, capable of anything else, would, unless under an irresistible *entrainement*, rendering them for the time insensible to anything but itself, choose such a lot, when any other means were open to them of filling a conventionally honourable place in life: and if men are determined that the law of marriage shall be a law of despotism, they are quite right, in point of mere policy, in leaving to women only Hobson's choice. But, in that case, all that has been done in the modern world to relax the chain on the minds of women, has been a mistake. They never should have been allowed to receive a literary education. Women who read, much more women who write, are, in the existing constitution of things, a contradiction and a disturbing element: and it was wrong to bring women up with any acquirements but those of an odalisque, or of a domestic servant.

CHAPTER II

It will be well to commence the detailed discussion of the subject by the particular branch of it to which

the course of our observations has led us: the conditions which the laws of this and all other countries annex to the marriage contract. Marriage being the destination appointed by society for women, the prospect they are brought up to, and the object which it is intended should be sought by all of them, except those who are too little attractive to be chosen by any man as his companion; one might have supposed that everything would have been done to make this condition as eligible to them as possible, that they might have no cause to regret being denied the option of any other. Society, however, both in this, and, at first, in all other cases, has preferred to attain its object by foul rather than fair means: but this is the only case in which it has substantially persisted in them even to the present day. Originally women were taken by force, or regularly sold by their father to the husband. Until a late period in European history, the father had the power to dispose of his daughter in marriage at his own will and pleasure, without any regard to hers. The Church, indeed, was so far faithful to a better morality as to require a formal "yes" from the woman at the marriage ceremony; but there was nothing to shew that the consent was other than compulsory; and it was practically impossible for the girl to refuse compliance if the father persevered, except perhaps when she might obtain the protection of religion by a determined resolution to take monastic vows. After marriage, the man had anciently (but this was anterior to Christianity) the power of life and death over his wife. She could invoke no law against him; he was her sole tribunal and law. For a long time he could repudiate her, but she had no corresponding power in regard to him. By the old laws of England, the husband was called the *lord* of the wife; he was literally regarded as her sovereign, inasmuch that the murder of a man by his wife was called treason (*petty* as distinguished from *high* treason), and was more cruelly avenged than was usually the case with high treason, for the penalty was burning to death. Because these various enormities have fallen into disuse (for most of them were never formally abolished, or not until they had long ceased to be practised) men suppose that all is now as it should be in regard to the marriage contract; and we are continually told that civilization and Christianity have restored to the woman her just rights. Meanwhile the wife is the actual bondservant of her husband: no less so, as far as legal obligation goes, than slaves commonly so called. She vows a lifelong obedience to him at the altar, and is held to it all through her life by law. Casuists may say that the obligation of obedience stops short of participation in crime, but it certainly extends to everything else. She can do no act whatever but by his permission, at least tacit. She can acquire no property but for him; the instant it becomes hers, even if by inheritance, it becomes *ipso facto* his. In this respect the wife's position under the common law of England is worse than that of slaves in the laws of many countries: by the Roman law, for example, a slave might have his peculium, which to a certain extent the law guaranteed to him for his exclusive use. The higher classes in this country have given an analogous advantage to their women, through special contracts setting aside the law, by conditions of pin-money, &c.: since parental feeling being stronger with fathers than the class feeling of their own sex, a father generally prefers his own daughter to a son-in-law who is a stranger to him. By means of settlements, the rich usually contrive to withdraw the whole or part of the inherited property of the wife from the absolute control of the husband: but they do not succeed in keeping it under her own control; the utmost they can do only prevents the husband from squandering it, at the same time debarring the rightful owner from its use. The property itself is out of the reach of both; and as to the income derived from it, the form of settlement most favourable to the wife (that called "to her separate use") only precludes the husband from receiving it instead of her: it must pass through her hands, but if he takes it from her by personal violence as soon as she receives it, he can neither be punished, nor compelled to restitution. This is the amount of the protection which, under the laws of this country, the most powerful nobleman can give to his own daughter as respects her husband. In the immense majority of cases there is no settlement: and the absorption of all rights, all property, as well as all freedom of action, is complete. The two are called "one person in law," for the purpose of inferring that whatever is hers is his, but the parallel inference is never drawn that whatever is his is hers; the maxim is not applied against the man, except to make him responsible to third parties for her acts, as

a master for the acts of his slaves or of his cattle. I am far from pretending that wives are in general no better treated than slaves; but no slave is a slave to the same lengths, and in so full a sense of the word, as a wife is. Hardly any slave, except one immediately attached to the master's person, is a slave at all hours and all minutes; in general he has, like a soldier, his fixed task, and when it is done, or when he is off duty, he disposes, within certain limits, of his own time, and has a family life into which the master rarely intrudes. "Uncle Tom" under his first master had his own life in his "cabin," almost as much as any man whose work takes him away from home, is able to have in his own family. But it cannot be so with the wife. Above all, a female slave has (in Christian countries) an admitted right, and is considered under a moral obligation, to refuse to her master the last familiarity. Not so the wife: however brutal a tyrant she may unfortunately be chained to—though she may know that he hates her, though it may be his daily pleasure to torture her, and though she may feel it impossible not to loathe him—he can claim from her and enforce the lowest degradation of a human being, that of being made the instrument of an animal function contrary to her inclinations. While she is held in this worst description of slavery as to her own person, what is her position in regard to the children in whom she and her master have a joint interest? They are by law *his* children. He alone has any legal rights over them. Not one act can she do towards or in relation to them, except by delegation from him. Even after he is dead she is not their legal guardian, unless he by will has made her so. He could even send them away from her, and deprive her of the means of seeing or corresponding with them, until this power was in some degree restricted by Serjeant Talfourd's Act.[9] This is her legal state. And from this state she has no means of withdrawing herself. If she leaves her husband, she can take nothing with her, neither her children nor anything which is rightfully her own. If he chooses, he can compel her to return, by law, or by physical force; or he may content himself with seizing for his own use anything which she may earn, or which may be given to her by her relations. It is only legal separation by a decree of a court of justice, which entities her to live apart, without being forced back into the custody of an exasperated jailer—or which empowers her to apply any earnings to her own use, without fear that a man whom perhaps she has not seen for twenty years will pounce upon her some day and carry all off. This legal separation, until lately, the courts of justice would only give at an expense which made it inaccessible to any one out of the higher ranks. Even now it is only given in cases of desertion, or of the extreme of cruelty; and yet complaints are made every day that it is granted too easily. Surely, if a woman is denied any lot in life but that of being the personal body-servant of a despot, and is dependent for everything upon the chance of finding one who may be disposed to make a favourite of her instead of merely a drudge, it is a very cruel aggravation of her fate that she should be allowed to try this chance only once. The natural sequel and corollary from this state of things would be, that since her all in life depends upon obtaining a good master, she should be allowed to change again and again until she finds one. I am not saying that she ought to be allowed this privilege. That is a totally different consideration. The question of divorce, in the sense involving liberty of remarriage, is one into which it is foreign to my purpose to enter. All I now say is, that to those to whom nothing but servitude is allowed, the free choice of servitude is the only, though a most insufficient, alleviation. Its refusal completes the assimilation of the wife to the slave—and the slave under not the mildest form of slavery: for in some slave codes the slave could, under certain circumstances of ill usage, legally compel the master to sell him. But no amount of ill usage, without adultery superadded, will in England free a wife from her tormentor.[10]

9. [The Infant Custody Act of 1839 (2 & 3 Victoria, c. 54) allowed the Court of Chancery to award to mothers custody of their children under the age of seven and access to those under sixteen.]

10. [Until 1857, divorce with permission to remarry was obtainable only through a private act of Parliament. In the nineteenth century, only about ten such divorces were granted per year, and only four had ever been granted to women. The Divorce Act of 1857 (20 & 21 Victoria, c. 85) allowed a husband to divorce his wife for adultery alone, but allowed a wife to divorce on

I have no desire to exaggerate, nor does the case stand in any need of exaggeration. I have described the wife's legal position, not her actual treatment. The laws of most countries are far worse than the people who execute them, and many of them are only able to remain laws by being seldom or never carried into effect. If married life were all that it might be expected to be, looking to the laws alone, society would be a hell upon earth. Happily there are both feelings and interests which in many men exclude, and in most, greatly temper, the impulses and propensities which lead to tyranny: and of those feelings, the tie which connects a man with his wife affords, in a normal state of things, incomparably the strongest example. The only tie which at all approaches to it, that between him and his children, tends, in all save exceptional cases, to strengthen, instead of conflicting with, the first. Because this is true; because men in general do not inflict, nor women suffer, all the misery which could be inflicted and suffered if the full power of tyranny with which the man is legally invested were acted on; the defenders of the existing form of the institution think that all its iniquity is justified, and that any complaint is merely quarrelling with the evil which is the price paid for every great good. But the mitigations in practice, which are compatible with maintaining in full legal force this or any other kind of tyranny, instead of being any apology for despotism, only serve to prove what power human nature possesses of reacting against the vilest institutions, and with what vitality the seeds of good as well as those of evil in human character diffuse and propagate themselves. Not a word can be said for despotism in the family which cannot be said for political despotism. Every absolute king does not sit at his window to enjoy the groans of his tortured subjects, nor strips them of their last rag and turns them out to shiver in the road. The despotism of Louis XVI was not the despotism of Philippe le Bel, or of Nadir Shah, or of Caligula; but it was bad enough to justify the French Revolution, and to palliate even its horrors. If an appeal be made to the intense attachments which exist between wives and their husbands, exactly as much may be said of domestic slavery. It was quite an ordinary fact in Greece and Rome for slaves to submit to death by torture rather than betray their masters. In the proscriptions of the Roman civil wars it was remarked that wives and slaves were heroically faithful, sons very commonly treacherous. Yet we know how cruelly many Romans treated their slaves. But in truth these intense individual feelings nowhere rise to such a luxuriant height as under the most atrocious institutions. It is part of the irony of life, that the strongest feelings of devoted gratitude of which human nature seems to be susceptible, are called forth in human beings towards those who, having the power entirely to crush their earthly existence, voluntarily refrain from using that power. How great a place in most men this sentiment fills, even in religious devotion, it would be cruel to inquire. We daily see how much their gratitude to Heaven appears to be stimulated by the contemplation of fellow creatures to whom God has not been so merciful as he has to themselves.

Whether the institution to be defended is slavery, political absolutism, or the absolutism of the head of a family, we are always expected to judge of it from its best instances; and we are presented with pictures of loving exercise of authority on one side, loving submission to it on the other—superior wisdom ordering all things for the greatest good of the dependents, and surrounded by their smiles and benedictions. All this would be very much to the purpose if any one pretended that there are no such things as good men. Who doubts that there may be great goodness, and great happiness, and great affection, under the absolute government of a good man? Meanwhile, laws and institutions require to be adapted, not to good men, but to bad. Marriage is not an institution designed for a select few. Men are not required, as a preliminary to the marriage ceremony, to prove by testimonials that they are fit to be trusted with the exercise of absolute power. The tie of affection and obligation to a wife and children is very strong with those whose general social feelings are strong, and with many who are little sensible to any other social ties; but there are all degrees of sensibility and insensibility to it, as there are all grades of goodness and wickedness in men, down to those whom no ties will bind, and on whom society has no action but through its *ultima ratio*, the penalties of the law. In every

---

account of her husband's adultery only if he were also guilty of incest, bigamy, or extreme cruelty.]

grade of this descending scale are men to whom are committed all the legal powers of a husband. The vilest malefactor has some wretched woman tied to him, against whom he can commit any atrocity except killing her, and, if tolerably cautious, can do that without much danger of the legal penalty. And how many thousands are there among the lowest classes in every country, who, without being in a legal sense malefactors in any other respect, because in every other quarter their aggressions meet with resistance, indulge the utmost habitual excesses of bodily violence towards the unhappy wife, who alone, at least of grown persons, can neither repel nor escape from their brutality; and towards whom the excess of dependence inspires their mean and savage natures, not with a generous forbearance, and a point of honour to behave well to one whose lot in life is trusted entirely to their kindness, but on the contrary with a notion that the law has delivered her to them as their thing, to be used at their pleasure, and that they are not expected to practise the consideration towards her which is required from them towards everybody else. The law, which till lately left even these atrocious extremes of domestic oppression practically unpunished, has within these few years made some feeble attempts to repress them. But its attempts have done little, and cannot be expected to do much, because it is contrary to reason and experience to suppose that there can be any real check to brutality, consistent with leaving the victim still in the power of the executioner. Until a conviction for personal violence, or at all events a repetition of it after a first conviction, entitles the woman *ipso facto* to a divorce, or at least to a judicial separation, the attempt to repress these "aggravated assaults" by legal penalties will break down for want of a prosecutor, or for want of a witness.

When we consider how vast is the number of men, in any great country, who are little higher than brutes, and that this never prevents them from being able, through the law of marriage, to obtain a victim, the breadth and depth of human misery caused in this shape alone by the abuse of the institution swells to something appalling. Yet these are only the extreme cases. They are the lowest abysses, but there is a sad succession of depth after depth before reaching them. In domestic as in political tyranny, the case of absolute monsters chiefly illustrates the institution by showing that there is scarcely any horror which may not occur under it if the despot pleases, and thus setting in a strong light what must be the terrible frequency of things only a little less atrocious. Absolute fiends are as rare as angels, perhaps rarer: ferocious savages, with occasional touches of humanity, are however very frequent: and in the wide interval which separates these from any worthy representatives of the human species, how many are the forms and gradations of animalism and selfishness, often under an outward varnish of civilization and even cultivation, living at peace with the law, maintaining a creditable appearance to all who are not under their power, yet sufficient often to make the lives of all who are so, a torment and a burthen to them! It would be tiresome to repeat the commonplaces about the unfitness of men in general for power, which, after the political discussions of centuries, every one knows by heart, were it not that hardly any one thinks of applying these maxims to the case in which above all others they are applicable, that of power, not placed in the hands of a man here and there, but offered to every adult male, down to the basest and most ferocious. It is not because a man is not known to have broken any of the Ten Commandments, or because he maintains a respectable character in his dealings with those whom he cannot compel to have intercourse with him, or because he does not fly out into violent bursts of ill-temper against those who are not obliged to bear with him, that it is possible to surmise of what sort his conduct will be in the unrestraint of home. Even the commonest men reserve the violent, the sulky, the undisguisedly selfish side of their character for those who have no power to withstand it. The relation of superiors to dependents is the nursery of these vices of character, which, wherever else they exist, are an overflowing from that source. A man who is morose or violent to his equals, is sure to be one who has lived among inferiors, whom he could frighten or worry into submission. If the family in its best forms is, as it is often said to be, a school of sympathy, tenderness, and loving forgetfulness of self, it is still oftener, as respects its chief, a school of wilfulness, overbearingness, unbounded self-indulgence, and a double-dyed and idealized selfishness, of which sacrifice itself is only a particular form: the care for the wife and children being only care for them as parts

of the man's own interests and belongings, and their individual happiness being immolated in every shape to his smallest preferences. What better is to be looked for under the existing form of the institution? We know that the bad propensities of human nature are only kept within bounds when they are allowed no scope for their indulgence. We know that from impulse and habit, when not from deliberate purpose, almost every one to whom others yield, goes on encroaching upon them, until a point is reached at which they are compelled to resist. Such being the common tendency of human nature; the almost unlimited power which present social institutions give to the man over at least one human being—the one with whom he resides, and whom he has always present—this power seeks out and evokes the latent germs of selfishness in the remotest corners of his nature—fans its faintest sparks and smouldering embers—offers to him a license for the indulgence of those points of his original character which in all other relations he would have found it necessary to repress and conceal, and the repression of which would in time have become a second nature. I know that there is another side to the question. I grant that the wife, if she cannot effectually resist, can at least retaliate; she, too, can make the man's life extremely uncomfortable, and by that power is able to carry many points which she ought, and many which she ought not, to prevail in. But this instrument of self-protection—which may be called the power of the scold, or the shrewish sanction—has the fatal defect, that it avails most against the least tyrannical superiors, and in favour of the least deserving dependents. It is the weapon of irritable and self-willed women; of those who would make the worst use of power if they themselves had it, and who generally turn this power to a bad use. The amiable cannot use such an instrument, the highminded disdain it. And on the other hand, the husbands against whom it is used most effectively are the gentler and more inoffensive; those who cannot be induced, even by provocation, to resort to any very harsh exercise of authority. The wife's power of being disagreeable generally only establishes a counter-tyranny, and makes victims in their turn chiefly of those husbands who are least inclined to be tyrants.

What is it, then, which really tempers the corrupting effects of the power, and makes it compatible with such amount of good as we actually see? Mere feminine blandishments, though of great effect in individual instances, have very little effect in modifying the general tendencies of the situation; for their power only lasts while the woman is young and attractive, often only while her charm is new, and not dimmed by familiarity; and on many men they have not much influence at any time. The real mitigating causes are, the personal affection which is the growth of time, in so far as the man's nature is susceptible of it, and the woman's character sufficiently congenial with his to excite it; their common interests as regards the children, and their general community of interest as concerns third persons (to which however there are very great limitations); the real importance of the wife to his daily comforts and enjoyments, and the value he consequently attaches to her on his personal account, which, in a man capable of feeling for others, lays the foundation of caring for her on her own; and lastly, the influence naturally acquired over almost all human beings by those near to their persons (if not actually disagreeable to them): who, both by their direct entreaties, and by the insensible contagion of their feelings and dispositions, are often able, unless counteracted by some equally strong personal influence, to obtain a degree of command over the conduct of the superior, altogether excessive and unreasonable. Through these various means, the wife frequently exercises even too much power over the man; she is able to affect his conduct in things in which she may not be qualified to influence it for good—in which her influence may be not only unenlightened, but employed on the morally wrong side; and in which he would act better if left to his own prompting. But neither in the affairs of families nor in those of states is power a compensation for the loss of freedom. Her power often gives her what she has no right to, but does not enable her to assert her own rights. A Sultan's favourite slave has slaves under her, over whom she tyrannizes; but the desirable thing would be that she should neither have slaves nor be a slave. By entirely sinking her own existence in her husband; by having no will (or persuading him that she has no will) but his, in anything which regards their joint relation, and by making it the business of her life to work upon his sentiments, a wife may gratify herself by influencing, and very probably per-

verting, his conduct, in those of his external relations which she has never qualified herself to judge of, or in which she is herself wholly influenced by some personal or other partiality or prejudice. Accordingly, as things now are, those who act most kindly to their wives, are quite as often made worse, as better, by the wife's influence, in respect to all interests extending beyond the family. She is taught that she has no business with things out of that sphere; and accordingly she seldom has any honest and conscientious opinion on them; and therefore hardly ever meddles with them for any legitimate purpose, but generally for an interested one. She neither knows nor cares which is the right side in politics, but she knows what will bring in money or invitations, give her husband a title, her son a place, or her daughter a good marriage.

But how, it will be asked, can any society exist without government? In a family, as in a state, some one person must be the ultimate ruler. Who shall decide when married people differ in opinion? Both cannot have their way, yet a decision one way or the other must be come to.

It is not true that in all voluntary association between two people, one of them must be absolute master: still less that the law must determine which of them it shall be. The most frequent case of voluntary association, next to marriage, is partnership in business: and it is not found or thought necessary to enact that in every partnership, one partner shall have entire control over the concern, and the others shall be bound to obey his orders. No one would enter into partnership on terms which would subject him to the responsibilities of a principal, with only the powers and privileges of a clerk or agent. If the law dealt with other contracts as it does with marriage, it would ordain that one partner should administer the common business as if it was his private concern; that the others should have only delegated powers; and that this one should be designated by some general presumption of law, for example as being the eldest. The law never does this: nor does experience show it to be necessary that any theoretical inequality of power should exist between the partners, or that the partnership should have any other conditions than what they may themselves appoint by their articles of agreement. Yet it might seem that the exclusive power might be conceded with less danger to the rights and interests of the inferior, in the case of partnership than in that of marriage, since he is free to cancel the power by withdrawing from the connexion. The wife has no such power, and even if she had, it is almost always desirable that she should try all measures before resorting to it.

It is quite true that things which have to be decided every day, and cannot adjust themselves gradually, or wait for a compromise, ought to depend on one will: one person must have their sole control. But it does not follow that this should always be the same person. The natural arrangement is a division of powers between the two; each being absolute in the executive branch of their own department, and any change of system and principle requiring the consent of both. The division neither can nor should be pre-established by the law, since it must depend on individual capacities and suitabilities. If the two persons chose, they might pre-appoint it by the marriage contract, as pecuniary arrangements are now often pre-appointed. There would seldom be any difficulty in deciding such things by mutual consent, unless the marriage was one of those unhappy ones in which all other things, as well as this, become subjects of bickering and dispute. The division of rights would naturally follow the division of duties and functions; and that is already made by consent, or at all events not by law, but by general custom, modified and modifiable at the pleasure of the persons concerned.

The real practical decision of affairs, to whichever may be given the legal authority, will greatly depend, as it even now does, upon comparative qualifications. The mere fact that he is usually the eldest, will in most cases give the preponderance to the man; at least until they both attain a time of life at which the difference in their years is of no importance. There will naturally also be a more potential voice on the side, whichever it is, that brings the means of support. Inequality from this source does not depend on the law of marriage, but on the general conditions of human society, as now constituted. The influence of mental superiority, either general or special, and of superior decision of character, will necessarily tell for much. It always does so at present. And this fact shows how little foundation there is for the apprehension that the powers and responsibilities of partners in life (as of partners in business), cannot be satisfactorily

apportioned by agreement between themselves. They always are so apportioned, except in cases in which the marriage institution is a failure. Things never come to an issue of downright power on one side, and obedience on the other, except where the connexion altogether has been a mistake, and it would be a blessing to both parties to be relieved from it. Some may say that the very thing by which an amicable settlement of differences becomes possible, is the power of legal compulsion known to be in reserve; as people submit to an arbitration because there is a court of law in the background, which they know that they can be forced to obey. But to make the cases parallel, we must suppose that the rule of the court of law was, not to try the cause, but to give judgment always for the same side, suppose the defendant. If so, the amenability to it would be a motive with the plaintiff to agree to almost any arbitration, but it would be just the reverse with the defendant. The despotic power which the law gives to the husband may be a reason to make the wife assent to any compromise by which power is practically shared between the two, but it cannot be the reason why the husband does. That there is always among decently conducted people a practical compromise, though one of them at least is under no physical or moral necessity of making it, shows that the natural motives which lead to a voluntary adjustment of the united life of two persons in a manner acceptable to both, do on the whole, except in unfavourable cases, prevail. The matter is certainly not improved by laying down as an ordinance of law, that the superstructure of free government shall be raised upon a legal basis of despotism on one side and subjection on the other, and that every concession which the despot makes may, at his mere pleasure, and without any warning, be recalled. Besides that no freedom is worth much when held on so precarious a tenure, its conditions are not likely to be the most equitable when the law throws so prodigious a weight into one scale; when the adjustment rests between two persons one of whom is declared to be entitled to everything, the other not only entitled to nothing except during the good pleasure of the first, but under the strongest moral and religious obligation not to rebel under any excess of oppression.

A pertinacious adversary, pushed to extremities, may say, that husbands indeed are willing to be reasonable, and to make fair concessions to their partners without being compelled to it, but that wives are not: that if allowed any rights of their own, they will acknowledge no rights at all in any one else, and never will yield in anything, unless they can be compelled, by the man's mere authority, to yield in everything. This would have been said by many persons some generations ago, when satires on women were in vogue, and men thought it a clever thing to insult women for being what men made them. But it will be said by no one now who is worth replying to. It is not the doctrine of the present day that women are less susceptible of good feeling, and consideration for those with whom they are united by the strongest ties, than men are. On the contrary, we are perpetually told that women are better than men, by those who are totally opposed to treating them as if they were as good; so that the saying has passed into a piece of tiresome cant, intended to put a complimentary face upon an injury, and resembling those celebrations of royal clemency which, according to Gulliver, the king of Lilliput always prefixed to his most sanguinary decrees.[11] If women are better than men in anything, it surely is in individual self-sacrifice for those of their own family. But I lay little stress on this, so long as they are universally taught that they are born and created for self-sacrifice. I believe that equality of rights would abate the exaggerated self-abnegation which is the present artificial ideal of feminine character, and that a good woman would not be more self-sacrificing than the best man: but on the other hand, men would be much more unselfish and self-sacrificing than at present, because they would no longer be taught to worship their own will as such a grand thing that it is actually the law for another rational being. There is nothing which men so easily learn as this self-worship: all privileged persons, and all privileged classes, have had it. The more we descend in the scale of humanity, the intenser it is; and most of all in those who are not, and can never expect to be, raised above any one except an unfortunate

11. [Jonathan Swift, Gulliver's Travels (1726), pt. 1, *A Voyage to Lilliput*, chap. 7. The more inhuman the punishment and the more innocent the victim, the greater were the king's professions of clemency and tenderness.]

wife and children. The honourable exceptions are proportionally fewer than in the case of almost any other human infirmity. Philosophy and religion, instead of keeping it in check, are generally suborned to defend it; and nothing controls it but that practical feeling of the equality of human beings, which is the theory of Christianity, but which Christianity will never practically teach, while it sanctions institutions grounded on an arbitrary preference of one human being over another.

There are, no doubt, women, as there are men, whom equality of consideration will not satisfy; with whom there is no peace while any will or wish is regarded but their own. Such persons are a proper subject for the law of divorce. They are only fit to live alone, and no human beings ought to be compelled to associate their lives with them. But the legal subordination tends to make such characters among women more, rather than less, frequent. If the man exerts his whole power, the woman is of course crushed: but if she is treated with indulgence, and permitted to assume power, there is no rule to set limits to her encroachments. The law, not determining her rights, but theoretically allowing her none at all, practically declares that the measure of what she has a right to, is what she can contrive to get.

The equality of married persons before the law, is not only the sole mode in which that particular relation can be made consistent with justice to both sides, and conducive to the happiness of both, but it is the only means of rendering the daily life of mankind, in any high sense, a school of moral cultivation. Though the truth may not be felt or generally acknowledged for generations to come, the only school of genuine moral sentiment is society between equals. The moral education of mankind has hitherto emanated chiefly from the law of force, and is adapted almost solely to the relations which force creates. In the less advanced states of society, people hardly recognise any relation with their equals. To be an equal is to be an enemy. Society, from its highest place to its lowest, is one long chain, or rather ladder, where every individual is either above or below his nearest neighbour, and wherever he does not command he must obey. Existing moralities, accordingly, are mainly fitted to a relation of command and obedience. Yet command and obedience are but unfortunate necessities of human life: society in equality is its normal state. Already in modern life, and more and more as it progressively improves, command and obedience become exceptional facts in life, equal association its general rule. The morality of the first ages rested on the obligation to submit to power; that of the ages next following, on the right of the weak to the forbearance and protection of the strong. How much longer is one form of society and life to content itself with the morality made for another? We have had the morality of submission, and the morality of chivalry and generosity; the time is now come for the morality of justice. Whenever, in former ages, any approach has been made to society in equality, justice has asserted its claims as the foundation of virtue. It was thus in the free republics of antiquity. But even in the best of these, the equals were limited to the free male citizens; slaves, women, and the unenfranchised residents were under the law of force. The joint influence of Roman civilization and of Christianity obliterated these distinctions, and in theory (if only partially in practice) declared the claims of the human being, as such, to be paramount to those of sex, class, or social position. The barriers which had begun to be levelled were raised again by the northern conquests; and the whole of modern history consists of the slow process by which they have since been wearing away. We are entering into an order of things in which justice will again be the primary virtue; grounded as before on equal, but now also on sympathetic association; having its root no longer in the instinct of equals for self-protection, but in a cultivated sympathy between them; and no one being now left out, but an equal measure being extended to all. It is no novelty that mankind do not distinctly foresee their own changes, and that their sentiments are adapted to past, not to coming ages. To see the futurity of the species has always been the privilege of the intellectual élite, or of those who have learnt from them; to have the feelings of that futurity has been the distinction, and usually the martyrdom, of a still rarer élite. Institutions, books, education, society, all go on training human beings for the old, long after the new has come; much more when it is only coming. But the true virtue of human beings is fitness to live together as equals; claiming nothing for themselves but what they as freely conceded to every one else;

regarding command of any kind as an exceptional necessity, and in all cases a temporary one; and preferring, whenever possible, the society of those with whom leading and following can be alternate and reciprocal. To these virtues, nothing in life as at present constituted gives cultivation by exercise. The family is a school of despotism, in which the virtues of despotism, but also its vices, are largely nourished. Citizenship, in free countries, is partly a school of society in equality; but citizenship fills only a small place in modern life, and does not come near the daily habits or inmost sentiments. The family, justly constituted, would be the real school of the virtues of freedom. It is sure to be a sufficient one of everything else. It will always be a school of obedience for the children, of command for the parents. What is needed is, that it should be a school of sympathy in equality, of living together in love, without power on one side or obedience on the other. This it ought to be between the parents. It would then be an exercise of those virtues which each requires to fit them for all other association, and a model to the children of the feelings and conduct which their temporary training by means of obedience is designed to render habitual, and therefore natural, to them. The moral training of mankind will never be adapted to the conditions of the life for which all other human progress is a preparation, until they practise in the family the same moral rule which is adapted to the normal constitution of human society. Any sentiment of freedom which can exist in a man whose nearest and dearest intimacies are with those of whom he is absolute master, is not the genuine or Christian love of freedom, but, what the love of freedom generally was in the ancients and in the middle ages—an intense feeling of the dignity and importance of his own personality; making him disdain a yoke for himself, of which he has no abhorrence whatever in the abstract, but which he is abundantly ready to impose on others for his own interest or glorification.

I readily admit (and it is the very foundation of my hopes) that numbers of married people even under the present law, (in the higher classes of England probably a great majority,) live in the spirit of a just law of equality. Laws never would be improved, if there were not numerous persons whose moral sentiments are better than the existing laws. Such persons ought to support the principles here advocated; of which the only object is to make all other married couples similar to what these are now. But persons even of considerable moral worth, unless they are also thinkers, are very ready to believe that laws or practices, the evils of which they have not personally experienced, do not produce any evils, but (if seeming to be generally approved of) probably do good, and that it is wrong to object to them. It would, however, be a great mistake in such married people to suppose, because the legal conditions of the tie which unites them do not occur to their thoughts once in a twelvemonth, and because they live and feel in all respects as if they were legally equals, that the same is the case with all other married couples, wherever the husband is not a notorious ruffian. To suppose this, would be to show equal ignorance of human nature and of fact. The less fit a man is for the possession of power—the less likely to be allowed to exercise it over any person with that person's voluntary consent—the more does he hug himself in the consciousness of the power the law gives him, exact its legal rights to the utmost point which custom (the custom of men like himself) will tolerate, and take pleasure in using the power, merely to enliven the agreeable sense of possessing it. What is more; in the most naturally brutal and morally uneducated part of the lower classes, the legal slavery of the woman, and something in the merely physical subjection to their will as an instrument, causes them to feel a sort of disrespect and contempt towards their own wife which they do not feel towards any other woman, or any other human being, with whom they come in contact; and which makes her seem to them an appropriate subject for any kind of indignity. Let an acute observer of the signs of feeling, who has the requisite opportunities, judge for himself whether this is not the case: and if he finds that it is, let him not wonder at any amount of disgust and indignation that can be felt against institutions which lead naturally to this depraved state of the human mind.

We shall be told, perhaps, that religion imposes the duty of obedience; as every established fact which is too bad to admit of any other defence, is always presented to us as an injunction of religion. The Church, it is very true, enjoins it in her

formularies,[12] but it would be difficult to derive any such injunction from Christianity. We are told that St. Paul said, "Wives, obey your husbands:" but he also said, "Slaves, obey your masters."[13] It was not St. Paul's business, nor was it consistent with his object, the propagation of Christianity, to incite any one to rebellion against existing laws. The apostle's acceptance of all social institutions as he found them, is no more to be construed as a disapproval of attempts to improve them at the proper time, than his declaration, "The powers that be are ordained of God,"[14] gives his sanction to military despotism, and to that alone, as the Christian form of political government, or commands passive obedience to it. To pretend that Christianity was intended to stereotype existing forms of government and society, and protect them against change, is to reduce it to the level of Islamism or of Brahminism. It is precisely because Christianity has not done this, that it has been the religion of the progressive portion of mankind, and Islamism, Brahminism, &c., have been those of the stationary portions; or rather (for there is no such thing as a really stationary society) of the declining portions. There have been abundance of people, in all ages of Christianity, who tried to make it something of the same kind; to convert us into a sort of Christian Mussulmans, with the Bible for a Koran, prohibiting all improvement: and great has been their power, and many have had to sacrifice their lives in resisting them. But they have been resisted, and the resistance has made us what we are, and will yet make us what we are to be.

After what has been said respecting the obligation of obedience, it is almost superfluous to say anything concerning the more special point included in the general one—a woman's right to her own property; for I need not hope that this treatise can make any impression upon those who need anything to convince them that a woman's inheritance or gains ought to be as much her own after marriage as before.[15] The rule is simple: whatever would be the husband's or wife's if they were not married, should be under their exclusive control during marriage; which need not interfere with the power to tie up property by settlement, in order to preserve it for children. Some people are sentimentally shocked at the idea of a separate interest in money matters, as inconsistent with the ideal fusion of two lives into one. For my own part, I am one of the strongest supporters of community of goods, when resulting from an entire unity of feeling in the owners, which makes all things common between them. But I have no relish for a community of goods resting on the doctrine, that what is mine is yours but what is yours is not mine; and I should prefer to decline entering into such a compact with any one, though I were myself the person to profit by it.

This particular injustice and oppression to women, which is, to common apprehensions, more obvious than all the rest, admits of remedy without interfering with any other mischiefs: and there can be little doubt that it will be one of the earliest remedied. Already, in many of the new and several of the old States of the American Confederation, provisions have been inserted even in the written Constitutions, securing to women equality of rights in this respect: and thereby improving materially the position, in the marriage relation, of those women at least who have property, by leaving them one instrument of power which they have not signed away; and preventing also the scandalous abuse of the marriage institution, which is perpetrated when a man entraps a girl into marrying him without a settlement, for the sole purpose of getting possession of her money. When the support of the family depends, not on property, but on earnings, the common arrangement, by which the man earns the income and the wife superintends the domestic expenditure, seems to me in general the most suitable division of labour between the two persons. If, in addition to the physical suffering of bearing children, and the whole responsibility of their care and education in early years, the wife undertakes the careful

12. ["The Form of Solemnization of Matrimony" in the *Book of Common Prayer* of the Church of England required the bride to promise to "obey . . . and serve" her husband, as well as to "love [and] honour" him.]

13. [Colossians 3:18, 22.]

14. [Rom. 13:1.]

15. [The Married Women's Property Acts, which together established in some respects the "rule" Mill asserts here, were passed by Parliament in 1870 and 1882.]

and economical application of the husband's earnings to the general comfort of the family; she takes not only her fair share, but usually the larger share, of the bodily and mental exertion required by their joint existence. If she undertakes any additional portion, it seldom relieves her from this, but only prevents her from performing it properly. The care which she is herself disabled from taking of the children and the household, nobody else takes; those of the children who do not die, grow up as they best can, and the management of the household is likely to be so bad, as even in point of economy to be a great drawback from the value of the wife's earnings. In an otherwise just state of things, it is not, therefore, I think, a desirable custom, that the wife should contribute by her labour to the income of the family. In an unjust state of things, her doing so may be useful to her, by making her of more value in the eyes of the man who is legally her master; but, on the other hand, it enables him still farther to abuse his power, by forcing her to work, and leaving the support of the family to her exertions, while he spends most of his time in drinking and idleness. The *power* of earning is essential to the dignity of a woman, if she has not independent property. But if marriage were an equal contract, not implying the obligation of obedience; if the connexion were no longer enforced to the oppression of those to whom it is purely a mischief, but a separation, on just terms (I do not now speak of a divorce), could be obtained by any woman who was morally entitled to it; and if she would then find all honourable employments as freely open to her as to men; it would not be necessary for her protection, that during marriage she should make this particular use of her faculties. Like a man when he chooses a profession, so, when a woman marries, it may in general be understood that she makes choice of the management of a household, and the bringing up of a family, as the first call upon her exertions, during as many years of her life as may be required for the purpose; and that she renounces, not all other objects and occupations, but all which are not consistent with the requirements of this. The actual exercise, in a habitual or systematic manner, of outdoor occupations, or such as cannot be carried on at home, would by this principle be practically interdicted to the greater number of married women. But the utmost latitude ought to exist for the adaptation of general rules to individual suitabilities; and there ought to be nothing to prevent faculties exceptionally adapted to any other pursuit, from obeying their vocation notwithstanding marriage: due provision being made for supplying otherwise any falling-short which might become inevitable, in her full performance of the ordinary functions of mistress of a family. These things, if once opinion were rightly directed on the subject, might with perfect safety be left to be regulated by opinion, without any interference of law.[16]

CHAPTER III

On the other point which is involved in the just equality of women, their admissibility to all the functions and occupations hitherto retained as the monopoly of the stronger sex, I should anticipate no difficulty in convincing any one who has gone with me on the subject of the equality of women in the family. I believe that their disabilities elsewhere are only clung to in order to maintain their subordination in domestic life; because the generality of the male sex cannot yet tolerate the idea of living with an equal. Were it not for that, I think that almost every one, in the existing state of opinion in politics and political economy, would admit the injustice of excluding half the human race from the greater number of lucrative occupations, and from almost all high social functions; ordaining from their birth either that they are not, and cannot by any possibility become, fit for employments which are legally open to the stupidest and basest of the other sex, or else that however fit they may be, those employments shall be interdicted to them, in order to be preserved for the exclusive benefit of males. In the last two centuries, when (which was seldom the case) any reason beyond the mere existence of the fact was thought to be required to justify the disabilities of women, people seldom

16. [This legal reform took much longer to be achieved than many of the others Mill proposes in this chapter. As late as World War II, "marriage bars" ensured that women in many spheres of employment in Britain, including the Civil Service, were automatically fired upon marrying.]

assigned as a reason their inferior mental capacity; which, in times when there was a real trial of personal faculties (from which all women were not excluded) in the struggles of public life, no one really believed in. The reason given in those days was not women's unfitness, but the interest of society, by which was meant the interest of men: just as the *raison d' état*, meaning the convenience of the government, and the support of existing authority, was deemed a sufficient explanation and excuse for the most flagitious crimes. In the present day, power holds a smoother language, and whomsoever it oppresses, always pretends to do so for their own good: accordingly, when anything is forbidden to women, it is thought necessary to say, and desirable to believe, that they are incapable of doing it, and that they depart from their real path of success and happiness when they aspire to it. But to make this reason plausible (I do not say valid), those by whom it is urged must be prepared to carry it to a much greater length than any one ventures to do in the face of present experience. It is not sufficient to maintain that women on the average are less gifted than men on the average, with certain of the higher mental faculties, or that a smaller number of women than of men are fit for occupations and functions of the highest intellectual character. It is necessary to maintain that no women at all are fit for them, and that the most eminent women are inferior in mental faculties to the most mediocre of the men on whom those functions at present devolve. For if the performance of the function is decided either by competition, or by any mode of choice which secures regard to the public interest, there needs be no apprehension that any important employments will fall into the hands of women inferior to average men, or to the average of their male competitors. The only result would be that there would be fewer women than men in such employments; a result certain to happen in any case, if only from the preference always likely to be felt by the majority of women for the one vocation in which there is nobody to compete with them. Now, the most determined depreciator of women will not venture to deny, that when we add the experience of recent times to that of ages past, women, and not a few merely, but many women, have proved themselves capable of everything, perhaps without a single exception, which is done by men, and of doing it successfully and creditably. The utmost that can be said is, that there are many things which none of them have succeeded in doing as well as they have been done by some men—many in which they have not reached the very highest rank. But there are extremely few, dependent only on mental faculties, in which they have not attained the rank next to the highest. Is not this enough, and much more than enough, to make it a tyranny to them, and a detriment to society, that they should not be allowed to compete with men for the exercise of these functions? Is it not a mere truism to say, that such functions are often filled by men far less fit for them than numbers of women, and who would be beaten by women in any fair field of competition? What difference does it make that there may be men somewhere, fully employed about other things, who may be still better qualified for the things in question than these women? Does not this take place in all competitions? Is there so great a superfluity of men fit for high duties, that society can afford to reject the service of any competent person? Are we so certain of always finding a man made to our hands for any duty or function of social importance which falls vacant, that we lose nothing by putting a ban upon one-half of mankind, and refusing beforehand to make their faculties available, however distinguished they may be? And even if we could do without them, would it be consistent with justice to refuse to them their fair share of honour and distinction, or to deny to them the equal moral right of all human beings to choose their occupation (short of injury to others) according to their own preferences, at their own risk? Nor is the injustice confined to them: it is shared by those who are in a position to benefit by their services. To ordain that any kind of persons shall not be physicians, or shall not be advocates, or shall not be members of parliament, is to injure not them only, but all who employ physicians or advocates, or elect members of parliament, and who are deprived of the stimulating effect of greater competition on the exertions of the competitors, as well as restricted to a narrower range of individual choice.

It will perhaps be sufficient if I confine myself, in the details of my argument, to functions of a public nature: since, if I am successful as to those, it probably will be readily granted that women should be admissible to all other occupations to which it is at all material

whether they are admitted or not. And here let me begin by marking out one function, broadly distinguished from all others, their right to which is entirely independent of any question which can be raised concerning their faculties. I mean the suffrage, both parliamentary and municipal. The right to share in the choice of those who are to exercise a public trust, is altogether a distinct thing from that of competing for the trust itself. If no one could vote for a member of parliament who was not fit to be a candidate, the government would be a narrow oligarchy indeed. To have a voice in choosing those by whom one is to be governed, is a means of self-protection due to every one, though he were to remain for ever excluded from the function of governing: and that women are considered fit to have such a choice, may be presumed from the fact, that the law already gives it to women in the most important of all cases to themselves: for the choice of the man who is to govern a woman to the end of life, is always supposed to be voluntarily made by herself. In the case of election to public trusts, it is the business of constitutional law to surround the right of suffrage with all needful securities and limitations; but whatever securities are sufficient in the case of the male sex, no others need be required in the case of women. Under whatever conditions, and within whatever limits, men are admitted to the suffrage, there is not a shadow of justification for not admitting women under the same. The majority of the women of any class are not likely to differ in political opinion from the majority of the men of the same class, unless the question be one in which the interests of women, as such, are in some way involved; and if they are so, women require the suffrage, as their guarantee of just and equal consideration. This ought to be obvious even to those who coincide in no other of the doctrines for which I contend. Even if every woman were a wife, and if every wife ought to be a slave, all the more would these slaves stand in need of legal protection: and we know what legal protection the slaves have, where the laws are made by their masters.

With regard to the fitness of women, not only to participate in elections, but themselves to hold offices or practise professions involving important public responsibilities; I have already observed that this consideration is not essential to the practical question in dispute: since any woman, who succeeds in an open profession, proves by that very fact that she is qualified for it. And in the case of public offices, if the political system of the country is such as to exclude unfit men, it will equally exclude unfit women: while if it is not, there is no additional evil in the fact that the unfit persons whom it admits may be either women or men. As long therefore as it is acknowledged that even a few women may be fit for these duties, the laws which shut the door on those exceptions cannot be justified by any opinion which can be held respecting the capacities of women in general. But, though this last consideration is not essential, it is far from being irrelevant. An unprejudiced view of it gives additional strength to the arguments against the disabilities of women, and reinforces them by high considerations of practical utility.

Let us at first make entire abstraction of all psychological considerations tending to show, that any of the mental differences supposed to exist between women and men are but the natural effect of the differences in their education and circumstances, and indicate no radical difference, far less radical inferiority, of nature. Let us consider women only as they already are, or as they are known to have been; and the capacities which they have already practically shown. What they have done, that at least, if nothing else, it is proved that they can do. When we consider how sedulously they are all trained away from, instead of being trained towards, any of the occupations or objects reserved for men, it is evident that I am taking a very humble ground for them, when I rest their case on what they have actually achieved. For, in this case, negative evidence is worth little, while any positive evidence is conclusive. It cannot be inferred to be impossible that a woman should be a Homer, or an Aristotle, or a Michael Angelo, or a Beethoven, because no woman has yet actually produced works comparable to theirs in any of those lines of excellence. This negative fact at most leaves the question uncertain, and open to psychological discussion. But it is quite certain that a woman can be a Queen Elizabeth, or a Deborah,[17] or a Joan of Arc, since

17. [Deborah was a judge and prophet who played an important role in the Israelites' victory over the Canaanites (Judges 4–5).]

this is not inference, but fact. Now it is a curious consideration, that the only things which the existing law excludes women from doing, are the things which they have proved that they are able to do. There is no law to prevent a woman from having written all the plays of Shakespeare, or composed all the operas of Mozart. But Queen Elizabeth or Queen Victoria, had they not inherited the throne, could not have been intrusted with the smallest of the political duties, of which the former showed herself equal to the greatest.

If anything conclusive could be inferred from experience, without psychological analysis, it would be that the things which women are not allowed to do are the very ones for which they are peculiarly qualified; since their vocation for government has made its way, and become conspicuous, through the very few opportunities which have been given; while in the lines of distinction which apparently were freely open to them, they have by no means so eminently distinguished themselves. We know how small a number of reigning queens history presents, in comparison with that of kings. Of this smaller number a far larger proportion have shown talents for rule; though many of them have occupied the throne in difficult periods. It is remarkable, too, that they have, in a great number of instances, been distinguished by merits the most opposite to the imaginary and conventional character of women: they have been as much remarked for the firmness and vigour of their rule, as for its intelligence. When, to queens and empresses, we add regents, and viceroys of provinces, the list of women who have been eminent rulers of mankind swells to a great length.[18] This fact is so undeniable, that some one, long ago, tried to retort the argument, and turned the admitted truth into an additional insult, by saying that queens are better than kings, because under kings women govern, but under queens, men.

It may seem a waste of reasoning to argue against a bad joke; but such things do affect people's minds; and I have heard men quote this saying, with an air as if they thought there was something in it. At any rate, it will serve as well as anything else for a starting point in discussion. I say, then, that it is not true that under kings, women govern. Such cases are entirely exceptional: and weak kings have quite as often governed ill through the influence of male favourites, as of female. When a king is governed by a woman merely through his amatory propensities, good government is not probable, though even then there are exceptions. But French history counts two kings who have voluntarily given the direction of affairs during many years, the one to his mother, the other to his sister. One of them, Charles VIII, was a mere boy, but in doing so he followed the intentions of his father Louis XI, the ablest monarch of his age. The other, Saint Louis, was the best, and one of the most vigorous rulers, since the time of Charlemagne.[19] Both these princesses ruled in a manner hardly equalled by any prince among their contemporaries. The emperor Charles V, the most politic prince of his time, who had as great a number of able men in his service as a ruler ever had, and was one of the least likely of all sovereigns to sacrifice his interest to personal feelings, made two princesses of his family successively Governors of the Netherlands, and kept one or other of them in that post during his whole life, (they were

18. Especially is this true if we take into consideration Asia as well as Europe. If a Hindoo principality is strongly, vigilantly, and economically governed; if order is preserved without oppression; if cultivation is extending, and the people prosperous, in three cases out of four that principality is under a woman's rule. This fact, to me an entirely unexpected one, I have collected from a long official knowledge of Hindoo governments. There are many such instances: for though, by Hindoo institutions, a woman cannot reign, she is the legal regent of a kingdom during the minority of the heir; and minorities are frequent, the lives of the male rulers being so often prematurely terminated through the effect of inactivity and sensual excesses. When we consider that these princesses have never been seen in public, have never conversed with any man not of their own family except from behind a curtain, that they do not read, and if they did, there is no book in their languages which can give them the smallest instruction on political affairs; the example they afford of the natural capacity of women for government is very striking.

19. [Blanche of Castile, mother of Louis IX (king of France 1226–70, also called Saint Louis), acted as regent for eight years during his minority and again when he embarked on the sixth crusade. Anne of Beaujeu, sister of Charles VIII (king of France 1483–98), was regent through much of his reign.]

afterwards succeeded by a third). Both ruled very successfully and one of them, Margaret of Austria, was one of the ablest politicians of the age.[20] So much for one side of the question. Now as to the other. When it is said that under queens men govern, is the same meaning to be understood as when kings are said to be governed by women? Is it meant that queens choose as their instruments of government, the associates of their personal pleasures? The case is rare even with those who are as unscrupulous on the latter point as Catherine II: and it is not in these cases that the good government, alleged to arise from male influence, is to be found.[21] If it be true, then, that the administration is in the hands of better men under a queen than under an average king, it must be that queens have a superior capacity for choosing them; and women must be better qualified than men both for the position of sovereign, and for that of chief minister; for the principal business of a prime minister is not to govern in person, but to find the fittest persons to conduct every department of public affairs. The more rapid insight into character, which is one of the admitted points of superiority in women over men, must certainly make them, with anything like parity of qualifications in other respects, more apt than men in that choice of instruments, which is nearly the most important business of every one who has to do with governing mankind. Even the unprincipled Catherine de' Medici could feel the value of a Chancellor de l'Hôpital.[22] But it is also true that most great queens have been great by their own talents for government, and have been well served precisely for that reason. They retained the supreme direction of affairs in their own hands: and if they listened to good advisers, they gave by that fact the strongest proof that their judgment fitted them for dealing with the great questions of government.

Is it reasonable to think that those who are fit for the greater functions of politics, are incapable of qualifying themselves for the less? Is there any reason in the nature of things, that the wives and sisters of princes should, whenever called on, be found as competent as the princes themselves to *their* business, but that the wives and sisters of statesmen, and administrators, and directors of companies, and managers of public institutions, should be unable to do what is done by their brothers and husbands? The real reason is plain enough; it is that princesses, being more raised above the generality of men by their rank than placed below them by their sex, have never been taught that it was improper for them to concern themselves with politics; but have been allowed to feel the liberal interest natural to any cultivated human being, in the great transactions which took place around them, and in which they might be called on to take a part. The ladies of reigning families are the only women who are allowed the same range of interests and freedom of development as men; and it is precisely in their case that there is not found to be any inferiority. Exactly where and in proportion as women's capacities for government have been tried, in that proportion have they been found adequate.

This fact is in accordance with the best general conclusions which the world's imperfect experience seems as yet to suggest, concerning the peculiar tendencies and aptitudes characteristic of women, as women have hitherto been. I do not say, as they will continue to be; for, as I have already said more than once, I consider it presumption in any one to pretend to decide what women are or are not, can or cannot be, by natural constitution. They have always hitherto been kept, as far as regards spontaneous development, in so unnatural a state, that their nature cannot but have been greatly distorted and disguised; and no one can safely pronounce that if women's nature were left to choose its direction as freely as men's, and if no artificial bent were attempted to be given to it except that required by the conditions of human soci-

20. [Charles V (Holy Roman Emperor 1519–56) appointed first his aunt, Margaret of Austria, and later his sister, Mary of Hungary, to rule over the Netherlands. In her nineteen-year regency, Margaret did much to consolidate Hapsburg rule there. After Charles's death, his natural daughter, Margaret of Parma, was appointed to the same regency.]

21. [Catherine II (empress of Russia 1762–96), a strong and ruthless ruler, had many lovers, including Potemkin, one of her ministers.]

22. [Catherine de' Medici was the queen consort of Henry II (king of France 1547–59) and then regent of France from 1560 to 1574. She played an influential role in reconciling the warring French religious factions, with help from her chancellor, Michel de L'Hôpital.]

ety, and given to both sexes alike, there would be any material difference, or perhaps any difference at all, in the character and capacities which would unfold themselves. I shall presently show, that even the least contestable of the differences which now exist, are such as may very well have been produced merely by circumstances, without any difference of natural capacity. But, looking at women as they are known in experience, it may be said of them, with more truth than belongs to most other generalizations on the subject, that the general bent of their talents is towards the practical. This statement is conformable to all the public history of women, in the present and the past. It is no less borne out by common and daily experience. Let us consider the special nature of the mental capacities most characteristic of a woman of talent. They are all of a kind which fits them for practice, and makes them tend towards it. What is meant by a woman's capacity of intuitive perception? It means, a rapid and correct insight into present fact. It has nothing to do with general principles. Nobody ever perceived a scientific law of nature by intuition, nor arrived at a general rule of duty or prudence by it. These are results of slow and careful collection and comparison of experience; and neither the men nor the women of intuition usually shine in this department, unless, indeed, the experience necessary is such as they can acquire by themselves. For what is called their intuitive sagacity makes them peculiarly apt in gathering such general truths as can be collected from their individual means of observation. When, consequently, they chance to be as well provided as men are with the results of other people's experience, by reading and education, (I use the word chance advisedly, for, in respect to the knowledge that tends to fit them for the greater concerns of life, the only educated women are the self-educated) they are better furnished than men in general with the essential requisites of skilful and successful practice. Men who have been much taught, are apt to be deficient in the sense of present fact; they do not see, in the facts which they are called upon to deal with, what is really there, but what they have been taught to expect. This is seldom the case with women of any ability. Their capacity of "intuition" preserves them from it. With equality of experience and of general faculties, a woman usually sees much more than a man of what is immediately before her. Now this sensibility to the present, is the main quality on which the capacity for practice, as distinguished from theory, depends. To discover general principles, belongs to the speculative faculty: to discern and discriminate the particular cases in which they are and are not applicable, constitutes practical talent: and for this, women as they now are have a peculiar aptitude. I admit that there can be no good practice without principles, and that the predominant place which quickness of observation holds among a woman's faculties, makes her particularly apt to build over-hasty generalizations upon her own observation; though at the same time no less ready in rectifying those generalizations, as her observation takes a wider range. But the corrective to this defect, is access to the experience of the human race; general knowledge—exactly the thing which education can best supply. A woman's mistakes are specifically those of a clever self-educated man, who often sees what men trained in routine do not see, but falls into errors for want of knowing things which have long been known. Of course he has acquired much of the pre-existing knowledge, or he could not have got on at all; but what he knows of it he has picked up in fragments and at random, as women do.

But this gravitation of women's minds to the present, to the real, to actual fact, while in its exclusiveness it is a source of errors, is also a most useful counteractive of the contrary error. The principal and most characteristic aberration of speculative minds as such, consists precisely in the deficiency of this lively perception and ever-present sense of objective fact. For want of this, they often not only overlook the contradiction which outward facts oppose to their theories, but lose sight of the legitimate purpose of speculation altogether, and let their speculative faculties go astray into regions not peopled with real beings, animate or inanimate, even idealized, but with personified shadows created by the illusions of metaphysics or by the mere entanglement of words, and think these shadows the proper objects of the highest, the most transcendant, philosophy. Hardly anything can be of greater value to a man of theory and speculation who employs himself not in collecting materials of knowledge by observation, but in working them up by processes of thought into comprehensive truths of

science and laws of conduct, than to carry on his speculations in the companionship, and under the criticism, of a really superior woman. There is nothing comparable to it for keeping his thoughts within the limits of real things, and the actual facts of nature. A woman seldom runs wild after an abstraction. The habitual direction of her mind to dealing with things as individuals rather than in groups, and (what is closely connected with it) her more lively interest in the present feelings of persons, which makes her consider first of all, in anything which claims to be applied to practice, in what manner persons will be affected by it—these two things make her extremely unlikely to put faith in any speculation which loses sight of individuals, and deals with things as if they existed for the benefit of some imaginary entity, some mere creation of the mind, not resolvable into the feelings of living beings. Women's thoughts are thus as useful in giving reality to those of thinking men, as men's thoughts in giving width and largeness to those of women. In depth, as distinguished from breadth, I greatly doubt if even now, women, compared with men, are at any disadvantage.

If the existing mental characteristics of women are thus valuable even in aid of speculation, they are still more important, when speculation has done its work, for carrying out the results of speculation into practice. For the reasons already given, women are comparatively unlikely to fall into the common error of men, that of sticking to their rules in a case whose specialities either take it out of the class to which the rules are applicable, or require a special adaptation of them. Let us now consider another of the admitted superiorities of clever women, greater quickness of apprehension. Is not this pre-eminently a quality which fits a person for practice? In action, everything continually depends upon deciding promptly. In speculation, nothing does. A mere thinker can wait, can take time to consider, can collect additional evidence; he is not obliged to complete his philosophy at once, lest the opportunity should go by. The power of drawing the best conclusion possible from insufficient data is not indeed useless in philosophy; the construction of a provisional hypothesis consistent with all known facts is often the needful basis for further inquiry. But this faculty is rather serviceable in philosophy, than the main qualification for it: and, for the auxiliary as well as for the main operation, the philosopher can allow himself any time he pleases. He is in no need of the capacity of doing rapidly what he does; what he rather needs is patience, to work on slowly until imperfect lights have become perfect, and a conjecture has ripened into a theorem. For those, on the contrary, whose business is with the fugitive and perishable—with individual facts, not kinds of facts—rapidity of thought is a qualification next only in importance to the power of thought itself. He who has not his faculties under immediate command, in the contingencies of action, might as well not have them at all. He may be fit to criticize, but he is not fit to act. Now it is in this that women, and the men who are most like women, confessedly excel. The other sort of man, however pre-eminent may be his faculties, arrives slowly at complete command of them: rapidity of judgment and promptitude of judicious action, even in the things he knows best, are the gradual and the late result of strenuous effort grown into habit.

It will be said, perhaps, that the greater nervous susceptibility of women is a disqualification for practice, in anything but domestic life, by rendering them mobile, changeable, too vehemently under the influence of the moment, incapable of dogged perseverance, unequal and uncertain in the power of using their faculties. I think that these phrases sum up the greater part of the objections commonly made to the fitness of women for the higher class of serious business. Much of all this is the mere overflow of nervous energy run to waste, and would cease when the energy was directed to a definite end. Much is also the result of conscious or unconscious cultivation; as we see by the almost total disappearance of "hysterics" and fainting fits, since they have gone out of fashion. Moreover, when people are brought up, like many women of the higher classes (though less so in our own country than in any other) a kind of hot-house plants, shielded from the wholesome vicissitudes of air and temperature, and untrained in any of the occupations and exercises which give stimulus and development to the circulatory and muscular system, while their nervous system, especially in its emotional department, is kept in unnaturally active play; it is no wonder if those of them who do not die of consumption, grow up with constitutions liable to de-

rangement from slight causes, both internal and external, and without stamina to support any task, physical or mental, requiring continuity of effort. But women brought up to work for their livelihood show none of these morbid characteristics, unless indeed they are chained to an excess of sedentary work in confined and unhealthy rooms. Women who in their early years have shared in the healthful physical education and bodily freedom of their brothers, and who obtain a sufficiency of pure air and exercise in after-life, very rarely have any excessive susceptibility of nerves which can disqualify them for active pursuits. There is indeed a certain proportion of persons, in both sexes, in whom an unusual degree of nervous sensibility is constitutional, and of so marked a character as to be the feature of their organization which exercises the greatest influence over the whole character of the vital phenomena. This constitution, like other physical conformations, is hereditary, and is transmitted to sons as well as daughters; but it is possible, and probable, that the nervous temperament (as it is called) is inherited by a greater number of women than of men. We will assume this as a fact: and let me then ask, are men of nervous temperament found to be unfit for the duties and pursuits usually followed by men? If not, why should women of the same temperament be unfit for them? The peculiarities of the temperament are, no doubt, within certain limits, an obstacle to success in some employments, though an aid to it in others. But when the occupation is suitable to the temperament, and sometimes even when it is unsuitable, the most brilliant examples of success are continually given by the men of high nervous sensibility. They are distinguished in their practical manifestations chiefly by this, that being susceptible of a higher degree of excitement than those of another physical constitution, their powers when excited differ more than in the case of other people, from those shown in their ordinary state: they are raised, as it were, above themselves, and do things with ease which they are wholly incapable of at other times. But this lofty excitement is not, except in weak bodily constitutions, a mere flash, which passes away immediately, leaving no permanent traces, and incompatible with persistent and steady pursuit of an object. It is the character of the nervous temperament to be capable of *sustained* excitement, holding out through long continued efforts. It is what is meant by *spirit*. It is what makes the high-bred racehorse run without slackening speed till he drops down dead. It is what has enabled so many delicate women to maintain the most sublime constancy not only at the stake, but through a long preliminary succession of mental and bodily tortures. It is evident that people of this temperament are particularly apt for what may be called the executive department of the leadership of mankind. They are the material of great orators, great preachers, impressive diffusers of moral influences. Their constitution might be deemed less favourable to the qualities required from a statesman in the cabinet, or from a judge. It would be so, if the consequence necessarily followed that because people are excitable they must always be in a state of excitement. But this is wholly a question of training. Strong feeling is the instrument and element of strong self-control: but it requires to be cultivated in that direction. When it is, it forms not the heroes of impulse only, but those also of self-conquest. History and experience prove that the most passionate characters are the most fanatically rigid in their feelings of duty, when their passion has been trained to act in that direction. The judge who gives a just decision in a case where his feelings are intensely interested on the other side, derives from that same strength of feeling the determined sense of the obligation of justice, which enables him to achieve this victory over himself. The capability of that lofty enthusiasm which takes the human being out of his every-day character, reacts upon the daily character itself. His aspirations and powers when he is in this exceptional state, become the type with which he compares, and by which he estimates, his sentiments and proceedings at other times: and his habitual purposes assume a character moulded by and assimilated to the moments of lofty excitement, although those, from the physical nature of a human being, can only be transient. Experience of races, as well as of individuals, does not show those of excitable temperament to be less fit, on the average, either for speculation or practice, than the more unexcitable. The French, and the Italians, are undoubtedly by nature more nervously excitable than the Teutonic races, and, compared at least with the English, they have a much greater habitual and daily emotional life: but have

they been less great in science, in public business, in legal and judicial eminence, or in war? There is abundant evidence that the Greeks were of old, as their descendants and successors still are, one of the most excitable of the races of mankind. It is superfluous to ask, what among the achievements of men they did not excel in. The Romans, probably, as an equally southern people, had the same original temperament: but the stern character of their national discipline, like that of the Spartans, made them an example of the opposite type of national character; the greater strength of their natural feelings being chiefly apparent in the intensity which the same original temperament made it possible to give to the artificial. If these cases exemplify what a naturally excitable people may be made, the Irish Celts afford one of the aptest examples of what they are when left to themselves (if those can be said to be left to themselves who have been for centuries under the indirect influence of bad government, and the direct training of a Catholic hierarchy and of a sincere belief in the Catholic religion). The Irish character must be considered, therefore, as an unfavourable case: yet, whenever the circumstances of the individual have been at all favourable, what people have shown greater capacity for the most varied and multifarious individual eminence? Like the French compared with the English, the Irish with the Swiss, the Greeks or Italians compared with the German races, so women compared with men may be found, on the average, to do the same things with some variety in the particular kind of excellence. But, that they would do them fully as well on the whole, if their education and cultivation were adapted to correcting instead of aggravating the infirmities incident to their temperament, I see not the smallest reason to doubt.

Supposing it, however, to be true that women's minds are by nature more mobile than those of men, less capable of persisting long in the same continuous effort, more fitted for dividing their faculties among many things than for travelling in any one path to the highest point which can be reached by it: this may be true of women as they now are (though not without great and numerous exceptions), and may account for their having remained behind the highest order of men in precisely the things in which this absorption of the whole mind in one set of ideas and occupations may seem to be most requisite. Still, this difference is one which can only affect the kind of excellence, not the excellence itself, or its practical worth: and it remains to be shown whether this exclusive working of a part of the mind, this absorption of the whole thinking faculty in a single subject, and concentration of it on a single work, is the normal and healthful condition of the human faculties, even for speculative uses. I believe that what is gained in special development by this concentration, is lost in the capacity of the mind for the other purposes of life; and even in abstract thought, it is my decided opinion that the mind does more by frequently returning to a difficult problem, than by sticking to it without interruption. For the purposes, at all events, of practice, from its highest to its humblest departments, the capacity of passing promptly from one subject of consideration to another, without letting the active spring of the intellect run down between the two, is a power far more valuable; and this power women pre-eminently possess, by virtue of the very mobility of which they are accused. They perhaps have it from nature, but they certainly have it by training and education; for nearly the whole of the occupations of women consist in the management of small but multitudinous details, on each of which the mind cannot dwell even for a minute, but must pass on to other things, and if anything requires longer thought, must steal time at odd moments for thinking of it. The capacity indeed which women show for doing their thinking in circumstances and at times which almost any man would make an excuse to himself for not attempting it, has often been noticed: and a woman's mind, though it may be occupied only with small things, can hardly ever permit itself to be vacant, as a man's so often is when not engaged in what he chooses to consider the business of his life. The business of a woman's ordinary life is things in general, and can as little cease to go on as the world to go round.

But (it is said) there is anatomical evidence of the superior mental capacity of men compared with women: they have a larger brain. I reply, that in the first place the fact itself is doubtful. It is by no means established that the brain of a woman is smaller than that of a man. If it is inferred merely because a woman's bodily frame generally is of less dimensions than

a man's, this criterion would lead to strange consequences. A tall and large-boned man must on this showing be wonderfully superior in intelligence to a small man, and an elephant or a whale must prodigiously excel mankind. The size of the brain in human beings, anatomists say, varies much less than the size of the body, or even of the head, and the one cannot be at all inferred from the other. It is certain that some women have as large a brain as any man. It is within my knowledge that a man who had weighed many human brains, said that the heaviest he knew of, heavier even than Cuvier's (the heaviest previously recorded,) was that of a woman. Next, I must observe that the precise relation which exists between the brain and the intellectual powers is not yet well understood, but is a subject of great dispute. That there is a very close relation we cannot doubt. The brain is certainly the material organ of thought and feeling: and (making abstraction of the great unsettled controversy respecting the appropriation of different parts of the brain to different mental faculties) I admit that it would be an anomaly, and an exception to all we know of the general laws of life and organization, if the size of the organ were wholly indifferent to the function; if no accession of power were derived from the greater magnitude of the instrument. But the exception and the anomaly would be fully as great if the organ exercised influence by its magnitude only. In all the more delicate operations of nature—of which those of the animated creation are the most delicate, and those of the nervous system by far the most delicate of these—differences in the effect depend as much on differences of quality in the physical agents, as on their quantity: and if the quality of an instrument is to be tested by the nicety and delicacy of the work it can do, the indications point to a greater average fineness of quality in the brain and nervous system of women than of men. Dismissing abstract difference of quality, a thing difficult to verify, the efficiency of an organ is known to depend not solely on its size but on its activity: and of this we have an approximate measure in the energy with which the blood circulates through it, both the stimulus and the reparative force being mainly dependent on the circulation. It would not be surprising—it is indeed an hypothesis which accords well with the differences actually observed between the mental operations of the two sexes—if men on the average should have the advantage in the size of the brain, and women in activity of cerebral circulation. The results which conjecture, founded on analogy, would lead us to expect from this difference of organization, would correspond to some of those which we most commonly see. In the first place, the mental operations of men might be expected to be slower. They would neither be so prompt as women in thinking, nor so quick to feel. Large bodies take more time to get into full action. On the other hand, when once got thoroughly into play, men's brain would bear more work. It would be more persistent in the line first taken; it would have more difficulty in changing from one mode of action to another, but, in the one thing it was doing, it could go on longer without loss of power or sense of fatigue. And do we not find that the things in which men most excel women are those which require most plodding and long hammering at a single thought, while women do best what must be done rapidly? A woman's brain is sooner fatigued, sooner exhausted; but given the degree of exhaustion, we should expect to find that it would recover itself sooner. I repeat that this speculation is entirely hypothetical; it pretends to no more than to suggest a line of enquiry. I have before repudiated the notion of its being yet certainly known that there is any natural difference at all in the average strength or direction of the mental capacities of the two sexes, much less what that difference is. Nor is it possible that this should be known, so long as the psychological laws of the formation of character have been so little studied, even in a general way, and in the particular case never scientifically applied at all; so long as the most obvious external causes of difference of character are habitually disregarded—left unnoticed by the observer, and looked down upon with a kind of supercilious contempt by the prevalent schools both of natural history and of mental philosophy: who, whether they look for the source of what mainly distinguishes human beings from one another, in the world of matter or in that of spirit, agree in running down those who prefer to explain these differences by the different relations of human beings to society and life.

To so ridiculous an extent are the notions formed of the nature of women, mere empirical generalizations, framed, without philosophy or analysis, upon the first

instances which present themselves, that the popular idea of it is different in different countries, according as the opinions and social circumstances of the country have given to the women living in it any speciality of development or non-development. An Oriental thinks that women are by nature peculiarly voluptuous; see the violent abuse of them on this ground in Hindoo writings. An Englishman usually thinks that they are by nature cold. The sayings about women's fickleness are mostly of French origin; from the famous distich of Francis I, upward and downward.[23] In England it is a common remark, how much more constant women are than men. Inconstancy has been longer reckoned discreditable to a woman, in England than in France; and Englishwomen are besides, in their inmost nature, much more subdued to opinion. It may be remarked by the way, that Englishmen are in peculiarly unfavourable circumstances for attempting to judge what is or is not natural, not merely to women, but to men, or to human beings altogether, at least if they have only English experience to go upon: because there is no place where human nature shows so little of its original lineaments. Both in a good and a bad sense, the English are farther from a state of nature than any other modern people. They are, more than any other people, a product of civilization and discipline. England is the country in which social discipline has most succeeded, not so much in conquering, as in suppressing, whatever is liable to conflict with it. The English, more than any other people, not only act but feel according to rule. In other countries, the taught opinion, or the requirement of society, may be the stronger power, but the promptings of the individual nature are always visible under it, and often resisting it: rule may be stronger than nature, but nature is still there. In England, rule has to a great degree substituted itself for nature. The greater part of life is carried on, not by following inclination under the control of rule, but by having no inclination but that of following a rule. Now this has its good side doubtless, though it has also a wretchedly bad one; but it must render an Englishman peculiarly ill-qualified to pass a judgment on the original tendencies of human nature from his own experience. The errors to which observers elsewhere are liable on the subject, are of a different character. An Englishman is ignorant respecting human nature, a Frenchman is prejudiced. An Englishman's errors are negative, a Frenchman's positive. An Englishman fancies that things do not exist, because he never sees them; a Frenchman thinks they must always and necessarily exist, because he does see them. An Englishman does not know nature, because he has had no opportunity of observing it; a Frenchman generally knows a great deal of it, but often mistakes it, because he has only seen it sophisticated and distorted. For the artificial state superinduced by society disguises the natural tendencies of the thing which is the subject of observation, in two different ways: by extinguishing the nature, or by transforming it. In the one case there is but a starved residuum of nature remaining to be studied; in the other case there is much, but it may have expanded in any direction rather than that in which it would spontaneously grow.

I have said that it cannot now be known how much of the existing mental differences between men and women is natural, and how much artificial; whether there are any natural differences at all; or, supposing all artificial causes of difference to be withdrawn, what natural character would be revealed. I am not about to attempt what I have pronounced impossible: but doubt does not forbid conjecture, and where certainty is unattainable, there may yet be the means of arriving at some degree of probability. The first point, the origin of the differences actually observed, is the one most accessible to speculation; and I shall attempt to approach it, by the only path by which it can be reached; by tracing the mental consequences of external influences. We cannot isolate a human being from the circumstances of his condition, so as to ascertain experimentally what he would have been by nature; but we can consider what he is, and what his circumstances have been, and whether the one would have been capable of producing the other.

Let us take, then, the only marked case which observation affords, of apparent inferiority of women to men, if we except the merely physical one of bodily strength. No production in philosophy, science, or art, entitled to the first rank, has been the work of a

23. [The saying, "Women are often fickle; foolish is he who trusts them," is attributed by Victor Hugo to Francis I (king of France 1515–47).]

woman. Is there any mode of accounting for this, without supposing that women are naturally incapable of producing them?

In the first place, we may fairly question whether experience has afforded sufficient grounds for an induction. It is scarcely three generations since women, saving very rare exceptions, have begun to try their capacity in philosophy, science, or art. It is only in the present generation that their attempts have been at all numerous; and they are even now extremely few, everywhere but in England and France. It is a relevant question, whether a mind possessing the requisites of first-rate eminence in speculation or creative art could have been expected, on the mere calculation of chances, to turn up during that lapse of time, among the women whose tastes and personal position admitted of their devoting themselves to these pursuits. In all things which there has yet been time for—in all but the very highest grades in the scale of excellence, especially in the department in which they have been longest engaged, literature (both prose and poetry)—women have done quite as much, have obtained fully as high prizes and as many of them, as could be expected from the length of time and the number of competitors. If we go back to the earlier period when very few women made the attempt, yet some of those few made it with distinguished success. The Greek always accounted Sappho among their great poets; and we may well suppose that Myrtis, said to have been the teacher of Pindar, and Corinna, who five times bore away from him the prize of poetry, must at least have had sufficient merit to admit of being compared with that great name. Aspasia did not leave any philosophical writings; but it is an admitted fact that Socrates resorted to her for instruction, and avowed himself to have obtained it.[24]

If we consider the works of women in modern times, and contrast them with those of men, either in the literary or the artistic department, such inferiority as may be observed resolves itself essentially into one thing: but that is a most material one; deficiency of originality. Not total deficiency; for every production of mind which is of any substantive value, has an originality of its own—is a conception of the mind itself, not a copy of something else. Thoughts original, in the sense of being unborrowed—of being derived from the thinker's own observations or intellectual processes—are abundant in the writings of women. But they have not yet produced any of those great and luminous new ideas which form an era in thought, nor those fundamentally new conceptions in art, which open a vista of possible effects not before thought of, and found a new school. Their compositions are mostly grounded on the existing fund of thought, and their creations do not deviate widely from existing types. This is the sort of inferiority which their works manifest: for in point of execution, in the detailed application of thought, and the perfection of style, there is no inferiority. Our best novelists in point of composition, and of the management of detail, have mostly been women; and there is not in all modern literature a more eloquent vehicle of thought than the style of Madame de Staël, nor, as a specimen of purely artistic excellence, anything superior to the prose of Madame Sand, whose style acts upon the nervous system like a symphony of Haydn or Mozart. High originality of conception is, as I have said, what is chiefly wanting. And now to examine if there is any manner in which this deficiency can be accounted for.

Let us remember, then, so far as regards mere thought, that during all that period in the world's existence, and in the progress of cultivation, in which great and fruitful new truths could be arrived at by mere force of genius, with little previous study and accumulation of knowledge—during all that time women did not concern themselves with speculation at all. From the days of Hypatia to those of the Reformation, the illustrious Heloisa is almost the only woman to whom any such achievement might have been possible; and we know not how great a capacity of speculation in her may have been lost to mankind by the misfortunes of her life.[25] Never since any

24. [Sappho was a celebrated Greek poet (c. 610–c. 580 B.C.E.) whose works have survived in a fragmentary state. Corinna was a Greek lyric poet thought to have been a rival of Pindar (c. 500 B.C.E.). Aspasia (fifth century B.C.E.), philosopher and the mistress of Pericles, was a striking figure in Athenian society. She was accused of having too much influence over Pericles.]

25. [Hypatia (c. 370–415), head of the Egyptian neoplatonist school of philosophy, was the first notable

considerable number of women have began to cultivate serious thought, has originality been possible on easy terms. Nearly all the thoughts which can be reached by mere strength of original faculties, have long since been arrived at; and originality, in any high sense of the word, is now scarcely ever attained but by minds which have undergone elaborate discipline, and are deeply versed in the results of previous thinking. It is Mr. Maurice, I think, who has remarked on the present age, that its most original thinkers are those who have known most thoroughly what had been thought by their predecessors: and this will always henceforth be the case. Every fresh stone in the edifice has now to be placed on the top of so many others, that a long process of climbing, and of carrying up materials, has to be gone through by whoever aspires to take a share in the present stage of the work. How many women are there who have gone through any such process? Mrs. Somerville, alone perhaps of women, knows as much of mathematics as is now needful for making any considerable mathematical discovery: is it any proof of inferiority in women, that she has not happened to be one of the two or three persons who in her lifetime have associated their names with some striking advancement of the science? Two women, since political economy has been made a science, have known enough of it to write usefully on the subject. Of how many of the innumerable men who have written on it during the same time, is it possible with truth to say more? If no woman has hitherto been a great historian, what woman has had the necessary erudition? If no woman is a great philologist, what woman has studied Sanscrit and Slavonic, the Gothic of Ulphila and the Persic of the Zendavesta? Even in practical matters we all know what is the value of the originality of untaught geniuses. It means, inventing over again in its rudimentary form something already invented and improved upon by many successive inventors. When women have had the preparation which all men now require to be eminently original, it will be time enough to begin judging by experience of their capacity for originality.

It no doubt often happens that a person, who has not widely and accurately studied the thoughts of others on a subject, has by natural sagacity a happy intuition, which he can suggest, but cannot prove, which yet when matured may be an important addition to knowledge: but even then, no justice can be done to it until some other person, who does possess the previous acquirements, takes it in hand, tests it, gives it a scientific or practical form, and fits it into its place among the existing truths of philosophy or science. Is it supposed that such felicitous thoughts do not occur to women? They occur by hundreds to every woman of intellect. But they are mostly lost, for want of a husband or friend who has the other knowledge which can enable him to estimate them properly and bring them before the world: and even when they are brought before it, they generally appear as his ideas, not their real author's. Who can tell how many of the most original thoughts put forth by male writers, belong to a woman by suggestion, to themselves only by verifying and working out? If I may judge by my own case, a very large proportion indeed.

If we turn from pure speculation to literature in the narrow sense of the term, and the fine arts, there is a very obvious reason why women's literature is, in its general conception and in its main features, an imitation of men's. Why is the Roman literature, as critics proclaim to satiety, not original, but an imitation of the Greek? Simply because the Greeks came first. If women lived in a different country from men, and had never read any of their writings, they would have had a literature of their own. As it is, they have not created one, because they found a highly advanced literature already created. If there had been no suspension of the knowledge of antiquity, or if the Renaissance had occurred before the Gothic cathedrals were built, they never would have been built. We see that, in France and Italy, imitation of the ancient literature stopped the original development even after it had commenced. All women who write are pupils of the great male writers. A painter's early pictures, even if he be a Raffaelle, are undistinguishable in style from those of his master. Even a Mozart does not display his powerful originality in his earliest

---

female mathematician. Heloise (1098–1164), the brilliant niece of a canon of Notre Dame, was educated by Peter Abelard, theologian and philosopher. Her intellectual potential was thwarted by the outcome of their tragic love for each other; he was castrated, and she entered a convent.]

pieces. What years are to a gifted individual, generations are to a mass. If women's literature is destined to have a different collective character from that of men, depending on any difference of natural tendencies, much longer time is necessary than has yet elapsed, before it can emancipate itself from the influence of accepted models, and guide itself by its own impulses. But if, as I believe, there will not prove to be any natural tendencies common to women, and distinguishing their genius from that of men, yet every individual writer among them has her individual tendencies, which at present are still subdued by the influence of precedent and example: and it will require generations more, before their individuality is sufficiently developed to make head against that influence.

It is in the fine arts, properly so called, that the *primâ facie* evidence of inferior original powers in women at first sight appears the strongest: since opinion (it may be said) does not exclude them from these, but rather encourages them, and their education, instead of passing over this department, is in the affluent classes mainly composed of it. Yet in this line of exertion they have fallen still more short than in many others, of the highest eminence attained by men. This shortcoming, however, needs no other explanation than the familiar fact, more universally true in the fine arts than in anything else; the vast superiority of professional persons over amateurs. Women in the educated classes are almost universally taught more or less of some branch or other of the fine arts, but not that they may gain their living or their social consequence by it. Women artists are all amateurs. The exceptions are only of the kind which confirm the general truth. Women are taught music, but not for the purpose of composing, only of executing it: and accordingly it is only as composers, that men, in music, are superior to women. The only one of the fine arts which women do follow, to any extent, as a profession, and an occupation for life, is the histrionic; and in that they are confessedly equal, if not superior, to men. To make the comparison fair, it should be made between the productions of women in any branch of art, and those of men not following it as a profession. In musical composition, for example, women surely have produced fully as good things as have ever been produced by male amateurs. There are now a few women, a very few, who practise painting as a profession, and these are already beginning to show quite as much talent as could be expected. Even male painters (*pace* Mr. Ruskin) have not made any very remarkable figure these last centuries, and it will be long before they do so.[26] The reason why the old painters were so greatly superior to the modern, is that a greatly superior class of men applied themselves to the art. In the fourteenth and fifteenth centuries the Italian painters were the most accomplished men of their age. The greatest of them were men of encyclopaedical acquirements and powers, like the great men of Greece. But in their times fine art was, to men's feelings and conceptions, among the grandest things in which a human being could excel; and by it men were made, what only political or military distinction now makes them, the companions of sovereigns, and the equals of the highest nobility. In the present age, men of anything like similar calibre find something more important to do, for their own fame and the uses of the modern world, than painting: and it is only now and then that a Reynolds or a Turner (of whose relative rank among eminent men I do not pretend to an opinion) applies himself to that art.[27] Music belongs to a different order of things; it does not require the same general powers of mind, but seems more dependant on a natural gift: and it may be thought surprising that no one of the great musical composers has been a woman. But even this natural gift, to be made available for great creations, requires study, and professional devotion to the pursuit. The only countries which have produced first-rate composers, even of the male sex, are Germany and Italy—countries in which, both in point of special and of general cultivation, women have remained far behind France and England, being generally (it may be said without exaggeration) very little educated, and having scarcely cultivated at all any of the higher faculties

26. [John Ruskin (1819–1900), the art critic whose *Modern Painters* (1843–60) did much to establish the reputation of J. M. W. Turner (see n. 27).]

27. [Sir Joshua Reynolds (1723–92), portrait painter and art critic, was in 1768 elected the first president of the Royal Academy of Art. Joseph Mallord William Turner (1775–1851) was the greatest English landscapist and marine painter of the nineteenth century.]

of mind. And in those countries the men who are acquainted with the principles of musical composition must be counted by hundreds, or more probably by thousands, the women barely by scores: so that here again, on the doctrine of averages, we cannot reasonably expect to see more than one eminent woman to fifty eminent men; and the last three centuries have not produced fifty eminent male composers either in Germany or in Italy.

There are other reasons, besides those which we have now given, that help to explain why women remain behind men, even in the pursuits which are open to both. For one thing, very few women have time for them. This may seem a paradox; it is an undoubted social fact. The time and thoughts of every woman have to satisfy great previous demands on them for things practical. There is, first, the superintendence of the family and the domestic expenditure, which occupies at least one woman in every family, generally the one of mature years and acquired experience; unless the family is so rich as to admit of delegating that task to hired agency, and submitting to all the waste and malversation inseparable from that mode of conducting it. The superintendence of a household, even when not in other respects laborious, is extremely onerous to the thoughts; it requires incessant vigilance, an eye which no detail escapes, and presents questions for consideration and solution, foreseen and unforeseen, at every hour of the day, from which the person responsible for them can hardly ever shake herself free. If a woman is of a rank and circumstances which relieve her in a measure from these cares, she has still devolving on her the management for the whole family of its intercourse with others—of what is called society, and the less the call made on her by the former duty, the greater is always the development of the latter: the dinner parties, concerts, evening parties, morning visits, letter writing, and all that goes with them. All this is over and above the engrossing duty which society imposes exclusively on women, of making themselves charming. A clever woman of the higher ranks finds nearly a sufficient employment of her talents in cultivating the graces of manner and the arts of conversation. To look only at the outward side of the subject: the great and continual exercise of thought which all women who attach any value to dressing well (I do not mean expensively, but with taste, and perception of natural and of artificial *convenance*) must bestow upon their own dress, perhaps also upon that of their daughters, would alone go a great way towards achieving respectable results in art, or science, or literature, and does actually exhaust much of the time and mental power they might have to spare for either.[28] If it were possible that all this number of little practical interests (which are made great to them) should leave them either much leisure, or much energy and freedom of mind, to be devoted to art or speculation, they must have a much greater original supply of active faculty than the vast majority of men. But this is not all. Independently of the regular offices of life which devolve upon a woman, she is expected to have her time and faculties always at the disposal of everybody. If a man has not a profession to exempt him from such demands, still, if he has a pursuit, he offends nobody by devoting his time to it; occupation is received as a valid excuse for his not answering to every casual demand which may be made on him. Are a woman's occupations, especially her chosen and voluntary ones, ever regarded as excusing her from any of what are termed the calls of society? Scarcely are her most necessary and recognised duties allowed as an exemption. It requires an illness in the family, or something else out of the common way, to entitle her to give her own business the precedence over other people's amusement. She must always be at the beck and call

28. "It appears to be the same right turn of mind which enables a man to acquire the truth, or the just idea of what is right, in the ornaments, as in the more stable principles of art. It has still the same centre of perfection, though it is the centre of a smaller circle.—To illustrate this by the fashion of dress, in which there is allowed to be a good or bad taste. The component parts of dress are continually changing from great to little, from short to long; but the general form still remains: it is still the same general dress which is comparatively fixed, though on a very slender foundation; but it is on this which fashion must rest. He who invents with the most success, or dresses in the best taste, would probably, from the same sagacity employed to greater purposes, have discovered equal skill, or have formed the same correct taste, in the highest labours of art." Sir Joshua Reynolds's *Discourses* (1776), Discourse VII (in *Works*, ed. Edmond Malone, 4th ed., 3 vols. [London: Cadell and Davies, 1809], vol. I, pp. 230–31).

of somebody, generally of everybody. If she has a study or a pursuit, she must snatch any short interval which accidentally occurs to be employed in it. A celebrated woman, in a work which I hope will some day be published, remarks truly that everything a woman does is done at odd times. Is it wonderful, then, if she does not attain the highest eminence in things which require consecutive attention, and the concentration on them of the chief interest of life? Such is philosophy, and such, above all, is art, in which, besides the devotion of the thoughts and feelings, the hand also must be kept in constant exercise to attain high skill.

There is another consideration to be added to all these. In the various arts and intellectual occupations, there is a degree of proficiency sufficient for living by it, and there is a higher degree on which depend the great productions which immortalize a name. To the attainment of the former, there are adequate motives in the case of all who follow the pursuit professionally: the other is hardly ever attained where there is not, or where there has not been at some period of life, an ardent desire of celebrity. Nothing less is commonly a sufficient stimulus to undergo the long and patient drudgery, which, in the case even of the greatest natural gifts, is absolutely required for great eminence in pursuits in which we already possess so many splendid memorials of the highest genius. Now, whether the cause be natural or artificial, women seldom have this eagerness for fame. Their ambition is generally confined within narrower bounds. The influence they seek is over those who immediately surround them. Their desire is to be liked, loved, or admired, by those whom they see with their eyes: and the proficiency in knowledge, arts, and accomplishments, which is sufficient for that, almost always contents them. This is a trait of character which cannot be left out of the account in judging of women as they are. I do not at all believe that it is inherent in women. It is only the natural result of their circumstances. The love of fame in men is encouraged by education and opinion: to "scorn delights and live laborious days" for its sake, is accounted the part of "noble minds;" even if spoken of as their "last infirmity,"[29] and is stimulated by the access which fame gives to all objects of ambition, including even the favour of women; while to women themselves all these objects are closed, and the desire of fame itself considered daring and unfeminine. Besides, how could it be that a woman's interests should not be all concentrated upon the impressions made on those who come into her daily life, when society has ordained that all her duties should be to them, and has contrived that all her comforts should depend on them? The natural desire of consideration from our fellow creatures is as strong in a woman as in a man; but society has so ordered things that public consideration is, in all ordinary cases, only attainable by her through the consideration of her husband or of her male relations, while her private consideration is forfeited by making herself individually prominent, or appearing in any other character than that of an appendage to men. Whoever is in the least capable of estimating the influence on the mind of the entire domestic and social position and the whole habit of a life, must easily recognise in that influence a complete explanation of nearly all the apparent differences between women and men, including the whole of those which imply any inferiority.

As for moral differences, considered as distinguished from intellectual, the distinction commonly drawn is to the advantage of women. They are declared to be better than men; an empty compliment, which must provoke a bitter smile from every woman of spirit, since there is no other situation in life in which it is the established order, and considered quite natural and suitable, that the better should obey the worse. If this piece of idle talk is good for anything, it is only as an admission by men, of the corrupting influence of power; for that is certainly the only truth which the fact, if it be a fact, either proves or illustrates. And it *is* true that servitude, except when it actually brutalizes, though corrupting to both, is less so to the slaves than to the slave-masters. It is wholesomer for the moral nature to be restrained, even by arbitrary power, than to be allowed to exercise arbitrary power without restraint. Women, it is said, seldomer fall under the penal law—contribute a much smaller number of offenders to the criminal calendar, than men. I doubt not that the same thing may be said, with the same truth, of negro slaves. Those who are under the control of others cannot

29. [John Milton, *Lycidas* (1638), 11.70–72.]

often commit crimes, unless at the command and for the purposes of their masters. I do not know a more signal instance of the blindness with which the world, including the herd of studious men, ignore and pass over all the influences of social circumstances, than their silly depreciation of the intellectual, and silly panegyrics on the moral, nature of women.

The complimentary dictum about women's superior moral goodness may be allowed to pair off with the disparaging one respecting their greater liability to moral bias. Women, we are told, are not capable of resisting their personal partialities: their judgment in grave affairs is warped by their sympathies and antipathies. Assuming it to be so, it is still to be proved that women are oftener misled by their personal feelings than men by their personal interests. The chief difference would seem in that case to be, that men are led from the course of duty and the public interest by their regard for themselves, women (not being allowed to have private interests of their own) by their regard for somebody else. It is also to be considered, that all the education which women receive from society inculcates on them the feeling that the individuals connected with them are the only ones to whom they owe any duty—the only ones whose interest they are called upon to care for; while, as far as education is concerned, they are left strangers even to the elementary ideas which are presupposed in any intelligent regard for larger interests or higher moral objects. The complaint against them resolves itself merely into this, that they fulfil only too faithfully the sole duty which they are taught, and almost the only one which they are permitted to practise.

The concessions of the privileged to the unprivileged are so seldom brought about by any better motive than the power of the unprivileged to extort them, that any arguments against the prerogative of sex are likely to be little attended to by the generality, as long as they are able to say to themselves that women do not complain of it. That fact certainly enables men to retain the unjust privilege some time longer; but does not render it less unjust. Exactly the same thing may be said of the women in the harem of an Oriental: they do not complain of not being allowed the freedom of European women. They think our women insufferably bold and unfeminine. How rarely it is that even men complain of the general order of society; and how much rarer still would such complaint be, if they did not know of any different order existing anywhere else. Women do not complain of the general lot of women; or rather they do, for plaintive elegies on it are very common in the writings of women, and were still more so as long as the lamentations could not be suspected of having any practical object. Their complaints are like the complaints which men make of the general unsatisfactoriness of human life; they are not meant to imply blame, or to plead for any change. But though women do not complain of the power of husbands, each complains of her own husband, or of the husbands of her friends. It is the same in all other cases of servitude, at least in the commencement of the emancipatory movement. The serfs did not at first complain of the power of their lords, but only of their tyranny. The, Commons began by claiming a few municipal privileges; they next asked an exemption for themselves from being taxed without their own consent; but they would at that time have thought it a great presumption to claim any share in the king's sovereign authority. The case of women is now the only case in which to rebel against established rules is still looked upon with the same eyes as was formerly a subject's claim to the right of rebelling against his king. A woman who joins in any movement which her husband disapproves, makes herself a martyr, without even being able to be an apostle, for the husband can legally put a stop to her apostleship. Women cannot be expected to devote themselves to the emancipation of women, until men in considerable number are prepared to join with them in the undertaking.

CHAPTER IV

There remains a question, not of less importance than those already discussed, and which will be asked the most importunately by those opponents whose conviction is somewhat shaken on the main point. What good are we to expect from the changes proposed in our customs and institutions? Would mankind be at all better off if women were free? If not, why disturb their minds, and attempt to make a social revolution in the name of an abstract right?

It is hardly to be expected that this question will be asked in respect to the change proposed in the condition of women in marriage. The sufferings, immoralities, evils of all sorts, produced in innumerable cases by the subjection of individual women to individual men, are far too terrible to be overlooked. Unthinking or uncandid persons, counting those cases alone which are extreme, or which attain publicity, may say that the evils are exceptional; but no one can be blind to their existence, nor, in many cases, to their intensity. And it is perfectly obvious that the abuse of power cannot be very much checked while the power remains. It is a power given, or offered, not to good men, or to decently respectable men, but to all men; the most brutal, and the most criminal. There is no check but that of opinion, and such men are in general within the reach of no opinion but that of men like themselves. If such men did not brutally tyrannize over the one human being whom the law compels to bear everything from them, society must already have reached a paradisiacal state. There could be no need any longer of laws to curb men's vicious propensities. Astraea must not only have returned to earth, but the heart of the worst man must have become her temple. The law of servitude in marriage is a monstrous contradiction to all the principles of the modern world, and to all the experience through which those principles have been slowly and painfully worked out. It is the sole case, now that negro slavery has been abolished, in which a human being in the plenitude of every faculty is delivered up to the tender mercies of another human being, in the hope forsooth that this other will use the power solely for the good of the person subjected to it. Marriage is the only actual bondage known to our law. There remain no legal slaves, except the mistress of every house.

It is not, therefore, on this part of the subject, that the question is likely to be asked, *Cui bono?*[30] We may be told that the evil would outweigh the good, but the reality of the good admits of no dispute. In regard, however, to the larger question, the removal of women's disabilities—their recognition as the equals of men in all that belongs to citizenship—the opening to them of all honourable employments, and of the training and education which qualifies for those employments—there are many persons for whom it is not enough that the inequality has no just or legitimate defence; they require to be told what express advantage would be obtained by abolishing it.

To which let me first answer, the advantage of having the most universal and pervading of all human relations regulated by justice instead of injustice. The vast amount of this gain to human nature, it is hardly possible, by any explanation or illustration, to place in a stronger light than it is placed by the bare statement, to any one who attaches a moral meaning to words. All the selfish propensities, the self-worship, the unjust self-preference, which exist among mankind, have their source and root in, and derive their principal nourishment from, the present constitution of the relation between men and women. Think what it is to a boy, to grow up to manhood in the belief that without any merit or any exertion of his own, though he may be the most frivolous and empty or the most ignorant and stolid of mankind, by the mere fact of being born a male he is by right the superior of all and every one of an entire half of the human race: including probably some whose real superiority to himself he has daily or hourly occasion to feel; but even if in his whole conduct he habitually follows a woman's guidance, still, if he is a fool, he thinks that of course she is not, and cannot be, equal in ability and judgment to himself; and if he is not a fool, he does worse—he sees that she is superior to him, and believes that, notwithstanding her superiority, he is entitled to command and she is bound to obey. What must be the effect on his character, of this lesson? And men of the cultivated classes are often not aware how deeply it sinks into the immense majority of male minds. For, among right-feeling and well-bred people, the inequality is kept as much as possible out of sight; above all, out of sight of the children. As much obedience is required from boys to their mother as to their father: they are not permitted to domineer over their sisters, nor are they accustomed to see these postponed to them, but the contrary; the compensations of the chivalrous feeling being made prominent, while the servitude which requires them is kept in the background. Well brought-up youths in the higher classes thus often escape the bad influences of the

30. ["For the good of whom?"]

situation in their early years, and only experience them when, arrived at manhood, they fall under the dominion of facts as they really exist. Such people are little aware, when a boy is differently brought up, how early the notion of his inherent superiority to a girl arises in his mind; how it grows with his growth and strengthens with his strength; how it is inoculated by one schoolboy upon another; how early the youth thinks himself superior to his mother, owing her perhaps forbearance, but no real respect; and how sublime and sultan-like a sense of superiority he feels, above all, over the woman whom he honours by admitting her to a partnership of his life. Is it imagined that all this does not pervert the whole manner of existence of the man, both as an individual and as a social being? It is an exact parallel to the feeling of a hereditary king that he is excellent above others by being born a king, or a noble by being born a noble. The relation between husband and wife is very like that between lord and vassal, except that the wife is held to more unlimited obedience than the vassal was. However the vassal's character may have been affected, for better and for worse, by his subordination, who can help seeing that the lord's was affected greatly for the worse? whether he was led to believe that his vassals were really superior to himself, or to feel that he was placed in command over people as good as himself, for no merits or labours of his own, but merely for having, as Figaro says, taken the trouble to be born. The self-worship of the monarch, or of the feudal superior, is matched by the self-worship of the male. Human beings do not grow up from childhood in the possession of unearned distinctions, without pluming themselves upon them. Those whom privileges not acquired by their merit, and which they feel to be disproportioned to it, inspire with additional humility, are always the few, and the best few. The rest are only inspired with pride, and the worst sort of pride, that which values itself upon accidental advantages, not of its own achieving. Above all, when the feeling of being raised above the whole of the other sex is combined with personal authority over one individual among them; the situation, if a school of conscientious and affectionate forbearance to those whose strongest points of character are conscience and affection, is to men of another quality a regularly constituted Academy or Gymnasium for training them in arrogance and overbearingness; which vices, if curbed by the certainty of resistance in their intercourse with other men, their equals, break out towards all who are in a position to be obliged to tolerate them, and often revenge themselves upon the unfortunate wife for the involuntary restraint which they are obliged to submit to elsewhere.

The example afforded, and the education given to the sentiments, by laying the foundation of domestic existence upon a relation contradictory to the first principles of social justice, must, from the very nature of man, have a perverting influence of such magnitude, that it is hardly possible with our present experience to raise our imaginations to the conception of so great a change for the better as would be made by its removal. All that education and civilization are doing to efface the influences on character of the law of force, and replace them by those of justice, remains merely on the surface, as long as the citadel of the enemy is not attacked. The principle of the modern movement in morals and politics, is that conduct, and conduct alone, entitles to respect: that not what men are, but what they do, constitutes their claim to deference; that, above all, merit, and not birth, is the only rightful claim to power and authority. If no authority, not in its nature temporary, were allowed to one human being over another, society would not be employed in building up propensities with one hand which it has to curb with the other. The child would really, for the first time in man's existence on earth, be trained in the way he should go, and when he was old there would be a chance that he would not depart from it. But so long as the right of the strong to power over the weak rules in the very heart of society, the attempt to make the equal right of the weak the principle of its outward actions will always be an uphill struggle; for the law of justice, which is also that of Christianity, will never get possession of men's inmost sentiments; they will be working against it, even when bending to it.

The second benefit to be expected from giving to women the free use of their faculties, by leaving them the free choice of their employments, and opening to them the same field of occupation and the same prizes and encouragements as to other human beings, would be that of doubling the mass of mental faculties

available for the higher service of humanity. Where there is now one person qualified to benefit mankind and promote the general improvement, as a public teacher, or an administrator of some branch of public or social affairs, there would then be a chance of two. Mental superiority of any kind is at present everywhere so much below the demand; there is such a deficiency of persons competent to do excellently anything which it requires any considerable amount of ability to do; that the loss to the world, by refusing to make use of one-half of the whole quantity of talent it possesses, is extremely serious. It is true that this amount of mental power is not totally lost. Much of it is employed, and would in any case be employed, in domestic management, and in the few other occupations open to women; and from the remainder indirect benefit is in many individual cases obtained, through the personal influence of individual women over individual men. But these benefits are partial; their range is extremely circumscribed; and if they must be admitted, on the one hand, as a deduction from the amount of fresh social power that would be acquired by giving freedom to one-half of the whole sum of human intellect, there must be added, on the other, the benefit of the stimulus that would be given to the intellect of men by the competition; or (to use a more true expression) by the necessity that would be imposed on them of deserving precedency before they could expect to obtain it.

This great accession to the intellectual power of the species, and to the amount of intellect available for the good management of its affairs, would be obtained, partly, through the better and more complete intellectual education of women, which would then improve *pari passu* with that of men. Women in general would be brought up equally capable of understanding business, public affairs, and the higher matters of speculation, with men in the same class of society; and the select few of the one as well as of the other sex, who were qualified not only to comprehend what is done or thought by others, but to think or do something considerable themselves, would meet with the same facilities for improving and training their capacities in the one sex as in the other. In this way, the widening of the sphere of action for women would operate for good, by raising their education to the level of that of men, and making the one participate in all improvements made in the other. But independently of this, the mere breaking down of the barrier would of itself have an educational virtue of the highest worth. The mere getting rid of the idea that all the wider subjects of thought and action, all the things which are of general and not solely of private interest, are men's business, from which women are to be warned off—positively interdicted from most of it, coldly tolerated in the little which is allowed them—the mere consciousness a woman would then have of being a human being like any other, entitled to choose her pursuits, urged or invited by the same inducements as any one else to interest herself in whatever is interesting to human beings, entitled to exert the share of influence on all human concerns which belongs to an individual opinion, whether she attempted actual participation in them or not—this alone would effect an immense expansion of the faculties of women, as well as enlargement of the range of their moral sentiments.

Besides the addition to the amount of individual talent available for the conduct of human affairs, which certainly are not at present so abundantly provided in that respect that they can afford to dispense with one-half of what nature proffers; the opinion of women would then possess a more beneficial, rather than a greater, influence upon the general mass of human belief and sentiment. I say a more beneficial, rather than a greater influence; for the influence of women over the general tone of opinion has always, or at least from the earliest known period, been very considerable. The influence of mothers on the early character of their sons, and the desire of young men to recommend themselves to young women, have in all recorded times been important agencies in the formation of character, and have determined some of the chief steps in the progress of civilization. Even in the Homeric age, αἰδώς towards the Τρωάδας ἑλκεσιπέπλους[31] is an acknowledged and powerful motive of action in the great Hector. The moral influence of women has had two modes of operation. First, it has been a softening influence. Those who were most liable to be the victims of violence, have naturally tended as much as they could towards

31. ["Regard for the judgment of the Trojan women." Homer, *The Iliad*, Bk. 6, 441–42.]

limiting its sphere and mitigating its excesses. Those who were not taught to fight, have naturally inclined in favour of any other mode of settling differences rather than that of fighting. In general, those who have been the greatest sufferers by the indulgence of selfish passion, have been the most earnest supporters of any moral law which offered a means of bridling passion. Women were powerfully instrumental in inducing the northern conquerors to adopt the creed of Christianity, a creed so much more favourable to women than any that preceded it. The conversion of the Anglo-Saxons and of the Franks may be said to have been begun by the wives of Ethelbert and Clovis. The other mode in which the effect of women's opinion has been conspicuous, is by giving a powerful stimulus to those qualities in men, which, not being themselves trained in, it was necessary for them that they should find in their protectors. Courage, and the military virtues generally, have at all times been greatly indebted to the desire which men felt of being admired by women: and the stimulus reaches far beyond this one class of eminent qualities, since, by a very natural effect of their position, the best passport to the admiration and favour of women has always been to be thought highly of by men. From the combination of the two kinds of moral influence thus exercised by women, arose the spirit of chivalry: the peculiarity of which is, to aim at combining the highest standard of the warlike qualities with the cultivation of a totally different class of virtues—those of gentleness, generosity, and self-abnegation, towards the non-military and defenceless classes generally, and a special submission and worship directed towards women; who were distinguished from the other defenceless classes by the high rewards which they had it in their power voluntarily to bestow on those who endeavoured to earn their favour, instead of extorting their subjection. Though the practice of chivalry fell even more sadly short of its theoretic standard than practice generally falls below theory, it remains one of the most precious monuments of the moral history of our race; as a remarkable instance of a concerted and organized attempt by a most disorganized and distracted society, to raise up and carry into practice a moral ideal greatly in advance of its social conditions and institutions; so much so as to have been completely frustrated in the main object, yet never entirely inefficacious, and which has left a most sensible, and for the most part a highly valuable impress on the ideas and feelings of all subsequent times.

The chivalrous ideal is the acme of the influence of women's sentiments on the moral cultivation of mankind: and if women are to remain in their subordinate situation, it were greatly to be lamented that the chivalrous standard should have passed away, for it is the only one at all capable of mitigating the demoralizing influences of that position. But the changes in the general state of the species rendered inevitable the substitution of a totally different ideal of morality for the chivalrous one. Chivalry was the attempt to infuse moral elements into a state of society in which everything depended for good or evil on individual prowess, under the softening influences of individual delicacy and generosity. In modern societies, all things, even in the military department of affairs, are decided, not by individual effort, but by the combined operations of numbers; while the main occupation of society has changed from fighting to business, from military to industrial life. The exigencies of the new life are no more exclusive of the virtues of generosity than those of the old, but it no longer entirely depends on them. The main foundations of the moral life of modern times must be justice and prudence; the respect of each for the rights of every other, and the ability of each to take care of himself. Chivalry left without legal check all forms of wrong which reigned unpunished throughout society; it only encouraged a few to do right in preference to wrong, by the direction it gave to the instruments of praise and admiration. But the real dependence of morality must always be upon its penal sanctions—its power to deter from evil. The security of society cannot rest on merely rendering honour to right, a motive so comparatively weak in all but a few, and which on very many does not operate at all. Modern society is able to repress wrong through all departments of life, by a fit exertion of the superior strength which civilization has given it, and thus to render the existence of the weaker members of society (no longer defenceless but protected by law) tolerable to them, without reliance on the chivalrous feelings of those who are in a position to tyrannize. The beauties and graces of the chivalrous character are still what they were, but the rights of the weak, and the general

comfort of human life, now rest on a far surer and steadier support; or rather, they do so in every relation of life except the conjugal.

At present the moral influence of women is no less real, but it is no longer of so marked and definite a character: it has more nearly merged in the general influence of public opinion. Both through the contagion of sympathy, and through the desire of men to shine in the eyes of women, their feelings have great effect in keeping alive what remains of the chivalrous ideal—in fostering the sentiments and continuing the traditions of spirit and generosity. In these points of character, their standard is higher than that of men; in the quality of justice, somewhat lower. As regards the relations of private life it may be said generally, that their influence is, on the whole, encouraging to the softer virtues, discouraging to the sterner: though the statement must be taken with all the modifications dependent on individual character. In the chief of the greater trials to which virtue is subject in the concerns of life—the conflict between interest and principle—the tendency of women's influence is of a very mixed character. When the principle involved happens to be one of the very few which the course of their religious or moral education has strongly impressed upon themselves, they are potent auxiliaries to virtue: and their husbands and sons are often prompted by them to acts of abnegation which they never would have been capable of without that stimulus. But, with the present education and position of women, the moral principles which have been impressed on them cover but a comparatively small part of the field of virtue, and are, moreover, principally negative; forbidding particular acts, but having little to do with the general direction of the thoughts and purposes. I am afraid it must be said, that disinterestedness in the general conduct of life—the devotion of the energies to purposes which hold out no promise of private advantages to the family—is very seldom encouraged or supported by women's influence. It is small blame to them that they discourage objects of which they have not learnt to see the advantage, and which withdraw their men from them, and from the interests of the family. But the consequence is that women's influence is often anything but favourable to public virtue.

Women have, however, some share of influence in giving the tone to public moralities since their sphere of action has been a little widened, and since a considerable number of them have occupied themselves practically in the promotion of objects reaching beyond their own family and household. The influence of women counts for a great deal in two of the most marked features of modern European life—its aversion to war, and its addiction to philanthropy. Excellent characteristics both; but unhappily, if the influence of women is valuable in the encouragement it gives to these feelings in general, in the particular applications the direction it gives to them is at least as often mischievous as useful. In the philanthropic department more particularly, the two provinces chiefly cultivated by women are religious proselytism and charity. Religious proselytism at home, is but another word for embittering of religious animosities: abroad, it is usually a blind running at an object, without either knowing or heeding the fatal mischiefs—fatal to the religious object itself as well as to all other desirable objects—which may be produced by the means employed. As for charity, it is a matter in which the immediate effect on the persons directly concerned, and the ultimate consequence to the general good, are apt to be at complete war with one another: while the education given to women—an education of the sentiments rather than of the understanding—and the habit inculcated by their whole life, of looking to immediate effects on persons, and not to remote effects on classes of persons—make them both unable to see, and unwilling to admit, the ultimate evil tendency of any form of charity or philanthropy which commends itself to their sympathetic feelings. The great and continually increasing mass of unenlightened and shortsighted benevolence, which, taking the care of people's lives out of their own hands, and relieving them from the disagreeable consequences of their own acts, saps the very foundations of the self-respect, self-help, and self-control which are the essential conditions both of individual prosperity and of social virtue—this waste of resources and of benevolent feelings in doing harm instead of good, is immensely swelled by women's contributions, and stimulated by their influence. Not that this is a mistake likely to be made by women, where they have actually the practical management of schemes

of beneficence. It sometimes happens that women who administer public charities—with that insight into present fact, and especially into the minds and feelings of those with whom they are in immediate contact, in which women generally excel men—recognise in the clearest manner the demoralizing influence of the alms given or the help afforded, and could give lessons on the subject to many a male political economist. But women who only give their money, and are not brought face to face with the effects it produces, how can they be expected to foresee them? A woman born to the present lot of women, and content with it, how should she appreciate the value of self-dependence? She is not self-dependent; she is not taught self-dependence; her destiny is to receive everything from others, and why should what is good enough for her be bad for the poor? Her familiar notions of good are of blessings descending from a superior. She forgets that she is not free, and that the poor are; that if what they need is given to them unearned, they cannot be compelled to earn it: that everybody cannot be taken care of by everybody, but there must be some motive to induce people to take care of themselves; and that to be helped to help themselves, if they are physically capable of it, is the only charity which proves to be charity in the end.

These considerations shew how usefully the part which women take in the formation of general opinion, would be modified for the better by that more enlarged instruction, and practical conversancy with the things which their opinions influence, that would necessarily arise from their social and political emancipation. But the improvement it would work through the influence they exercise, each in her own family, would be still more remarkable.

It is often said that in the classes most exposed to temptation, a man's wife and children tend to keep him honest and respectable, both by the wife's direct influence, and by the concern he feels for their future welfare. This may be so, and no doubt often is so, with those who are more weak than wicked; and this beneficial influence would be preserved and strengthened under equal laws; it does not depend on the woman's servitude, but is, on the contrary, diminished by the disrespect which the inferior class of men always at heart feel towards those who are subject to their power. But when we ascend higher in the scale, we come among a totally different set of moving forces. The wife's influence tends, as far as it goes, to prevent the husband from falling below the common standard of approbation of the country. It tends quite as strongly to hinder him from rising above it. The wife is the auxiliary of the common public opinion. A man who is married to a woman his inferior in intelligence, finds her a perpetual dead weight, or, worse than a dead weight, a drag, upon every aspiration of his to be better than public opinion requires him to be. It is hardly possible for one who is in these bonds, to attain exalted virtue. If he differs in his opinion from the mass—if he sees truths which have not yet dawned upon them, or if, feeling in his heart truths which they nominally recognise, he would like to act up to those truths more conscientiously than the generality of mankind—to all such thoughts and desires, marriage is the heaviest of drawbacks, unless he be so fortunate as to have a wife as much above the common level as he himself is.

For, in the first place, there is always some sacrifice of personal interest required; either of social consequence, or of pecuniary means; perhaps the risk of even the means of subsistence. These sacrifices and risks he may be willing to encounter for himself; but he will pause before he imposes them on his family. And his family in this case means his wife and daughters; for he always hopes that his sons will feel as he feels himself, and that what he can do without, they will do without, willingly, in the same cause. But his daughters—their marriage may depend upon it: and his wife, who is unable to enter into or understand the objects for which these sacrifices are made—who, if she thought them worth any sacrifice, would think so on trust, and solely for his sake—who can participate in none of the enthusiasm or the self-approbation he himself may feel, while the things which he is disposed to sacrifice are all in all to her; will not the best and most unselfish man hesitate the longest before bringing on her this consequence? If it be not the comforts of life, but only social consideration, that is at stake, the burthen upon his conscience and feelings is still very severe. Whoever has a wife and children has given hostages

to Mrs. Grundy.[32] The approbation of that potentate may be a matter of indifference to him, but it is of great importance to his wife. The man himself may be above opinion, or may find sufficient compensation in the opinion of those of his own way of thinking. But to the women connected with him, he can offer no compensation. The almost invariable tendency of the wife to place her influence in the same scale with social consideration, is sometimes made a reproach to women, and represented as a peculiar trait of feebleness and childishness of character in them: surely with great injustice. Society makes the whole life of a woman, in the easy classes, a continued self-sacrifice; it exacts from her an unremitting restraint of the whole of her natural inclinations, and the sole return it makes to her for what often deserves the name of a martyrdom, is consideration. Her consideration is inseparably connected with that of her husband, and after paying the full price for it, she finds that she is to lose it, for no reason of which she can feel the cogency. She has sacrificed her whole life to it, and her husband will not sacrifice to it a whim, a freak, an eccentricity; something not recognised or allowed for by the world, and which the world will agree with her in thinking a folly, if it thinks no worse! The dilemma is hardest upon that very meritorious class of men, who, without possessing talents which qualify them to make a figure among those with whom they agree in opinion, hold their opinion from conviction, and feel bound in honour and conscience to serve it, by making profession of their belief, and giving their time, labour, and means, to anything undertaken in its behalf. The worst case of all is when such men happen to be of a rank and position which of itself neither gives them, nor excludes them from, what is considered the best society; when their admission to it depends mainly on what is thought of them personally—and however unexceptionable their breeding and habits, their being identified with opinions and public conduct unacceptable to those who give the tone to society would operate as an effectual exclusion. Many a woman flatters herself (nine times out of ten quite erroneously) that nothing prevents her and her husband from moving in the highest society of her neighbourhood—society in which others well known to her, and in the same class of life, mix freely—except that her husband is unfortunately a Dissenter, or has the reputation of mingling in low radical politics. That it is, she thinks, which hinders George from getting a commission or a place, Caroline from making an advantageous match, and prevents her and her husband from obtaining invitations, perhaps honours, which, for aught she sees, they are as well entitled to as some folks. With such an influence in every house, either exerted actively, or operating all the more powerfully for not being asserted, is it any wonder that people in general are kept down in that mediocrity of respectability which is becoming a marked characteristic of modern times?

There is another very injurious aspect in which the effect, not of women's disabilities directly, but of the broad line of difference which those disabilities create between the education and character of a woman and that of a man, requires to be considered. Nothing can be more unfavourable to that union of thoughts and inclinations which is the ideal of married life. Intimate society between people radically dissimilar to one another, is an idle dream. Unlikeness may attract, but it is likeness which retains; and in proportion to the likeness is the suitability of the individuals to give each other a happy life. While women are so unlike men, it is not wonderful that selfish men should feel the need of arbitrary power in their own hands, to arrest *in limine* the life-long conflict of inclinations, by deciding every question on the side of their own preference. When people are extremely unlike, there can be no real identity of interest. Very often there is conscientious difference of opinion between married people, on the highest points of duty. Is there any reality in the marriage union where this takes place? Yet it is not uncommon anywhere, when the woman has any earnestness of character; and it is a very general case indeed in Catholic countries, when she is supported in her dissent by the only other authority to which she is taught to bow, the priest. With the usual barefacedness of power not accustomed to find itself disputed, the influence of priests over women is attacked by

32. [A character in Thomas Morton's play *Speed the Plough* (1798), who represents the censoring opinions of the rigidly respectable.]

Protestant and Liberal writers, less for being bad in itself, than because it is a rival authority to the husband, and raises up a revolt against his infallibility. In England, similar differences occasionally exist when an Evangelical wife has allied herself with a husband of a different quality; but in general this source at least of dissension is got rid of, by reducing the minds of women to such a nullity, that they have no opinions but those of Mrs. Grundy or those which the husband tells them to have. When there is no difference of opinion, differences merely of taste may be sufficient to detract greatly from the happiness of married life. And though it may stimulate the amatory propensities of men, it does not conduce to married happiness, to exaggerate by differences of education whatever may be the native differences of the sexes. If the married pair are well-bred and well-behaved people, they tolerate each other's tastes; but is mutual toleration what people look forward to, when they enter into marriage? These differences of inclination will naturally make their wishes different, if not restrained by affection or duty, as to almost all domestic questions which arise. What a difference there must be in the society which the two persons will wish to frequent, or be frequented by! Each will desire associates who share their own tastes: the persons agreeable to one, will be indifferent or positively disagreeable to the other; yet there can be none who are not common to both, for married people do not now live in different parts of the house and have totally different visiting lists, as in the reign of Louis XV.[33] They cannot help having different wishes as to the bringing up of the children: each will wish to see reproduced in them their own tastes and sentiments: and there is either a compromise, and only a half-satisfaction to either, or the wife has to yield—often with bitter suffering; and, with or without intention, her occult influence continues to counterwork the husband's purposes.

It would of course be extreme folly to suppose that these differences of feeling and inclination only exist because women are brought up differently from men, and that there would not be differences of taste under any imaginable circumstances. But there is nothing beyond the mark in saying that the distinction in bringing-up immensely aggravates those differences, and renders them wholly inevitable. While women are brought up as they are, a man and a woman will but rarely find in one another real agreement of tastes and wishes as to daily life. They will generally have to give it up as hopeless, and renounce the attempt to have, in the intimate associate of their daily life, that *idem velle*, *idem nolle*,[34] which is the recognised bond of any society that is really such: or if the man succeeds in obtaining it, he does so by choosing a woman who is so complete a nullity that she has no *velle* or *nolle* at all, and is as ready to comply with one thing as another if anybody tells her to do so. Even this calculation is apt to fail; dulness and want of spirit are not always a guarantee of the submission which is so confidently expected from them. But if they were, is this the ideal of marriage? What, in this case, does the man obtain by it, except an upper servant, a nurse, or a mistress? On the contrary, when each of two persons, instead of being a nothing, is a something; when they are attached to one another, and are not too much unlike to begin with; the constant partaking in the same things, assisted by their sympathy, draws out the latent capacities of each for being interested in the things which were at first interesting only to the other; and works a gradual assimilation of the tastes and characters to one another, partly by the insensible modification of each but more by a real enriching of the two natures, each acquiring the tastes and capacities of the other in addition to its own. This often happens between two friends of the same sex, who are much associated in their daily life: and it would be a common, if not the commonest, case in marriage, did not the totally different bringing-up of the two sexes make it next to an impossibility to form a really well-assorted union. Were this remedied, whatever differences there might still be in individual tastes, there would at least be, as a general rule, complete unity and unanimity as to the great objects of life. When the two persons both care for great objects, and are a help and encour-

33. [King of France (1715–74).]

34. ["Wanting the same and not wanting the same," that is to say, similarity in opinions, tastes, or values.]

agement to each other in whatever regards these, the minor matters on which their tastes may differ are not all-important to them; and there is a foundation for solid friendship, of an enduring character, more likely than anything else to make it, through the whole of life, a greater pleasure to each to give pleasure to the other, than to receive it.

I have considered, thus far, the effects on the pleasures and benefits of the marriage union which depend on the mere unlikeness between the wife and the husband: but the evil tendency is prodigiously aggravated when the unlikeness is inferiority. Mere unlikeness, when it only means difference of good qualities, may be more a benefit in the way of mutual improvement, than a drawback from comfort. When each emulates, and desires and endeavours to acquire, the other's peculiar qualities, the difference does not produce diversity of interest, but increased identity of it, and makes each still more valuable to the other. But when one is much the inferior of the two in mental ability and cultivation, and is not actively attempting by the other's aid to rise to the other's level, the whole influence of the connexion upon the development of the superior of the two is deteriorating: and still more so in a tolerably happy marriage than in an unhappy one. It is not with impunity that the superior in intellect shuts himself up with an inferior, and elects that inferior for his chosen, and sole completely intimate, associate. Any society which is not improving, is deteriorating: and the more so, the closer and more familiar it is. Even a really superior man almost always begins to deteriorate when he is habitually (as the phrase is) king of his company: and in his most habitual company the husband who has a wife inferior to him is always so. While his self-satisfaction is incessantly ministered to on the one hand, on the other he insensibly imbibes the modes of feeling, and of looking at things, which belong to a more vulgar or a more limited mind than his own. This evil differs from many of those which have hitherto been dwelt on, by being an increasing one. The association of men with women in daily life is much closer and more complete than it ever was before. Men's life is more domestic. Formerly, their pleasures and chosen occupations were among men, and in men's company: their wives had but a fragment of their lives. At the present time, the progress of civilization, and the turn of opinion against the rough amusements and convivial excesses which formerly occupied most men in their hours of relaxation—together with (it must be said) the improved tone of modern feeling as to the reciprocity of duty which binds the husband towards the wife—have thrown the man very much more upon home and its inmates, for his personal and social pleasures: while the kind and degree of improvement which has been made in women's education, has made them in some degree capable of being his companions in ideas and mental tastes, while leaving them, in most cases, still hopelessly inferior to him. His desire of mental communion is thus in general satisfied by a communion from which he learns nothing. An unimproving and unstimulating companionship is substituted for (what he might otherwise have been obliged to seek) the society of his equals in powers and his fellows in the higher pursuits. We see, accordingly, that young men of the greatest promise generally cease to improve as soon as they marry, and, not improving, inevitably degenerate. If the wife does not push the husband forward, she always holds him back. He ceases to care for what she does not care for; he no longer desires, and ends by disliking and shunning, society congenial to his former aspirations, and which would now shame his falling-off from them; his higher faculties both of mind and heart cease to be called into activity. And this change coinciding with the new and selfish interests which are created by the family, after a few years he differs in no material respect from those who have never had wishes for anything but the common vanities and the common pecuniary objects.

What marriage may be in the case of two persons of cultivated faculties, identical in opinions and purposes, between whom there exists that best kind of equality, similarity of powers and capacities with reciprocal superiority in them—so that each can enjoy the luxury of looking up to the other, and can have alternately the pleasure of leading and of being led in the path of development—I will not attempt to describe. To those who can conceive it, there is no need; to those who cannot, it would appear the dream of an enthusiast. But I maintain, with the profoundest conviction, that this, and this only, is the ideal of

marriage; and that all opinion, customs, and institutions which favour any other notion of it, or turn the conceptions and aspirations connected with it into any other direction, by whatever pretences they may be coloured, are relics of primitive barbarism. The moral regeneration of mankind will only really commence, when the most fundamental of the social relations is placed under the rule of equal justice, and when human beings learn to cultivate their strongest sympathy with an equal in rights and in cultivation.

Thus far, the benefits which it has appeared that the world would gain by ceasing to make sex a disqualification for privileges and a badge of subjection, are social rather than individual; consisting in an increase of the general fund of thinking and acting power, and an improvement in the general conditions of the association of men with women. But it would be a grievous understatement of the case to omit the most direct benefit of all, the unspeakable gain in private happiness to the liberated half of the species; the difference to them between a life of subjection to the will of others, and a life of rational freedom. After the primary necessities of food and raiment, freedom is the first and strongest want of human nature. While mankind are lawless, their desire is for lawless freedom. When they have learnt to understand the meaning of duty and the value of reason, they incline more and more to be guided and restrained by these in the exercise of their freedom; but they do not therefore desire freedom less; they do not become disposed to accept the will of other people as the representative and interpreter of those guiding principles. On the contrary, the communities in which the reason has been most cultivated, and in which the idea of social duty has been most powerful, are those which have most strongly asserted the freedom of action of the individual—the liberty of each to govern his conduct by his own feelings of duty, and by such laws and social restraints as his own conscience can subscribe to.

He who would rightly appreciate the worth of personal independence as an element of happiness, should consider the value he himself puts upon it as an ingredient of his own. There is no subject on which there is a greater habitual difference of judgment between a man judging for himself, and the same man judging for other people. When he hears others complaining that they are not allowed freedom of action—that their own will has not sufficient influence in the regulation of their affairs—his inclination is, to ask, what are their grievances? what positive damage they sustain? and in what respect they consider their affairs to be mismanaged? and if they fail to make out, in answer to these questions, what appears to him a sufficient case, he turns a deaf ear, and regards their complaint as the fanciful querulousness of people whom nothing reasonable will satisfy. But he has a quite different standard of judgment when he is deciding for himself. Then, the most unexceptionable administration of his interests by a tutor set over him, does not satisfy his feelings: his personal exclusion from the deciding authority appears itself the greatest grievance of all, rendering it superfluous even to enter into the question of mismanagement. It is the same with nations. What citizen of a free country would listen to any offers of good and skilful administration, in return for the abdication of freedom? Even if he could believe that good and skilful administration can exist among a people ruled by a will not their own, would not the consciousness of working out their own destiny under their own moral responsibility be a compensation to his feelings for great rudeness and imperfection in the details of public affairs? Let him rest assured that whatever he feels on this point, women feel in a fully equal degree. Whatever has been said or written, from the time of Herodotus to the present, of the ennobling influence of free government[35]—the nerve and spring which it gives to all the faculties, the larger and higher objects which it presents to the intellect and feelings, the more unselfish public spirit, and calmer and broader views of duty, that it engenders, and the generally loftier platform on which it elevates the individual as a moral, spiritual, and social being—is every particle as true of women as of men. Are these things no important part of individual happiness? Let any man call to mind what he himself felt on emerging

35. [Herodotus (c. 484–c. 425 B.C.E.) was the first great historian. Bk. 3, 80 of his *History* of the Persian wars consists of a speech about the evils of monarchy and in praise of popular government.]

from boyhood—from the tutelage and control of even loved and affectionate elders—and entering upon the responsibilities of manhood. Was it not like the physical effect of taking off a heavy weight, or releasing him from obstructive, even if not otherwise painful, bonds? Did he not feel twice as much alive, twice as much a human being, as before? And does he imagine that women have none of these feelings? But it is a striking fact, that the satisfactions and mortifications of personal pride, though all in all to most men when the case is their own, have less allowance made for them in the case of other people, and are less listened to as a ground or a justification of conduct, than any other natural human feelings; perhaps because men compliment them in their own case with the names of so many other qualities, that they are seldom conscious how mighty an influence these feelings exercise in their own lives. No less large and powerful is their part, we may assure ourselves, in the lives and feelings of women. Women are schooled into suppressing them in their most natural and most healthy direction, but the internal principle remains, in a different outward form. An active and energetic mind, if denied liberty, will seek for power: refused the command of itself, it will assert its personality by attempting to control others. To allow to any human beings no existence of their own but what depends on others, is giving far too high a premium on bending others to their purposes. Where liberty cannot be hoped for, and power can, power becomes the grand object of human desire; those to whom others will not leave the undisturbed management of their own affairs, will compensate themselves, if they can, by meddling for their own purposes with the affairs of others. Hence also women's passion for personal beauty, and dress and display; and all the evils that flow from it, in the way of mischievous luxury and social immorality. The love of power and the love of liberty are in eternal antagonism. Where there is least liberty, the passion for power is the most ardent and unscrupulous. The desire of power over others can only cease to be a depraving agency among mankind, when each of them individually is able to do without it: which can only be where respect for liberty in the personal concerns of each is an established principle.

But it is not only through the sentiment of personal dignity, that the free direction and disposal of their own faculties is a source of individual happiness, and to be fettered and restricted in it, a source of unhappiness, to human beings, and not least to women. There is nothing, after disease, indigence, and guilt, so fatal to the pleasurable enjoyment of life as the want of a worthy outlet for the active faculties. Women who have the cares of a family, and while they have the cares of a family, have this outlet, and it generally suffices for them: but what of the greatly increasing number of women, who have had no opportunity of exercising the vocation which they are mocked by telling them is their proper one? What of the women whose children have been lost to them by death or distance, or have grown up, married, and formed homes of their own? There are abundant examples of men who, after a life engrossed by business, retire with a competency to the enjoyment, as they hope, of rest, but to whom, as they are unable to acquire new interests and excitements that can replace the old, the change to a life of inactivity brings ennui, melancholy, and premature death. Yet no one thinks of the parallel case of so many worthy and devoted women, who, having paid what they are told is their debt to society—having brought up a family blamelessly to manhood and womanhood—having kept a house as long as they had a house needing to be kept—are deserted by the sole occupation for which they have fitted themselves; and remain with undiminished activity but with no employment for it, unless perhaps a daughter or daughter-in-law is willing to abdicate in their favour the discharge of the same functions in her younger household. Surely a hard lot for the old age of those who have worthily discharged, as long as it was given to them to discharge, what the world accounts their only social duty. Of such women, and of those others to whom this duty has not been committed at all—many of whom pine through life with the consciousness of thwarted vocations, and activities which are not suffered to expand—the only resources, speaking generally, are religion and charity. But their religion, though it may be one of feeling, and of ceremonial observance, cannot be a religion of action, unless in the form of charity. For charity many of them are by

nature admirably fitted; but to practise it usefully, or even without doing mischief, requires the education, the manifold preparation, the knowledge and the thinking powers, of a skilful administrator. There are few of the administrative functions of government for which a person would not be fit, who is fit to bestow charity usefully. In this as in other cases (preeminently in that of the education of children), the duties permitted to women cannot be performed properly, without their being trained for duties which, to the great loss of society, are not permitted to them. And here let me notice the singular way in which the question of women's disabilities is frequently presented to view, by those who find it easier to draw a ludicrous picture of what they do not like, than to answer the arguments for it. When it is suggested that women's executive capacities and prudent counsels might sometimes be found valuable in affairs of state, these lovers of fun hold up to the ridicule of the world, as sitting in parliament or in the cabinet, girls in their teens, or young wives of two or three and twenty, transported bodily, exactly as they are, from the drawing-room to the House of Commons. They forget that males are not usually selected at this early age for a seat in Parliament, or for responsible political functions. Common sense would tell them that if such trusts were confided to women, it would be to such as having no special vocation for married life, or preferring another employment of their faculties (as many women even now prefer to marriage some of the few honourable occupations within their reach), have spent the best years of their youth in attempting to qualify themselves for the pursuits in which they desire to engage; or still more frequently perhaps, widows or wives of forty or fifty, by whom the knowledge of life and faculty of government which they have acquired in their families, could by the aid of appropriate studies be made available on a less contracted scale. There is no country of Europe in which the ablest men have not frequently experienced, and keenly appreciated, the value of the advice and help of clever and experienced women of the world, in the attainment both of private and of public objects; and there are important matters of public administration to which few men are equally competent with such women; among others, the detailed control of expenditure. But what we are now discussing is not the need which society has of the services of women in public business, but the dull and hopeless life to which it so often condemns them, by forbidding them to exercise the practical abilities which many of them are conscious of, in any wider field than one which to some of them never was, and to others is no longer, open. If there is anything vitally important to the happiness of human beings, it is that they should relish their habitual pursuit. This requisite of an enjoyable life is very imperfectly granted, or altogether denied, to a large part of mankind; and by its absence many a life is a failure, which is provided, in appearance, with every requisite of success. But if circumstances which society is not yet skilful enough to overcome, render such failures often for the present inevitable, society need not itself inflict them. The injudiciousness of parents, a youth's own inexperience, or the absence of external opportunities for the congenial vocation, and their presence for an uncongenial, condemn numbers of men to pass their lives in doing one thing reluctantly and ill, when there are other things which they could have done well and happily. But on women this sentence is imposed by actual law, and by customs equivalent to law. What, in unenlightened societies, colour, race, religion, or in the case of a conquered country, nationality, are to some men, sex is to all women; a peremptory exclusion from almost all honourable occupations, but either such as cannot be fulfilled by others, or such as those others do not think worthy of their acceptance. Sufferings arising from causes of this nature usually meet with so little sympathy, that few persons are aware of the great amount of unhappiness even now produced by the feeling of a wasted life. The case will be even more frequent, as increased cultivation creates a greater and greater disproportion between the ideas and faculties of women, and the scope which society allows to their activity.

When we consider the positive evil caused to the disqualified half of the human race by their disqualification—first in the loss of the most inspiriting and elevating kind of personal enjoyment, and next in the weariness, disappointment, and profound dissatisfaction with life, which are so often the substitute for it; one feels that among all the lessons which men require for carrying on the struggle against the inevitable imperfections of their lot on earth, there

is no lesson which they more need, than not to add to the evils which nature inflicts, by their jealous and prejudiced restrictions on one another. Their vain fears only substitute other and worse evils for those which they are idly apprehensive of: while every restraint on the freedom of conduct of any of their human fellow creatures, (otherwise than by making them responsible for any evil actually caused by it), dries up *pro tanto* the principal fountain of human happiness, and leaves the species less rich, to an inappreciable degree, in all that makes life valuable to the individual human being.

KARL MARX

Western ideologies have often been philosophical, combining critical reflection with systematic boldness. But few philosophies have been social or political ideologies. Marxism is almost unique in this regard. Arising out of the thinking of a German philosopher, it became first a comprehensive conception of human nature, history, society, and salvation, and then the mobilizing ideology of nations. Marxism warns us not to forget that our thinking about human beings and their lives arises out of history and is capable of being realized in history. Moreover, it was no accident that Marxism became the framework of commitments and of conduct for millions. For its turn away from abstract, theoretical thinking to practice and action is part of its very understanding of history, society, thought, and the ultimate goals of human life.

Marxism arises out of the life and work of Karl Heinrich Marx (1818–1883), who was born on May 5, 1818, in Trier, in Prussia. Marx's father, Heinrich, was a lawyer of Jewish descent who converted to Christianity in 1824. He expected his son to practice law also, and Karl Marx entered the University of Bonn in 1836 with this intention. But a year later, he transferred to Berlin, became associated with Bruno Bauer and the young left-wing Hegelians, and turned to philosophy. These disciples of Georg Wilhelm Friedrich Hegel had traded in Hegel's reverence for religion, morality, philosophy, and the spiritual character of history for a humanistic critique in which religion, morality, and traditional politics were viewed as distortions of what is genuinely human and ultimately as sources of alienation. According to Ludwig Feuerbach, a young theologian and a leader of the movement, Hegel had been wrong to see all things, including human culture, society, and morality, as expressions of Spirit or the divine; rather, all things, even God, are in truth expressions of human interests and human productivity.

After completing his doctoral dissertation, on the ancient atomists and critics of religion, Democritus and Epicurus, at the University of Jena in 1841, Marx turned to journalism. He edited the radical newspaper the *Rheinische Zeitung* in Cologne until 1843, when government censorship led him to resign. During this period Marx completed his critique of the *Philosophy of Right*, Hegel's central work on ethics and politics, and wrote his famous review-essay of Bauer's *The Jewish Question*, with its important treatment of political alienation, the primacy of social existence, and the relation between money and labor.

In June of 1843 Marx married his childhood love, Jenny von Westphalen, and together they moved to Paris, as Marx joined Arnold Ruge, another young left-wing Hegelian, in editing the *Deutsch-Französische Jahrbücher* (*German-French Yearbooks*). In France Marx became reacquainted with Friedrich Engels, who became his closest friend and collaborator. By the end of 1844, the two had completed their first project, *The Holy Family*, a critique of young Hegelian philosophy on the basis of a new humanism, a critical analysis of the Hegelian treatment of property, and an attack on the hidden theology of the young radicals.

In 1845 Marx was banished from Paris and moved to Brussels. He and Engels joined the Communist League in 1847 and in February 1848, on the eve of the revolutions in France, published their famous *Manifesto*. Then, after moving back and forth across Western Europe, Marx was finally expelled from all Prussian territories; he set sail for London, where he settled in 1849 and lived for virtually all of his remaining years.

The 1850s and 1860s were extremely difficult decades for Marx and his family. Poverty and illness filled their lives with suffering and grief. By 1856 three of the six Marx children had died. Marx worked steadily, even fanatically, ten hours a day in the British Museum studying economics and the analysis of political economy, and then writing at home long into the night. The results were the *Critique of Political Economy* of 1859; the long unpublished draft on political economy called the *Grundrisse* (1857–58); and, most important,

the critical analysis of capitalism, *Capital*, the first volume of which was published in 1867. The final two volumes were published by Engels in 1885 and 1894, after Marx's death.

During the 1850s Marx wrote articles for the *New York Daily Tribune*, but the American Civil War put an end to even such modest employment. Fortunately, by the end of the decade, a small bequest to Jenny and Engels's support from his company in Manchester bettered the Marx family's situation. By this time, however, Marx's health was very bad.

In 1864 Marx helped found the International Working Men's Association in London and served on its General Council for seven years. But his health deteriorated steadily. Physically debilitated, Marx was increasingly less productive in what would be his last decade. In 1881 Jenny died of cancer; ill since 1878, she had been less and less able to help decipher his notorious handwriting. Then, on March 14, 1883, Marx too died, leaving to Engels the task of editing the remaining volumes of *Capital*. Less than forty years later, in the Russian Revolution of 1917, history would seek to confirm Marx's understanding of it in a rare, if not unique, celebration of the efficacy of philosophical thought to change the world—and not merely to understand it.

Alienated Labor

We have proceeded from the presuppositions of political economy. We have accepted its language and its laws. We presupposed private property, the separation of labor, capital and land, hence of wages, profit of capital and rent, likewise the division of labor, competition, the concept of exchange value, etc. From political economy itself, in its own words, we have shown that the worker sinks to the level of a commodity, the most miserable commodity; that the misery of the worker is inversely proportional to the power and volume of his production; that the necessary result of competition is the accumulation of capital in a few hands and thus the revival of monopoly in a more frightful form; and finally that the distinction between capitalist and landowner, between agricultural laborer and industrial worker, disappears and the whole society must divide into the two classes of *proprietors* and propertyless *workers*.

Political economy proceeds from the fact of private property. It does not explain private property. It grasps the actual, *material* process of private property in abstract and general formulae which it then takes as *laws*. It does not *comprehend* these laws, that is, does not prove them as proceeding from the nature of private property. Political economy does not disclose the reason for the division between capital and labor, between capital and land. When, for example, the relation of wages to profits is determined, the ultimate basis is taken to be the interest of the capitalists; that is, political economy assumes what it should develop. Similarly, competition is referred to at every point and explained from external circumstances. Political economy teaches us nothing about the extent to which these external, apparently accidental circumstances are simply the expression of a necessary development. We have seen how political economy regards exchange itself as an accidental fact. The only wheels which political economy puts in motion are *greed* and the *war among the greedy*, *competition*.

Just because political economy does not grasp the interconnections within the movement, the doctrine of competition could stand opposed to the doctrine of monopoly, the doctrine of freedom of craft to that of the guild, the doctrine of the division of landed property to that of the great estate. Competition, freedom of craft, and division of landed property were developed and conceived only as accidental, deliberate, forced consequences of monopoly, the guild, and feudal property, rather than necessary, inevitable, natural consequences.

We now have to grasp the essential connection among private property, greed, division of labor, capital and landownership, and the connection of exchange with competition, of value with the devaluation of men, of monopoly with competition, etc., and of this whole alienation with the *money*-system.

Let us not put ourselves in a fictitious primordial state like a political economist trying to clarify things. Such a primordial state clarifies nothing. It merely pushes the issue into a gray, misty distance. It acknowledges as a fact or event what it should deduce, namely, the necessary relation between two things for example, between division of labor and exchange. In such a manner theology explains the origin of evil by the fall of man. That is, it asserts as a fact in the form of history what it should explain.

We proceed from a *present* fact of political economy.

The worker becomes poorer the more wealth he produces, the more his production increases in power and extent. The worker becomes a cheaper commodity the more commodities he produces. The *increase in value* of the world of things is directly proportional to the *decrease in value* of the human world. Labor not only produces commodities. It also produces itself and the worker as a *commodity*, and indeed in the

Translated by Loyd D. Easton and Kurt H. Guddat. Reprinted by permission of Loyd D. Easton and Mrs. Kurt H. Guddat.

same proportion as it produces commodities in general.

This fact simply indicates that the object which labor produces, its product, stands opposed to it as an *alien thing*, as a *power independent* of the producer. The product of labor is labor embodied and made objective in a thing. It is the *objectification* of labor. The realization of labor is its objectification. In the viewpoint of political economy this realization of labor appears as the *diminution* of the worker, the objectification as the *loss of and subservience to the object*, and the appropriation as *alienation* [*Entfremdung*], as externalization [*Entäusserung*].

So much does the realization of labor appear as diminution that the worker is diminished to the point of starvation. So much does objectification appear as loss of the object that the worker is robbed of the most essential objects not only of life but also of work. Indeed, work itself becomes a thing of which he can take possession only with the greatest effort and with the most unpredictable interruptions. So much does the appropriation of the object appear as alienation that the more objects the worker produces, the fewer he can own and the more he falls under the domination of his product, of capital.

All these consequences follow from the fact that the worker is related to the *product of his labor* as to an *alien* object. For it is clear according to this premise: The more the worker exerts himself, the more powerful becomes the alien objective world which he fashions against himself, the poorer he and his inner world become, the less there is that belongs to him. It is the same in religion. The more man attributes to God, the less he retains in himself. The worker puts his life into the object; then it no longer belongs to him but to the object. The greater his activity, the poorer is the worker. What the product of his work is, he is not. The greater this product is, the smaller he is himself. The *externalization* of the worker in his product means not only that his work becomes an object, an *external* existence, but also that it exists *outside him* independently, alien, an autonomous power, opposed to him. The life he has given to the object confronts him as hostile and alien.

Let us now consider more closely the *objectification*, the worker's production and with it the *alienation* and *loss* of the object, his product.

The worker can make nothing without *nature*, without the *sensuous external world*. It is the material wherein his labor realizes itself, wherein it is active, out of which and by means of which it produces.

But as nature furnishes to labor the *means of life* in the sense that labor cannot *live* without objects upon which labor is exercised, nature also furnishes the *means of life* in the narrower sense, namely, the means of physical subsistence of the *worker* himself.

The more the worker *appropriates* the external world and sensuous nature through his labor, the more he deprives himself of the *means of life* in two respects: first, that the sensuous external world gradually ceases to be an object belonging to his labor, a *means of life* of his work; secondly, that it gradually ceases to be a *means of life* in the immediate sense, a means of physical subsistence of the worker.

In these two respects, therefore, the worker becomes a slave to his objects; first, in that he receives an *object of labor*, that is, he receives *labor*, and secondly that he receives the *means of subsistence*. The first enables him to exist as a *worker* and the second as a *physical subject*. The terminus of this slavery is that he can only maintain himself as a *physical subject* so far as he is a *worker*, and only as a *physical subject* is he a worker.

(The alienation of the worker in his object is expressed according to the laws of political economy as follows: the more the worker produces, the less he has to consume; the more values he creates the more worthless and unworthy he becomes; the better shaped his product, the more misshapen is he; the more civilized his product, the more barbaric is the worker; the more powerful the work, the more powerless becomes the worker; the more intelligence the work has, the more witless is the worker and the more he becomes a slave of nature.)

Political economy conceals the alienation in the nature of labor by ignoring the direct relationship between the worker (labor) *and production*. To be sure, labor produces marvels for the wealthy but it produces deprivation for the worker. It produces palaces, but hovels for the worker. It produces beauty, but mutilation for the worker. It displaces labor through machines, but it throws some workers back into barbarous labor and turns others into machines. It produces intelligence, but for the worker it produces imbecility and cretinism.

The direct relationship of labor to its products is the relationship of the worker to the objects of his production. The relationship of the rich to the objects of production and to production itself is only a *consequence* of this first relationship and confirms it. Later we shall observe the latter aspect.

Thus, when we ask, What is the essential relationship of labor? we ask about the relationship of the *worker* to production.

Up to now we have considered the alienation, the externalization of the worker only from one side: his *relationship to the products of his labor*. But alienation is shown not only in the result but also in the *process of production*, in the *producing activity* itself. How could the worker stand in an alien relationship to the product of his activity if he did not alienate himself from himself in the very act of production? After all, the product is only the résumé of activity, of production. If the product of work is externalization, production itself must be active externalization, externalization of activity, activity of externalization. Only alienation—and externalization in the activity of labor itself—is summarized in the alienation of the object of labor.

What constitutes the externalization of labor?

First is the fact that labor is *external* to the laborer—that is, it is not part of his nature—and that the worker does not affirm himself in his work but denies himself, feels miserable and unhappy, develops no free physical and mental energy but mortifies his flesh and ruins his mind. The worker, therefore feels at ease only outside work, and during work he is outside himself. He is at home when he is not working and when he is working he is not at home. His work, therefore, is not voluntary, but coerced, *forced labor*. It is not the satisfaction of a need but only a *means* to satisfy other needs. Its alien character is obvious from the fact that as soon as no physical or other pressure exists, labor is avoided like the plague. External labor, labor in which man is externalized, is labor of self-sacrifice, of penance. Finally, the external nature of work for the worker appears in the fact that it is not his own but another person's, that in work he does not belong to himself but to someone else. In religion the spontaneity of human imagination, the spontaneity of the human brain and heart, acts independently of the individual as an alien, divine or devilish activity. Similarly, the activity of the worker is not his own spontaneous activity. It belongs to another. It is the loss of his own self.

The result, therefore, is that man (the worker) feels that he is acting freely only in his animal functions—eating, drinking, and procreating, or at most in his shelter and finery—while in his human functions he feels only like an animal. The animalistic becomes the human and the human the animalistic.

To be sure, eating, drinking, and procreation are genuine human functions. In abstraction, however, and separated from the remaining sphere of human activities and turned into final and sole ends, they are animal functions.

We have considered labor, the act of alienation of practical human activity, in two aspects: (1) the relationship of the worker to the *product of labor* as an alien object dominating him. This relationship is at the same time the relationship to the sensuous external world, to natural objects as an alien world hostile to him; (2) the relationship of labor to the *act of production* in *labor*. This relationship is that of the worker to his own activity as alien and not belonging to him, activity as passivity, power as weakness, procreation as emasculation, the worker's *own* physical and spiritual energy, his personal life—for what else is life but activity—as an activity turned against him, independent of him, and not belonging to him. *Self-alienation*, as against the alienation of the *object*, stated above.

We have now to derive a third aspect of *alienated labor* from the two previous ones.

Man is a species-being [*Gattungswesen*] not only in that he practically and theoretically makes his own species as well as that of other things his object, but also—and this is only another expression for the same thing—in that as present and living species he considers himself to be a *universal* and consequently free being.

The life of the species in man as in animals is physical in that man, (like the animal) lives by inorganic nature. And as man is more universal than the animal, the realm of inorganic nature by which he lives is more universal. As plants, animals, minerals, air, light, etc., in theory form a part of human consciousness, partly as objects of natural science, partly as objects of art—his spiritual inorganic nature of

spiritual means of life which he first must prepare for enjoyment and assimilation—so they also form in practice a part of human life and human activity. Man lives physically only by these products of nature; they may appear in the form of food, heat, clothing, housing, etc. The universality of man appears in practice in the universality which makes the whole of nature his *inorganic* body: (1) as a direct means of life, and (2) as the matter, object, and instrument of his life activity. Nature is the *inorganic body* of man, that is, nature insofar as it is not the human body. Man *lives* by nature. This means that nature is his *body* with which he must remain in perpetual process in order not to die. That the physical and spiritual life of man is tied up with nature is another way of saying that nature is linked to itself, for man is a part of nature.

In alienating (1) nature from man, and (2) man from himself, his own active function, his life activity, alienated labor also alienates the *species* from him; it makes *species-life* the means of individual life. In the first place it alienates species-life and the individual life, and secondly it turns the latter in its abstraction into the purpose of the former, also in its abstract and alienated form.

For labor, *life activity*, and *productive life* appear to man at first only as a *means* to satisfy a need, the need to maintain physical existence. Productive life, however, is species-life. It is life begetting life. In the mode of life activity lies the entire character of a species, its species-character; and free conscious activity is the species-character of man. Life itself appears only as a *means of life*.

The animal is immediately one with its life activity, not distinct from it. The animal is *its life activity*. Man makes his life activity itself into an object of will and consciousness. He has conscious life activity. It is not a determination with which he immediately identifies. Conscious life activity distinguishes man immediately from the life activity of the animal. Only thereby is he a species-being. Or rather, he is only, a conscious being—that is, his own life is an object for him—since he is a species-being. Only on that account is his activity free activity. Alienated labor reverses the relationship in that man, since he is a conscious being, makes his life activity, his *essence*, only a means for his *existence*.

The practical creation of an *objective world*, the *treatment* of inorganic nature, is proof that man is a conscious species-being, that is, a being which is related to its species as to its own essence or is related to itself as a species-being. To be sure animals also produce. They build themselves nests, dwelling places, like the bees, beavers, ants, etc. But the animal produces only what is immediately necessary for itself or its young. It produces in a one-sided way while man produces universally. The animal produces under the domination of immediate physical need while man produces free of physical need and only genuinely so in freedom from such need. The animal only produces itself while man reproduces the whole of nature. The animal's product belongs immediately to its physical body while man is free when he confronts his product. The animal builds only according to the standard and need of the species to which it belongs while man knows how to produce according to the standard of any species and at all times knows how to apply an intrinsic standard to the object. Thus man creates also according to the laws of beauty.

In the treatment of the objective world, therefore, man proves himself to be genuinely a *species-being*. This production is his active species-life. Through it nature appears as *his* work and his actuality. The object of labor is thus the *objectification of man's species-life:* he produces himself not only intellectually, as in consciousness, but also actively in a real sense and sees himself in a world he made. In taking from man the object of his production, alienated labor takes from his *species-life*, his actual and objective existence as a species. It changes his superiority to the animal to inferiority, since he is deprived of nature, his inorganic body.

By degrading free spontaneous activity to the level of a means, alienated labor makes the species-life of man a means of his physical existence.

The consciousness which man has from his species is altered through alienation, so that species-life becomes a means for him.

(3) Alienated labor hence turns the *species-existence of man*, and also nature as his mental species-capacity, into an existence *alien* to him, into the *means* of his *individual existence*. It alienates his spiritual nature, his *human essence*, from his own body and likewise from nature outside him.

(4) A direct consequence of man's alienation from the product of his work, from his life activity, and from his species-existence, is the *alienation of man* from *man*. When man confronts himself, he confronts *other* men. What holds true of man's relationship to his work, to the product of his work, and to himself, also holds true of man's relationship to other men, to their labor, and the object of their labor.

In general, the statement that man is alienated from his species-existence means that one man is alienated from another just as each man is alienated from human nature.

The alienation of man, the relation of man to himself, is realized and expressed in the relation between man and other men.

Thus in the relation of alienated labor every man sees the others according to the standard and the relation in which he finds himself as a worker.

We began with an economic fact, the alienation of the worker and his product. We have given expression to the concept of this fact: *alienated*, *externalized* labor. We have analyzed this concept and have thus analyzed merely a fact of political economy.

Let us now see further how the concept of alienated, externalized labor must express and respect itself in actuality.

If the product of labor is alien to me, confronts me as an alien power, to whom then does it belong?

If my own activity does not belong to me, if it is an alien and forced activity, to whom then does it belong?

To a being *other* than myself.

Who is this being?

Gods? To be sure, in early times the main production, for example, the building of temples in Egypt, India, and Mexico, appears to be in the service of the gods, just as the product belongs to the gods. But gods alone were never workmasters. The same is true of *nature*. And what a contradiction it would be if the more man subjugates nature through his work and the more the miracles of gods are rendered superfluous by the marvels of industry, man should renounce his joy in producing and the enjoyment of his product for love of these powers.

The *alien* being who owns labor and the product of labor, whom labor serves and whom the product of labor satisfies can only be *man* himself.

That the product of labor does not belong to the worker and an alien power confronts him is possible only because this product belongs to *a man other than the worker*. If his activity is torment for him, it must be the *pleasure* and the life-enjoyment for another. Not gods, not nature, but only man himself can be this alien power over man.

Let us consider the statement previously made, that the relationship of man to himself is *objective* and *actual* to him only through his relationships to other men. If man is related to the product of his labor, to his objectified labor, as to an *alien*, hostile, powerful object independent of him, he is so related that another alien, hostile, powerful man independent of him is the lord of this object. If he is unfree in relation to his own activity, he is related to it as bonded activity, activity under the domination, coercion, and yoke of another man.

Every self-alienation of man, from himself and from nature, appears in the relationship which he postulates between other men and himself and nature. Thus religious self-alienation appears necessarily in the relation of laity to priest, or also to a mediator, since we are here now concerned with the spiritual world. In the practical real world self-alienation can appear only in the practical real relationships to other men. The means whereby the alienation proceeds is a *practical* means. Through alienated labor man thus not only produces his relationship to the object and to the act of production as an alien man at enmity with him. He also creates the relation in which other men stand to his production and product, and the relation in which he stands to these other men. Just as he begets his own production as loss of his reality, as his punishment; just as he begets his own product as a loss, a product not belonging to him, so he begets the domination of the non-producer over production and over product. As he alienates his own activity from himself, he confers upon the stranger an activity which is not his own.

Up to this point, we have investigated the relationship only from the side of the worker and will later investigate it also from the side of the non-worker.

Thus through *alienated externalized labor* does the worker create the relation to this work of man alienated to labor and standing outside it. The relation of the worker to labor produces the relation of the

capitalist to labor, or whatever one wishes to call the lord of labor. *Private property* is thus product, result, and necessary consequence of *externalized labor*, of the external relation of the worker to nature and to himself.

Private property thus is derived, through analysis, from the concept of *externalized labor*, that is, *externalized man*, alienated labor, alienated life, and *alienated* man.

We have obtained the concept of *externalized labor (externalized life)* from political economy as a result of the *movement of private property*. But the analysis of this idea shows that though private property appears to be the ground and cause of externalized labor, it is rather a consequence of externalized labor, just as gods are *originally* not the cause but the effect of an aberration of the human mind. Later this relationship reverses.

Only at the final culmination of the development of private property does this, its secret, reappear—namely, that on the one hand it is the *product* of externalized labor and that secondly it is the *means* through which labor externalizes itself, the *realization of this externalization*.

This development throws light on several conflicts hitherto unresolved.

(1) Political economy proceeds from labor as the very soul of production and yet gives labor nothing, private property everything. From this contradiction Proudhon decided in favor of labor and against private property. We perceive, however, that this apparent contradiction is the contradiction of *alienated labor* with itself and that political economy has only formulated the laws of alienated labor.

Therefore we also perceive that *wages* and *private property* are identical: for when the product, the object of labor, pays for the labor itself, wages are only a necessary consequence of the alienation of labor. In wages labor appears not as an end in itself but as the servant of wages. We shall develop this later and now only draw some conclusions.

An enforced *raising of wages* (disregarding all other difficulties, including that this anomaly could only be maintained forcibly) would therefore be nothing but a *better slave-salary* and would not achieve either for the worker or for labor human significance and dignity.

Even the *equality of wages*, as advanced by Proudhon, would only convert the relation of the contemporary worker to his work into the relation of all men to labor. Society would then be conceived as an abstract capitalist.

Wages are a direct result of alienated labor, and alienated labor is the direct cause of private property. The downfall of one is necessarily the downfall of the other.

(2) From the relation of alienated labor to private property it follows further that the emancipation of society from private property, etc., from servitude, is expressed in its *political* form as the *emancipation of workers*, not as though it is only a question of their emancipation but because in their emancipation is contained universal human emancipation. It is contained in their emancipation because the whole of human servitude is involved in the relation of worker to production, and all relations of servitude are only modifications and consequences of the worker's relation to production.

As we have found the concept of *private property* through *analysis* from the concept of *alienated, externalized labor*, so we can develop all the *categories* of political economy with the aid of these two factors, and we shall again find in each category—for example, barter, competition, capital, money—only a *particular* and *developed expression* of these primary foundations.

Before considering this configuration, however, let us try to solve two problems.

(1) To determine the general *nature of private property* as a result of alienated labor in its relation to *truly human* and *social property*.

(2) We have taken the *alienation of labor* and its *externalization* as a fact and analyzed this fact. How, we ask now, does it happen that *man externalizes* his *labor*, alienates it? How is this alienation rooted in the nature of human development? We have already achieved much in resolving the problem by *transforming* the question concerning the *origin of private property* into the question concerning the relationship of *externalized labor* to evolution of humanity. In talking about *private property* one believes he is dealing with something external to man. Talking of labor, one is immediately dealing with man himself. This new formulation of the problem already contains its solution.

On (1) *The general nature of private property and its relation to truly human property.*

We have resolved alienated labor into two parts which mutually determine each other or rather are only different expressions of one and the same relationship. *Appropriation* appears as *alienation*, as *externalization*; *externalization* as *appropriation*; *alienation* as the true *naturalization*.

We considered the one side, *externalized* labor, in relation to the *worker* himself, that is, the relation of *externalized labor to itself*. We have found the *property relation of the non-worker* to the *worker* and *labor* to be the product, the necessary result, of this relationship. *Private property* as the material, summarized expression of externalized labor embraces both relationships—the *relationship of worker to labor, the product of his work, and the non-worker*; and the relationship of the *non-worker to the worker* and *the product of his labor*.

As we have seen that in relation to the worker who *appropriates* nature through his labor the appropriation appears as alienation—self-activity as activity for another and of another, living as the sacrifice of life, production of the object as loss of it to an alien power, an *alien* man—we now consider the relationship of this *alien* man to the worker, to labor and its object.

It should be noted first that everything which appears with the worker as an *activity of externalization* and an *activity of alienation* appears with the non-worker as a *condition of externalization*, a *condition of alienation*.

Secondly, that the *actual, practical attitude* of the worker in production and to his product (as a condition of mind) appears as a *theoretical* attitude in the non-worker confronting him.

Thirdly, the non-worker does everything against the worker which the worker does against himself, but he does not do against his own self what he does against the worker.

Let us consider more closely these three relationships. [Here the manuscript breaks off, unfinished.]

On the Jewish Question

Bruno Bauer, *The Jewish Question*, Braunschweig, 1843

The German Jews want emancipation. What kind of emancipation? *Civil*, *political* emancipation.

Bruno Bauer answers them: No one in Germany is politically emancipated. We are not free ourselves. How shall we liberate you? You Jews are *egoists* when you claim a special emancipation for yourselves as Jews. As Germans, you should work for the political emancipation of Germany, as men, for the emancipation of mankind; and you should feel the particular form of your oppression and shame not as an exception to the rule but rather as its confirmation.

Or do Jews desire to be put on an equal footing with *Christian subjects?* If so, they recognize the *Christian state* as legitimate, as the regime of general subjugation. Why should they be displeased at their particular yoke if the general yoke pleases them? Why should Germans be interested in the liberation of Jews if Jews are not interested in the liberation of Germans?

The *Christian* state takes cognizance only of *privileges*. In it the Jew has the privilege of being a Jew. As a Jew he has rights that Christians do not have. Why does he want rights he does not have and that Christians enjoy?

If the Jew wants to be emancipated from the Christian state, he is demanding that the Christian state abandon its *religious* prejudice. But does the Jew abandon *his* religious prejudice? Has he, then, the right to demand of another this abdication of religion?

By *its very nature* the Christian state cannot emancipate the Jew; but, Bauer adds, the Jew by his very nature cannot be emancipated. So long as the state remains Christian and the Jew remains Jewish, both are equally incapable of giving as well as receiving emancipation.

The Christian state can only behave toward the Jew in the manner of the Christian state—that is, permitting the separation of the Jew from other subjects as a privilege but making him feel the pressure of the other separate spheres of society, and feel them all the more heavily, since he stands in *religious* opposition to the predominant religion. But the Jew in turn can behave toward the state only in a Jewish manner, that is as a foreigner, since he opposes his chimerical nationality to actual nationality, his illusory law to actual law. He imagines that his separation from humanity is justified, abstains on principle from participation in the historical movement, looks to a future that has nothing in common with the future of mankind as a whole, and regards himself as a part of the Jewish people, the chosen people.

On what basis, then, do you Jews want emancipation? On the basis of your religion? It is the mortal enemy of the religion of the state. As citizens? There are no citizens in Germany. As men? You are not men, just as those to whom you appeal are not men.

After criticizing previous positions and solutions, Bauer formulates the question of Jewish emancipation in a new way. What is the *nature*, he asks, of the Jew who is to be emancipated and the Christian state that is to emancipate him? He answers with a critique of the Jewish religion, analyzes the *religious* antagonism between Judaism and Christianity, and explains the essence of the Christian state—all this with dash, acuteness, wit, and thoroughness in a style as precise as it is pregnant and energetic.

How then does Bauer settle the Jewish question? What is the result? The formulation of a question is its solution. Criticism of the Jewish question provides the answer to the Jewish question. The résumé thus follows:

We must emancipate ourselves before we can emancipate others.

Translated by Loyd D. Easton and Kurt H. Guddat. Reprinted by permission of Loyd D. Easton and Mrs. Kurt H. Guddat.

The most persistent form of the antagonism between the Jew and the Christian is the *religious* antagonism. How is an antagonism to be resolved? By making it impossible. And how is a *religious* antagonism made impossible? By *abolishing religion*. Once Jew and Christian recognize their respective religions as nothing more than *different stages in the evolution of the human spirit*, as different snake skins shed by *history*, and recognize *man* as the snake that wore them, they will no longer find themselves in religious antagonism but only in a critical, *scientific*, and human relationship. *Science*, then, constitutes their unity. Contradictions in science, however, are resolved by science itself.

The *German* Jew is particularly affected by the general lack of political emancipation and the pronounced Christianity of the state. With Bauer, however, the Jewish question has a universal significance independent of specific German conditions. It is the question of the relation of religion to the state, of the *contradiction between religious prejudice and political emancipation*. Emancipation from religion is presented as a condition both for the Jew who seeks political emancipation and for the state which is to emancipate him and is to be emancipated itself as well.

> "Very well, you say—and the Jew himself says it—the Jew should not be emancipated because he is Jew or because he has such excellent and universal ethical principles but rather because he takes second place to the *citizen* and becomes one in spite of being and wanting to remain a Jew. That is, he is and remains a Jew in spite of the fact that he is a *citizen* living in universally human relationships; his Jewish and restricted nature always triumphs in the end over his human and political obligations. The *prejudice* remains even though it has been overtaken by *universal* principles. But if it remains, it rather overtakes everything else." "The Jew could remain a Jew in political life only in a sophistical sense, only in appearance; thus if he wanted to remain a Jew, this mere appearance would become the essential thing and would triumph. In other words, his *life in the state* would be only a semblance or a momentary exception to the real nature of things, an exception to the rule." ("The Capacity of Present-day Jews and Christians to Become Free," *Twenty-one Sheets from Switzerland* [*Einundzwanzig Bogen aus der Schweiz*], p. 57.)

Let us see, on the other hand, how Bauer describes the role of the state:

> "France," he says, "recently (Proceedings of the Chamber of Deputies, 26 December 1840) gave us, in connection with the Jewish question and all other *political* questions (since the July Revolution), a glimpse of a life which is free but which revokes its freedom by law, thus revealing it to be a sham, and on the other hand, denies its free law by its acts." (*The Jewish Question*, p. 64.)
>
> "Universal freedom is not yet established as law in France, and the *Jewish question is not yet settled* because legal freedom—that all citizens are equal—is limited in actual life which is still dominated and fragmented by religious privileges, and because the lack of freedom in actual life reacts on the law, compelling it to sanction the division of inherently free citizens into the oppressed and the oppressors" (p. 65).

When, therefore, would the Jewish question be settled in France?

> "The Jew, for instance, would really have ceased being a Jew if he did not let himself be hindered by his code from fulfilling his duties toward the state and his fellow citizens—if he went, for example, to the Chamber of Deputies and took part in public affairs on the Sabbath. Every *religious privilege*, including the monopoly of a privileged church, would have to be abolished, and if a few or many or *even the overwhelming majority still felt obliged to fulfill their religious duties*, such a practice should be left to *them as a purely private matter*" (p. 65). "There is no longer any religion if there is no privileged religion. Take from religion its power of excommunication and it ceases to exist" (p. 66). "Just as M. Martin du Nord saw the proposal to omit any mention of Sunday in the

> law as a declaration that Christianity had ceased to exist, with equal right (and one well-founded) a declaration that the Sabbath-law is no longer binding for the Jew would proclaim the end of Judaism" (p. 71).

Bauer thus demands, on the one hand, that the Jew give up Judaism and man give up religion in order to be emancipated *as a citizen*. On the other hand, he holds that from the *political* abolition of religion there logically follows the abolition of religion altogether. The state which presupposes religion is as yet no true, no actual state. "To be sure, the religious view reinforces the state. But what state? W*hat kind of state*?" (p. 97).

At this point Bauer's *one-sided* approach to the Jewish question becomes apparent.

It is by no means sufficient to ask: Who should emancipate and who should be emancipated? Criticism has to be concerned with a third question. It must ask: W*hat kind of emancipation* is involved and what are its underlying conditions? Criticism of *political emancipation* itself is primarily the final critique of the Jewish question and its true resolution into the "*universal question of the age*."

Since Bauer does not raise the question to this level, he falls into contradictions. He presents conditions that are not based on the essence of *political* emancipation. He raises questions that are irrelevant to his problem and solves problems that leave his question untouched. Bauer says of the opponents of Jewish emancipation, "Their mistake simply lay in assuming the Christian state to be the only true state without subjecting it to the same criticism they applied to Judaism" (p. 3). Here we find Bauer's mistake in subjecting *only* the "Christian state," not the "state as such," to criticism, in failing to examine the *relation between political emancipation and human emancipation*, and hence presenting conditions that are only explicable from his uncritical confusion of political emancipation with universal human emancipation. Bauer asks the Jews: Have you the right to demand *political emancipation* from your standpoint? We ask, on the contrary: Has the standpoint of *political* emancipation the right to demand from the Jews the abolition of Judaism and from man the abolition of religion?

The Jewish question has a different aspect according to the state in which the Jew finds himself. In Germany, where there is no political state and no state as such exists, the Jewish question is purely *theological*. The Jew finds himself in *religious* opposition to a state acknowledging Christianity as its foundation. This state is a theologian *ex professo*. Criticism is here criticism of theology, double-edged criticism of Christian and of Jewish theology. But however *critical* we might be, we are still moving in theology.

In France, a *constitutional* state, the Jewish question is a question of constitutionalism, a question of the *incompleteness of political emancipation*. As the *semblance* of a state religion is preserved there, if only by the meaningless and self-contradictory formula of a *religion of the majority*, the relation of the Jew to the state also retains the *semblance* of a religious or theological opposition.

Only in the free states of North America—or at least in some of them—does the Jewish question lose its *theological* significance and become a truly *secular* question. Only where the political state exists in its complete development can the relation of the Jew, and generally speaking the religious man, to the political state, that is, the relation of religion to state, appear in its characteristic and pure form. Criticism of this relation ceases to be theological once the state abandons a *theological* posture toward religion, once it relates itself to religion as a state, that is, *politically*. Criticism then becomes *criticism of the political state*. Where the question here ceases to be *theological*, Bauer's criticism ceases to be critical. "*In the United States there is neither a state religion, nor a religion declared to be that of the majority, nor a pre-eminence of one faith over another. The state is foreign to all faiths*." (Gustave de Beaumont, *Marie ou l'esclavage aux Etats-Unis* . . . [Brussels, 1835], p. 214.) There are even some states in North America where "*the constitution imposes no religious beliefs or sectarian practice as the condition of political rights*" *(loc. cit.*, p. 225). Yet "*no one in the United States believes that a man without religion can be an honest man*" *(loc. cit.*, p. 224). And North America is pre-eminently the land of religiosity as Beaumont, Tocqueville, and the Englishman Hamilton assure us unanimously. The North American states, however, serve only as an example. The question is: What is the relation of *complete* political emancipation to religion? If we find

even in a country with full political emancipation that religion not only *exists* but is *fresh* and *vital*, we have proof that the existence of religion is not incompatible with the full development of the state. But since the existence of religion implies a defect, the source of this defect must be sought in the *nature* of the state itself. We no longer take religion to be the *basis* but only the *manifestation* of secular narrowness. Hence we explain religious restriction of free citizens on the basis of their secular restriction. We do not claim that they must transcend their religious restriction in order to transcend their secular limitations. We do claim that they will transcend their religious restriction once they have transcended their secular limitations. We do not convert secular questions into theological ones. We convert theological questions into secular questions. History has long enough been resolved into superstition, but now we can resolve superstition into history. The question of the *relation of political emancipation to religion* becomes for us a question of the *relation of political emancipation to human emancipation*. We criticize the religious weaknesses of the political state by criticizing the political state in its *secular* constitution *apart from* the religious defects. In human terms we resolve the contradiction between the state and a *particular religion* such as *Judaism* into the contradiction between the state and *particular secular* elements, the contradiction between the state and *religion generally* into the contradiction between the state and its *presuppositions*.

The *political* emancipation of the Jew, the Christian, or the *religious* man generally is the *emancipation of the state* from Judaism, from Christianity, from *religion* in general. In a form and manner corresponding to its nature, the *state* as such emancipates itself from religion by emancipating itself from the *state religion*, that is, by recognizing no religion and recognizing itself simply as the state. *Political* emancipation from religion is not complete and consistent emancipation from religion because political emancipation is not the complete and consistent form of *human* emancipation.

The limits of political emancipation are seen at once in the fact that the *state* can free itself from a limitation without man *actually* being free from it, in the fact that a state can be a *free state* without men becoming *free men*. Bauer himself tacitly admits this in setting the following condition of political emancipation: "Every religious privilege, including the monopoly of a privileged church, would have to be abolished. If a few or many or even the *overwhelming majority still felt obliged to fulfill their religious duties*, such a practice should be left to them as a *purely private matter*." The *state* can thus emancipate itself from religion even though the *overwhelming majority* is still religious. And the overwhelming majority does not cease being religious by being religious *in private*.

But the attitude of the state, particularly the *free state*, toward religion is still only the attitude of the *men* who make up the state. Hence it follows that man frees himself from a limitation *politically*, *through the state*, by overcoming the limitation in an *abstract*, *limited*, and partial manner, in contradiction with himself. Further, when man frees himself *politically*, he does so *indirectly*, through an *intermediary*, even if the *intermediary* is *necessary*. Finally, even when man proclaims himself an atheist through the medium of the state—that is, when he declares the state to be atheistic—he is still captive to religion since he only recognizes his atheism indirectly through an intermediary. Religion is merely the indirect recognition of man through a *mediator*. The state is the mediator between man and the freedom of man. As Christ is the mediator on whom man unburdens all his own divinity and all his *religious ties*, so is the state the mediator to which man transfers all his unholiness and all his *human freedom*.

The *political* elevation of man above religion shares all the defects and all the advantages of any political elevation. If the state as state, for example, abolishes *private property*, man proclaims private property is *overcome politically* once he abolishes the *property qualification* for active and passive voting as has been done in many North American states. *Hamilton* interprets this fact quite correctly in political terms: *"The great majority of the people have gained a victory over property owners and financial wealth."*[*] Is not private

[* Thomas Hamilton, *Men and Manners in America* (2 vols.; Edinburgh: William Blackwood, 1833). Marx quotes from the German translation, *Die Menschen und die Sitten in den Vereinigten Staaten von Nordamerika* (Mannheim: Hoff, 1834), Vol I, p. 146.]

property ideally abolished when the have-nots come to legislate for the haves? The *property qualification* is the last *political* form for recognizing private property.

Yet the political annulment of private property not only does not abolish it but even presupposes it. The state abolishes distinctions of *birth*, *rank*, *education*, and *occupation* in its fashion when it declares them to be *non-political* distinctions, when it proclaims that every member of the community *equally* participates in popular sovereignty without regard to these distinctions, and when it deals with all elements of the actual life of the nation from the standpoint of the state. Nevertheless the state permits private property, education, and occupation to *act* and manifest their *particular* nature as private property, education, and occupation in their *own* ways. Far from overcoming these *factual* distinctions, the state exists only by presupposing them; it is aware of itself as a *political state* and makes its *universality* effective only in opposition to these elements. *Hegel*, therefore, defines the relation of the *political state* to religion quite correctly in saying: "If the state is to have specific existence as the *self-knowing ethical actuality* of Spirit, it must be *distinct* from the form of authority and faith; this distinction emerges only as the ecclesiastical sphere is *divided* within itself; *only* thus has the state attained *universality* of thought, the principle of its form, *above particular* churches and only thus does it bring that universality into existence." (Hegel's *Philosophy of Law*, 1st ed., p. 346 [§270].) Exactly! Only thus *above* the *particular* elements is the state a universality.

By its nature the perfected political state is man's *species-life* in *opposition* to his material life. All the presuppositions of this egoistic life remain in *civil society outside* the state, but as qualities of civil society. Where the political state has achieved its full development, man leads a double life, a heavenly and an earthly life, not only in thought or consciousness but in *actuality*. In the *political community* he regards himself as a *communal being*; but in *civil society* he is active as a *private individual*, treats other men as means, reduces himself to a means, and becomes the plaything of alien powers. The political state is as spiritual in relation to civil society as heaven is in relation to earth. It stands in the same opposition to civil society and goes beyond it in the same way as religion goes beyond the limitation of the profane world, that is, by recognizing, reestablishing, and necessarily allowing itself to be dominated by it. In his *innermost* actuality, in civil society, man is a profane being. Here, where he counts as an actual individual to himself and others, he is an *illusory* phenomenon. In the state where he counts as a species-being, on the other hand, he is an imaginary member of an imagined sovereignty, divested of his actual individual life and endowed with an unactual universality.

The conflict in which man as believer in a *particular* religion finds himself—a conflict with his own citizenship and other men as members of the community—is reduced to the *secular* split between the *political* state and *civil society*. For man as *bourgeois* [or part of civil society], "life in the state is only a semblance or a momentary exception to the real nature of things, an exception to the rule." Certainly the *bourgeois*, like the Jew, participates in the life of the state only in a sophistical way just as the *citoyen* is only sophistically a Jew or *bourgeois*; but this sophistry is not personal. It is the *sophistry of the political state* itself. The difference between the religious man and the citizen is the difference between the shopkeeper and the citizen, between the day laborer and the citizen, between the landowner and the citizen, between the *living individual* and the *citizen*. The contradiction between the religious and political man is the same as that between *bourgeois* and *citoyen*, between the member of civil society and his *political lion skin*.

This secular conflict to which the Jewish question ultimately is reduced—the relation between the political state and its presuppositions, whether the presuppositions be material elements such as private property or spiritual elements such as education and religion, the conflict between *general* and *private interest*, the split between the *political state* and *civil society*—these secular contradictions Bauer leaves untouched while attacking their *religious* expression. "It is precisely its foundation, need, which assures the maintenance of *civil society* and *guarantees its necessity* but exposes its maintenance to constant danger, sustains an element of uncertainty in civil society, and produces that constantly alternating mixture of poverty and wealth, of adversity and prosperity, and change in general" (p. 8).

Consider his entire section, "Civil Society" (pp. 8–9), which closely follows the main features of

Hegel's philosophy of law. Civil society in opposition to the political state is recognized as necessary since the political state is recognized as necessary.

Political emancipation is indeed a great step forward. It is not, to be sure, the final form of universal human emancipation, but it is the final form *within* the prevailing order of things. It is obvious that we are here talking about actual, practical emancipation.

Man emancipates himself *politically* from religion by banishing it from the sphere of public law into private right. It is no longer the spirit of the *state* where man—although in a limited way, under a particular form, and in a particular sphere—associates in community with other men as a species-being. It has become the spirit of *civil society*, of the sphere of egoism, of the *bellum omnium contra omnes*. It is no longer the essence of *community* but the essence of *division*. It has become what it was *originally*, an expression of the *separation* of man from his *community*, from himself and from other men. It is now only the abstract confession of particular peculiarity, of *private whim*, of caprice. The infinite splits of religion in North America, for example, already give it the *external* form of a purely individual matter. It has been tossed among numerous private interests and exiled from the community as a community. But one must not be deceived about the scope of political emancipation. The splitting of man into *public* and *private*, the *displacement* of religion from the state to civil society, is not just a step in political emancipation but its *completion*. It as little abolishes man's *actual* religiosity as it seeks to abolish it.

The *disintegration* of man into Jew and citizen, Protestant and citizen, religious man and citizen does not belie citizenship or circumvent political emancipation. It is *political emancipation itself*, the *political* mode of emancipation from religion. To be sure, in periods when the political state as such is forcibly born from civil society, when men strive to liberate themselves under the form of political self-liberation, the state can and must go as far as to *abolish* and *destroy religion*, but only in the way it abolishes private property by setting a maximum, confiscation, and progressive taxation or only in the way it abolishes life by the *guillotine*. In moments of special concern for itself political life seeks to repress its presupposition, civil society and its elements, and to constitute itself the actual, harmonious species-life of man. But it can do this only in *violent* contradiction with its own conditions of existence by declaring the revolution to be *permanent*, and thus the political drama is bound to end with the restoration of religion, private property, and all the elements of civil society just as war ends with peace.

Indeed, the perfected Christian state is not the so-called *Christian* state acknowledging Christianity as its foundation in the state religion and excluding all others. It is, rather, the *atheistic* state, the *democratic* state, the state that relegates religion to the level of other elements of civil society. The state that is still theological and still officially prescribes belief in Christianity has not yet dared to declare itself to be *a state* and has not yet succeeded in expressing in *secular* and *human* form, in its *actuality* as a state, those *human* foundations of which Christianity is the sublime expression. The so-called Christian state is simply a *non-state*, for it is only the *human foundation* of Christianity, not Christianity as a religion, which can realize itself in actual human creations.

The so-called Christian state is a Christian denial of the state, not in any way the political actualization of Christianity. The state that still professes Christianity in the form of religion does not profess it in political form because it still behaves religiously toward religion—that is, it is not the *actual expression* of the human basis of religion since it still deals with the *unreality* and *imaginary* form of this human core. The so-called Christian state is an *imperfect* one, which treats Christianity as the *supplement* and *sanctification* of its imperfection. Hence religion necessarily becomes a *means* to an end, and the state is a *hypocrite*. There is a great difference between a *perfected* state that counts religion as one of its *prerequisites* because of a lack in the general *nature* of the state and an *imperfect* state that proclaims religion as its *foundation* because of a lack in its *particular existence* as an imperfect state. In the latter, religion becomes *imperfect politics*. In the former, the inadequacy of even perfected *politics* is apparent in religion. The so-called Christian state needs the Christian religion to complete itself *as a state*. The democratic state, the real state, needs no religion for its political fulfillment. It can, rather, do without religion because it fulfills the human basis of religion in a secular

way. The so-called Christian state, on the other hand, behaves toward religion in a political way and toward politics in a religious way. As it reduces political forms to mere appearance, it equally reduces religion to a mere appearance.

To express this contradiction clearly let us consider Bauer's construct of the Christian state, a construct derived from this perception of the Christian-Germanic state.

> "To prove the *impossibility* or *non-existence* of a Christian state," says Bauer, "we have recently and more frequently been referred to those passages in the Gospel which the [present] state *not only* does *not* follow but *also cannot unless it wants to dissolve itself completely*." "But the matter is not so easily settled. What do those Gospel passages demand? Supernatural self-renunciation and submission to the authority of revelation, turning away from the state, the abolition of secular relationships. But the Christian state demands and achieves all these things. It has made the *spirit of the Gospel* its own, and if it does not reproduce it in exactly the same words as the Gospel, that is because it expresses that spirit in political forms borrowed from the political system of this world but reduced to mere appearance by the religious rebirth they must undergo. This withdrawal from the state is realized through the forms of the state" (p. 55).

Bauer goes on to show how the people of a Christian state do not constitute a nation with a will of its own but have their true existence in the ruler to whom they are subject but who is alien to them by origin and nature since he was given to them by God without their consent. Further, the laws of this nation are not its own doing but are positive revelations. The supreme ruler requires privileged intermediaries in his relations with his own people, the masses, themselves split into a multitude of distinct spheres formed and determined by chance and differentiated from each other by their interests and particular passions and prejudices but permitted as a privilege to isolate themselves from each other, etc. (p. 56).

But Bauer himself says: "If politics is to be nothing more than religion, it cannot be politics any more than cleaning cooking pans can be regarded as an economic matter if it is to be treated religiously" (p. 108). But in the Christian-Germanic state, religion is an "economic matter" just as "economic matters" are religion. In the Christian-Germanic state, the dominance of religion is the religion of domination.

The separation of the "spirit of the Gospel" from the "letter of the Gospel" is an *irreligious* act. The state that permits the Gospel to speak in the letter of politics or in any other letter than that of the Holy Spirit commits a sacrilege if not in the eyes of men at least in the eyes of its own religion. The state that acknowledges Christianity as its highest rule and the *Bible* as its *charter* must be confronted with the *words* of Holy Writ, for the Writ is holy in every word. This state as well as the *human rubbish* on which it is based finds itself involved in a painful contradiction, a contradiction insoluble from the standpoint of religious consciousness based on the teaching of the Gospel, which it "not only does not follow but *also cannot unless it wants to dissolve itself completely as a state*." And why does it not want to dissolve itself completely? It cannot answer this question either for itself or others. In its *own consciousness* the official Christian state is an *ought* whose realization is impossible. It knows it can affirm the *actuality* of its own existence only by lying to itself and hence remains dubious, unreliable, and problematic. Criticism is thus completely right in forcing the state that appeals to the Bible into a mental derangement in which it no longer knows whether it is an *illusion* or a *reality*, in which the infamy of its *secular* purposes cloaked by religion irreconcilably conflicts with the integrity of its *religious* consciousness viewing religion as the world's purpose. Such a state can only free itself of inner torment by becoming the *constable* of the Catholic Church. In relation to that church, which claims secular power as its servant, the state, the *secular* power claiming to dominate the religious spirit, is impotent.

In the so-called Christian state what counts is indeed *alienation* but not *man*. The only man who does count, the *king*, is still religious, specifically distinguished from others and directly connected with heaven, with God. The relations prevailing here are still relations of *faith*. The religious spirit is still not actually secularized.

But the religious spirit cannot *actually* be secularized, for what is it, in fact, but the *unsecular* form of a stage in the development of the human spirit? The religious spirit can only be actualized if the stage of development of the human spirit it expresses religiously emerges into and assumes its *secular* form. This is what happens in the *democratic* state. The basis of the democratic state is not Christianity but the *human ground* of Christianity. Religion remains the ideal, unsecular consciousness of its members because it is the ideal form of the *stage of human development* attained in the democratic state.

The members of the political state are religious by virtue of the dualism between individual life and species-life, between the life of civil society and political life. They are religious inasmuch as man regards as his true life the political life remote from his actual individuality, inasmuch as religion is here the spirit of civil society expressing the generation and withdrawal of man from man. Political democracy is Christian in that it regards man—not merely one but every man—as *sovereign* and supreme. But this means man in his uncivilized and unsocial aspect, in his fortuitous existence and just as he is, corrupted by the entire organization of our society, lost and alienated from himself, oppressed by inhuman relations and elements—in a word, man who is not yet an *actual* species-being. The sovereignty of man—though as alien and distinct from actual men—which is the chimera, dream, and postulate of Christianity, is a tangible and present actuality, a secular maxim, in democracy.

In the perfected democracy the religious and theological consciousness appears to itself all the more religious and theological for being apparently without political significance or mundane purposes—for being a spiritual affair eschewing the world, an expression of reason's limitation, a product of whim and fantasy, an actual life in the beyond. Christianity here achieves the *practical* expression of its universal religious meaning in that the most varied views are grouped together in the form of Christianity and, what is more, others are not asked to profess Christianity but only religion in general, any kind of religion (cf. Beaumont, *op. cit.*). The religious consciousness revels in the wealth of religious contradictions and multiplicity.

We have thus shown: Political emancipation from religion permits religion, though not privileged religion, to continue. The contradiction in which the adherent of a specific religion finds himself in relation to his citizenship is only *one aspect* of the universal *secular contradiction between the political state and civil society*. The fulfillment of the Christian state is a state that acknowledges itself as a state and ignores the religion of its members. The emancipation of the state from religion is not the emancipation of actual man from religion.

We thus do not say with Bauer to the Jews: You cannot be politically emancipated without radically emancipating yourselves from Judaism. Rather we tell them: Because you can be emancipated politically without completely and fully renouncing Judaism, *political emancipation* by itself is not *human* emancipation. If you Jews want to be politically emancipated without emancipating yourselves humanly, the incompleteness and contradiction lies not only in you but in the *essence* and *category* of political emancipation. If you are engrossed in this category, you share a general bias. Just as the state *evangelizes* when, in spite of being a state, it behaves toward the Jew in a Christian way, the Jew *acts politically* when, in spite of being a Jew, he demands civil rights.

But if man can be emancipated politically and acquire civil rights even though he is a Jew, can he claim and acquire the so-called *rights of man*? Bauer *denies* it.

> "The question is whether the Jew as such—i.e. the Jew who avows that his true nature compels him to live in eternal separation from others—is able to acquire the *universal rights of man* and grant them to others."
>
> "The idea of the rights of man was discovered in the Christian world only in the last century. It is not an innate idea but rather is acquired in struggle against historical traditions in which man has hitherto been educated. Thus the rights of man are neither a gift of nature nor a legacy from past history but the reward of struggle against the accident of birth and privileges transmitted by history from generation to generation up to the present. They are the result of culture, and only

he can possess them who has earned and deserved them."

"But can the Jew actually take possession of them? As long as he remains a Jew the limited nature which makes him a Jew must triumph over the human nature which should link him as a man with others and must separate him from non-Jews. By this separation he proclaims that the special nature which makes him a Jew is his true and highest nature to which his human nature must yield."

"In the same way, the Christian as Christian cannot grant the rights of man." (Pp. 19, 20.)

According to Bauer man must sacrifice the "*privilege of faith*" to be able to acquire the universal rights of man. Let us consider for a moment these so-called rights and indeed in their most authentic form, the form they have among their *discoverers*, the North Americans and the French. In part these rights are *political* rights that can be exercised only in community with others. *Participation* in the *community*, indeed the *political* community or *state*, constitutes their substance. They belong in the category of *political freedom*, of *civil rights*, which by no means presupposes the consistent and positive transcendence of religion and thus of Judaism, as we have seen. There is left for consideration the other part, the *rights of man* as distinct from the *rights of the citizen*.

Among these is freedom of conscience, the right to practice one's chosen religion. The *privilege of faith* is expressly recognized either as a *right of man* or as a consequence of a right of man, freedom.

Declaration of the Rights of Man and of the Citizen, 1791, Art. 10: "No one is to be disturbed on account of his beliefs, even religious beliefs." In Title I of the Constitution of 1791 there is guaranteed as a human right: "The liberty of every man to practice the *religious worship* to which he is attached."

The *Declaration of the Rights of Man*, etc., 1793, includes among human rights, Art. 7: "Freedom of worship." Moreover, it even maintains in regard to the right to express views and opinions, to assemble, and to worship: "The need to proclaim these *rights* assumes either the presence or recent memory of despotism." Compare the Constitution of 1795, Title XIV, Art. 354.

Constitution of Pennsylvania, Art. 9, §3: "All men have a natural and indefeasible *right* to worship Almighty God according to the dictates of their own consciences; no man can of right be compelled to attend, erect, or support any place of worship, or to maintain any ministry against his consent; no human authority can, in any case whatever, interfere with the rights of conscience and control the prerogatives of the soul."

Constitution of New Hampshire, Arts. 5 and 6: "Among the natural rights, some are in their very nature unalienable, because no equivalent can be conceived for them. Of this kind are the *rights* of conscience." (Beaumont, *loc. cit.*, pp. 213, 214.)

The incompatibility between a religion and the rights of man is so little implied in the concept of the rights of man that the *right to be religious* according to one's liking and to practice a particular religion is explicitly included among the rights of man. The *privilege of faith* is a *universal human right*.

The *rights of man* as *such* are distinguished from the *rights of the citizen*. Who is this *man* distinguished from the *citizen*? None other than the *member of civil society*. Why is the member of the civil society called "man," man without qualification, and why are his rights called the *rights of man*? How can we explain this? By the relation of the political state to civil society and by the nature of political emancipation.

Let us note first of all that the so-called *rights of man* as distinguished from the *rights of the citizen* are only the rights of the *member of civil society*, that is, of egoistic man, man separated from other men and from the community. The most radical constitution, the Constitution of 1793, may be quoted:

Declaration of the Rights of Man and of the Citizen.

Art. 2. "These rights (the natural and imprescriptible rights) are: *equality*, *liberty*, *security*, *property*."

What is this *liberty*?

> *Art. 6.* "Liberty is the power belonging to each man to do anything which does not impair the rights of others," or according to the Declaration of the Rights of Man of 1791: "Liberty is the power to do anything which does not harm others."

Liberty is thus the right to do and perform anything that does not harm others. The limits within which each can act *without harming* others is determined by law just as the boundary between two fields is marked by a stake. This is the liberty of man viewed as an isolated monad, withdrawn into himself. Why, according to Bauer, is the Jew not capable of acquiring human rights? "As long as he remains a Jew the limited nature which makes him a Jew must triumph over the human nature which should link him as a man with others and must separate him from non-Jews." But liberty as a right of man is not based on the association of man with man but rather on the separation of man from man. It is the *right* of this separation, the right of the *limited* individual limited to himself.

The practical application of the right of liberty is the right of *private property*.

What is property as one of the rights of man?

> *Art. 16* (Constitution of 1793): "The right of *property* is that belonging to every citizen to enjoy and dispose of his goods, his revenues, the fruits of his labor and of his industry *as he wills*."

The right of property is thus the right to enjoy and dispose of one's possessions as one wills, without regard for other men and independently of society. It is the right of self-interest. This individual freedom and its application as well constitutes the basis of civil society. It lets every man find in other men not the *realization* but rather the *limitation* of his own freedom. It proclaims above all the right of man "to enjoy and dispose of his goods, his revenues, the fruits of his labor and of his industry *as he wills*."

There still remain the other rights of man, equality and security.

"Equality"—here used in its non-political sense—is only the equal right to *liberty* as described above, viz., that every man is equally viewed as a self-sufficient monad. The Constitution of 1705 defines the concept of equality with this significance:

> *Art.* 3 (Constitution of 1795): "Equality consists in the fact that the law is the same for all, whether it protects or whether it punishes."

And security?

> *Art. 8* (Constitution of 1793): "Security consists in the protection accorded by society to each of its members for the preservation of his person, his rights and his property."

Security is the supreme social concept of civil society, the concept of the *police*, the concept that the whole society exists only to guarantee to each of its members the preservation of his person, his rights, and his property. In this sense Hegel calls civil society "the state as necessity and rationality."

Civil society does not raise itself above its egoism through the concept of security. Rather, security is the *guarantee* of the egoism.

Thus none of the so-called rights of men goes beyond the egoistic man, the man withdrawn into himself, his private interest and his private choice, and separated from the community as a member of civil society. Far from viewing man here in his species-being, his species-life itself—society—rather appears to be an external framework for the individual, limiting his original independence. The only bond between men is natural necessity, need and private interest, the maintenance of their property and egoistic persons.

It is somewhat curious that a nation just beginning to free itself, tearing down all the barriers between different sections of the people and founding a political community, should solemnly proclaim (Declaration of 1791) the justification of the egoistic man, man separated from his fellow men and from the community, and should even repeat this proclamation at

a moment when only the most heroic sacrifice can save the nation and hence is urgently required, when the sacrifice of all the interests of civil society is highly imperative and egoism must be punished as crime (Declaration of the Rights of Man of 1793). This becomes even more curious when we observe that the political liberators reduce citizenship, the *political community*, to a mere *means* for preserving these so-called rights of man and that the citizen thus is proclaimed to be the servant of the egoistic man, the sphere in which man acts as a member of the community is degraded below that in which he acts as a fractional being, and finally man as bourgeois rather than man as citizen is considered to be the *proper* and *authentic* man.

"The *goal* of all *political association* is the *preservation* of the natural and imprescriptible rights of man." (Declaration of the Rights of Man, etc., of 1791, Art. 2.) "*Government* is instituted to guarantee man's enjoyment of his natural and imprescriptible rights." (Declaration, etc., of 1793, Art. 1.) Thus even at the time of its youthful enthusiasm fired by the urgency of circumstances political life is proclaimed to be a mere *means* whose end is life in civil society. To be sure, revolutionary practice flagrantly contradicts its theory. While security, for example, is proclaimed to be one of the rights of man, the violation of the privacy of correspondence is publicly established as the order of the day. While the "*unlimited* freedom of the press" (Constitution of 1793, Art. 122) as a consequence of the rights of man and individual freedom is guaranteed, freedom of the press is completely abolished because "freedom of the press should not be permitted to compromise public liberty." ("Robespierre jeune," *Parliamentary History of the French Revolution*, by Buchez and Roux, Vol. 28, p. 159.) This means that the human right of liberty ceases to be a right when it comes into conflict with *political* life while theoretically political life is only the guarantee of the rights of man, the rights of individual man, and should be abandoned once it contradicts its *end*, these rights of man. But the practice is only the exception, the theory is the rule. Even if we choose to regard revolutionary practice as the correct expression of this relationship, the problem still remains unsettled as to why the relationship is inverted in the consciousness of the political liberators so that the end appears as means and the means as the end. This optical illusion of their consciousness would always be the same problem, though a psychological, a theoretical problem.

The problem is easily settled.

Political emancipation is also the *dissolution* of the old society on which rests the sovereign power, the character of the state as alienated from the people. The political revolution is the revolution of civil society. What was the character of the old society? It can be described in one word. *Feudalism*. The old civil society had a *directly political* character, that is, the elements of civil life such as property, the family, the mode and manner of work, for example, were raised into elements of political life in the form of landlordism, estates, and corporations. In this form they determined the relation of the particular individual to the *state as a whole*, that is, his *political* relation, his separation and exclusion from other parts of society. For the feudal organization of national life did not elevate property or labor to the level of social elements but rather completed their *separation* from the state as a whole and established them as *separate* societies within society. Thus the vital functions and conditions of civil society always remained political, but political in the feudal sense. That is, they excluded the individual from the state as a whole and transformed the *special* relation between his corporation and the state into his own general relation to national life, just as they transformed his specific civil activity and situation into a general activity and situation. As a consequence of this organization, there necessarily appears the unity of the state as well as its consciousness, will, and activity—the general political power—likewise the *special* business of the ruler and his servants, separated from the people.

The political revolution, which overthrew this domination, turned the business of the state into the people's business, and made the political state the business of *all*, that is, an actual state—this revolution inevitably destroyed all estates, corporations, guilds, and privileges variously expressing the separation of the people from their community. The political revolution thereby *abolished* the *political character of civil society*. It shattered civil society into its constituent elements—on the one hand *individuals* and on the other the *material* and *spiritual elements* constituting

the vital content and civil situation of these individuals. It released the political spirit, which had been broken, fragmented, and lost, as it were, in the various cul-de-sacs of feudal society. It gathered up this scattered spirit, liberated it from its entanglement with civil life, and turned it into the sphere of the community, the *general* concern of the people ideally independent of these *particular* elements of civil life. A *particular* activity and situation in life sank into a merely individual significance, no longer forming the general relation of the individual to the state as a whole. Public business as such rather became the general business of every individual and the political function became his general function.

But the fulfillment of the idealism of the state was at the same time the fulfillment of the materialism of civil society. The throwing off of the political yoke was at the same time the throwing off of the bond that had fettered the egoistic spirit of civil society. Political emancipation was at the same time the emancipation of civil society from politics, from the *appearance* of a general content.

Feudal society was dissolved into its foundation, into *man*. But into man as he actually was the foundation of that society, into *egoistical* man.

This *man*, the member of civil society, is now the basis and presupposition of the *political* state. He is recognized as such by the state in the rights of man.

But the freedom of egoistic man and the recognition of this freedom is rather the recognition of the *unbridled* movement of the spiritual and material elements forming the content of his life.

Thus man was not freed from religion; he received religious freedom. He was not freed from property. He received freedom of property. He was not freed from the egoism of trade but received freedom to trade.

The *constitution* of the *political state* and the dissolution of civil society into independent *individuals*—whose relation is *law* just as the relation of estates and guilds was *privilege*—is accomplished in *one and the same act*. As a member of civil society man is the *non-political* man but necessarily appears to be *natural* man. The *rights of man* appear to be *natural rights* because *self-conscious activity* is concentrated on the *political act*. The *egoistic* man is the *passive* and *given* result of the dissolved society, an object of *immediate certainty* and thus a *natural* object. The *political revolution* dissolves civil life into its constituent elements without *revolutionizing* these elements themselves and subjecting them to criticism. It regards civil society—the realm of needs, labor, private interests, and private right—as the *basis of its existence*, as a *presupposition* needing no ground, and thus as its *natural basis*. Finally, man as a member of civil society is regarded as *authentic* man, *man* as distinct from *citizen*, since he is man in his sensuous, individual, and *most intimate* existence while *political* man is only the abstract and artificial man, man as an *allegorical, moral* person. Actual man is recognized only in the form of an *egoistic* individual, *authentic* man, only in the form of *abstract citizen*.

The abstraction of the political man was correctly depicted by Rousseau:

> "Whoever dares to undertake the founding of a nation must feel himself capable of **changing,**[*] so to speak, **human nature** and **transforming** each individual who is in himself a complete but isolated whole, into a **part** of something greater than himself from which he somehow derives his life and existence, substituting a **limited** and **moral existence** for physical and independent existence. **Man** must be deprived of **his own powers** and given alien powers which he cannot use without the aid of others." (*Social Contract*, Bk. II, London, 1782, p. 67.)

All emancipation is *restoration* of the human world and the relationships of *men themselves*.

Political emancipation is a reduction of man to a member of civil society, to an *egoistic independent* individual on the one hand and to a *citizen*, a moral person, on the other.

Only when the actual, individual man has taken back into himself the abstract citizen and in his everyday life, his individual work, and his individual relationships has become a *species-being*, only when he has recognized and organized his own powers as *social* powers so that social force is no longer separated

[* Boldface type identified Marx's emphasis in the quotation.]

from him as *political* power, only then is human emancipation complete.

Bruno Bauer, *"The Capacity of Present-day Jews and Christians to Become Free,"* Twenty-one Sheets [from Switzerland *(ed. Georg Herwegh), Zurich and Winterthur, 1843*], *pp. 56–71.*

Here Bauer deals with the relation between the *Jewish and Christian religion* and their relation to criticism. Their relation to criticism is their bearing "on the capacity to become free."

Accordingly: "The Christian has only one stage to surpass—namely, his religion—in order to abandon religion in general" and thus become free. "The Jew, on the other hand, has to break not only with his Jewish nature but also with the development, the completion, of his religion, a development which has remained alien to him" (p. 71).

Thus Bauer here transforms the question of Jewish emancipation into a purely religious one. The theological difficulty as to whether the Jew or the Christian has the better prospect of salvation is here reproduced in the enlightened form: Which of the two is *more capable of emancipation*? It is thus no longer the question: Does Judaism or Christianity emancipate? but rather, on the contrary: Which emancipates more, the negation of Judaism or the negation of Christianity?

"If they want to be free, the Jews should not embrace Christianity but Christianity in dissolution, religion generally in dissolution—enlightenment, criticism and its results, free humanity" (p. 70).

For the Jew it is still a matter of *professing faith*, not Christianity but rather Christianity in dissolution.

Bauer requires the Jew to break with the essence of the Christian religion, a requirement which does not follow, as he says himself, from the development of the Jewish nature.

When Bauer, at the end of his *Jewish Question*, interpreted Judaism merely as a crude religious criticism of Christianity and hence gave it "only" a religious significance, it was to be expected that he would also transform the emancipation of the Jews into a philosophico-theological act.

Bauer views the *ideal* and abstract essence of the Jew, his *religion*, as his *whole* nature. Hence he correctly infers: "The Jew contributes nothing to mankind if he disregards his narrow law," if he cancels all his Judaism (p. 65).

The relation of Jews to Christian thus becomes the following: the sole interest of the Christian in the emancipation of the Jew is a general human interest, a *theoretical* interest. Judaism is an offensive fact to the religious eye of the Christian. As soon as the Christian's eye ceases to be religious, this fact ceases to offend it. In and for itself the emancipation of the Jew is not a task for the Christian.

The Jew, on the other hand, not only has to finish his own task but also the task of the Christian—[Bruno Bauer's] *Critique of the* [*Gospel History of the*] *Synoptics* and [Strauss'] *Life of Jesus*, etc.—if he wants to emancipate himself.

"They can look after themselves: they will determine their own destiny; but history does not allow itself to be mocked" (p. 71).

We will try to break with the theological formulation of the issue. The question concerning the Jew's capacity for emancipation becomes for us the question: What specific *social* element is to be overcome in order to abolish Judaism? For the modern Jew's capacity for emancipation is the relation of Judaism to the emancipation of the modern world. This relation follows necessarily from the particular position of Judaism in the modern subjugated world.

Let us consider the actual, secular Jew—not the *sabbath Jew*, as Bauer does, but the *everyday Jew*.

Let us look for the secret of the Jew not in his religion but rather for the secret of the religion in the actual Jew.

What is the secular basis of Judaism? *Practical* need, *self-interest*.

What is the worldly cult of the Jew? *Bargaining*. What is his worldly god? *Money*.

Very well! Emancipation from *bargaining* and *money*, and thus from practical and real Judaism would be the self-emancipation of our era.

An organization of society that would abolish the pre-conditions of bargaining and thus its possibility

would render the Jew impossible. His religious consciousness would dissolve like a dull mist in the actual life-giving air of society. On the other hand, when the Jew recognizes this *practical* nature of his as futile and strives to eliminate it, he works away from his previous development toward general *human emancipation* and opposes the *supreme practical* expression of human self-alienation.

Thus we perceive in Judaism a general and *contemporary anti-social* element, which has been carried to its present high point by a historical development in which the Jews have contributed to this element, a point at which it must necessarily dissolve itself.

The *emancipation of the Jews*, in the final analysis, is the emancipation of mankind from *Judaism*.

The Jew has already emancipated himself in a Jewish way, "The Jew who is only tolerated in Vienna, for example, determines the fate of the whole empire through his financial power. The Jew who may be without rights in the smallest German state decides the destiny of Europe. While corporations and guilds exclude the Jew or are unfavorable to him, audacity in industry mocks the obstinacy of the medieval institutions." (B. Bauer, *The Jewish Question*, p. 114.)

This is no isolated fact. The Jew has emancipated himself in a Jewish way not only by acquiring financial power but also because, with and without him, *money* has become a world power, and the practical Jewish spirit has become the practical spirit of Christian nations. The Jews have emancipated themselves insofar as the Christian have become Jews.

For example, the pious and politically free inhabitant of New England, Captain Hamilton reports, is a kind of *Laocoön* who does not make the slightest effort to free himself from the serpents strangling him. *Mammon* is his idol to whom he prays not only with his lips but with all the power of his body and soul. In his eyes the world is nothing but a stock exchange, and he is convinced that here below he has no other destiny than to become richer than his neighbor. Bargaining dominates his every thought, exchange in things constitutes his only recreation. When he travels, he carries his shop or office on his back, as it were, and talks of nothing but interest and profit. If he loses sight of his own business for a moment, it is only in order to poke his nose into that of others.

Indeed, the practical domination of Judaism over the Christian world in North America has achieved such clear and common expression that the *very preaching of the Gospel*, the Christian ministry, has become an article of commerce and the bankrupt merchant takes to the Gospel while the minister who has become rich goes into business. "*That man whom you see at the head of a respectable congregation began as a merchant; his business having failed, he became a minister; the other started with the ministry, but as soon as he had acquired a sum of money, he left the pulpit for business. In the eyes of many, the religious ministry is a veritable commercial career.*" (Beaumont, *loc. cit.*, pp. 185, 186.)

According to Bauer it is a hypocritical situation when the Jew is deprived of political rights in theory while he wields enormous power in practice, when he exercises the political influence *wholesale* denied to him in retail (*The Jewish Question*, p. 114).

The contradiction existing between the practical political power of the Jew and his political rights is the contradiction between politics and financial power in general. While politics ideally is superior to financial power, in actual fact it has become its serf.

Judaism has persisted *alongside* Christianity not only as the religious critique of Christianity, not only as the concrete doubt concerning the religious descent of Christianity, but equally because the practical Jewish spirit, Judaism, has perpetuated itself in Christian society and there even attained its highest development. The Jew, who exists as a special member of civil society, is only the special manifestation of civil society's Judaism.

Judaism has survived not in spite of but by means of history.

Out of its own entrails, civil society ceaselessly produces the Jew.

What actually was the foundation of the Jewish religion? Practical need, egoism.

Hence, the Jew's monotheism is actually the polytheism of many needs, a polytheism that makes even the toilet an object of divine law. *Practical need, egoism* is the principle of *civil society* and appears purely as such as soon as civil society has fully delivered itself to the political state. The god of *practical need and self-interest* is *money*.

Money is the jealous god of Israel before whom no other god may exist. Money degrades all the gods

of mankind—and converts them into commodities. Money is the general, self-sufficient *value* of everything. Hence it has robbed the whole world, the human world as well as nature, of its proper worth. Money is the alienated essence of man's labor and life, and this alien essence dominates him as he worships it.

The god of the Jews has been secularized and has become the god of the world. The bill of exchange is the Jew's actual god. His god is only an illusory bill of exchange.

The view of nature achieved under the rule of private property and money is an actual contempt for and practical degradation of nature which does, to be sure, exist in the Jewish religion, but only in imagination.

In this sense Thomas Münzer declared it to be intolerable "that every creature should be turned into property, the fish in the water, the birds in the air, the plants of the earth—the creature must also become free."

That which is contained abstractly in the Jewish religion—contempt for theory, for art, for history, for man as an end in himself—is the *actual conscious* standpoint and virtue of the monied man. The species-relation itself, the relation between man and woman, etc., becomes an object of commerce! The woman is bought and sold.

The *chimerical* nationality of the Jew is the nationality of the merchant, particularly of the monied man.

The Jew's unfounded, superficial law is only the religious caricature of unfounded, superficial morality and law in general, the caricature of merely *formal* ceremonies encompassing the world of self-interest.

Here also the highest relation of man is the *legal* relation, the relation to laws which apply to him not because they are laws of his own will and nature but because they *dominate* him and because defection from them will be *avenged*.

Jewish Jesuitism, the same practical Jesuitism Bauer finds in the Talmud, is the relationship of the world of self-interest to the laws governing it, and the cunning circumvention of these laws is that world's main art.

Indeed, the movement of that world within its law is necessarily a continuous abrogation of the law.

Judaism could not develop further as *religion*, could not develop further theoretically, because the perspective of practical need is limited by its very nature and soon exhausted.

By its very nature, the religion of practical need could not find fulfillment in theory but only in *practice* [*Praxis*], simply because practice is its truth.

Judaism could create no new world; it could only draw the new creations and conditions of the world into the compass of its own activity because practical need, whose rationale is self-interest, remains passive, never willfully extending itself but only *finding* itself extended with the continuous development of social conditions.

Judaism reaches its height with the perfection of civil society, but civil society achieves perfection only in the *Christian* world. Only under the reign of Christianity, which makes *all* national, natural, moral, and theoretical relationships *external* to man, was civil society able to separate itself completely from political life, sever all man's species-ties, substitute egoism and selfish need for those ties, and dissolve the human world into a world of atomistic, mutually hostile individuals.

Christianity arose out of Judaism. It has again dissolved itself into Judaism.

From the outset the Christian was the theorizing Jew. Hence, the Jew is the practical Christian, and the practical Christian has again become a Jew.

Christianity overcame real Judaism only in appearance. It was too *noble*, too spiritual, to eliminate the crudeness of practical need except by elevating it into the blue.

Christianity is the sublime thought of Judaism, and Judaism is the common practical application of Christianity. But this application could only become universal after Christianity as religion par excellence had *theoretically* completed the alienation of man from himself and from nature.

Only then could Judaism attain universal dominion and convert externalized man and nature into *alienable* and saleable objects subservient to egoistic need, dependent on bargaining.

Selling is the practice of externalization. As long as man is captivated in religion, knows his nature only as objectified, and thereby converts his nature into an *alien* illusory being, so under the dominion of egoistic need he can only act practically, only

practically produce objects, by subordinating both his products and this activity to the domination of an alien being, bestowing upon them the significance of an alien entity—of money.

The Christian egoism of eternal bliss in its practical fulfillment necessarily becomes the material egoism of the Jew, heavenly need is converted into earthly need, and subjectivism becomes selfishness. We do not explain the Jew's tenacity from his religion but rather from the human basis of his religion, from practical need, from egoism.

Since the Jew's real nature have been generally actualized and secularized in civil society, civil society could not convince the Jew of the *unreality* of his *religious* nature which is precisely the ideal representation of practical need. Thus not only in the Pentateuch or Talmud but also in present society we find the nature of the contemporary Jew, not as an abstract nature but a supremely empirical nature, not only as the Jew's narrowness but as the Jewish narrowness of society.

When society succeeds in transcending the *empirical* essence of Judaism—bargaining and all its conditions—the Jew becomes *impossible* because his consciousness no longer has an object, the subjective basis of Judaism—practical need—is humanized, and the conflict between the individual sensuous existence of man and his species-existence is transcended.

The *social* emancipation of the Jew is the *emancipation of society from Judaism*.

Manifesto of the Communist Party

PREFACE TO THE GERMAN EDITION OF 1872

The Communist League, an international association of workers, which could of course be only a secret one under the conditions obtaining at the time, commissioned the undersigned, at the Congress held in London in November 1847, to draw up for publication a detailed theoretical and practical programme of the Party. Such was the origin of the following Manifesto, the manuscript of which travelled to London, to be printed, a few weeks before the February Revolution.[1] First published in German, it has been republished in that language in at least twelve different editions in Germany, England and America. It was published in English for the first time in 1850 in the *Red Republican*, London, translated by Miss Helen Macfarlane, and in 1871 in at least three different translations in America. A French version first appeared in Paris shortly before the June insurrection of 1848 and recently in *Le Socialiste* of New York. A new translation is in the course of preparation. A Polish version appeared in London shortly after it was first published in German. A Russian translation was published in Geneva in the sixties. Into Danish, too, it was translated shortly after its first appearance.

However much the state of things may have altered during the last twenty-five years, the general principles laid down in this Manifesto are, on the whole, as correct today as ever. Here and there some detail might be improved. The practical application of the principles will depend, as the Manifesto itself states, everywhere and at all times, on the historical conditions for the time being existing, and, for that reason, no special stress is laid on the revolutionary measures proposed at the end of Section II. That passage would, in many respects, be very differently worded today. In view of the gigantic strides of Modern Industry in the last twenty-five years, and of the accompanying improved and extended party organisation of the working class, in view of the practical experience gained, first in the February Revolution, and then, still more, in the Paris Commune, where the proletariat for the first time held political power for two whole months, this programme has in some details become antiquated. One thing especially was proved by the Commune, *viz.*, that "the working class cannot simply lay hold of the ready-made State machinery, and wield it for its own purposes." (See *The Civil War in France; Address of the General Council of the International Working Men's Association*, London, Trulove, 1871, p. 15, where this point is further developed.) Further, it is self-evident that the criticism of socialist literature is deficient in relation to the present time, because it comes down only to 1847; also, that the remarks on the relation of the Communists to the various opposition parties (Section IV), although in principle still correct, yet in practice are antiquated, because the political situation has been entirely changed, and the progress of history has swept from off the earth the greater portion of the political parties there enumerated.

But, then, the Manifesto has become a historical document which we have no longer any right to alter. A subsequent edition may perhaps appear with an introduction bridging the gap from 1847 to the present day; this reprint was too unexpected to leave us time for that.

Karl Marx Friedrich Engels
London, June 24, 1872

The edition reprinted here is the standard English edition of 1888.

1. [The February Revolution in France, 1848.]

PREFACE TO THE RUSSIAN EDITION OF 1882

The first Russian edition of the *Manifesto of the Communist Party*, translated by Bakunin, was published early in the sixties[2] by the printing office of the *Kolokol*. Then the West could see in it (the *Russian* edition of the Manifesto) only a literary curiosity. Such a view would be impossible today.

What a limited field the proletarian movement still occupied at that time (December 1847) is most clearly shown by the last section of the Manifesto: the position of the Communists in relation to the various opposition parties in the various countries. Precisely Russia and the United States are missing here. It was the time when Russia constituted the last great reserve of all European reaction, when the United States absorbed the surplus proletarian forces of Europe through immigration. Both countries provided Europe with raw materials and were at the same time markets for the sale of its industrial products. At that time both were, therefore, in one way or another, pillars of the existing European order.

How very different today! Precisely European immigration fitted North America for a gigantic agricultural production, whose competition is shaking the very foundations of European landed property—large and small. In addition it enabled the United States to exploit its tremendous industrial resources with an energy and on a scale that must shortly break the industrial monopoly of Western Europe, and especially of England, existing up to now. Both circumstances react in revolutionary manner upon America itself. Step by step the small and middle landownership of the farmers, the basis of the whole political constitution, is succumbing to the competition of giant farms; simultaneously, a mass proletariat and a fabulous concentration of capitals are developing for the first time in the industrial regions.

And now Russia! During the Revolution of 1848–49 not only the European princes, but the European bourgeois as well, found their only salvation from the proletariat, just beginning to awaken, in Russian intervention. The tsar was proclaimed the chief of European reaction. Today he is a prisoner of war of the revolution, in Gatchina, and Russia forms the vanguard of revolutionary action in Europe.

The Communist Manifesto had as its object the proclamation of the inevitably impending dissolution of modern bourgeois property. But in Russia we find, face to face with the rapidly developing capitalist swindle and bourgeois landed property, just beginning to develop, more than half the land owned in common by the peasants. Now the question is: Can the Russian *obshchina*,[3] though greatly undermined, yet a form of the primeval common ownership of land, pass directly to the higher form of communist common ownership? Or, on the contrary, must it first pass through the same process of dissolution as constitutes the historical evolution of the West?

The only answer to that possible today is this: If the Russian Revolution becomes the signal for a proletarian revolution in the West, so that both complement each other, the present Russian common ownership of land may serve as the starting-point for a communist development.

Karl Marx Friedrich Engels
London, January 21, 1882

PREFACE TO THE GERMAN EDITION OF 1883

The preface to the present edition I must, alas, sign alone. Marx, the man to whom the whole working class of Europe and America owes more than to anyone else, rests at Highgate Cemetery and over his grave the first grass is already growing. Since his death, there can be even less thought of revising or supplementing the Manifesto. All the more do I consider it necessary again to state here the following expressly:

The basic thought running through the Manifesto—that economic production and the structure of society of every historical epoch necessarily arising therefrom constitute the foundation for the political and intellectual history of that epoch; that

2. [The date is not correct; the edition referred to appeared in 1869.]

3. [Village community.]

consequently (ever since the dissolution of the primeval communal ownership of land) all history has been a history of class struggles, of struggles between exploited and exploiting, between dominated and dominating classes at various stages of social development; that this struggle, however, has now reached a stage where the exploited and oppressed class (the proletariat) can no longer emancipate itself from the class which exploits and oppresses it (the bourgeoisie), without at the same time forever freeing the whole of society from exploitation, oppression and class struggles—this basic thought belongs solely and exclusively to Marx.

I have already stated this many times; but precisely now it is necessary that it also stand in front of the Manifesto itself.

Friedrich Engels
London, June 28, 1883

Manifesto of the Communist Party

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communistic by its opponents in power? Where the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London, and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

I. BOURGEOIS AND PROLETARIANS[4]

The history of all hitherto existing society[5] is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master[6] and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary re-constitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost

4. By bourgeoisie is meant the class of modern Capitalists, owners of the means of social production and employers of wage-labour. By proletariat, the class of modern wage-labourers who, having no means of production of their own, are reduced to selling their labour-power in order to live.—*Engels, English edition of 1888.*

5. That is, all *written* history. In 1847, the pre-history of society, the social organisation existing previous to recorded history, was all but unknown. Since then, Haxthausen discovered common ownership of land in Russia, Maurer proved it to be the social foundation from which all Teutonic races started in history, and by and by village communities were found to be, or to have been the primitive form of society everywhere from India to Ireland. The inner organisation of this primitive Communistic society was laid bare, in its typical form, by Morgan's crowning discovery of the true nature of the *gens* and its relation to the *tribe*. With the dissolution of these primaeval communities society begins to be differentiated into separate and finally antagonistic classes. I have attempted to retrace this process of dissolution in: "Der Ursprung der Familie, des Privateigenthums und des Staats" [*The Origin of the Family, Private Property and the State*], 2nd edition, Stuttgart 1886.—*Engels, English edition of 1888.*

6. Guild-master, that is, a full member of a guild, a master within, not a head of a guild.—*Engels, English edition of 1888.*

everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with clash antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms: Society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the Middle Ages sprang the chartered burghers of the earliest towns. From these burgesses the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape, opened up fresh ground for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle class; division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world-market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the mediaeval commune;[7] here independent urban republic (as in Italy and Germany), there taxable "third estate" of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, corner-stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic

7. "Commune" was the name taken, in France, by the nascent towns even before they had conquered from their feudal lords and masters local self-government and political rights as the "Third Estate." Generally speaking, for the economical development of the bourgeoisie, England is here taken as the typical country; for its political development, France.—*Engels, English edition of 1888.*

This was the name given their urban communities by the townsmen of Italy and France, after they had purchased or wrested their initial rights of self-government from their feudal lords.—*Engels, German edition of 1890.*

relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage-labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which Reactionists so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilised nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures, there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian, nations into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate. It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, *i.e.,* to become bourgeois themselves. In one word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared

with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations and peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated population, centralised means of production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class-interest, one frontier and one customs-tariff. The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

We see then: the means of production and of exchange, on whose foundation the bourgeoisie built itself up, were generated in feudal society. At a certain stage in the development of these means of production and of exchange, the conditions under which feudal society produced and exchanged, the feudal organisation of agriculture and manufacturing industry, in one word, the feudal relations of property became no longer compatible with the already developed productive forces; they became so many fetters. They had to be burst asunder; they were burst asunder.

Into their place stepped free competition, accompanied by a social and political constitution adapted to it, and by the economical and political sway of the bourgeois class.

A similar movement is going on before our own eyes. Modern bourgeois society with its relations of production, of exchange and of property, a society that has conjured up such gigantic means of production and of exchange, is like the sorcerer, who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put on its trial, each time more threateningly, the existence of the entire bourgeois society. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of over-production. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a universal war of devastation had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed; and why? Because there is too much civilisation, too much means of subsistence, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of bourgeois property; on the contrary, they have become too powerful for these conditions, by which they are fettered, and so soon as they overcome these fetters, they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand by enforced destruction of a mass of productive forces; on the other, by the conquest of new markets, and by the more thorough exploitation of the old ones. That is to say, by paving the way for more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

The weapons with which the bourgeoisie felled feudalism to the ground are now turned against the bourgeoisie itself.

But not only has the bourgeoisie forged the weapons that bring death to itself; it has also called into existence the men who are to wield these weapons—the modern working class—the proletarians.

In proportion as the bourgeoisie, *i.e.*, capital, is developed, in the same proportion is the proletariat, the modern working class, developed—a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piece-meal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labour, the work of the proletarians has lost all individual character, and consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous, and most easily acquired knack, that is required of him. Hence, the cost of production of a workman is restricted, almost entirely, to the means of subsistence that he requires for his maintenance, and for the propagation of his race. But the price of a commodity, and therefore also of labour,[8] is equal to its cost of production. In proportion, therefore, as the repulsiveness of the work increases, the wage decreases. Nay more, in proportion as the use of machinery and division of labour increases, in the same proportion the burden of toil also increases, whether by prolongation of the working hours, by increase of the work exacted in a given time or by increased speed of the machinery, etc.

Modern industry has converted the little workshop of the patriarchal master into the great factory of the industrial capitalist. Masses of labourers, crowded into the factory, are organised like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeois class, and of the bourgeois State; they are daily and hourly enslaved by the machine, by the over-looker, and, above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is.

The less the skill and exertion of strength implied in manual labour, in other words, the more modern industry becomes developed, the more is the labour of men superseded by that of women. Differences of age and sex have no longer any distinctive social validity for the working class. All are instruments of labour, more or less expensive to use, according to their age and sex.

No sooner is the exploitation of the labourer by the manufacturer, so far, at an end, that he receives his wages in cash, than he is set upon by the other portions of the bourgeoisie, the landlord, the shopkeeper, the pawnbroker, etc.

The lower strata of the middle class—the small tradespeople, shopkeepers, and retired tradesmen generally, the handicraftsmen and peasants—all these sink gradually into the proletariat, partly because their diminutive capital does not suffice for the scale on which Modern Industry is carried on, and is swamped in the competition with the large capitalists, partly because their specialised skill is rendered worthless by new methods of production. Thus the proletariat is recruited from all classes of the population.

The proletariat goes through various stages of development. With its birth begins its struggle with the bourgeoisie. At first the contest is carried on by individual labourers, then by the workpeople of a factory, then by the operatives of one trade, in one locality, against the individual bourgeois who directly exploits them. They direct their attacks not against the bourgeois conditions of production, but against the instruments of production themselves; they destroy imported wares that compete with their labour, they smash to pieces machinery, they set factories ablaze, they seek to restore by force the vanished status of the workman of the Middle Ages.

At this stage the labourers still form an incoherent mass scattered over the whole country, and broken up by their mutual competition. If anywhere they unite to form more compact bodies, this is not yet the consequence of their own active union, but of the union of the bourgeoisie, which class, in order to attain its own political ends, is compelled to set the whole proletariat in motion, and is moreover yet, for a time, able to do so. At this stage, therefore, the proletarians do not fight their enemies, but the enemies of their enemies, the remnants of absolute monarchy, the landowners, the non-industrial bourgeois, the petty bourgeoisie. Thus the whole historical

8. [Subsequently Marx pointed out that the worker sells not his labour but his labour power.]

movement is concentrated in the hands of the bourgeoisie; every victory so obtained is a victory for the bourgeoisie.

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows, and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalised, in proportion as machinery obliterates all distinctions of labour, and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crises, make the wages of the workers ever more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (Trades Unions) against the bourgeois; they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots.

Now and then the workers are victorious, but only for a time. The real fruit of their battles lies, not in the immediate result, but in the ever-expanding union of the workers. This union is helped on by the improved means of communication that are created by modern industry and that place the workers of different localities in contact with one another. It was just this contact that was needed to centralise the numerous local struggles, all of the same character, into one national struggle between classes. But every class struggle is a political struggle. And that union, to attain which the burghers of the Middle Ages, with their miserable highways, required centuries, the modern proletarians, thanks to railways, achieve in a few years.

This organisation of the proletarians into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. It compels legislative recognition of particular interests of the workers, by taking advantage of the divisions among the bourgeoisie itself. Thus the ten-hours' bill in England was carried.

Altogether collisions between the classes of the old society further, in many ways, the course of development of the proletariat. The bourgeoisie finds itself involved in a constant battle. At first with the aristocracy; later on, with those portions of the bourgeoisie itself, whose interests have become antagonistic to the progress of industry; at all times, with the bourgeoisie of foreign countries. In all these battles it sees itself compelled to appeal to the proletariat, to ask for its help, and thus, to drag it into the political arena. The bourgeoisie itself, therefore, supplies the proletariat with its own elements of political and general education, in other words, it furnishes the proletariat with weapons for fighting the bourgeoisie.

Further, as we have already seen, entire sections of the ruling classes are, by the advance of industry, precipitated into the proletariat, or are at least threatened in their conditions of existence. These also supply the proletariat with fresh elements of enlightenment and progress.

Finally, in times when the class struggle nears the decisive hour, the process of dissolution going on within the ruling class, in fact within the whole range of society, assumes such a violent, glaring character, that a small section of the ruling class cuts itself adrift, and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.

Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes decay and finally disappear in the face of Modern Industry; the proletariat is its special and essential product.

The lower middle class, the small manufacturer, the shopkeeper, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class. They are therefore not revolutionary, but conservative. Nay more, they are reactionary, for they try to roll back the wheel of history. If by chance they are revolutionary, they are so only in view of their impending transfer into the proletariat, they thus defend not their

present, but their future interests, they desert their own standpoint to place themselves at that of the proletariat.

The "dangerous class," the social scum, that passively rotting mass thrown off by the lowest layers of old society, may, here and there, be swept into the movement by a proletarian revolution; its conditions of life, however, prepare it far more for the part of a bribed tool of reactionary intrigue.

In the conditions of the proletariat, those of old society at large are already virtually swamped. The proletarian is without property; his relation to his wife and children has no longer anything in common with the bourgeois family-relations; modern industrial labour, modern subjection to capital, the same in England as in France, in America as in Germany, has stripped him of every trace of national character. Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests.

All the preceding classes that got the upper hand, sought to fortify their already acquired status by subjecting society at large to their conditions of appropriation. The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropriation, and thereby also every other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property.

All previous historical movements were movements of minorities, or in the interests of minorities. The proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority. The proletariat, the lowest stratum of our present society, cannot stir, cannot raise itself up, without the whole superincumbent strata of official society being sprung into the air.

Though not in substance, yet in form, the struggle of the proletariat with the bourgeoisie is at first a national struggle. The proletariat of each country must, of course, first of all settle matters with its own bourgeoisie.

In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war, raging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat.

Hitherto, every form of society has been based, as we have already seen, on the antagonism of oppressing and oppressed classes. But in order to oppress a class, certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism, managed to develop into a bourgeois. The modern labourer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident, that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him sink into such a state, that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society.

The essential condition for the existence, and for the sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage-labour. Wage-labour rests exclusively on competition between the labourers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, is its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable.

II. PROLETARIANS AND COMMUNISTS

In what relation do the Communists stand to the proletarians as a whole?

The Communists do not form a separate party opposed to other working-class parties.

They have no interests separate and apart from those of the proletariat as a whole.

They do not set up any sectarian principles of their own, by which to shape and mould the proletarian movement.

The Communists are distinguished from the other working-class parties by this only: (1) In the national struggles of the proletarians of the different countries, they point out and bring to the front the common interests of the entire proletariat, independently of all nationality. (2) In the various stages of development which the struggle of the working class against the bourgeoisie has to pass through, they always and everywhere represent the interests of the movement as a whole.

The Communists, therefore, are on the one hand, practically, the most advanced and resolute section of the working-class parties of every country, that section which pushes forward all others; on the other hand, theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the ultimate general results of the proletarian movement.

The immediate aim of the Communists is the same as that of all the other proletarian parties: formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat.

The theoretical conclusions of the Communists are in no way based on ideas or principles that have been invented, or discovered, by this or that would-be universal reformer.

They merely express, in general terms, actual relations springing from an existing class struggle, from a historical movement going on under our very eyes. The abolition of existing property relations is not at all a distinctive feature of Communism.

All property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.

The French Revolution, for example, abolished feudal property in favour of bourgeois property.

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products, that is based on class antagonisms, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property.

We Communists have been reproached with the desire of abolishing the right of personally acquiring property as the fruit of a man's own labour, which property is alleged to be the groundwork of all personal freedom, activity and independence.

Hard-won, self-acquired, self-earned property! Do you mean the property of the petty artisan and of the small peasant, a form of property that preceded the bourgeois form? There is no need to abolish that; the development of industry has to a great extent already destroyed it, and is still destroying it daily.

Or do you mean modern bourgeois private property?

But does wage-labour create any property for the labourer? Not a bit. It creates capital, *i.e.*, that kind of property which exploits wage-labour, and which cannot increase except upon condition of begetting a new supply of wage-labour for fresh exploitation. Property, in its present form, is based on the antagonism of capital and wage-labour. Let us examine both sides of this antagonism.

To be a capitalist, is to have not only a purely personal, but a social *status* in production. Capital is a collective product, and only by the united action of many members, nay, in the last resort, only by the united action of all members of society, can it be set in motion.

Capital is, therefore, not a personal, it is a social power.

When, therefore, capital is converted into common property, into the property of all members of society, personal property is not thereby transformed into social property. It is only the social character of the property that is changed. It loses its class-character.

Let us now take wage-labour.

The average price of wage-labour is the minimum wage, *i.e.*, that quantum of the means of subsistence, which is absolutely requisite to keep the labourer in bare existence as a labourer. What, therefore, the wage-labourer appropriates by means of his labour,

merely suffices to prolong and reproduce a bare existence. We by no means intend to abolish this personal appropriation of the products of labour, an appropriation that is made for the maintenance and reproduction of human life, and that leaves no surplus wherewith to command the labour of others. All that we want to do away with, is the miserable character of this appropriation, under which the labourer lives merely to increase capital, and is allowed to live only in so far as the interest of the ruling class requires it.

In bourgeois society, living labour is but a means to increase accumulated labour. In Communist society, accumulated labour is but a means to widen, to enrich, to promote the existence of the labourer.

In bourgeois society, therefore, the past dominates the present; in Communist society, the present dominates the past. In bourgeois society capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois, abolition of individuality and freedom! And rightly so. The abolition of bourgeois individuality, bourgeois independence, and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other "brave words" of our bourgeoisie about freedom in general, have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the Middle Ages, but have no meaning when opposed to the Communistic abolition of buying and selling, of the bourgeois conditions of production, and of the bourgeoisie itself.

You are horrified at our intending to do away with private property. But in your existing society, private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In one word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend.

From the moment when labour can no longer be converted into capital, money, or rent, into a social power capable of being monopolised, *i.e.,* from the moment when individual property can no longer be transformed into bourgeois property, into capital, from that moment, you say, individuality vanishes.

You must, therefore, confess that by "individual" you mean no other person than the bourgeois, than the middle-class owner of property. This person must, indeed, be swept out of the way, and made impossible.

Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.

It has been objected that upon the abolition of private property all work will cease, and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work, acquire nothing, and those who acquire anything, do not work. The whole of this objection is but another expression of the tautology: that there can no longer be any wage-labour when there is no longer any capital.

All objections urged against the Communistic mode of producing and appropriating material products, have, in the same way, been urged against the Communistic modes of producing and appropriating intellectual products. Just as, to the bourgeois, the disappearance of class property is the disappearance of production itself, so the disappearance of class culture is to him identical with the disappearance of all culture.

That culture, the loss of which he laments, is, for the enormous majority, a mere training to act as a machine.

But don't wrangle with us so long as you apply, to our intended abolition of bourgeois property, the standard of your bourgeois notions of freedom, culture, law, &c. Your very ideas are but the outgrowth of the conditions of your bourgeois production and bourgeois property, just as your jurisprudence is but the will of your class made into a law for all, a will, whose essential character and direction are determined by the economical conditions of existence of your class.

The selfish misconception that induces you to transform into eternal laws of nature and of reason, the social forms springing from your present mode of production and form of property—historical relations that rise and disappear in the progress of production—this misconception you share with every ruling class that has preceded you. What you see clearly in the case of ancient property, what you admit in the case of feudal property, you are of course forbidden to admit in the case of your own bourgeois form of property.

Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But this state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations, when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate, by the intervention, direct or indirect, of society, by means of schools, &c.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention, and to rescue education from the influence of the ruling class.

The bourgeois clap-trap about the family and education, about the hallowed co-relation of parent and child, becomes all the more disgusting, the more, by the action of Modern Industry, all family ties among the proletarians are torn asunder, and their children transformed into simple articles of commerce and instruments of labour.

But you Communists would introduce community of women, screams the whole bourgeoisie in chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point aimed at is to do away with the status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no need to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the greatest pleasure in seducing each other's wives.

Bourgeois marriage is in reality a system of wives in common and thus, at the most, what the Communists might possibly be reproached with, is that they desire to introduce, in substitution for a hypocritically concealed, an openly legalised community of women. For the rest, it is self-evident that the abolition of the present system of production must bring with it the abolition of the community of women springing from that system, *i.e.*, of prostitution both public and private.

The Communists are further reproached with desiring to abolish countries and nationality.

The working men have no country. We cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself *the* nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world-market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilised countries at least, is one of the first conditions for the emancipation of the proletariat.

In proportion as the exploitation of one individual

by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

The charges against Communism made from a religious, a philosophical, and, generally, from an ideological standpoint, are not deserving of serious examination.

Does it require deep intuition to comprehend that man's ideas, views and conceptions, in one word, man's consciousness, changes with every change in the conditions of his material existence, in his social relations and in his social life?

What else does the history of ideas prove, than that intellectual production changes its character in proportion as material production is changed? The ruling ideas of each age have ever been the ideas of its ruling class.

When people speak of ideas that revolutionise society, they do but express the fact, that within the old society, the elements of a new one have been created, and that the dissolution of the old ideas keeps even pace with the dissolution of the old conditions of existence.

When the ancient world was in its last throes, the ancient religions were overcome by Christianity. When Christian ideas succumbed in the 18th century to rationalist ideas, feudal society fought its death battle with the then revolutionary bourgeoisie. The ideas of religious liberty and freedom of conscience merely gave expression to the sway of free competition within the domain of knowledge.

"Undoubtedly," it will be said, "religious, moral, philosophical and juridical ideas have been modified in the course of historical development. But religion, morality, philosophy, political science, and law, constantly survived this change."

"There are, besides, eternal truths, such as Freedom, Justice, etc., that are common to all states of society. But Communism abolishes eternal truths, it abolishes all religion, and all morality, instead of constituting them on a new basis; it therefore acts in contradiction to all past historical experience."

What does this accusation reduce itself to? The history of all past society has consisted in the development of class antagonisms, antagonisms that assumed different forms at different epochs.

But whatever form they may have taken, one fact is common to all past ages, *viz.*, the exploitation of one part of society by the other. No wonder, then, that the social consciousness of past ages, despite all the multiplicity and variety it displays, moves within certain common forms, or general ideas, which cannot completely vanish except with the total disappearance of class antagonisms.

The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas.

But let us have done with the bourgeois objections to Communism.

We have seen above, that the first step in the revolution by the working class, is to raise the proletariat to the position of ruling class, to win the battle of democracy.

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production in the hands of the State, *i.e.*, of the proletariat organised as the ruling class; and to increase the total of productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which, in the course of the movement, outstrip themselves, necessitate further inroads upon the old social order, and are unavoidable as a means of entirely revolutionising the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries, the following will be pretty generally applicable.

1. Abolition of property in land and application of all rents of land to public purposes.
2. A heavy progressive or graduated income tax.
3. Abolition of all right of inheritance.

4. Confiscation of the property of all emigrants and rebels.
5. Centralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.
6. Centralisation of the means of communication and transport in the hands of the State.
7. Extension of factories and instruments of production owned by the State; the bringing into cultivation of waste-lands, and the improvement of the soil generally in accordance with a common plan.
8. Equal liability of all to labour. Establishment of industrial armies, especially for agriculture.
9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equable distribution of the population over the country.
10. Free education for all children in public schools. Abolition of children's factory labour in its present form. Combination of education with industrial production, &c., &c.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organised power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organise itself as a class, if, by means of a revolution, it makes itself the ruling class, and, as such, sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all.

III. SOCIALIST AND COMMUNIST LITERATURE

1. Reactionary Socialism

A. Feudal Socialism

Owing to their historical position, it became the vocation of the aristocracies of France and England to write pamphlets against modern bourgeois society. In the French revolution of July 1830, and in the English reform agitation, these aristocracies again succumbed to the hateful upstart. Thenceforth, a serious political contest was altogether out of the question. A literary battle alone remained possible. But even in the domain of literature the old cries of the restoration period[9] had become impossible.

In order to arouse sympathy, the aristocracy were obliged to lose sight, apparently, of their own interests, and to formulate their indictment against the bourgeoisie in the interest of the exploited working class alone. Thus the aristocracy took their revenge by singing lampoons on their new master, and whispering in his ears sinister prophecies of coming catastrophe.

In this way arose Feudal Socialism: half lamentation, half lampoon; half echo of the past, half menace of the future; at times, by its bitter, witty and incisive criticism, striking the bourgeoisie to the very heart's core; but always ludicrous in its effect, through total incapacity to comprehend the march of modern history.

The aristocracy, in order to rally the people to them, waved the proletarian alms-bag in front for a banner. But the people, so often as it joined them, saw on their hindquarters the old feudal coats of arms, and deserted with loud and irreverent laughter.

9. Not the English Restoration 1660 to 1689, but the French Restoration 1814 to 1830.—*Engels, English edition of 1888.*

One section of the French Legitimists[10] and "Young England"[11] exhibited this spectacle.

In pointing out that their mode of exploitation was different to that of the bourgeoisie, the feudalists forget that they exploited under circumstances and conditions that were quite different, and that are now antiquated. In showing that, under their rule, the modern proletariat never existed, they forget that the modern bourgeoisie is the necessary offspring of their own form of society.

For the rest, so little do they conceal the reactionary character of their criticism that their chief accusation against the bourgeoisie amounts to this, that under the bourgeois *régime* a class is being developed, which is destined to cut up root and branch the old order of society.

What they upbraid the bourgeoisie with is not so much that it creates a proletariat, as that it creates a *revolutionary* proletariat.

In political practice, therefore, they join in all coercive measures against the working class; and in ordinary life, despite their high falutin phrases, they stoop to pick up the golden apples dropped from the tree of industry, and to barter truth, love, and honour for traffic in wool, beetroot-sugar, and potato spirits.[12]

As the parson has ever gone hand in hand with the landlord, so has Clerical Socialism with Feudal Socialism.

Nothing is easier than to give Christian asceticism a Socialist tinge. Has not Christianity declaimed against private property, against marriage, against the State? Has it not preached in the place of these, charity and poverty, celibacy and mortification of the flesh, monastic life and Mother Church? Christian Socialism is but the holy water with which the priest consecrates the heart-burnings of the aristocrat.

B. Petty-Bourgeois Socialism

The feudal aristocracy was not the only class that was ruined by the bourgeoisie, not the only class whose conditions of existence pined and perished in the atmosphere of modern bourgeois society. The mediaeval burgesses and the small peasant proprietors were the precursors of the modern bourgeoisie. In those countries which are but little developed, industrially and commercially, these two classes still vegetate side by side with the rising bourgeoisie.

In countries where modern civilisation has become fully developed, a new class of petty bourgeois has been formed, fluctuating between proletariat and bourgeoisie and ever renewing itself as a supplementary part of bourgeois society. The individual members of this class, however, are being constantly hurled down into the proletariat by the action of competition, and, as modern industry develops, they even see the moment approaching when they will completely disappear as an independent section of modern society, to be replaced, in manufactures, agriculture and commerce, by overlookers, bailiffs and shopmen.

In countries like France, where the peasants constitute far more than half of the population, it was natural that writers who sided with the proletariat against the bourgeoisie, should use, in their criticism of the bourgeois *régime*, the standard of the peasant and petty bourgeois, and from the standpoint of these intermediate classes should take up the cudgels for the working class. Thus arose petty-bourgeois Socialism. Sismondi was the head of this school, not only in France but also in England.

This school of Socialism dissected with great acuteness the contradictions in the conditions of modern production. It laid bare the hypocritical apologies of economists. It proved, incontrovertibly, the disastrous effects of machinery and division of labour; the concentration of capital and land in a few hands; overproduction and crises; it pointed out the inevitable ruin of the petty bourgeois and peasant, the misery of

10. [The party of the noble landowners, who advocated the restoration of the Bourbon dynasty.]

11. [A group of British Conservatives—aristocrats and men of politics and literature—formed about 1842. Prominent among them were Disraeli, Thomas Carlyle, and others.]

12. This applies chiefly to Germany where the landed aristocracy and squire-archy have large portions of their estates cultivated for their own account by stewards, and are, moreover, extensive beetroot-sugar manufacturers and distillers of potato spirits. The wealthier British aristocracy are, as yet, rather above that: but they, too, know how to make up for declining rents by lending their names to floaters of more or less shady joint-stock companies.—*Engels, English edition of 1888.*

the proletariat, the anarchy in production, the crying inequalities in the distribution of wealth, the industrial war of extermination between nations, the dissolution of old moral bonds, of the old family relations, of the old nationalities.

In its positive aims, however, this form of Socialism aspires either to restoring the old means of production and of exchange, and with them the old property relations, and the old society, or to cramping the modern means of production and of exchange, within the framework of the old property relations that have been, and were bound to be, exploded by those means. In either case, it is both reactionary and Utopian.

Its last words are: corporate guilds for manufacture, patriarchal relations in agriculture.

Ultimately, when stubborn historical facts had dispersed all intoxicating effects of self-deception, this form of Socialism ended in a miserable fit of the blues.

C. German, or "True," Socialism

The Socialist and Communist literature of France, a literature that originated under the pressure of a bourgeoisie in power, and that was the expression of the struggle against this power, was introduced into Germany at a time when the bourgeoisie, in that country, had just begun its contest with feudal absolutism.

German philosophers, would-be philosophers, and *beaux esprits*, eagerly seized on this literature, only forgetting, that when these writings immigrated from France into Germany, French social conditions had not immigrated along with them. In contact with German social conditions, this French literature lost all its immediate practical significance, and assumed a purely literary aspect. Thus, to the German philosophers of the eighteenth century, the demands of the first French Revolution were nothing more than the demands of "Practical Reason" in general, and the utterance of the will of the revolutionary French bourgeoisie signified in their eyes the law of pure Will, of Will as it was bound to be, of true human Will generally.

The work of the German *literati* consisted solely in bringing the new French ideas into harmony with their ancient philosophical conscience, or rather, in annexing the French ideas without deserting their own philosophic point of view.

This annexation took place in the same way in which a foreign language is appropriated, namely, by translation.

It is well known how the monks wrote silly lives of Catholic Saints *over* the manuscripts on which the classical works of ancient heathendom had been written. The German *literati* reversed this process with the profane French literature. They wrote their philosophical nonsense beneath the French original. For instance, beneath the French criticism of the economic functions of money, they wrote "Alienation of Humanity," and beneath the French criticism of the bourgeois State they wrote "dethronement of the Category of the General," and so forth.

The introduction of these philosophical phrases at the back of the French historical criticisms they dubbed "Philosophy of Action," "True Socialism," "German Science of Socialism," "Philosophical Foundation of Socialism," and so on.

The French Socialist and Communist literature was thus completely emasculated. And, since it ceased in the hands of the German to express the struggle of one class with the other, he felt conscious of having overcome "French one-sidedness" and of representing, not true requirements, but the requirements of truth; not the interests of the proletariat, but the interests of Human Nature, of Man in general, who belongs to no class, has no reality, who exists only in the misty realm of philosophical fantasy.

This German Socialism, which took its schoolboy task so seriously and solemnly, and extolled its poor stock-in-trade in such mountebank fashion, meanwhile gradually lost its pedantic innocence.

The fight of the German, and especially, of the Prussian bourgeoisie, against feudal aristocracy and absolute monarchy, in other words, the liberal movement, became more earnest.

By this, the long wished-for opportunity was offered to "True" Socialism of confronting the political movement with the Socialist demands, of hurling the traditional anathemas against liberalism, against representative government, against bourgeois competition, bourgeois freedom of the press, bourgeois legislation, bourgeois liberty and equality, and of preaching to the masses that they had nothing to

gain, and everything to lose, by this bourgeois movement. German Socialism forgot, in the nick of time, that the French criticism, whose silly echo it was, presupposed the existence of modern bourgeois society, with its corresponding economic conditions of existence, and the political constitution adapted thereto, the very things whose attainment was the object of the pending struggle in Germany.

To the absolute governments, with their following of parsons, professors, country squires and officials, it served as a welcome scarecrow against the threatening bourgeoisie.

It was a sweet finish after the bitter pills of floggings and bullets with which these same governments, just at that time, dosed the German working-class risings.

While this "True" Socialism thus served the governments as a weapon for fighting the German bourgeoisie, it, at the same time, directly represented a reactionary interest, the interest of the German Philistines. In Germany the *petty-bourgeois* class, a relic of the sixteenth century, and since then constantly cropping up again under various forms, is the real social basis of the existing state of things.

To preserve this class is to preserve the existing state of things in Germany. The industrial and political supremacy of the bourgeoisie threatens it with certain destruction; on the one hand, from the concentration of capital; on the other, from the rise of a revolutionary proletariat. "True" Socialism appeared to kill these two birds with one stone. It spread like an epidemic.

The robe of speculative cobwebs, embroidered with flowers of rhetoric, steeped in the dew of sickly sentiment, this transcendental robe in which the German Socialists wrapped their sorry "eternal truths," all skin and bone, served to wonderfully increase the sale of their goods amongst such a public.

And on its part, German Socialism recognised, more and more, its own calling as the bombastic representative of the petty-bourgeois Philistine.

It proclaimed the German nation to be the model nation, and the German petty Philistine to be the typical man. To every villainous meanness of this model man it gave a hidden, higher, Socialistic interpretation, the exact contrary of its real character. It went to the extreme length of directly opposing the "brutally destructive" tendency of Communism, and of proclaiming its supreme and impartial contempt of all class struggles. With very few exceptions, all the so-called Socialist and Communist publications that now (1847) circulate in Germany belong to the domain of this foul and enervating literature.[13]

2. Conservative, or Bourgeois, Socialism

A part of the bourgeoisie is desirous of redressing social grievances, in order to secure the continued existence of bourgeois society.

To this section belong economists, philanthropists, humanitarians, improvers of the condition of the working class, organisers of charity, members of societies for the prevention of cruelty to animals, temperance fanatics, hole-and-corner reformers of every imaginable kind. This form of Socialism has, moreover, been worked out into complete systems.

We may site Proudhon's *Philosophie de la Misère* as an example of this form.

The Socialistic bourgeois want all the advantages of modern social conditions without the struggles and dangers necessarily resulting therefrom. They desire the existing state of society minus its revolutionary and disintegrating elements. They wish for a bourgeoisie without a proletariat. The bourgeoisie naturally conceives the world in which it is supreme to be the best; and bourgeois Socialism develops this comfortable conception into various more or less complete systems. In requiring the proletariat to carry out such a system, and thereby to march straightway into the social New Jerusalem, it but requires in reality, that the proletariat should remain within the bounds of existing society, but should cast away all its hateful ideas concerning the bourgeoisie.

A second and more practical, but less systematic, form of this Socialism sought to depreciate every revolutionary movement in the eyes of the working class, by showing that no mere political reform, but only a change in the material conditions of existence, in economical relations, could be of any advantage to

13. The revolutionary storm of 1848 swept away this whole shabby tendency and cured its protagonists of the desire to dabble further in Socialism. The chief representative and classical type of this tendency is Herr Karl Grün.—*Engels, German edition of 1890.*

them. By changes in the material conditions of existence, this form of Socialism, however, by no means understands abolition of the bourgeois relations of production, an abolition that can be effected only by a revolution, but administrative reforms, based on the continued existence of these relations; reforms, therefore, that in no respect affect the relations between capital and labour, but, at the best, lessen the cost, and simplify the administrative work, of bourgeois government.

Bourgeois Socialism attains adequate expression, when, and only when, it becomes a mere figure of speech.

Free trade: for the benefit of the working class. Protective duties: for the benefit of the working class. Prison Reform: for the benefit of the working class. This is the last word and the only seriously meant word of bourgeois Socialism.

It is summed up in the phrase: the bourgeois is a bourgeois—for the benefit of the working class.

3. Critical-Utopian Socialism and Communism

We do not here refer to that literature which, in every great modern revolution, has always given voice to the demands of the proletariat, such as the writings of Babeuf and others.

The first direct attempts of the proletariat to attain its own ends, made in times of universal excitement, when feudal society was being overthrown, these attempts necessarily failed, owing to the then undeveloped state of the proletariat, as well as to the absence of the economic conditions for its emancipation, conditions that had yet to be produced, and could be produced by the impending bourgeois epoch alone. The revolutionary literature that accompanied these first movements of the proletariat had necessarily a reactionary character. It inculcated universal asceticism and social levelling in its crudest form.

The Socialist and Communist systems properly so called, those of Saint-Simon, Fourier, Owen and others, spring into existence in the early undeveloped period, described above, of the struggle between proletariat and bourgeoisie (see Section I. Bourgeois and Proletarians).

The founders of these systems see, indeed, the class antagonisms, as well as the action of the decomposing elements, in the prevailing form of society. But the proletariat, as yet in its infancy, offers to them the spectacle of a class without any historical initiative or any independent political movement.

Since the development of class antagonism keeps even pace with the development of industry, the economic situation, as they find it, does not as yet offer to them the material conditions for the emancipation of the proletariat. They therefore search after a new social science, after new social laws, that are to create these conditions.

Historical action is to yield to their personal inventive action, historically created conditions of emancipation to fantastic ones, and the gradual, spontaneous class-organisation of the proletariat to the organisation of society specially contrived by these inventors. Future history resolves itself, in their eyes, into the propaganda and the practical carrying out of their social plans.

In the formation of their plans they are conscious of caring chiefly for the interests of the working class, as being the most suffering class. Only from the point of view of being the most suffering class does the proletariat exist for them.

The undeveloped state of the class struggle, as well as their own surroundings, causes Socialists of this kind to consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favoured. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class. For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society?

Hence, they reject all political, and especially all revolutionary, action; they wish to attain their ends by peaceful means, and endeavour, by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social Gospel.

Such fantastic pictures of future society, painted at a time when the proletariat is still in a very undeveloped state and has but a fantastic conception of its own position correspond with the first instinctive yearnings of that class for a general reconstruction of society.

But these Socialist and Communist publications contain also a critical element. They attack every principle of existing society. Hence they are full of the most valuable materials for the enlightenment of the working class. The practical measures proposed in them—such as the abolition of the distinction between town and country, of the family, of the carrying on of industries for the account of private individuals, and of the wage system, the proclamation of social harmony, the conversion of the functions of the State into a mere superintendence of production, all these proposals, point solely to the disappearance of class antagonisms which were, at that time, only just cropping up, and which, in these publications, are recognised in their earliest, indistinct and undefined forms only. These proposals, therefore, are of a purely Utopian character.

The significance of Critical-Utopian Socialism and Communism bears an inverse relation to historical development. In proportion as the modern class struggle develops and takes definite shape, this fantastic standing apart from the contest, these fantastic attacks on it, lose all practical value and all theoretical justification. Therefore, although the originators of these systems were, in many respects, revolutionary, their disciples have, in every case, formed mere reactionary sects. They hold fast by the original views of their masters, in opposition to the progressive historical development of the proletariat. They, therefore, endeavour, and that consistently, to deaden the class struggle and to reconcile the class antagonisms. They still dream of experimental realisation of their social Utopias, of founding isolated "*phalanstères,*" of establishing "Home Colonies," of setting up a "Little Icaria"[14]—duodecimo editions of the New Jerusalem—and to realise all these castles in the air, they are compelled to appeal to the feelings and purses of the bourgeois. By degrees they sink into the category of the reactionary conservative Socialists depicted above, differing from these only by more systematic pedantry, and by their fanatical and superstitious belief in the miraculous effects of their social science.

They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new Gospel.

The Owenites in England, and the Fourierists in France, respectively, oppose the Chartists and the *Réformistes.*[15]

IV. POSITION OF THE COMMUNISTS IN RELATION TO THE VARIOUS EXISTING OPPOSITION PARTIES

Section II has made clear the relations of the Communists to the existing working-class parties, such as the Chartists in England and the Agrarian Reformers in America.

The Communists fight for the attainment of the immediate aims, for the enforcement of the momentary interests of the working class; but in the movement of the present, they also represent and take care of the future of that movement. In France the Communists ally themselves with the Social-Democrats,[16] against the conservative and radical

14. *Phalanstères* were Socialist colonies on the plan of Charles Fourier; *Icaria* was the name given by Cabet to his Utopia and, later on, to his American Communist colony.—*Engels, English edition of 1888.*

"Home colonies" were what Owen called his Communist model societies. *Phalanstères* was the name of the public palaces planned by Fourier. *Icaria* was the name given to the Utopian land of fancy, whose Communist institutions Cabet portrayed.—*Engels, German edition of 1890.*

15. [This refers to the adherents of the newspaper *La Réforme* which was published in Paris from 1843 to 1850.]

16. The party then represented in Parliament by Ledru-Rollin, in literature by Louis Blanc, in the daily press by the *Réforme.* The name of Social-Democracy signified, with these its inventors, a section of the Democratic or Republican party more or less tinged with Socialism.—*Engels, English edition of 1888.*

The party in France which at that time called itself Socialist-Democratic was represented in political life by Ledru-Rollin and in literature by Louis Blanc; thus it differed immeasurably from present-day German Social-Democracy.—*Engels, German edition of 1890.*

bourgeoisie, reserving, however, the right to take up a critical position in regard to phrases and illusions traditionally handed down from the great Revolution.

In Switzerland they support the Radicals, without losing sight of the fact that this party consists of antagonistic elements, partly of Democratic Socialists, in the French sense, partly of radical bourgeois.

In Poland they support the party that insists on an agrarian revolution as the prime condition for national emancipation, that party which fomented the insurrection of Cracow in 1846.

In Germany they fight with the bourgeoisie whenever it acts in a revolutionary way, against the absolute monarchy, the feudal squire-archy, and the petty bourgeoisie.[17]

But they never cease, for a single instant, to instil into the working class the clearest possible recognition of the hostile antagonism between bourgeoisie and proletariat, in order that the German workers may straightway use, as so many weapons against the bourgeoisie, the social and political conditions that the bourgeoisie must necessarily introduce along with its supremacy, and in order that, after the fall of the reactionary classes in Germany, the fight against the bourgeoisie itself may immediately begin.

The Communists turn their attention chiefly to Germany, because that country is on the eve of a bourgeois revolution that is bound to be carried out under more advanced conditions of European civilisation, and with a much more developed proletariat, than that of England was in the seventeenth, and of France in the eighteenth century, and because the bourgeois revolution in Germany will be but the prelude to an immediately following proletarian revolution.

In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things.

In all these movements they bring to the front, as the leading question in each, the property question, no matter what its degree of development at the time.

Finally, they labour everywhere for the union and agreement of the democratic parties of all countries.

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communistic revolution. The proletarians have nothing to lose but their chains. They have a world to win.

Working Men of All Countries, Unite!

17. [*Kleinbürgerei* in the German original. Marx and Engels used this term to describe the reactionary elements of the urban petty bourgeoisie.]

Critique of the Gotha Program

1. "Labour is the source of all wealth and all culture, *and since* useful labour is possible only in society and through society, the proceeds of labour belong undiminished with equal right to all members of society."

First Part of the Paragraph: "Labour is the source of all wealth and all culture."

Labour is *not the source* of all wealth. *Nature* is just as much the source of use values (and it is surely of such that material wealth consists!) as labour, which itself is only the manifestation of a force of nature, human labour power. The above phrase is to be found in all children's primers and is correct in so far as it is *implied* that labour is performed with the appurtenant subjects and instruments. But a socialist programme cannot allow such bourgeois phrases to pass over in silence the *conditions* that alone give them meaning. And in so far as man from the beginning behaves towards nature, the primary source of all instruments and subjects of labour, as an owner, treats her as belonging to him, his labour becomes the source of use values, therefore also of wealth. The bourgeois have very good grounds for falsely ascribing *supernatural creative power* to labour; since precisely from the fact that labour depends on nature it follows that the man who possesses no other property than his labour power must, in all conditions of society and culture, be the slave of other men who have made themselves the owners of the material conditions of labour. He can work only with their permission, hence live only with their permission.

Let us now leave the sentence as it stands, or rather limps. What would one have expected in conclusion? Obviously this:

"Since labour is the source of all wealth, no one in society can appropriate wealth except as the product of labour. Therefore, if he himself does not work, he lives by the labour of others and also acquires his culture at the expense of the labour of others."

Instead of this, by means of the verbal rivet "*and since*" a second proposition is added in order to draw a conclusion from this and not from the first one.

Second Part of the Paragraph: "Useful labour is possible only in society and through society."

According to the first proposition, labour was the source of all wealth and all culture; therefore no society is possible without labour. Now we learn, conversely, that no "useful" labour is possible without society.

One could just as well have said that only in society can useless and even socially harmful labour become a branch of gainful occupation, that only in society can one live by being idle, etc., etc.—in short, one could just as well have copied the whole of Rousseau.

And what is "useful" labour? Surely only labour which produces the intended useful result. A savage—and man was a savage after he had ceased to be an ape—who kills an animal with a stone, who collects fruits, etc., performs "useful" labour.

Thirdly. The Conclusion: "And since useful labour is possible only in society and through society, the proceeds of labour belong undiminished with equal right to all members of society."

A fine conclusion! If useful labour is possible only in society and through society, the proceeds of labour belong to society—and only so much therefrom accrues to the individual worker as is not required to maintain the "condition" of labour, society.

In fact, this proposition has at all times been made use of by the champions of the *state of society prevailing at any given time*. First come the claims of the

From *The Collected Works of Marx and Engels.* Copyright © 1975 by International Publishers, Inc. Reprinted by permission of International Publishers, Inc.

government and everything that sticks to it, since it is the social organ for the maintenance of the social order; then come the claims of the various kinds of private property, for the various kinds of private property are the foundations of society, etc. One sees that such hollow phrases can be twisted and turned as desired.

The first and second parts of the paragraph have some intelligible connection only in the following wording:

"Labour becomes the source of wealth and culture only as social labour," or, what is the same thing, "in and through society."

This proposition is incontestably correct, for although isolated labour (its material conditions presupposed) can create use values, it can create neither wealth nor culture.

But equally incontestable is this other proposition:

"In proportion as labour develops socially, and becomes thereby a source of wealth and culture, poverty and destitution develop among the workers, and wealth and culture among the non-workers."

This is the law of all history hitherto. What, therefore, had to be done here, instead of setting down general phrases about "labour" and "society," was to prove concretely how in present capitalist society the material, etc., conditions have at last been created which enable and compel the workers to lift this social curse.

In fact, however, the whole paragraph, bungled in style and content, is only there in order to inscribe the Lassallean catchword of the "undiminished proceeds of labour" as a slogan at the top of the party banner. I shall return later to the "proceeds of labour," "equal right," etc., since the same thing recurs in a somewhat different form further on.

> 2. "In present-day society, the instruments of labour are the monopoly of the capitalist class; the resulting dependence of the working class is the cause of misery and servitude in all its forms."

This sentence, borrowed from the Rules of the International, is incorrect in this "improved" edition.

In present-day society the instruments of labour are the monopoly of the landowners (the monopoly of property in land is even the basis of the monopoly of capital) *and* the capitalists. In the passage in question, the Rules of the International do not mention either the one or the other class of monopolists. They speak of the "*monopoliser of the means of labour*, that is, *the sources of life*." The addition, "*sources of life*," makes it sufficiently clear that land is included in the instruments of labour.

The correction was introduced because Lassalle, for reasons now generally known, attacked *only* the capitalist class and not the landowners. In England, the capitalist is usually not even the owner of the land on which his factory stands.

> 3. "The emancipation of labour demands the promotion of the instruments of labour to the common property of society and the co-operative regulation of the total labour with a fair distribution of the proceeds of labour."

"Promotion of the instruments of labour to the common property" ought obviously to read their "conversion into the common property"; but this only in passing.

What are "proceeds of labour"? The product of labour or its value? And in the latter case, is it the total value of the product or only that part of the value which labour has newly added to the value of the means of production consumed?

"Proceeds of labour" is a loose notion which Lassalle has put in the place of definite economic conceptions.

What is "a fair distribution"?

Do not the bourgeois assert that the present-day distribution is "fair"? And is it not, in fact, the only "fair" distribution on the basis of the present-day mode of production? Are economic relations regulated by legal conceptions or do not, on the contrary, legal relations arise from economic ones? Have not also the socialist sectarians the most varied notions about "fair" distribution?

To understand what is implied in this connection by the phrase "fair distribution," we must take the first paragraph and this one together. The latter presupposes a society wherein "the instruments of labour are common property and the total labour is cooperatively regulated," and from the first paragraph we

learn that "the proceeds of labour belong undiminished with equal right to all members of society."

"To all members of society"? To those who do not work as well? What remains then of the "undiminished proceeds of labour"? Only to those members of society who work? What remains then of the equal right" of all members of society?

But "all members of society" and "equal right" are obviously mere phrases. The kernel consists in this, that in this communist society every worker must receive the "undiminished" Lassallean "proceeds of labour."

Let us take first of all the words "proceeds of labour" in the sense of the product of labour; then the co-operative proceeds of labour are the *total social product*.

From this must now be deducted:

First, cover for replacement of the means of production used up.

Secondly, additional portion for expansion of production.

Thirdly, reserve or insurance funds to provide against accidents, dislocations caused by natural calamities, etc.

These deductions from the "undiminished proceeds of labour" are an economic necessity and their magnitude is to be determined according to available means and forces, and partly by computation of probabilities, but they are in no way calculable by equity.

There remains the other part of the total product, intended to serve as means of consumption.

Before this is divided among the individuals, there has to be deducted again, from it:

First, the general costs of administration not belonging to production.

This part will, from the outset, be very considerably restricted in comparison with present-day society and it diminishes in proportion as the new society develops.

Secondly, that which is intended for the common satisfaction of needs, such as schools, health services, etc.

From the outset this part grows considerably in comparison with present-day society and it grows in proportion as the new society develops.

Thirdly, funds for those unable to work, etc., in short, for what is included under so-called official poor relief today.

Only now do we come to the "distribution" which the programme, under Lassallean influence, alone has in view in its narrow fashion, namely, to that part of the means of consumption which is divided among the individual producers of the co-operative society.

The "undiminished proceeds of labour" have already unnoticeably become converted into the "diminished" proceeds, although what the producer is deprived of in his capacity as a private individual benefits him directly or indirectly in his capacity as a member of society.

Just as the phrase of the "undiminished proceeds of labour" has disappeared, so now does the phrase of the "proceeds of labour" disappear altogether.

Within the co-operative society based on common ownership of the means of production, the producers do not exchange their products; just as little does the labour employed on the products appear here *as the value* of these products, as a material quality possessed by them, since now, in contrast to capitalist society, individual labour no longer exists in an indirect fashion but directly as a component part of the total labour. The phrase "proceeds of labour," objectionable also today on account of its ambiguity, thus loses all meaning.

What we have to deal with here is a communist society, not as it has *developed* on its own foundations, but, on the contrary, just as it *emerges* from capitalist society; which is thus in every respect, economically, morally and intellectually, still stamped with the birth marks of the old society from whose womb it emerges. Accordingly, the individual producer receives back from society—after the deductions have been made—exactly what he gives to it. What he has given to it is his individual quantum of labour. For example, the social working day consists of the sum of the individual hours of work; the individual labour time of the individual producer is the part of the social working day contributed by him, his share in it. He receives a certificate from society that he has furnished such and such an amount of labour (after deducting his labour for the common funds), and with this certificate he draws from the social stock of means of consumption as much as costs the same amount of labour. The same amount of labour which he has given to society in one form he receives back in another.

Here obviously the same principle prevails as that which regulates the exchange of commodities, as far as this is exchange of equal values. Content and form are changed, because under the altered circumstances no one can give anything except his labour, and because, on the other hand, nothing can pass to the ownership of individuals except individual means of consumption. But, as far as the distribution of the latter among the individual producers is concerned, the same principle prevails as in the exchange of commodity equivalents: a given amount of labour in one form is exchanged for an equal amount of labour in another form.

Hence, *equal right* here is still in principle—*bourgeois right*, although principle and practice are no longer at loggerheads, while the exchange of equivalents in commodity exchange only exists *on the average* and not in the individual case.

In spite of this advance, this *equal right* is still constantly stigmatised by a bourgeois limitation. The right of the producers is *proportional* to the labour they supply; the equality consists in the fact that measurement is made with an *equal standard*, labour.

But one man is superior to another physically or mentally and so supplies more labour in the same time, or can labour for a longer time; and labour, to serve as a measure, must be defined by its duration or intensity, otherwise it ceases to be a standard of measurement. This *equal* right is an unequal right for unequal labour. It recognises no class differences, because everyone is only a worker like everyone else; but it tacitly recognises unequal individual endowment and thus productive capacity as natural privileges. *It is, therefore, a right of inequality, in its content, like every right.* Right by its very nature can consist only in the application of an equal standard; but unequal individuals (and they would not be different individuals if they were not unequal) are measurable only by an equal standard in so far as they are brought under an equal point of view, are taken from one *definite* side only, for instance, in the present case, are regarded *only as workers* and nothing more is seen in them, everything else being ignored. Further, one worker is married, another not; one has more children than another, and so on and so forth. Thus, with an equal performance of labour, and hence an equal share in the social consumption fund, one will in fact receive more than another, one will be richer than another, and so on. To avoid all these defects, right instead of being equal would have to be unequal.

But these defects are inevitable in the first phase of communist society as it is when it has just emerged after prolonged birth pangs from capitalist society. Right can never be higher than the economic structure of society and its cultural development conditioned thereby.

In a higher phase of communist society, after the enslaving subordination of the individual to the division of labour, and therewith also the antithesis between mental and physical labour, has vanished; after labour has become not only a means of life but life's prime want; after the productive forces have also increased with the all-round development of the individual, and all the springs of cooperative wealth flow more abundantly—only then can the narrow horizon of bourgeois right be crossed in its entirety and society inscribe on its banner: From each according to his ability, to each according to his needs!

I have dealt more at length with the "undiminished proceeds of labour," on the one hand, and with "equal right" and "fair distribution," on the other, in order to show what a crime it is to attempt, on the one hand, to force on our Party again, as dogmas, ideas which in a certain period had some meaning but have now become obsolete verbal rubbish, while again perverting, on the other, the realistic outlook, which it cost so much effort to instil into the Party but which has now taken root in it, by means of ideological nonsense about right and other trash so common among the democrats and French Socialists.

Quite apart from the analysis so far given, it was in general a mistake to make a fuss about so-called *distribution* and put the principal stress on it.

Any distribution whatever of the means of consumption is only a consequence of the distribution of the conditions of production themselves. The latter distribution, however, is a feature of the mode of production itself. The capitalist mode of production, for example, rests on the fact that the material conditions of production are in the hands of non-workers in the form of property in capital and land, while the masses are only owners of the personal condition of production, of labour power. If the elements of production are so distributed, then the present-day

distribution of the means of consumption results automatically. If the material conditions of production are the co-operative property of the workers themselves, then there likewise results a distribution of the means of consumption different from the present one. Vulgar socialism (and from it in turn a section of the democracy) has taken over from the bourgeois economists the consideration and treatment of distribution as independent of the mode of production and hence the presentation of socialism as turning principally on distribution. After the real relation has long been made clear, why retrogress again?

> 4. "The emancipation of labour must be the work of the working class, relatively to which all other classes are *only one reactionary mass*."

The first strophe is taken from the introductory words of the Rules of the International, but "improved." There it is said: "The emancipation of the working class must be the act of the workers themselves"; here, on the contrary, the "working class" has to emancipate—what? "Labour." Let him understand who can.

In compensation, the antistrophe, on the other hand, is a Lassallean quotation of the first water: "relatively to which (the working class) all other classes are *only one reactionary mass*."

In the *Communist Manifesto* it is said: "Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a *really revolutionary class*. The other classes decay and finally disappear in the face of modern industry; the proletariat is its special and essential product."

The bourgeoisie is here conceived as a revolutionary class—as the bearer of large-scale industry—relatively to the feudal lords and the lower middle class, who desire to maintain all social positions that are the creation of obsolete modes of production. Thus they do not form *together* with the *bourgeoisie* only one reactionary mass.

On the other hand, the proletariat is revolutionary relatively to the bourgeoisie because, having itself grown up on the basis of large-scale industry, it strives to strip off from production the capitalist character that the bourgeoisie seeks to perpetuate. But the *Manifesto* adds that the "lower middle class" is becoming revolutionary "in view of [its] impending transfer into the proletariat."

From this point of view, therefore, it is again nonsense to say that it, together with the bourgeoisie, and with the feudal lords into the bargain, "form only one reactionary mass" relatively to the working class.

Has one proclaimed to the artisans, small manufacturers, etc., and *peasants* during the last elections: Relatively to us you, together with the bourgeoisie and feudal lords, form only one reactionary mass?

Lassalle knew the *Communist Manifesto* by heart, as his faithful followers know the gospels written by him. If, therefore, he has falsified it so grossly, this has occurred only to put a good colour on his alliance with absolutist and feudal opponents against the bourgeoisie.

In the above paragraph, moreover, his oracular saying is dragged in by main force without any connection with the botched quotation from the Rules of the International. Thus is it here simply an impertinence, and indeed not at all displeasing to Herr Bismarck, one of those cheap pieces of insolence in which the Marat of Berlin[1] deals.

> 5. "The working class strives for its emancipation first of all *within the framework of the present-day national state*, conscious that the necessary result of its efforts, which are common to the workers of all civilised countries, will be the international brotherhood of peoples."

Lassalle, in opposition to the *Communist Manifesto* and to all earlier socialism, conceived the workers' movement from the narrowest national standpoint. He is being followed in this—and that after the work of the International!

It is altogether self-evident that, to be able to fight at all, the working class must organise itself at home *as a class* and that its own country is the immediate arena of its struggle. In so far its class struggle is national, not in substance, but, as the *Communist Manifesto* says, "in form." But the "framework of the present-day national state," for instance, the German

1. [A reference to Hasselmann, the chief editor of the *Neuer Sozial-Demokrat*, the central organ of the Lassalleans.]

Empire, is itself in its turn economically "within the framework" of the world market, politically "within the framework" of the system of states. Every businessman knows that German trade is at the same time foreign trade, and the greatness of Herr Bismarck consists, to be sure, precisely in his pursuing a kind of *international* policy.

And to what does the German workers' party reduce its internationalism? To the consciousness that the result of its efforts will be "*the international brotherhood of peoples*"—a phrase borrowed from the bourgeois League of Peace and Freedom[2] which is intended to pass as equivalent to the international brotherhood of the working classes in the joint struggle against the ruling classes and their governments. Not a word, therefore, *about the international functions* of the German working class! And it is thus that it is to challenge its own bourgeoisie—which is already linked up in brotherhood against it with the bourgeois of all other countries—and Herr Bismarck's international policy of conspiracy!

In fact, the internationalism of the programme stands even *infinitely below* that of the Free Trade Party. The latter also asserts that the result of its efforts will be "the international brotherhood of peoples." But it also *does* something to make trade international and by no means contents itself with the consciousness—that all peoples are carrying on trade at home.

The international activity of the working classes does not in any way depend on the existence of the *International Working Men's Association*. This was only the first attempt to create a central organ for that activity; an attempt which was a lasting success on account of the impulse which it gave but which was no longer realisable in its *first historical form* after the fall of the Paris Commune.

Bismarck's *Norddeutsche* was absolutely right when it announced, to the satisfaction of its master, that the German workers' party had sworn off internationalism in the new programme.[3]

II

> "Starting from these basic principles, the German workers' party strives by all legal means for the *free state—and*—socialist society: the abolition of the wage system *together with* the *iron law of wages*—and—exploitation in every form; the elimination of all social and political inequality."

I shall return to the "free" state later.

So, in future, the German workers' party has got to believe in Lassalle's "iron law of wages"! That this may not be lost, the nonsense is perpetrated of speaking of the "abolition of the wage system" (it should read: system of wage labour) "*together with* the iron law of wages." If I abolish wage labour, then naturally I abolish its laws also, whether they are of "iron" or sponge. But Lassalle's attack on wage labour turns almost solely on this so-called law. In order, therefore, to prove that Lassalle's sect has conquered, the "wage system" must be abolished "*together with* the iron law of wages" and not without it.

It is well known that nothing of the "iron law of wages" is Lassalle's except the word "iron" borrowed from Goethe's "great eternal iron laws." The word *iron* is a label by which the true believers recognise one another. But if I take the law with Lassalle's stamp on it and, consequently, in his sense, then I must also take it with his substantiation for it. And what is that? As Lange already showed, shortly after Lassalle's death, it is the Malthusian theory of population (preached by Lange himself). But if this theory is correct, then again I *cannot* abolish the law even if I abolish wage labour a hundred times over, because the law then governs not only the system of wage labour but *every* social system. Basing themselves directly on this, the economists have been proving for fifty years and more that socialism cannot abolish poverty, *which has its basis in nature*, but can only make it *general*, distribute it simultaneously over the whole surface of society!

---

2. [The International League of Peace and Freedom was organized in Geneva in 1867 by liberals and pacifists.]

3. [Marx refers to the editorial which appeared in No. 67 of the *Norddeutsche Allgemeine Zeitung* (*North German General Newspaper*) of March 20, 1875. It stated with regard to Article 5 of the Social-Democratic Programme that "Social-Democratic agitation had in many respects become more prudent" and that it was "repudiating the International."]

But all this is not the main thing. *Quite apart* from the *false* Lassallean formulation of the law, the truly outrageous retrogression consists in the following.

Since Lassalle's death there has asserted itself in *our* Party the scientific understanding that wages are not what they *appear* to be, namely, the *value*, or *price*, *of labour*, but only a masked form for the *value*, or *price*, *of labour power*. Thereby the whole bourgeois conception of wages hitherto, as well as all the criticism hitherto directed against this conception, was thrown overboard once for all and it was made clear that the wage-worker has permission to work for his own subsistence, that is, *to live*, only in so far as he works for a certain time gratis for the capitalist (and hence also for the latter's co-consumers of surplus value); that the whole capitalist system of production turns on the increase of this gratis labour by extending the working day or by developing the productivity, that is, increasing the intensity of labour power, etc; that, consequently, the system of wage labour is a system of slavery, and indeed of a slavery which becomes more severe in proportion as the social productive forces of labour develop, whether the worker receives better or worse payment. And after this understanding has gained more and more ground in our Party, one returns to Lassalle's dogmas, although one must have known that Lassalle *did not know* what wages were, but following in the wake of the bourgeois economists took the appearance for the essence of the matter.

It is as if, among slaves who have at last got behind the secret of slavery and broken out in rebellion, a slave still in thrall to obsolete notions were to inscribe on the programme of the rebellion: Slavery must be abolished because the feeding of slaves in the system of slavery cannot exceed a certain low maximum!

Does not the mere fact that the representatives of our Party were capable of perpetrating such a monstrous attack on the understanding that has spread among the mass of our Party prove by itself with what criminal levity and with what lack of conscience they set to work in drawing up this compromise programme!

Instead of the indefinite concluding phrase of the paragraph, "the elimination of all social and political inequality," it ought to have been said that with the abolition of class distinctions all social and political inequality arising from them would disappear of itself.

III

> "The German workers' party, in order *to pave the way to the solution of the social question*, demands the establishment of producers' co-operative societies *with state aid under the democratic control of the toiling people*. The producers' co-operative societies *are to be called into being* for industry and agriculture on such a scale *that the socialist organisation of the total labour will arise from them*."

After the Lassallean "iron law of wages," the physic of the prophet. The way to it is "paved" in worthy fashion. In place of the existing class struggle appears a newspaper scribbler's phrase: "the social *question*," to the "*solution*" of which one "paves the way." Instead of arising from the revolutionary process of transformation of society, the "socialist organisation of the total labour" "arises" from the "state aid" that the state gives to the producers' co-operative societies and which the *state*, not the worker, "*calls into being*." It is worthy of Lassalle's imagination that with state loans one can build a new society just as well as a new railway!

From the remnants of a sense of shame, "state aid" has been put—under the democratic control of the "toiling people."

In the first place, the majority of the "toiling people" in Germany consists of peasants, and not of proletarians.

Secondly, "democratic" means in German "*volksherrschaftlich*" ["by the rule of the people"]. But what does "control by the rule of the people of the toiling people" mean? And particularly in the case of a toiling people which, through these demands that it puts to the state, expresses its full consciousness that it neither rules nor is ripe for ruling!

It would be superfluous to deal here with the criticism of the recipe prescribed by Buchez in the reign of Louis Philippe in *opposition* to the French Socialists and accepted by the reactionary workers of the *Atelier*.[4] The chief offence does not lie in having

4. [*Atelier* (Workshop): A workers' monthly which appeared in Paris in 1840–50. It was under the influence of the Catholic socialism of Buchez.]

inscribed this specific nostrum in the programme, but in taking, in general, a retrograde step from the standpoint of a class movement to that of a sectarian movement.

That the workers desire to establish the conditions for co-operative production on a social scale, and first of all on a national scale in their own country, only means that they are working to revolutionise the present conditions of production, and it has nothing in common with the foundation of co-operative societies with state aid. But as far as the present co-operative societies are concerned, they are of value *only* in so far as they are the independent creations of the workers and not protégés either of the government or of the bourgeois.

IV

I come now to the democratic section.

A. *"The free basis of the state."*

First of all, according to II, the German workers' party strives for "the free state."

Free state—what is this?

It is by no means the aim of the workers, who have got rid of the narrow mentality of humble subjects, to set the state free. In the German Empire the "state" is almost as "free" as in Russia. Freedom consists in converting the state from an organ superimposed upon society into one completely subordinate to it, and today, too, the forms of state are more free or less free to the extent that they restrict the "freedom of the state."

The German workers' party—at least if it adopts the programme—shows that its socialist ideas are not even skin-deep; in that, instead of treating existing society (and this holds good for any future one) as the *basis* of the existing state (or of the future state in the case of future society), it treats the state rather as independent entity that possesses its own *intellectual, ethical and libertarian bases.*

And what of the riotous misuse which the programme makes of the words *"present-day state,"* *"present-day society,"* and of the still more riotous misconception it creates in regard to the state to which it addresses its demands?

"Present-day society" is capitalist society, which exists in all civilised countries, more or less free from medieval admixture, more or less modified by the special historical development of each country, more or less developed. On the other hand, the "present-day state" changes with a country's frontier. It is different in the Prusso-German Empire from what it is in Switzerland, it is different in England from what it is in the United States. The "present-day state" is, therefore, a fiction.

Nevertheless, the different states of the different civilised countries, in spite of their manifold diversity of form, all have this in common, that they are based on modern bourgeois society, only one more or less capitalistically developed. They have, therefore, also certain essential features in common. In this sense it is possible to speak of the "present-day state," in contrast with the future, in which its present root, bourgeois society, will have died off.

The question then arises: what transformation will the state undergo in communist society? In other words, what social functions will remain in existence there that are analogous to present functions of the state? This question can only be answered scientifically, and one does not get a flea-hop nearer to the problem by a thousandfold combination of the word people with the word state.

Between capitalist and communist society lies the period of the revolutionary transformation of the one into the other. There corresponds to this also a political transition period in which the state can be nothing but *the revolutionary dictatorship of the proletariat.*

Now the programme does not deal with this nor with the future state of communist society.

Its political demands contain nothing beyond the old democratic litany familiar to all: universal suffrage, direct legislation, popular rights, a people's militia, etc. They are a mere echo of the bourgeois People's Party, of the League of Peace and Freedom. They are all demands which, in so far as they are not exaggerated in fantastic presentation, have already been *realised.* Only the state to which they belong does not lie within the borders of the German Empire, but in Switzerland, the United States, etc. This sort of "state of the future" is a present-day state, although

existing outside the "framework" of the German Empire.

But one thing has been forgotten. Since the German workers' party expressly declares that it acts within "the present-day national state," hence within *its own* state, the Prusso-German Empire—its demands would indeed otherwise be largely meaningless, since one only demands what one has not got—it should not have forgotten the chief thing, namely, that all those pretty little gewgaws rest on the recognition of the so-called sovereignty of the people and hence are appropriate only in a *democratic republic.*

Since one has not the courage—and wisely so, for the circumstances demand caution—to demand the democratic republic, as the French workers' programmes under Louis Philippe and under Louis Napoleon did, one should not have resorted, either, to the subterfuge, neither "honest"[5] nor decent, of demanding things which have meaning only in a democratic republic from a state which is nothing but a police-guarded military despotism, embellished with parliamentary forms, alloyed with a feudal admixture, already influenced by the bourgeoisie and bureaucratically carpentered, and then to assure this state into the bargain that one imagines one will be able to force such things upon it "by legal means."

Even vulgar democracy, which sees the millennium in the democratic republic and has no suspicion that it is precisely in this last form of state of bourgeois society that the class struggle has to be fought out to a conclusion—even it towers mountains above this kind of democratism which keeps within the limits of what is permitted by the police and not permitted by logic.

That, in fact, by the word "state" is meant the government machine, or the state in so far as it forms a special organism separated from society through division of labour, is shown by the words "the German worker's party demands *as the economic basis of the state:* a single progressive income tax," etc. Taxes are the economic basis of the government machinery and of nothing else. In the state of the future, existing in Switzerland, this demand has been pretty well fulfilled. Income tax presupposes various sources of income of the various social classes, and hence capitalist society. It is, therefore, nothing remarkable that the Liverpool financial reformers, bourgeois headed by Gladstone's brother, are putting forward the same demand as the programme.

> B. "The German workers' party demands as the intellectual and ethical basis of the state:
>
> "1. Universal and *equal elementary education* by the state. Universal compulsory school attendance. Free instruction."

Equal elementary education? What idea lies behind these words? Is it believed that in present-day society (and it is only with this one has to deal) education can be *equal* for all classes? Or is it demanded that the upper classes also shall be compulsorily reduced to the modicum of education—the elementary school—that alone is compatible with the economic conditions not only of the wage-workers but of the peasants as well?

"Universal compulsory school attendance. Free instruction." The former exists even in Germany, the second in Switzerland and in the United States in the case of elementary schools. If in some states of the latter country higher educational institutions are also "free" that only means in fact defraying the cost of the education of the upper classes from the general tax receipts. Incidentally, the same holds good for "free administration of justice" demanded under A, 5. The administration of criminal justice is to be had free everywhere; that of civil justice is concerned almost exclusively with conflicts over property and hence affects almost exclusively the possessing classes. Are they to carry on their litigation at the expense of the national coffers?

The paragraph on the schools should at least have demanded technical schools (theoretical and practical) in combination with the elementary school.

"*Elementary education by the state*" is altogether objectionable. Defining by a general law the expenditures on the elementary schools, the qualifications of the teaching staff, the branches of instruction, etc., and, as is done in the United States, supervising the fulfilment of these legal specifications by state inspectors, is a very different thing from appointing the state as the educator of the people! Government and

5. ["*Honest*" was the epithet applied to the Eisenachers. Here a play upon words.]

Church should rather be equally excluded from any influence on the school. Particularly, indeed, in the Prusso-German Empire (and one should not take refuge in the rotten subterfuge that one is speaking of a "state of the future"; we have seen how matters stand in this respect) the state has need, on the contrary, of a very stern education by the people.

But the whole programme, for all its democratic clang, is tainted through and through by the Lassallean sect's servile belief in the state, or, what is no better, by a democratic belief in miracles, or rather it is a compromise between these two kinds of belief in miracles, both equally remote from socialism.

"*Freedom of science*" says a paragraph of the Prussian Constitution. Why, then, here?

"*Freedom of conscience*"! If one desired at this time of the *Kulturkampf*[6] to remind liberalism of its old catchwords, it surely could have been done only in the following form: Everyone should be able to attend to his religious as well as his bodily needs without the police sticking their noses in. But the workers' party ought at any rate in this connection to have expressed its awareness of the fact that bourgeois "freedom of conscience" is nothing but the toleration of all possible kinds of *religious freedom of conscience*, and that for its part it endeavours rather to liberate the conscience from the witchery of religion. But one chooses not to transgress the "bourgeois" level.

I have now come to the end, for the appendix that now follows in the programme does not constitute a characteristic component part of it. Hence I can be very brief here.

2. *"Normal working day."*

In no other country has the workers' party limited itself to such an indefinite demand, but has always fixed the length of the working day that it considers normal under the given circumstances.

3. "Restriction of female labour and prohibition of child labour."

The standardisation of the working day must include the restriction of female labour, in so far as it relates to the duration, intermissions, etc., of the working day; otherwise it could only mean the exclusion of female labour from branches of industry that are especially unhealthy for the female body or are objectionable morally for the female sex. If that is what was meant, it should have been said so: *"Prohibition of child labour."* Here it was absolutely essential to state the age limit.

A *general prohibition* of child labour is incompatible with the existence of large-scale industry and hence an empty, pious wish. Its realisation—if it were possible—would be reactionary, since, with a strict regulation of the working time according to the different age groups and other safety measures for the protection of children, an early combination of productive labour with education is one of the most potent means for the transformation of present-day society.

4. "State supervision of factory, workshop and domestic industry."

In consideration of the Prusso-German state it should definitely have been demanded that the inspectors are to be removable only by a court of law; that any worker can have them prosecuted for neglect of duty; that they must belong to the medical profession.

5. "Regulation of prison labour."

A petty demand in a general workers' programme. In any case, it should have been clearly stated that there is no intention from fear of competition to allow ordinary criminals to be treated like beasts, and especially that there is no desire to deprive them of their sole means of betterment, productive labour. This was surely the least one might have expected from Socialists.

6. "An effective liability law."

It should have been stated what is meant by an "effective" liability law.

6. [*Kulturkampf* (Struggle for culture): Bismarck's struggle in the seventies against the German Catholic Party, the Party of the "Centre," by means of police persecution of Catholicism.]

Be it noted, incidentally, that in speaking of the normal working day the part of factory legislation that deals with health regulations and safety measures, etc., has been overlooked. The liability law only comes into operation when these regulations are infringed.

In short, this appendix also is distinguished by slovenly editing.

Dixi et salvavi animam meam.[7]

7. ["I have spoken and saved my soul."]

FRIEDRICH NIETZSCHE

From Plato and Aristotle to Locke and Kant, moral and political theorists build their theories on the founding principle that human beings are especially valuable, somehow preeminent in the natural order, usually by virtue of reason or intellect, possessing thereby a nobility and grandeur that singles them out. Other thinkers, however, begin with a different estimate of the human and its place in nature; to them the proper way to understand humankind is to appreciate the impulses, desires, and instincts that ground all animal behavior and hence human action as well. Morality and political conduct, on such a view, are manifestations of these desires and drives, for example, the desire for self-preservation. On this view, human beings are to be considered like any other natural beings. Among such thinkers are Hobbes, Spinoza, Freud, and, perhaps the most bold and dramatic of all, Friedrich Nietzsche (1844–1900).

In an unpublished fragment of 1873, Nietzsche expresses this view about human intelligence with a powerful image:

> In some remote corner of the universe, poured out and glittering in innumerable solar systems, there once was a star on which clever animals invented knowledge. . . . After nature had drawn a few breaths the star grew cold, and the clever animals had to die. . . . how wretched, how shadowy and flighty, how aimless and arbitrary, the human intellect appears in nature. There have been eternities when it did not exist; and when it is done for again, nothing will have happened.
>
> (from *On Truth and Lie in an Extra-Moral Sense*)

According to Nietzsche, then, reason or intellect is no special capacity. It comes and goes like other natural abilities, as do knowledge, truth, and morality, too. All are tools of nature and must be studied historically, almost anthropologically or biologically, as devices that manifest the deepest drives of human nature. Western morality and religion incorporate many traditions, some that repress such central drives and others that enable them to flourish. Philosophy works to unearth these various traditions, to clarify them, and to enhance the lives of the philosophers and artists who do so. The proper way to study morality is not to seek to ground a special set of principles in some universal or transcendent source; rather, it is to examine and expose the features of various moralities as they have functioned in societies throughout history, that is, to study moralities historically and to see how some do and some do not repress the natural drives that characterize the human animal.

Such a conception—of morality as a historical, natural phenomenon and not as a set of universal principles—is one teaching of a powerful, influential set of works written by Nietzsche in the second half of the nineteenth century. These works are the products of a brilliant student of classical philology who broke out of the bonds of technical scholarship and welded a deep affinity with ancient culture to rare literary ability. Nietzsche was once attacked as a source of Nazi ideology; more recently, he is frequently cited as an inspiration for deconstructionists. But in his own day he was famous and controversial on a variety of fronts, not least of all for his bold style and his withering critique of Christianity and religion.

Nietzsche was born on October 15, 1844, in Rocken, Germany, where his father was a Lutheran pastor. In 1849, when he was nearly five, his father died, and Nietzsche spent his youth surrounded by his mother, his sister Elisabeth, who was two years younger than Nietzsche, his grandmother, and two maiden aunts. In 1864 he entered the University of Bonn to study theology. By the next year, however, Nietzsche had transferred

to Leipzig to study classical philology and was hard at work on a dissertation on the classical Greek poet Theognis. The results were a lecture, an essay, and, as Nietzsche put it, his "birth as a philologist." During the next few years he was deeply involved with a variety of projects, from essays on Diogenes Laertius and on Democritus to studies of history and teleology.

In 1869 the brilliant young scholar was appointed to a professorship at Basel University in Switzerland. At about this time, he first met the composer Richard Wagner, who became a powerful influence on his work. With the outbreak of the Franco-Prussian War in 1870, Nietzsche volunteered and served for a short time as a medical orderly. When he contracted dysentary and diphtheria, however, he was forced to return home. His deteriorating health and insomnia accompanied him for the rest of his life. By 1872, his first book, *The Birth of Tragedy*, was published; in it he explored the emergence of Greek tragedy out of music and its ruin at the hands of the rational philosophy of Socrates.

Nietzsche's health was constantly bad. By 1876 his painful physical condition mirrored his relationship with Wagner, which finally fell apart. Wagner had become a commercial success and the center of a cult at the opera center at Bayreuth. Wagner's self-importance, insensitivity, anti-Semitism, and total neglect of Nietzsche's work repelled Nietzsche, whose physical pain and psychological torment was expressed in his writings. During this period, his work, no longer scholarly, appeared at a steady rate—essays on David Strauss, the New Testament scholar and young radical Hegelian, on philosophy and Greek tragedy, on the uses and disadvantages of history, on Schopenhauer, and much else. Several of these essays were published, from 1873 to 1876, as *Untimely Meditations*, of which *On the Advantage and Disadvantage of History for Life* is the second. In 1878, *Human, All Too Human* appeared, then the *Gay Science* in 1882, *Thus Spoke Zarathustra* (Parts One and Two) in 1883, *Beyond Good and Evil* in 1886, *On the Geneology of Morality* in 1887, and the *Twilight of the Idols* in 1889.

During these extraordinarily productive but pain-racked years, Nietzsche was rarely at rest. His bad health forced him to clinics and convalescence, and illness interrupted his teaching. By 1876 he had stopped teaching altogether at the university, and in 1879 he formally resigned. The decade of the 1880s was filled with suffering, sickness, writing, and the interminable moving, mostly in Switzerland and Italy, in a vain effort to find a comfortable climate and peaceful surroundings. For much of these years Nietzsche and his entourage traveled from Genoa to Sils-Maria, back and forth, with occasional trips to Venice, Nice, Naumburg, and elsewhere. Then, in January of 1889, Nietzsche collapsed in the street in Turin, Italy, hopelessly insane. After brief periods in clinics, Nietzsche was released into the care of his mother, in whose home in Jena he lived until his death on August 25, 1900. His autobiographical work, *Ecce Homo*, written in 1888, was published in 1908.

On the Advantage and Disadvantage of History for Life

PREFACE

"Moreover I hate everything which merely instructs me without increasing or directly quickening my activity." These are Goethe's words with which, as with a boldly expressed *ceterum censeo*,[1] we may begin our consideration of the worth and worthlessness of history. Our aim will be to show why instruction which fails to quicken activity, why knowledge which enfeebles activity, why history as a costly intellectual excess and luxury must, in the spirit of Goethe's words, be seriously hated; for we still lack what is most necessary, and superfluous excess is the enemy of the necessary. Certainly we need history. But our need for history is quite different from that of the spoiled idler in the garden of knowledge, even if he in his refinement looks down on our rude and graceless requirements and needs. That is, we require history for life and action, not for the smug avoiding of life and action, or even to whitewash a selfish life and cowardly, bad acts. Only so far as history serves life will we serve it: but there is a degree of doing history and an estimation of it which brings with it a withering and degenerating of life: a phenomenon which is now as necessary as it may be painful to bring to consciousness through some remarkable symptoms of our age.

1. [This is an allusion to Cato's "Ceterum censeo Carthaginem esse delendam" ("Moreover I am of the opinion that Carthage be destroyed") with which he used to conclude every speech on any topic whatever until he finally goaded the Romans into the third Punic War. Goethe's words are from a letter from him to Friedrich Schiller dated 19 December 1798. – P.P.]

I have made an effort to describe a feeling which has tortured me often enough; I revenge myself on it by making it public. Perhaps this description will give someone occasion to explain to me that he too knows this feeling but that I have not felt it purely and originally enough and have quite failed to articulate it with the confidence and mature experience due it. A few may think so perhaps; but most will tell me that this is a quite perverted, unnatural, repulsive and downright impermissible feeling, even that with this feeling I have shown myself to be quite unworthy of the mighty historical orientation of the age which, as is well known, has been evident for two generations particularly among the Germans. At any rate, my daring to come forward with a natural description of my feeling will sooner promote than injure general propriety, for in doing so I give opportunity to many to pay compliments to this orientation of the age. For my part, however, I gain something I value more highly than general propriety—public instruction and correction about our age.

These reflections are also untimely, because I attempt to understand as a defect, infirmity and shortcoming of the age something of which our age is justifiably proud, its historical education. I even believe that all of us suffer from a consuming historical fever and should at least realize that we suffer from it. If Goethe has said with good reason that with our virtues we also cultivate our faults, and if, as everyone knows, a hypertrophic virtue—which the historical sense of our age seems to me to be—may bring about the decay of a people as much as a hypertrophic vice, one may as well allow me my say. I should not hide the exonerating circumstance that I have for the most part taken the experiences which those painful feelings occasioned in me from myself and have considered those of others only for the sake of comparison; and that further, only so far as I am the nursling of

more ancient times, especially the Greek, could I come to have such untimely experiences about myself as a child of the present age. That much I must be allowed to grant myself on the grounds of my profession as a classical philologist. For I do not know what meaning classical philology would have for our age if not to have an untimely effect within it, that is, to act against the age and so have an effect on the age to the advantage, it is to be hoped, of a coming age.

1

Consider the herd grazing before you. These animals do not know what yesterday and today are but leap about, eat, rest, digest and leap again; and so from morning to night and from day to day, only briefly concerned with their pleasure and displeasure, enthralled by the moment and for that reason neither melancholy nor bored. It is hard for a man to see this, for he is proud of being human and not an animal and yet regards its happiness with envy because he wants nothing other than to live like the animal, neither bored nor in pain, yet wants it in vain because he does not want it like the animal. Man may well ask the animal: why do you not speak to me of your happiness but only look at me? The animal does want to answer and say: because I always immediately forget what I wanted to say—but then it already forgot this answer and remained silent: so that man could only wonder.

But he also wondered about himself, that he cannot learn to forget but always remains attached to the past: however far and fast he runs, the chain runs with him. It is astonishing: the moment, here in a wink, gone in a wink, nothing before and nothing after, returns nevertheless as a spectre to disturb the calm of a later moment. Again and again a page loosens in the scroll of time, drops out, and flutters away—and suddenly flutters back again into man's lap. Then man says "I remember" and envies the animal which immediately forgets and sees each moment really die, sink back into deep night extinguished for ever. In this way the animal lives *unhistorically*: for it goes into the present like a number without leaving a curious fraction; it does not know how to dissimulate, hides nothing, appears at every moment fully as what it is and so cannot but be honest. Man on the other hand resists the great and ever greater weight of the past: this oppresses him and bends him sideways, it encumbers his gait like an invisible and sinister burden which, for the sake of appearances, he may deny at times and which in intercourse with his equals he is all too pleased to deny: to excite their envy. This is why he is moved, as though he remembered a lost paradise, when he sees a grazing herd, or, in more intimate proximity, sees a child, which as yet has nothing past to deny, playing between the fences of past and future in blissful blindness. And yet the child's play must be disturbed: only too soon will it be called out of its forgetfulness. Then it comes to understand the phrase "it was", that password with which struggle, suffering and boredom approach man to remind him what his existence basically is—a never to be completed imperfect tense. And when death finally brings longed-for forgetfulness it also robs him of the present and of existence and impresses its seal on this knowledge: that existence is only an uninterrupted having-been, a thing which lives by denying itself, consuming itself, and contradicting itself.

If, in any sense, it is some happiness or the pursuit of happiness which binds the living being to life and urges him to live, then perhaps no philosopher is closer to the truth than the cynic: for the happiness of the animal, that thorough cynic, is the living proof of the truth of cynicism. The least happiness, if only it keeps one happy without interruption, is incomparably more than the greatest happiness which comes to one as a mere episode, as a mood, a frantic incursion into a life of utter displeasure, desire, and privation. With the smallest as with the greatest happiness, however, there is always one thing which makes it happiness: being able to forget or, to express it in a more learned fashion, the capacity to live *unhistorically* while it endures. Whoever cannot settle on the threshold of the moment forgetful of the whole past, whoever is incapable of standing on a point like a goddess of victory without vertigo or fear, will never know what happiness is, and worse yet, will never do anything to make others happy. Take as an extreme example a man who possesses no trace of the power to forget, who is condemned everywhere to see becoming: such a one no longer believes in his own existence, no longer believes in himself; he sees everything flow apart in mobile points and loses himself in the stream of

becoming: he will, like the true pupil of Heraclitus,[2] hardly dare in the end to lift a finger. All acting requires forgetting, as not only light but also darkness is required for life by all organisms. A man who wanted to feel everything historically would resemble someone forced to refrain from sleeping, or an animal expected to live only from ruminating and ever repeated ruminating, So: it is possible to live with almost no memories, even to live happily as the animal shows; but without forgetting it is quite impossible to *live* at all. Or, to say it more simply yet: *there is a degree of insomnia, of rumination, of historical sense which injures every living thing and finally destroys it, be it a man, a people or a culture.*

To determine this degree, and through it the limit beyond which the past must be forgotten if it is not to become the gravedigger of the present, one would have to know precisely how great the *plastic power* of a man, a people or a culture is. I mean the power distinctively to grow out of itself, transforming and assimilating everything past and alien, to heal wounds, replace what is lost and reshape broken forms out of itself. There are men who have this power to so small a degree that they will incurably bleed to death over a single experience, a single pain, frequently over a single delicate injustice, as from quite a small bleeding laceration. On the other hand there are those who are affected so little by the wildest and *most* gruesome calamities of life and even by their own malicious acts, that in midst of them or shortly thereafter they achieve a tolerable degree of well-being and a kind of clear conscience. The stronger the roots of the inmost nature of a man are, the more of the past will he appropriate or master; and were one to conceive the most powerful and colossal nature, it would be known by this, that for it there would be no limit at which the historical sense could overgrow and harm it; such a nature would draw its own as well as every alien past wholly into itself and transform it into blood, as it were. What such a nature cannot master it knows how to forget; it no longer exists, the horizon is closed and whole, and nothing can serve as a reminder that beyond this horizon there remain men, passions, doctrines and purposes. And this is a general law: every living thing can become healthy, strong and fruitful only within a horizon; if it is incapable of drawing a horizon around itself or, on the other hand, too selfish to restrict its vision to the limits of a horizon drawn by another, it will wither away feebly or overhastily to its early demise. Cheerfulness, clear conscience, the carefree deed, faith in the future, all this depends, in the case of an individual as well as of a people, on there being a line which distinguishes what is clear and in full view from the dark and unilluminable; it depends on one's being able to forget at the right time as well as to remember at the right time; on discerning with strong instinctual feelings when there is need to experience historically and when unhistorically. Precisely this is the proposition the reader is invited to consider: *the unhistorical and the historical are equally necessary for the health of an individual, a people and a culture.*

Everyone will have made the following observation: a man's historical knowledge and perception may be very limited, his horizon as restricted as that of a resident of an alpine valley, into every judgment he may introduce an injustice, into every experience the error of being the first to have that experience—and despite all injustice and all error he stands firmly in indefatigable health and vigour, a pleasure to behold; while right beside him the man of greater justice and learning deteriorates and crumbles because the lines of his horizon restlessly shift again and again, because he cannot extricate himself from the much more delicate network of his justice and truths in order to engage in rude willing and desiring. We have seen, however, that the animal, which is quite unhistorical and lives within a horizon which is almost a point, nevertheless is in a certain sense happy, or at least lives without boredom and dissimulation. We must then consider the capacity to perceive unhistorically to a certain degree as the more important and fundamental so far as it provides the foundation upon which alone something right, healthy and great, something truly human may grow. The unhistorical resembles an enveloping atmosphere in which alone life is generated only to disappear again with the destruction of this atmosphere. It is true: only so far as man,

2. [The allusion is to Cratylus, who is said to have come to the view that, since no true statement can be made about a thing that is always changing, one ought not to say anything but only move one's finger. Cf. Aristotle, *Metaphysics*, 5, 1013 a13.]

by thinking, reflecting, comparing, dividing and joining, limits that unhistorical element; only so far as a bright lightning flash of light occurs within that encircling cloud of mist—that is, only through the power to use the past for life and to refashion what has happened into history, does man become man: but with an excess of history man ceases again, and without that cloak of the unhistorical he would never have begun and dared to begin. Where are there deeds which a man might have done without first having entered the mist of the unhistorical? Or, leaving images aside, to illustrate with an example: think of a man tossed and torn by a powerful passion for a woman or a great thought: how his world is changed! Glancing backwards he feels blind, listening sideways he hears what is foreign as a dull meaningless sound; what he perceives at all he has never perceived so before, so tangibly near, coloured, full of sound and light as though he were apprehending it with all his senses at once. All evaluations are changed and devalued; there is so much he can no longer value because he can hardly feel it: he asks himself whether he has been fooled the whole time by alien words and alien opinions; he is astonished that his memory so tirelessly runs in circles and is yet too weak and too tired to leap even once out of his circle. It is the most unjust condition in the world, narrow, ungrateful to the past, blind to dangers, deaf to warnings, a little living whirlpool in a dead sea of night and forgetting: and yet this condition—unhistorical, contra-historical through and through—is the cradle not only of an unjust, but rather of every just deed; and no artist will paint his picture, no general achieve victory nor any people its freedom without first having desired and striven for it in such an unhistorical condition. As the man of action, according to Goethe's[3] phrase, is always without conscience, so he is also without knowledge; he forgets a great deal to do one thing, he is unjust to what lies behind him and knows only one right, the right of that which is to become. So the agent loves his deed infinitely more than it deserves to be loved: and the best deeds occur in such an exuberance of love that of this love, at least, they must be unworthy even if their value is otherwise immeasurably great.

If someone could, in numerous instances, discern and breathe again the unhistorical atmosphere in which every great historical event came to be, then such a one might, as a cognitive being, perhaps elevate himself to a *superhistorical* standpoint such as Niebuhr[4] once described as the possible result of historical observation. "History", he says, "clearly and explicitly comprehended, has at least this one use: that one knows how even the greatest and highest spirits of humanity do not know how accidentally their vision adopted the form through which they see and through which they vehemently insist that, everyone else see; vehemently that is, since the intensity of their consciousness is exceptionally great. Whoever does not know this and has not comprehended it quite definitely and in many instances will be subjugated by the appearance of a mighty spirit who brings the highest passion into a given form." One could call such a standpoint superhistorical, because one who has adopted it could no longer be tempted at all to continue to live and cooperate in making history, since he would have understood that blindness and injustice in the soul of each agent as the condition of all activity; he would even be cured henceforth of taking history excessively seriously: for he would have learned, with regard to each person and each experience, to answer his question about how and why people live, whether among Greeks or Turks, whether in an hour of the first century or the nineteenth. Whoever asks his acquaintances whether they would want to relive the last ten or twenty years will notice quite readily which of them is prepared for the superhistorical standpoint: they will, of course, all answer No!, but they will give different reasons for this No! The reason of some may be that they take comfort in the hope that the next twenty years will be better; it is they whom David Hume ridicules when he says:

> And from the dregs of life hope to receive,
> What the first sprightly running could not give.[5]

3. ["The man of action is always without conscience; no one has a conscience except the observer." From "Sprüche in Prosa".]

4. [I believe that Barthold Georg Niebuhr is meant.]

5. [*Dialogues Concerning Natural Religion*, Part X, quoted with slight alteration from John Dryden. *Aureng-Zebe*, Act IV, Scene 1.]

Let us call them the historical men. Looking into the past urges them to ward the future, incites them to take courage and continue to engage in life, and kindles the hope that things will yet turn out well and that happiness is to be found behind the mountain toward which they are striding. These historical men believe that ever more light is shed on the meaning of existence in the course of its *process*, and they look back to consider that process only to understand the present better and learn to desire the future more vehemently. They do not know how unhistorically they think and act despite all their history, and how even their concern with historiography does not serve pure knowledge but life.

But the question whose first answer we have heard may also be answered differently. Of course again with a No!—but this time for different reasons. With the No of the superhistorical man who does not see salvation in the process, for whom, rather, the world is complete and achieves its end at every single moment. What could ten new years teach that the past ten were incapable of teaching!

Superhistorical men have never agreed whether the significance of the teaching is happiness or resignation, virtue or penance; but, opposed to all historical ways of viewing the past, they are quite unanimous in accepting the following proposition: the past and the present is one and the same, that is, typically alike in all manifold variety and, as omnipresence of imperishable types, a static structure of unchanged value and eternally the same meaning. As hundreds of different languages correspond to the typically fixed requirements of men, so that one who understood these requirements could learn nothing new from all those languages: so the superhistorical thinker illuminates all history of peoples and individuals from within, clairvoyantly guesses the original significance of the different hieroglyphs and gradually even evades, as one fatigued, the incessant flow of new script: how could he fail, amid the endless superfluity of events, to take in his fill, more than his fill, and finally be nauseated! So that in the end the boldest is perhaps prepared to say to his heart with Giacomo Leopardi:

> Nothing is worth
> One tremor or one beat; the very earth
> Deserves no sigh. Life
> Has shrunk to dregs and rancour; the world is unclean.
> Calm, calm.[6]

But let us leave the superhistorical men their nausea and their wisdom: today we want rather to rejoice in our unwisdom from the bottom of our hearts and as active and progressive men, as admirers of the process, enjoy ourselves. May our estimation of the historical be but an occidental prejudice; as long as, within these prejudices, we make progress and do not stand still! As long as we constantly learn to improve our ability to do history for the sake of *life*. So long as we may always be sure of more life than they, we will gladly grant the superhistorical men that they have more wisdom: for in this way, at any rate, our unwisdom will have more of a future than their wisdom. And so that there may remain no doubt about the significance of this opposition between life and wisdom I shall call to aid a traditionally well proven procedure and straightway set up several theses.

A historical phenomenon clearly and completely understood and reduced to an intellectual phenomenon, is for him who has understood it dead: for in it he has understood the mania, the injustice, the blind passion, and in general the whole earthly darkened horizon of that phenomenon, and just in this he has understood its historical power. So far as he is a knower this power has now become powerless for him: not yet perhaps so far as he is a living being.

History, conceived as pure science and become sovereign, would constitute a kind of final closing out of the accounts of life for mankind. Historical education is wholesome and promising for the future only in the service of a powerful new life-giving influence, of a rising culture for example; that is, only when it is ruled and guided by a higher power and does not itself rule and guide.

History, so far as it serves life, serves an unhistorical power. While so subordinated it will and ought never, therefore, become a pure science like, say, mathematics. But the question to what degree life requires the service of history at all is one of the highest questions and concerns affecting the health of a man, a

6. [From Leopardi's poem "A se stesso" ("To himself"), translated by Edwin Morgan.]

people, a culture. For with a certain excess of history life crumbles and degenerates, and finally, because of this degeneration, history itself degenerates as well.

2

That life requires the service of history, however, must be understood just as clearly as the proposition we intend to prove later—that an excess of history is detrimental to life. History belongs to the living man in three respects: it belongs to him so far as he is active and striving, so far as he preserves and admires, and so far as he suffers and is in need of liberation. To this triplicity of relations correspond three kinds of history: so far as they can be distinguished, a *monumental*, an *antiquarian* and a *critical* kind of history.

History belongs above all to the active and powerful man, to him who fights a great fight, who requires models, teachers and comforters and cannot find them among his associates and contemporaries. Thus history belonged to Schiller: for our age is so bad, says Goethe, that the poet encounters none to inspire him in the life that surrounds him. With respect to the man of action Polybius,[7] for example, calls political history the proper preparation for governing a state and the great teacher who, by reminding us of the sudden misfortunes of others, exhorts us steadfastly to bear the reverses of fortune. Whoever has learned to see the meaning of history in this must be distressed to see curious tourists or painstaking micrologists climbing around on the pyramids of monumental ages; where he has found incentive to do as others have done and do it better he does not want to meet the idler who, craving for distraction or sensation, strolls about as though among the heaped up pictorial treasures of some gallery. So as not to despair and be disgusted among frail and hopeless idlers, among contemporaries who appear to be active but in fact are merely wrought up and fidgetting, the man of action looks back and interrupts the course to his goal for once to breathe freely. His goal, however, is some happiness, perhaps not his own, often that of a people or of all mankind; he flees resignation and uses history as a means against resignation. In most cases, however, no reward beckons him unless it be fame, that is, the expectation of a place of honour in the temple of history where he himself may teach, console, and warn those who come after him. For his commandment reads: what once was capable of magnifying the concept 'man' and of giving it a more beautiful content must be present eternally in order eternally to have this capacity. That the great moments in the struggle of individuals form a chain, that in them the high points of humanity are linked throughout millennia, that what is highest in such a moment of the distant past be for me still alive, bright and great—this is the fundamental thought of the faith in humanity which is expressed in the demand for a *monumental* history. Precisely this demand however, that the great be eternal, occasions the most terrible conflict. For all else which also lives cries no. The monumental ought not arise—that is the counter-watch-word. Dull habit, the small and lowly which fills all corners of the world and wafts like a dense earthly vapour around everything great, deceiving, smothering and suffocating, obstructs the path which the great must still travel to immortality. Yet this path leads through human brains! Through the brains of frightened short-lived animals who repeatedly rise to the same needs and with effort fend off their destruction for a short time. For above all they want one thing: to live at all cost. Who could suspect in them the arduous torch race of monumental history through which alone the great lives on! And yet time and again some awaken who, in viewing past greatness and strengthened by their vision, rejoice as though human life were a grand affair and as though it were even the sweetest fruit of this bitter growth to know that at some earlier time someone went through existence proud and strong, another in profound thought, a third helpfully and with pity—yet all leaving one lesson, that he lives most splendidly who pays no heed to existence. If the common man views this span of time with such sad seriousness and finds it so desirable, then these others, on their way to immortality and monumental history, knew how to disregard it with Olympian laughter or at least with lofty scorn; they often went to their graves with irony—for what did they have that could be buried! Surely no more than what had always oppressed them as dross, excrement, vanity and animality which will now fall into forgetfulness after it had long been given over to their

7. [*The Histories.*]

contempt. But one thing will live, the monogram of their most authentic essence, a work, a deed, a rare inspiration, a creation: it will live because posterity cannot do without it. In this most refined form fame is more than the most delicious morsel of our self-love, as Schopenhauer[8] called it; it is the belief in the affinity and continuity of the great of all ages, it is a protest against the change of generations and transitoriness.

What is the advantage to the present individual, then, of the monumental view of the past, the concern with the classical and the rare of earlier times? It is the knowledge that the great which once existed was at least *possible* once and may well again be possible sometime; he goes his way more courageously, for now the doubt which assails him in moments of weakness, that he may perhaps want the impossible, has been conquered. Suppose someone were to believe that it required no more than a hundred productive men, raised and active in a new spirit, to put an end to the cultural refinement which has just now become fashionable in Germany, how it would strengthen him to realize that the culture of the Renaissance was raised on the shoulders of such a group of one hundred men.

And yet—at once to learn another new thing from the same example—how flowing and elusive, how imprecise would such a comparison be! How much that is different must be overlooked, how ruthlessly must the individuality of the past be forced into a general form and have all its sharp edges and lines broken for the sake of agreement, if the comparison is to have that powerful effect! Fundamentally what was possible once could only be possible a second time if the Pythagoreans were right in believing that with the same conjunction of the heavenly bodies the same events had to be repeated on earth down to the minutest detail: so that whenever the stars have a certain relation to each other a Stoic will join with an Epicurean and murder Caesar, and ever again with a different configuration Columbus will discover America. Only if the earth again and again began her drama anew after the fifth act, if it were certain that the same tangle of motives, the same *deus ex machina*, the same catastrophe recurred at definite intervals, should the powerful man desire monumental history in complete pictorial *truthfulness*, that is, desire each fact in its precisely depicted character and uniqueness: thus probably not before the astronomers become astrologers again. Until then monumental history will not find such complete truthfulness to its advantage: it will always approximate, generalize and finally equate differences; it will always weaken the disparity of motives and occasions in order, at the expense of the cause, to present the *effect* monumentally, that is, as exemplary and worthy of imitation. Monumental history then, since it disregards causes as much as possible, could without much exaggeration be called a collection of "effects in themselves", or of events which will at all times produce an effect. What is celebrated in national festivals and in religious or military days of remembrance is actually such an "effect in itself": it is this which gives no rest to the ambitious, which the enterprising take to heart like an amulet, and not the true, historical nexus of causes and effects which, if fully understood, would only prove that never again could quite the same thing result in the game of dice played by chance and the future.

As long as the soul of historiography is found in the great incentives a powerful man receives from it, as long as the past must be described as something worthy of imitation, something that can be imitated and is possible a second time, so long, at least, is the past in danger of being somewhat distorted, of being reinterpreted according to aesthetic criteria and so brought closer to fiction; there are even ages which are quite incapable of distinguishing between a monumental past and a mythical fiction: for precisely the same incentives can be given by the one world as by the other. Thus, whenever the monumental vision of the past rules over the other ways of looking at the past, I mean the antiquarian and the critical, the past itself suffers *damage*: very great portions of the past are forgotten and despised, and flow away like a grey uninterrupted flood, and only single embellished facts stand out as islands: there seems to be something unnatural and wondrous about the rare persons who become visible at all, like the golden hip which the

8. ["Considered eudaemonistically, then, fame is nothing more than the rarest and most delicious morsel for our pride and our vanity." Arthur Schopenhauer, *Sämtliche Werke*, ed. Wolfgang Freiherr von Löhneisen, Wissenschaftliche Buchgesellschaft, Darmstadt, 1968, Vol. IV, p. 475.]

pupils of Pythagoras thought they discerned in their master. Monumental history deceives with analogies: with tempting similarities the courageous are enticed to rashness, the enthusiastic to fanaticism; and if one thinks of this history as being in the hands and heads of talented egoists and enraptured rascals then empires are destroyed, princes murdered, wars and revolutions instigated and the number of historical "effects in themselves," that is, of effects without sufficient causes, is further increased. So much as a reminder of the damage which monumental history can cause among the mighty and active, be they good or evil: but what can it not inflict if the impotent and inactive master it and put it to their uses!

Let us take the simplest and most frequent example. Think of artless and feebly artistic natures girded and armed by monumental history of art and artists: against whom will they now direct their weapons? Against their traditional enemies, the strong artistic spirits, namely against those who alone are capable of learning truly, that is, for the sake of life, from that history and of putting what they have learned into higher practice. It is their path which is obstructed and their air which is darkened when one dances idolatrously and diligently round a half understood monument of some great past, as though to say: "See, this is true and real art: what do you care about aspiring newcomers!" Apparently this dancing swarm even has a monopoly on "good taste": for the creator has always been at a disadvantage to him who only looked on without even trying his hand; as at all times the armchair politician has been wiser, more just and judicious than the governing statesman. If, however, the use of the popular vote and numerical majorities were transferred to the realm of art and the artist required to defend himself before a forum of the aesthetically inactive, you may bet your life that he would be condemned: not despite, but just *because* of the fact that his judges have solemnly proclaimed the canon of monumental art (that is, according to the given explanation, of art which has at all times "produced an effect"). While for all art which is not yet monumental because still contemporary they lack first, any need, second, any genuine inclination, third, just that authority of history. On the other hand their instinct tells them that art may be beaten to death with art: the monumental must definitely not be produced again, and what happens to have the authority of monumentality from the past is just the right preventative. This is how the connoisseurs are because they wish to eliminate art altogether; they give the appearance of physicians while their real intention is to dispense poisons; so they cultivate their tongue and their taste in order to explain fastidiously why they so insistently decline whatever nourishing artistic fare is offered them. For they do not want something great to be produced: their expedient is to say "see, the great already exists!" In truth they care as little about existing greatness as about greatness in the making: to that their life bears witness. Monumental history is the disguise in which their hatred of the mighty and the great of their time parades as satisfied admiration of the mighty and the great of past ages. Cloaked in this disguise they turn the proper sense of monumental history into its opposite; whether they know it clearly or not, at any rate they act as though their motto were: let the dead bury the living.

Each of the three kinds of history is justified in only one soil and one climate: in every other it grows into a noxious weed. If the man who wants to achieve something great needs the past at all he will master it through monumental history; who on the other hand likes to persist in the traditional and venerable will care for the past as an antiquarian historian; and the burden at all cost has a need for critical, that is judging and condemning history. Much harm is caused by thoughtless transplanting; the critic without need, the antiquarian without reverence, the connoisseur of the great who has not the ability to achieve the great are such growths which have been alienated from their native soil and therefore have degenerated and shot up as weeds.

3

In the second place, then, history belongs to the preserving and revering soul—to him who with loyalty and love looks back on his origins; through this reverence he, as it were, gives thanks for his existence. By tending with loving hands what has long survived he intends to preserve the conditions in which he grew up for those who will come after him—and so he serves life. The possession of ancestral furniture changes its meaning in such a soul: for the soul is rather possessed

by the furniture. The small and limited, the decayed and obsolete receives its dignity and inviolability in that the preserving and revering soul of the antiquarian moves into these things and makes itself at home in the nest it builds there. The history of his city becomes for him the history of his self; he understands the wall, the turreted gate, the ordinance of the town council, the national festival like an illustrated diary of his youth and finds himself, his strength, his diligence, his pleasure, his judgment, his folly and rudeness, in all of them. Here one could live, he says to himself, for here one can live and will be able to live, for we are tough and not to be uprooted overnight. And so, with this "We", he looks beyond the ephemeral, curious, individual life and feels like the spirit of the house, the generation, and the city. Occasionally he will greet the soul of his people as his own soul even across the wide, obscuring and confusing centuries; and power of empathy and divination, of scenting an almost cold trail, of instinctively readng aright the past however much it be written over, a quick understanding of the palimpsests, even polypsests—these are his gifts and virtues. With them Goethe stood before the memorial of Erwin von Steinbach; in the tempest of his emotions the historical cloud-cover spread between them tore, and for the first time he saw the German work again "exerting its influence out of a strong robust German soul". [9] Such a sense and disposition guided the Italians of the Renaissance and reawakened in their poets the ancient Italic genius to a "wondrous reverberation of the ancient lyre",[10] as Jakob Burckhardt puts it. But this antiquarian historical sense of reverence is of highest value where it imbues modest, coarse, even wretched conditions in which a man or a people live with a simple touching feeling of pleasure and contentment; as for example Niebuhr honestly and candidly admits to living cheerfully on moor and heath among free peasants who have a history, without ever missing art. How could history serve life better than by tying even less favoured generations and populations to their homeland and its customs, by making them sedentary and preventing their searching and contentiously fighting for something better in foreign lands? At times what, as it were, nails an individual down to these companions and environment, to this tiresome habit, to this bare mountaintop seems to be stubbornness and unreason—but it is a most wholesome unreason productive of the common goal: as everyone knows who is aware of the terrible consequences of an adventurous urge to emigrate, say, in whole hordes of populations, or who closely observes the condition of a people which has lost its loyalty to its earlier times and is given over to a restless cosmopolitan choosing and searching for novelty and ever more novelty. The opposite sentiment, the contentment of a tree with its roots, the happiness of knowing oneself not to be wholly arbitrary and accidental, but rather as growing out of a past as its heir, flower and fruit and so to be exculpated, even justified, in one's existence—this is what one now especially likes to call the proper historical sense.

These, of course, are not the conditions which most favour a man's ability to reduce the past to pure knowledge; and we see again here what we have seen in the case of monumental history, that the past itself suffers as long as history serves life and is ruled by the impulses of life. To use a somewhat stretched metaphor: the tree feels its roots more than it can see them; this feeling, however, measures their size by the size and strength of its visible branches. The tree may already be in error here: but how much greater will its error be about the whole forest which surrounds it! of which it only knows and feels anything so far as it is hindered or helped by it—but nothing beyond that. The antiquarian sense of a man, of an urban community, of a whole people always has an extremely limited field of vision; by far the most is not seen at all, and the little that is seen is seen too closely and in isolation; it cannot apply a standard and therefore takes everything to be equally important and therefore each individual thing to be too important. Under these circumstances there are no differences in value and no proportions for the things of the past which would truly do justice to those things in relation to each other; but only measures and proportions of those things in relation to the antiquarian individual or people looking back at them.

9. [The reference is to Goethe's essay "Von deutscher_ Baukunst" which is dedicated to the departed spirit (*divis manibus*) of Erwin von Steinbach.]

10. [Jacob Burckhardt, *Die Cultur der Renaissance in Italien*, 4th edition, Leipzig, 1885, Vol. I, p. 286.]

Here there is always one danger very near: the time will finally come when everything old and past which has not totally been lost sight of will simply be taken as equally venerable, while whatever does not approach the old with veneration, that is, the new and growing, will be rejected and treated with hostility. Thus even the Greeks tolerated the hieratic style of their plastic arts beside a freer and greater style; and later not only tolerated the pointed noses and frosty smiles but even made of them a matter of refinement in artistic taste. When the sense of a people hardens in this way, when history serves past life so as to undermine further and especially higher life, when the historical sense no longer preserves life but mummifies it: then the tree dies unnaturally, beginning at the top and slowly dying toward the roots—and in the end the root itself generally decays. Antiquarian history itself degenerates the moment that the fresh life of the present no longer animates and inspires it. Now piety withers away, scholarly habit endures without it and, egoistically complacent, revolves around its own centre. Then you may well witness the repugnant spectacle of a blind lust for collecting, of a restless raking together of all that once has been. Man envelops himself in an odour of decay; through his antiquarian habit he succeeds in degrading even a more significant talent and nobler need to an insatiable craving for novelty, or rather a craving for all things and old things; often he sinks so low as finally to be satisfied with any fare and devours with pleasure even the dust of bibliographical quisquilia.

But even if that degeneration does not come about, if antiquarian history does not lose the foundation in which alone it can take root for the benefit of life: there are always left dangers enough should it become too powerful and overgrow the other ways of seeing the past. It merely understands how to *preserve* life, not how to generate it; therefore it always underestimates what is in process of becoming because it has no instinct for discerning its significance—unlike monumental history, for example, which has this instinct. Thus it hinders the powerful resolve for new life, thus it paralyzes the man of action who, as man of action, will and must always injure some piety or other. The fact that something has become old now gives rise to the demand that it must be immortal; for if one calculates what such an ancient thing—an old ancestral custom, a religious faith, an inherited political privilege—has experienced during its existence, the amount of piety and veneration paid by individuals and generations: then it seems presumptuous or even impious to replace such an ancient thing with a new one and to compare such a vast sum of acts of piety and veneration with the single-digit numbers of what is becoming and present.

Here it becomes clear how badly man needs, often enough, in addition to the monumental and antiquarian ways of seeing the past, a *third* kind, the *critical*: and this again in the service of life as well. He must have the strength, and use it from time to time, to shatter and dissolve something to enable him to live: this he achieves by dragging it to the bar of judgment, interrogating it meticulously and finally condemning it; every past, however, is worth condemning—for that is how matters happen to stand with human affairs: human violence and weakness have always contributed strongly to shaping them. It is not justice which here sits in judgment; even less is it mercy which here pronounces judgment: but life alone, that dark, driving, insatiably self-desiring power. Its verdict is always unmerciful, always unjust, because it has never flowed from a pure fountain of knowledge; but in most cases the verdict would be the same were justice itself to proclaim it. For "whatever has a beginning *deserves* to have an undoing; it would be better if nothing began at all."[11] It takes a great deal of strength to be able to live and to forget how far living and being unjust are one. Luther himself once thought that the world came to be through an oversight of God: for had God thought of "heavy artillery" he would never have created the world. Occasionally, however, the same life which needs forgetfulness demands the temporary destruction of this forgetfulness; then it is to become clear how unjust is the existence of some thing, a privilege, a caste, a dynasty for example, how much this thing deserves destruction. Then its past is considered critically, then one puts the knife to its roots, then one cruelly treads all pieties under foot. It is always a dangerous process, namely

11. [J. W. von Goethe, *Faust*, Part I. The lines are spoken by Mephistopheles in the early scene in Faust's study. We quote the translation by Louis MacNeice and E. L. Stahl.]

dangerous for life itself: and men or ages which serve life in this manner of judging and annihilating a past are always dangerous and endangered men and ages. For since we happen to be the results of earlier generations we are also the results of their aberrations, passions and errors, even crimes; it is not possible quite to free oneself from this chain. If we condemn those aberrations and think ourselves quite exempt from them, the fact that we are descended from them is not eliminated. At best we may bring about a conflict between our inherited, innate nature and our knowledge, as well as a battle between a strict new discipline and ancient education and breeding; we implant a new habit, a new instinct, a second nature so that the first nature withers away. It is an attempt, as it were, *a posteriori* to give oneself a past from which one would like to be descended in opposition to the past from which one is descended:—always a dangerous attempt because it is so difficult to find a limit in denying the past and because second natures are mostly feebler than the first. Too often we stop at knowing the good without doing it because we also know the better without being able to do it. Yet here and there a victory is achieved nevertheless, and for the fighters who use critical history for life there is even a remarkable consolation: namely, to know that this first nature also was, at some time or other, a second nature and that every victorious second nature becomes a first.

4

These are the services which history is capable of rendering to life; each man and each people requires, according to their goals, strengths and needs, a certain knowledge of the past, sometimes as monumental, sometimes as antiquarian, sometimes as critical history: but not like a crowd of pure thinkers who only contemplate life, not like individuals, hungry for knowledge, satisfied with mere knowledge, whose only goal is the increase of knowledge, but always only for the purpose of life and therefore also always under the rule and highest direction of that purpose. That this is the natural relation of an age, a culture, a people to history—brought on by hunger, regulated by the degree of need, held within limits by the inherent plastic power—that knowledge of the past is at all times desired only in the service of the future and the present, not to weaken the present, not to uproot a future strong with life: all of this is simple, as truth is simple, and immediately convinces even him who has not first been given a historical proof.

And now a quick glance at our time! We are shocked, we fly back: whither is all clarity, all naturalness and purity of that relation between life and history, how confused, how exaggerated, how troubled is this problem which now surges before our eyes! Is the fault ours, the observers? Or has the constellation of life and history really changed because a powerful, hostile star has come between them? May others show that we have seen falsely: we will say what we believe we see. Such a star has indeed intervened, a bright and glorious star, the constellation is really changed—*through science, through the demand that history be a science.* Now life is no longer the sale ruler and master of knowledge of the past: rather all boundary markers are overthrown and everything which once was rushes in upon man. An perspectives have shifted as far back as the origins of change, back into infinity. A boundless spectacle such as history, the science of universal becoming, now displays, no generation has ever seen; of course, she displays it with the dangerous boldness of her motto: *fiat veritas pereat vita.*[12]

Let us now picture to ourselves the spiritual events brought on hereby in the soul of modern man. Historical knowledge floods in ever anew from inexhaustible springs, the alien and disconnected throngs about, memory opens all its gates and is still not opened wide enough, nature makes a supreme effort to receive these alien guests, to order and to honour them, but these themselves are at war with each other and it appears necessary to master and overcome them all so as not oneself to perish in their strife. Gradually it becomes second nature to get accustomed to such a disorderly, stormy, belligerent household, while at the same time it is beyond question that this second nature is much weaker, much more troubled and through and through less healthy than the first. In the end modern man drags an immense amount of indigestible knowledge stones around with him which on occasion rattle around in his belly, as the fairy tale[13] has

12. [Let there be truth, and may life perish.]
13. [Little Red Riding Hood.]

it. This rattling betrays the most distinctive property of this modern man: the remarkable opposition of an inside to which no outside and an outside to which no inside corresponds, an opposition unknown to ancient peoples. Knowledge, taken in excess without hunger, even contrary to need, no longer acts as a transforming motive impelling to action and remains hidden in a certain chaotic inner world which that modern man, with curious pride, calls his unique "inwardness". He may then say that he has the content and that only the form is lacking; but in all living things this is quite an unseemly opposition. Our modern culture is nothing living just because it cannot be understood at all without that opposition, that is: it is no real culture at all, but only a kind of knowledge about culture, it stops at cultured thoughts and cultured feelings but leads to no cultured decisions. That, however, which truly is a motive and visibly shows itself in action often signifies little more than an indifferent convention, a miserable imitation or even a rude grimace. In the inner being sentiment may well sleep like the snake which, having swallowed whole rabbits, calmly lies in the sun and avoids all movement except the most necessary. The inner process, that is now the thing itself, that is properly "culture". Everyone who passes by wishes only one thing, that such a culture not perish of indigestibility. Think, for example, of a Greek passing by such a culture, he would perceive that for more recent men 'educated' and 'historically educated' appear to belong together as though they were one and distinguished only by the number of words. Were he now to give voice to his tenet: a man can be very educated and yet be historically quite uneducated, one would believe not to have heard properly and shake one's head. That well known little people of a not too distant past, I mean just the Greeks, had stubbornly preserved its unhistorical sense in the period of its greatest strength; were a contemporary man forced by magic spells to return to that world he would presumably find the Greeks very "uneducated", which would, of course, disclose the meticulously disguised secret of modern culture to public laughter: for from ourselves we moderns have nothing at all; only by filling and overfilling ourselves with alien ages, customs, arts, philosophies, religions, and knowledge do we become something worthy of notice, namely walking encyclopedias, as which an ancient Hellene, who had been thrown into our age, might perhaps address us. The whole value of encyclopedias, however, is found only in what is written in them, the content, not in what is written on them or in what is cover and what is shell; and so the whole of modern culture is essentially internal: on the outside the bookbinder has printed something like "Handbook of Inner Culture for External Barbarians". This opposition of inside and outside makes the outside still more barbaric than it would need to be were a rude people to grow out of itself alone according to its rough requirements. For what means is left to nature to take in what imposes itself so excessively? Only the one means, to accept it as easily as possible in order quickly to lay it aside again and expel it. This gives rise to a habit of not taking actual things too seriously anymore, this gives rise to the "weak personality" as a result of which the actual and enduring make only a minimal impression; in externals one finally becomes ever more casual and indolent and widens the critical gulf between content and form to the point of insensitivity to barbarism, if only the memory is stimulated ever anew, if only ever new things to be known keep streaming in to be neatly put on display in the cases of that memory. The culture of a people in contrast to that barbarism has once been designated, with some justification I believe, as unity of artistic style in all expressions of life of a people;[14] this designation should not be misunderstood as though the opposition between barbarism and *beautiful* style were at issue; the people that can be called cultured must in reality be a living unity and not fall apart so miserably into an inside and an outside, a content and a form. If you want to strive for and promote the culture of a people, then strive for and promote this higher unity and work to annihilate modern pseudo-culture in favour of a true culture; dare to devote some thought to the problem of restoring the health of a people which has been impaired by history, to how it may recover its instincts and therewith its integrity.

I wish only to speak plainly of us Germans of the present, of us who suffer more than another people from that weakness of personality and the contradction

14. [This probably refers to the first of Nietzsche's Untimely Observations, *David Strauß*.]

of content and form. Form is for us Germans generally a convention, a costume and disguise, and for that reason it is, if not hated, at least not loved; it would be more correct still to say that we are extraordinarily afraid of the word 'convention', and surely also of the thing 'convention'. With this fear the German left the school of the French: for he wanted to become more natural and thereby more German. However, he seems to have miscalculated this 'thereby': having run away from the school of convention he let himself go as and where it pleased him, and basically imitated sloppily and arbitrarily in partial forgetfulness what earlier he imitated meticulously and often successfully. Even today we still live, compared with earlier times, by slovenly, incorrect French convention: as all our walking, standing, conversation, dress and home life shows. We thought we had come back to being natural; but we merely chose to let ourselves go, we chose indolent comfort and the smallest possible degree of self-control. Walk around any German city—all convention, compared with the national character of foreign cities, will prove to be negative, all is colourless, worn down, badly copied, careless, each man follows his fancy, but not a strong thoughtful fancy, rather according to laws prescribed at one time by general haste and at another by the general craving for comfort. A piece of clothing whose invention requires no great mental effort, which takes no time to put on, that is, a piece of clothing borrowed from foreigners and copied as carelessly as possible, counts with Germans at once as a contribution to German fashion. The sense of form is rejected by them with veritable irony—one has, after all, *the sense of content:* they are, after all, the famous people of inwardness.

There is, however, a famous danger in this inwardness: the content itself, of which it is assumed that it cannot be seen at all from the outside, may at some time or other evaporate; externally one would not detect a trace of this nor of its earlier presence. But however far one may believe the German people to be from this danger: the foreigner will never be quite wrong in his reproach that our inner being is too weak and disorderly to have an external effect and give itself a form. Yet it may prove to be delicately receptive to a rare degree, serious, powerful, fervent, good and perhaps even richer than the inner being of other peoples: but as a whole it remains weak, since all those beautiful fibres are not entwined into a strong knot: so that the visible deed is not the deed of the whole and a self-manifestation of this inner being, but only a feeble and rude attempt of some fibre or other wanting for the sake of appearance to count as the whole. Therefore the German cannot be judged at all by an action and remains hidden as an individual even after this deed. He must, as is well known, be measured by his thoughts and his feelings and these he now expresses in his books. If only it were not just these books which lately raise more than a doubt, whether this famous inwardness still sits in its inaccessible little temple: it would be terrible to think that it disappeared one day and all that now remains as the distinguishing mark of the German is his outer being, that arrogantly clumsy and meekly ineffectual outer being. It would be almost as terrible as if that inwardness were to sit in there hidden from view, a counterfeit rouged and painted, having become an actress if not something worse: as for example Grillparzer, standing aside and calmly observing, seems to have come to believe through his dramatic-theatrical experience. "We feel with abstraction", he says, "we hardly know any longer how feeling is expressed by our contemporaries; we portray expressions of feeling which no longer occur nowadays. Shakespeare has spoiled all of us moderns."[15]

This is a single case perhaps too quickly interpreted as holding generally: but how terrible would be its justified generalization, if all too many single cases imposed themselves on the observer, what despair would ring in this proposition: we Germans feel with abstraction; we have all been spoiled by history—a proposition which would destroy at its roots all hope of a national culture still to come: for every hope of this kind is nourished by the belief in the genuineness and immediacy of German feeling, by the belief in an unharmed inwardness. What is there still to be hoped and believed when the spring of belief and hope is muddied, when inwardness has learned to leap, to dance, to use make-up, to express itself with abstraction and calculation and gradually to lose itself! And how shall the great productive spirit still find it tolerable to remain with a people which is no longer sure

15. [Grillparzer F., *Werke*, Der Tempel-Verlag, Berlin and Darmstadt, 1965, Vol. II, pp. 285–6.]

of its unifying inwardness and which falls apart into the educated with a miseducated and misguided inwardness and the uneducated with an inaccessible inwardness. How can this spirit tolerate it if the integrity of a people's feeling is lost, if moreover he finds this feeling a rouged counterfeit in just that part which calls itself the educated part of the people and claims a right to the national artistic spirits. Even if here and there the judgment and taste of individuals had grown finer and more refined—that does not compensate this spirit; he is tormented by having to speak only to a sect, as it were, and no longer being necessary in the midst of his people. Perhaps he would rather bury his treasure now because he feels revulsion at being pretentiously patronized by a sect while his heart is filled with pity for all. The instinct of the people no longer goes out to him; it is useless to long for him with open arms. What else is left to him but to turn his inspired hatred towards that hindering constraint, against the barriers erected by the so-called education of his people, to condemn as judge what for him who lives and generates life is annihilation and degradation: so he exchanges the deep insight of his fate for the divine pleasure of creating and helping and ends in lonely knowledge as a surfeited sage. It is the most painful spectacle: whoever sees it at all will discern a holy demand here: he says to himself, one must help here, that higher unity in the nature and soul of a people must be remade, that break between the inside and the outside must disappear under the hammer blows of need. What means shall he use? What is now left him but his deep knowledge: in expressing it, disseminating it, distributing it generously he hopes to plant a need: and from this strong need a strong deed will one day arise. And so as to leave no doubt from where I take the example of that need, that want, that knowledge: I shall explicitly set down my testimony here that it is *German unity* in that highest sense for which we strive and strive for more ardently than political reunification, the *unity of the German spirit and life after the annihilation of the opposition of form and content, of inwardness and convention.*

5

The surfeit of history of an age seems to me hostile and dangerous to life in five respects: through such an excess the contrast of inside and outside, discussed above, is generated and the personality weakened thereby; through this excess an age comes to imagine that it possesses the rarest virtue, justice, to a higher degree than any other age; through this excess the instincts of a people are impaired and the maturing of the individual no less than of the whole is prevented; through this excess the belief, harmful at any time, in the old age of mankind is implanted, the belief of being a latecomer and epigone; through this excess an age acquires the dangerous disposition of irony with regard to itself, and from this the still more dangerous one of cynicism: in this, however, it ripens even more into clever egoistic practice through which the vital strength is paralized and finally destroyed.

And now back to our first proposition: modern man suffers from a weakened personality. As the Roman of the Empire ceased to be Roman with regard to the region of the world which was at his service, as he lost himself in the influx of the foreign and degenerated in the cosmopolitan carnival of gods, customs, and arts, so it must go with modern man who continuously has the feast of a world exhibition prepared for him by his historical artists; he has become a spectator merely enjoying himself and strolling around and brought to a condition which can hardly be altered for a moment even by great wars and great revolutions. The war is not yet over and already it has been transformed a hundred thousandfold into printed paper, already it is being served up as a new stimulant for the weary palates of those greedy for history. It appears almost impossible to elicit a strong full sound even with the mightiest sweep of the strings: it fades away immediately, and in the next moment it already echoes away strengthless in historically subdued vapours. In moral language: you no longer succeed in holding fast the sublime, your deeds are sudden claps, not rolling thunder. Achieve the greatest and most wonderful: it must nevertheless go to Orcus unsung. For art flees if you immediately spread the historical awning over your deeds. Whoever wants to understand, calculate, comprehend in a moment where with profoundly sustained emotion he ought to hold fast the unintelligible as the sublime, may be called rational, but only in the sense in which Schiller speaks of the reason of reasonable men: he fails to see something which is yet seen by the child, he fails to hear

something which is yet heard by the child; this something is exactly the most important: because he does not understand this his understanding is more childish than the child and simpler than simplicity—despite the many clever wrinkles on his parchment face and the masterly skill his fingers have in unraveling tangles. It comes to this: he has annihilated and lost his instinct; when his reason wavers and his way leads through deserts he can no longer let go the reins and trust in the "divine animal". So the individual becomes timid and unsure and may no longer believe in himself: he sinks into himself, into his inner being, which here only means: into the heaped up chaos of knowledge which fails to have an external effect, of teaching which does not become life. If we regard their outside we notice how the expulsion of the instincts by history has almost transformed men into downright *abstractis* and shadows: no one dares to show his person, but masks himself as an educated man, as a scholar, a poet, a politician. If one takes hold of such masks believing them to be real and not just a puppet show—for they all pretend to be real—one suddenly has hold of nothing but rags and multi-coloured patches. Therefore one ought no longer to allow oneself to be deceived, therefore one ought to address them imperiously: "take off your jackets or be what you seem!" No longer shall everyone who is serious by nature become a Don Quixote, for they have better things to do than fight with such presumed realities. At least each ought to look closely, call his "Halt! Who goes there?" to each mask and tear it off. How strange! One should think that history would, above all, encourage men to be *honest*—even if it were to be an honest fool; and it has always had this effect, but no longer! Historical education and the universal frock of the citizen rule at the same time. While there has never been such sonorous talk of the "free personality" one does not even see personalities, not to speak of free ones, rather nothing but timidly disguised universal men. The individual has withdrawn into his inner being: externally one discerns nothing of him anymore; whereby one may doubt whether there can be any causes without effects. Or is a race of eunuchs required to guard the great historical world-harem? Pure objectivity is most becoming in such men, of course. It almost seems as though the task were to guard history so that nothing could come of it but stories, but by no means history-making events!—to prevent its making personalities "free", that is, sincere toward themselves, sincere towards others, and that in word and deed. Only through this sincerity will the distress, the inner misery of modern man reach the light of day and the timidly hidden convention and masquerade can then be replaced by art and religion as true helpers, together to plant a culture which is adequate to true needs and not, like contemporary general education, only teach to lie to oneself about these needs and thus to become a walking lie.

In how unnatural, artificial, in any case unworthy a condition must the most sincere of all the sciences, the honest naked goddess philosophy, find herself in an age which suffers from general education! In such a world of forced external uniformity she remains a learned monologue of the lonely walker, the chance prey of the solitary thinker, a hidden private secret or harmless gossip of academic old men and children. No one may dare to fulfill the law of philosophy in himself, no one lives philosophically, with that simple manful constancy which compelled one of the ancients, wherever he was, whatever he was doing, to behave like a Stoic if once he had pledged allegiance to the Stoa. All modern philosophizing is political and official, limited to learned appearance by governments, churches, academies, customs, and the cowardices of men; it stops with the sigh "if only" or with the realization "once upon a time". Philosophy has no rights within historical education if it wants to be more than an inwardly restrained knowing without effect; if modern man were only courageous and resolute, if only he were not only an inward being even in his enmities: he would banish philosophy; but as it is he is satisfied with modestly draping her nakedness. One does think, write, print, teach philosophically—all of this is more or less permitted; only in action, in so-called life all is different: only one thing is permitted here and everything else simply impossible: so historical education wills it. Are these still human beings, one then asks oneself, or only machines that think, write and talk?

Goethe once said of Shakespeare: "No one despised the material costume more than he; he knows the inner human costume very well, and here all are alike. It is said that he portrayed the Romans very well; I do not think so, they are all inveterate Englishmen, but,

of course, they are men, men from top to bottom, and assuredly the Roman toga fits them."[16] Now I ask whether it would be at all possible to present our contemporary literati, popular men, officials, politicians as Romans; it would be quite impossible because they are not men but only incarnate compendia and, as it were, concrete abstractions. If they have character and a manner of their own, then all this is seated so deeply that it cannot struggle out to the light of day at all: if they are men they can be known as such only by one who plumbs them deeply. For all others they are something else, not men, not gods, not animals, but historically educated patterns, through and through formation, image, form without demonstrable content, unfortunately only bad form, and moreover uniform. And so my proposition may be taken and understood: *only strong personalities can endure history; the weak are completely extinguished by it.* The reason is that history confuses feeling and sentiment where these are not strong enough to make themselves the measure of the past. The man who no longer dares to trust himself, but, seeking counsel from history about his feelings, asks "how am I to feel here", will, from timidity, gradually become an actor and play a role, mostly even many roles and therefore each so badly and superficially. Gradually all congruence between the man and his historical scope is lost; we see cheeky little fellows treating the Romans as though they were their equals: and they dig and burrow in the remains of Greek poets as though even these *corpora*[17] lay prepared for their dissection and were *vilia*, which their own literary *corpora* may be. Let us assume a man working on Democritis; I always have the question at the tip of my tongue: why not Heraclitus? Or Philo? Or Bacon? Or Descartes?—and so on at random. And then: just why a philosopher? Why not a poet, an orator? And: why especially a Greek, why not an Englishman, a Turk? Is not the past large enough to find something that will not make even you appear so ridiculously arbitrary? But, as I have said, it is a race of eunuchs; one woman is like the next to the eunuch, just a woman, woman in itself, the eternally unapproachable—and so it is a matter of indifference what you do as long as history itself is preserved nice and "objective", namely by those who can never themselves make history. And since the eternally feminine will never draw you up to itself,[18] you draw it down to you and, as neuters, take history to be a neuter as well. Lest one believe, however, that I seriously compare history with the eternal feminine, I shall rather clearly state that, on the contrary, I take it to be the eternal masculine: only that for those who are "historically educated" through and through it cannot matter very much whether it is one or the other: after all, they are themselves neither man nor woman, not even hermaphrodites, but always only neuters, or, to use a more educated expression, only the eternally objective ones.

Once personalities are drained, in the manner described, to the point of eternal non-subjectivity, or, as one says, objectivity: nothing can affect them any longer; should something good and right happen, as deed, as poetry, as music: at once those hollowed out by education will look beyond the work and inquire after the history of the author. If he has already produced several other works, he must at once suffer to have the past and projected future direction of his development explained to him, at once he is held up beside others for comparison, with regard to the choice and treatment of his material he will be dissected, torn apart, wisely put back together and on the whole admonished and reprimanded. Something most astonishing may happen, the flock of historical neuters is always already on the spot, prepared to comprehend the author from afar. Momentarily the echo resounds: but always as "criticism", while shortly before the critic did not even dream of the possibility of the event. Nowhere does it come to have an effect but always only "criticism"; and criticism itself again has no effect but only comes to see further criticism. In view of this there has come to be general agreement that much criticism is to be seen as an effect and little or none as failure. Basically, however, even

16. [J. W. von Goethe, "Shakespeare und kein Ende".]

17. [There is a play here on the Latin *corpora* (plural of *corpus*, which can mean either a body, e.g., of a human being, or a collection of literary works). The point is that these fellows dissect the Greek poets as though they were vile and cheap bodies, while only their own literary works are vile and cheap.]

18. [An allusion to the last two lines of Goethe's *Faust*, part II.]

with such "effect", all remains as it was: for a while one prattles something new, then again something new, and in the meantime does what one has always done. The historical education of our critics does not permit any more that there be an effect in the proper sense, namely an effect on life and action: on the blackest script they immediately press their blotter, on the most graceful drawing they smear their thick brush strokes, which are to be seen as corrections: once again it was all over. Their critical pen, however, never ceases to flow for they have lost control over it and are directed by it, instead of directing it. Just in this immoderation of their critical effusion, in this lack of self-mastery, in what the Romans call *impotentia*, the weakness of the modern personality is betrayed.

6

But let us leave this weakness be. Rather let us turn to a much praised strength of modern man with the question, which to be sure is embarrassing, whether he has a right by virtue of his well known historical "objectivity" to call himself strong, that is, *just*, and that to a higher degree than the man of other times. Is it true that this objectivity has its origin in a heightened desire and demand for justice? Or does it, as the effect of quite different causes, merely make it seem that justice is the proper cause of this effect? Does it perhaps mislead to a prejudice, dangerous because all too flattering, about the virtues of modern man?—Socrates took it to be a malady approaching insanity to imagine that one possesses a virtue when one does not possess it; and certainly such imagination is more dangerous than the opposite delusion of suffering from a shortcoming, from a vice. For through this delusion it is perhaps still possible to become better; the former imagination, however, will daily make a man or an age worse, that is—in this case, more unjust.

Truly, no one has more of a right to our respect than he who possesses the drive and strength to justice. For in it are joined and hidden the highest and rarest virtues as in an unfathomable sea which receives and swallows up rivers from all sides. The hand of the just man who is competent to sit in judgment no longer trembles when it holds the scales; pitiless toward himself he places weight upon weight, he is not downcast when the scales rise or fall and his voice is neither harsh nor broken when he proclaims the verdict. Were he a cold demon of knowledge he would spread about himself an icy atmosphere of superhumanly terrible majesty which we would have to fear, not revere: but that he is a man and attempts to rise from trivial doubt to strict certainty, from tolerant mildness to the imperative 'you must', from the rare virtue of generosity to the rarest of justice, that he now resembles that demon without from the beginning being anything other than a poor man, and above all that at every moment he must in himself do penance for his humanity and tragically devours himself through his impossible virtue—all this places him upon a solitary height as the most *venerable* exemplar of the species man; for he wants truth but not only as cold knowledge without consequences, rather as ordering and punishing judge, truth not as the egoistic possession of the individual but as the sacred justification to shift all boundary markers of egoistic possessions, in a word, truth as the Last Judgment and certainly not as the chance prey and pleasure of the individual hunter. Only so far as the seeker after truth has the unconditional will to be just is there something great in the striving for truth which is everywhere glorified so thoughtlessly: while before the duller eye quite a number of the most diverse drives such as curiosity, flight from boredom, envy, vanity, play instinct—drives which have nothing at all to do with truth—merge with that striving for truth which has its root in justice. The world may appear full of those who "serve truth"; and yet the virtue of justice is found so rarely, more rarely yet is it recognized and almost always mortally hated: whereas the host of sham virtues has at all times paraded in honour and pomp. Few serve truth in truth because only few have the pure will to be just, and of those again very few have the strength to be just. It is not at all sufficient to have only the will to justice: and the most terrible sufferings have come upon man precisely from a drive to justice which lacks power of judgment; which is why the general welfare would require no more than to strew the seed of the power of judgment as widely as possible so that the fanatic remain distinct from the judge, the blind desire to be a judge distinct from the conscious power of being allowed to judge. But where is there a means of planting the power of

judgment!—that is why men, whenever one speaks to them of truth and justice, will forever tarry in hesitant indecision whether the fanatic or the judge speaks to them. One ought therefore forgive them if they have always greeted with particular good will those "servants of truth" who have neither the will nor the power to judge and set themselves the task of seeking "pure" knowledge "without consequences" or, more plainly, truth that comes to nothing. There are very many indifferent truths; there are problems about which to judge correctly requires not even effort, to say nothing of sacrifice. A man may well succeed in becoming a cold demon of knowledge in this indifferent harmless area; and nevertheless! Even if in particularly favoured times whole cohorts of scholars and researchers are transformed into such demons—regrettably it still remains possible that such a time suffers from deficiency in strict and great justice—in short, in the noblest core of the so-called impulse to truth.

Consider now the historical virtuoso of the present time: is he the justest man of his age? It is true, he has developed in himself such a delicate and sensitive sensibility that nothing human remains alien to him; the most diverse ages and persons immediately reverberate in familiar sounds on his lyre: he has become a reverberating passivity which with its sounds acts again on other such passivities: until finally the whole atmosphere of an age is filled with a buzzing confusion of such tender and familiar reverberations. Yet it seems to me that one perceives, as it were, only the overtones of every original historical key-note: what was robust and powerful in the original can no longer be guessed in the ethereally thin and pointed sound of those strings. Moreover, the original note usually woke deeds, needs, terror, this one lulls us to sleep and turns us into soft men of pleasure; it is as though the heroic symphony[19] had been arranged for two flutes and reserved for the use of dreamy opium smokers. From this one may already gauge how matters will stand with these virtuosos as regards the chief claim of modern man to higher and purer justice; this virtue never has anything appealing about it, knows no exciting rush of emotion, is hard and terrible. Measured by it how low in the ranks of virtues is even generosity, that quality of a few rare historians! But a great many more only get as far as tolerance, as far as letting stand what simply cannot be denied, as far as ordering and beautifying with measured benevolence, on the clever assumption that the inexperienced will interpret it as the virtue of justice when the past is recounted without any harsh accents and without the expression of hatred. But only superior power can judge and weakness must tolerate if it would not feign strength and make an actress of justice on her seat of judgment. Yet there is still left over one dreadful species of historian, of diligent, strict and honest character—but narrow-minded; here the good will to be just is present, as well as the pathos of judging: but all verdicts are false for approximately the same reason that the judgments of the usual juries are false. How unlikely, then, is the frequency of historical talent! Leaving quite out of account disguised egoists and partisans who play their evil game with quite an objective bearing. Also leaving out of account those quite unreflective people who, as historians, write in the naive belief that just their age is right in all its popular opinions and that to write in accordance with the times comes to the same thing as being just; a belief in which every religion lives and concerning which, in a religious context, nothing further is to be said. Those naive historians call measuring past opinions and deeds by the common opinions of the moment "objectivity": here they find the canon of all truths; their work is to make the past fit the triviality of their time. On the other hand they call "subjective" all historical writing which does not take those popular opinions as its canon.

And might not an illusion lurk even in the highest interpretation of the word 'objectivity'? By this word one understands a condition in the historian in which his view of an event with all of its motives and consequences is so pure that it has no effect at all on his subjectivity: one has in mind that aesthetic phenomenon, that detachment from all personal interest with which the painter sees his inner picture in a stormy landscape amid lightning and thunder or on a rough sea, one has in mind the total absorption in things: yet it is a superstition to believe that the picture which things produce in a man in such a state of mind reproduces the empirical essence of those things. Or is one to think that things in such moments, as it were,

19. [Beethoven's third symphony, the *Eroica*, is meant.]

retrace, counterfeit, reproduce themselves photographically on a pure passivity through their own activity?

That would be a mythology and a bad one to boot: besides one forgets that that moment is just the most powerful and spontaneous moment of creation in the inner being of the artist, a moment of composition of the highest possible kind whose result may well be an artistically true portrait but not an historically true one. To think history objectively in this manner is the silent work of the dramatist; that is, to think everything in conjunction, to weave a whole out of the isolated: everywhere with the presupposition that a unity of plan must be put into things if it is not there. So man spins his web over the past and subdues it, so his impulse to art expresses itself—but not his impulse to truth and justice. Objectivity and justice have nothing to do with each other. One could think of a kind of historical writing which would not contain a drop of common empirical truth and yet be entitled in the highest degree to the predicate 'objectivity'. Grillparzer goes so far as to say: "what else is history, after all, than the way in which the spirit of man apprehends what for him are *impenetrable* events; unites elements of which God only knows whether they belong together; replaces the unintelligible with something intelligible; introduces its concepts of externally oriented purpose into a whole which surely admits only purposes with an inner orientation; and again assumes chance where a thousand little causes were at work. Every person at the same time has his individual necessity so that millions run in directions parallel to each other in crooked and straight lines, cross, support and restrict each other, strive forward and backward and in this assume the character of chance for each other, and so, leaving out of account the influences of natural events, make it impossible to demonstrate a penetrating all-inclusive necessity of events." Just such a necessity, however, is to be brought to light as a result of that "objective" view of things! This is a presupposition which, when stated as a dogma by the historian, can take only a curious form; Schiller, of course, is quite clear about what is properly subjective in this assumption when he says of the historian: "one appearance after the other begins to withdraw from blind approximation, from lawless freedom, and as a fit member joins the ranks of a coherent whole—*which, of course, only exists in his imagination.*"[20] But what is one to think of the claim of a famous historical virtuoso, a claim presented with innocent faith, artfully hovering between tautology and absurdity: "it is not otherwise than that all human acts and endeavours are subject to the silent, often imperceptible, yet powerful and inexorable course of things?" In such a proposition one discerns no more enigmatical wisdom than unenigmatical folly; as in the saying of Goethe's court gardener: "nature may let herself be forced but not compelled", or in the notice on a booth at the fair of which Swift tells: "here is to be seen the largest elephant in the world with the exception of itself". For, after all, what is the opposition between the acts and endeavours of man and the course of things? In general I notice that such historians, as the one whom we have just quoted, cease to be instructive as soon as they generalize and in doing so show the feeling of their weakness in obscurities. In other sciences the generalities are what is most important so far as they contain laws: should propositions like the one quoted pretend to be laws however, then one could reply that the historian's labour in writing history is wasted; for what remains at all true in such propositions, after deduction of that dark and insoluble remainder of which we have spoken—is well known and even trivial; for the smallest range of experience brings it to the attention of everyone. But to trouble whole peoples for this and to expend years of difficult labour to this end is surely no different from heaping experiment upon experiment in the natural sciences long after the law can already be inferred from the available store of experiments: from which senseless excess of experimentation, incidentally, contemporary natural science suffers according to Zöllner.[21] If the value of a drama lies merely in its final and main thought, then the drama itself would be a very long, crooked and laborious way to its goal; and so I hope that history may not see its significance in general thoughts as a kind of bloom and fruit: rather that its value is just this, to describe with insight a known, perhaps common theme, an

20. [In 1789 Friedrich Schiller became a professor of history at the University of Jena. The quotation is from his inaugural lecture delivered on May 26 and 27, 1789.]

21. [The astrophysicist Johann Karl Friedrich Zöllner (1836–1882).]

everyday melody, to elevate it, raise to a comprehensive symbol and so let a whole world of depth of meaning, power and beauty be guessed in it.

But this requires above all a great artistic capacity, and creative overview, a loving immersion in the empirical data, a poetic elaboration of given types—this, to be sure, requires objectivity, but as a positive property. Objectivity, however, is so often only a phrase. The dark tranquility of the artist's eye, flashing within yet unmoved without, is replaced by the affectation of tranquility; as lack of pathos and moral strength usually disguises itself as penetrating coolness of observation. In certain cases banality of sentiment and everyday wisdom, which by being so boring give the impression of tranquility and calm, dare to step forth and pretend to be that artistic condition in which the subject is silent and becomes quite imperceptible. Then all those items which do not arouse at all are searched out and the dullest word is just right. One goes so far as to assume that whoever is quite unconcerned about a past event has a calling to describe it. Philologists and Greeks relate to each other in this way: they are of no concern to each other—and this one is pleased to call "objectivity"! Where just the highest and rarest is to be described, there intentional and openly displayed detachment, the fabricated and soberly flat motivational artifice, is nothing short of outrageous—when, that is, the *vanity* of the historian impels to this indifference parading as objectivity. Moreover one's judgment on such authors should to a considerable degree be motivated by the principle that a man has just as much vanity as he lacks understanding. No, at least be honest! Do not seek the semblance of that artistic power which is true objectivity, do not seek the semblance of justice if you are not ordained to the terrible calling of the just man. As though, moreover, it were the task of every age that it must be just about everything past! As a matter of fact ages and generations never have the right to be the judge of all earlier ages and generations: rather such an uncomfortable mission occasionally is the lot only of individuals, and the rarest at that. Who forces you to judge? And then—just inquire of yourselves whether you could be just even if you wanted to! As judges you must stand higher than the one to be judged; while you have only come later. The guests who are the last to arrive at table justifiably should receive the last places: and you want to have the first? Well then, at least do the highest and greatest; perhaps one will really make room for you then, even if you arrive last.

Only from the standpoint of the highest strength of the present may you interpret the past: only in the highest exertion of your noblest qualities will you discern what is worthy of being known and preserved, what is great in the past. Like by like! Otherwise you will draw the past down to yourselves. Do not believe any historical writing if it does not issue from the head of the rarest minds; but you will always notice the quality of mind of such writing when it is required to assert something general or to repeat something generally known: the genuine historian must have the strength to recast the well known into something never heard before and to proclaim the general so simply and profoundly that one overlooks its simplicity because of its profundity and its profundity because of its simplicity. No one can be a great historian, an artistic man and a shallowpate at the same time: however one should not despise the workers who cart, heap up and sift because it is certain that they cannot become great historians; and even less should one confuse them with those historians but rather understand them to be the necessary helpers and underlings in the service of the master: somewhat as the French, with greater naiveté than is possible among the Germans, used to speak of the *historiens de M. Thiers*.[22] These workers should gradually become great scholars, but can never be masters for all that. A great scholar and a great shallowpate—that will more easily go together under one hat.

So: history is written by the experienced and superior man. If you have not had some higher and greater experiences than all others you will not know how to interpret anything great and high in the past. The past always speaks as an oracle: only as master builders of the future who know the present will you understand it. We now explain the extraordinarily deep and extensive effect of Delphi especially by the fact that the priests of Delphi had exact knowledge of the past; now it is proper to know that only the builder of

22. [Louis Adolphe Thiers (1797–1877), French politician, journalist and historian, whose *Histoire du consulat et de l'empire* was published in twenty volumes between 1845 and 1862.]

the future has a right to judge the past. By looking forward and setting a great goal for yourselves you will also curb that rank impulse to analysis which now lays waste your present and almost makes impossible all calm and all peaceful growth and ripening. Draw about yourselves the fence of a great and embracing hope, a hopeful striving. Form an image for yourselves to which the future ought to correspond and forget the superstitition that you are epigoni. You have enough to ponder and invent by pondering that future life; but do not ask history to show the How? and Wherewith?. If, on the other hand, you live yourselves into the history of great men you will learn from it a highest commandment, to become ripe and to flee from that paralyzing educational constraint of the age, which sees its advantage in preventing your becoming ripe, in order to rule and to exploit you unripe ones. And if you want biographies then not those with the refrain "Mr. So-and-so and His Time" but rather those on whose title page should be inscribed "A Fighter Against His Time". Satisfy your souls on Plutarch and dare to believe in yourselves when you believe in his heroes. A hundred such men educated against the modern fashion, that is, men who have ripened and are used to the heroic, could now silence forever the whole noisy pseudo-education of our time.

7

The historical sense, if it rules *without restraint* and unfolds all its implications, uproots the future because it destroys illusions and robs existing things of their atmosphere in which alone they can live. Historical justice, even when it is practised truly and with pure intentions, is a terrible virtue because it always undermines the living and brings it to ruin: its judging is always annihilating. If no constructive drive is active behind the historical drive, if one does not destroy and clear away so that a future, already alive in our hope, may build its house on the cleared ground, if justice alone rules, then the creative instinct is enfeebled and discouraged. A religion for example which, under the rule of pure justice, is to be transformed into historical knowledge, a religion which is to be thoroughly known in a scientific way, will at the end of this path also be annihilated. The reason is that the historical audit always brings to light so much that is false, crude, inhuman, absurd, violent, that the attitude of pious illusion, in which alone all that wants to live can live, is necessarily dispelled: only with love, however, only surrounded by the shadow of the illusion of love, can man create, that is, only with an unconditional faith in something perfect and righteous. Each man who is forced no longer to love unconditionally has had the root of his strength cut off: he must wither, that is, become dishonest. In such effects art is opposed to history: and only if history can bear being transformed into a work of art, that is, to become a pure art form, may it perhaps preserve instincts or even rouse them. But such a manner of writing history would thoroughly contradict the analytic and inartistic trend of our time, it would even be perceived as falsification. But history which only destroys without being guided by an inner constructive drive will in the long run make its instruments blasé and unnatural: for such men destroy illusions and "whoever destroys illusion in himself and others will be punished by nature, the strictest tyrant."[23] For some considerable time one may well occupy oneself with history quite harmlessly and unreflectively as though it were an occupation as good as any other; especially recent theology appears quite innocently to have taken up history and even now is hardly aware that in doing so, probably quite against its will, it has entered the service of Voltaire's *écrasez*.[24] Let no one suppose new and powerful constructive instincts behind this; one would then have to let the so-called Protestant Union count as the cradle of a new religion and the jurist Holtzendorf (the man who edited and wrote the preface to what is still widely called the Protestant Bible) might have to be acknowledged as John by the river Jordan. For a time perhaps the Hegelian philosophy, still smoking in older heads, may help to propagate

24. [*Écrasez l'infâme*: (literally) crush the infamous one. Voltaire's motto aimed at superstitution and fanaticism impeding the progress of rational thought, thus, indirectly, at the Christian church.]

that innocence, say, in that one distinguishes the "Idea of Christianity" from its many inadequate "forms of appearing" and talks oneself into thinking that it is the "love play of the Idea" to reveal itself in ever purer forms until finally it achieves the certainly purest, most transparent, hardly visible form in the brain of the contemporary *theologus liberalis vulgaris*.[25] But if you listen to these most purified forms of Christianity talk about the earlier less purified forms then the impartial listener often gets the impression that it is not at all Christianity which is being discussed but rather—well, what are we to think of when we find Christianity characterized by "the greatest theologian of the century" as the religion which allows one "to feel oneself into all actual and a few merely possible religions", and when the "true church" is said to be the one which "becomes a fluid mass which knows no outline, in which each part is found at times here at times there and everything mingles peacefully"? Again, what are we to think of?

What one can learn from Christianity, that as a result of a historicizing treatment it has become blasé and unnatural until finally a completely historical, that is, just treatment has resolved it into pure knowledge about Christianity and so has annihilated it, all this one can study in everything that has life: that it ceases to live when it has been dissected completely and lives painfully and becomes sick once one begins to practise historical dissection on it. There are men who believe in the overturning, reforming, healing powers of German music among Germans: they are angered and deem it an injustice, perpetrated on what is most alive in our culture, when men such as Mozart and Beethoven already get buried under the whole learned rubbish of biography and are forced to answer a thousand impertinent questions by the systematic torture of historical criticism. Is not something, which in its living effect is not at all exhausted, done away with too soon, or at least paralyzed, when greedy curiosity is directed on countless minutiae of life and works and when one searches for intellectual problems where one ought to learn to live and forget all problems? Just imagine a few such modern biographers transferred to the birthplace of Christianity or the Lutheran Reformation; their sober pragmatizing curiosity might just have sufficed to make impossible every ghostly *actio in distans*:[26] or the most miserable animal can prevent the genesis of the mightiest oak by swallowing the acorn. Every living thing needs to be surrounded by an atmosphere, a mysterious circle of mist: if one robs it of this veil, if one condemns a religion, an art, a genius to orbit as a star without an atmosphere: then one should not wonder about its rapidly becoming withered, hard and barren. That is just how it is with all things great indeed,

"which without some madness ne'er succeed"[27]

as Hans Sachs says in *Die Meistersinger*.

But every people, even every man, who wants to become *ripe* needs such an enveloping madness, such a protective and veiling cloud; now, however, we hate ripening as such because history is honoured above life. One even sees cause to triumph in the fact that "science now begins to rule life": perhaps this will be achieved; but surely a life ruled in that way is not worth much because it is much less *life* and guarantees much less life for the future than the life which used to be ruled not by knowledge but by instincts and powerful illusion. But then, as I have said, it is not to be an age of finished, ripe and harmonious personalities but of common, maximally useful labour. Yet that merely signified: men are to be trained for the purposes of the age to lend a hand as soon as possible: they are to labour in the factory of common utility before they are ripe, or rather to prevent their ever becoming ripe—because that would be a luxury which would withdraw a lot of strength from "the labour market". One blinds some birds to make them sing more beautifully: I do not believe that today's men sing more beautifully than their grandfathers, but I do know that they are blinded early. But the means, the vile means used to blind them is *much too bright, much too sudden, much too changeable light*. The young man is whipped through all millennia: youths who understand nothing of war, of diplomatic action, of commercial policy are deemed worthy of being introduced to political history. But just as the young man runs through history so we moderns run through art

26. [Action at a distance.]

27. [Hans Sachs sings this line in Act III of Wagner's opera *Die Meistersinger von Nürnberg*.]

galleries, so we listen to concerts. One may well feel that this sounds different from that, this makes a different impression from that: increasingly to lose this sense of surprise, no longer to be excessively astonished by anything, finally to tolerate everything—that is what we call historical sense, historical culture. To say it without making excuses: the flood of influences is so massive, the surprising, barbaric, violent crowds so overwhelmingly, "rolled into ugly clumps", upon the youthful soul, that it can only save itself by deliberately dulling its sensibility. With a finer and stronger consciousness we may well find another sentiment: disgust. The young man has become so homeless and doubts all customs and concepts. Now he knows it: things were different in all ages, it does not matter how you are. In melancholy apathy he lets opinion upon opinion pass by him and understands the meaning of Holderlin's words and mood when reading Diogenes Laertius concerning the lives and teachings of Greek philosophers: "here too I have experienced again what I have already noted a number of times, namely that the ephemeral and changing in human thoughts and systems has impressed me as being almost more tragic than the fates which alone one usually calls the actual ones."[28] No, such flooding, numbing, violent historicizing is certainly not required for youth as the ancients show, rather it is dangerous in the highest degree as the moderns show. Now, however, consider the historical student, the heir of a blasé indifference which appears all too soon, almost in his boyhood. Now he has acquired the "method" for his own work, the correct technique and the refined tone in the manner of his master; a quite isolated little chapter of the past has fallen victim to his acuteness and the method he has learned; he has already produced or, to use a prouder word, he has "created", he has now become a servant of truth in deed and lord of the world of history. If he was "done" already as a boy, then he is now overdone: you only need to shake him and wisdom will fall into your lap with great rattling; yet the wisdom is rotten and every apple has its worm. Believe me: if men are to labour and become useful in the scientific factory before they are ripe, science will soon be ruined as well as the slaves put to use all too soon in this factory. I regret that one is already required to use the linguistic jargon of slaveholders and employers in order to describe such conditions which ought to be thought basically free of utilities and exempted from the struggle for survival; but the words 'factory', 'labour market', 'offer', 'utilization'—and all the rest of the auxiliary verbs of egoism—involuntarily throng to one's lips if one wants to describe the youngest generation of scholars. Sterling mediocrity becomes ever more mediocre and science ever more useful in the economic sense. Actually the newest scholars are wise in only one respect and in this admittedly wiser than all men of the past, in all other respects only infinitely different—to put it carefully—from all scholars of the old type. Nevertheless they demand honours and advantages for themselves, as though the state and public opinion were obligated to take the new coin just as seriously as the old. The carters have entered into a labour contract with each other and decreed the genius to be superfluous—for every carter is being stamped a genius; probably a later age will be able to tell that their structures have been carted together, not joined together. Those who tirelessly use the modern cry of battle and sacrifice "Division of labour! Fall into line!" are for once to be told clearly and bluntly: if you want to further science as quickly as possible you will destroy it as quickly as possible; as the hen will perish if artificially forced to lay eggs too quickly. Granted, science has been furthered surprisingly quickly in the last decades: but just look at the scholars, the exhausted hens. They truly are no "harmonious" natures; they can only cackle more than ever because they lay eggs more often: of course, the eggs have become ever smaller (even if the books ever bigger). As the last and natural result we find the universally favoured "popularization" (next to "feminization" and "infantization") of science, that is the infamous re-cutting of the garment of science to fit a "mixed public"; to use tailor's German to describe a tailor's activity. Goethe saw a misuse in this and demanded that the sciences have an effect on the external world only through an *elevated practice*. Older generations of scholars moreover deemed such a misuse difficult and burdensome for good reason: equally for good reason it is easy for the younger scholars because they themselves, apart from a very small corner of knowledge, are a very

28. [Friedrich Holderlin's letter to Isaak von Sinclair dated December 24, 1798.]

mixed public and have its needs. They only need on occasion to sit down comfortably and they succeed in opening up their own little area of study as well to that mixed popular need and curiosity. Such a comfortable act one later calls pretentiously "modest condescension of a scholar to his people": while at bottom the scholar only descended to himself so far as he is not a scholar but a plebeian. Create for yourselves the concept of a "people": that concept you can never think nobly nor highly enough. Were you to think highly of the people you would also be merciful to them and would beware of offering them your historical *aqua fortis*[29] as a quickening refreshing drink. But at bottom, you think very little of them because you are not permitted a true and well founded respect for their future, and you act as practical pessimists, I mean as men who are guided by a premonition of ruin and therefore become indifferent and careless of the welfare of others and even of their own. As long as the earth will still bear *us!* And if it will no longer bear us we can accept that too:—thus they feel and live an *ironical* existence.

8

It may appear surprising but should not be thought contradictory if despite the age's noisy, obtrusive, and carefree rejoicing about its historical culture I nevertheless ascribe a kind of *ironical self-consciousness* to it, a pervasive inkling that there is no cause for rejoicing, a fear that perhaps all enjoyment of historical knowledge will soon be gone. A similar puzzle concerning individual personalities has been offered us by Goethe in his remarkable characterization of Newton: he finds in the depths (or more correctly: at the heights) of his being "an obscure inkling of his error", as though there were an expression, perceptible at particular moments, of a superior judging consciousness which has achieved a certain ironical overview of its necessary inner nature. So one finds especially in the greater and more highly developed historical men a consciousness, often subdued to the point of general scepticism, of how great is the absurdity and superstition in the belief that the education of a people must be as predominantly historical as it is now; after all, the strongest peoples, strong, that is, in deeds and works, have lived differently, have raised their youth differently. But that absurdity, that superstition suits us—so goes the sceptical objection—us the latecomers, us the faded last shoots of mighty and cheerful generations, us to whom Hesiod's prophecy applies that men would one day be born with grey hair and that Zeus would destroy this generation as soon as that sign has become visible in it. Historical education really is a kind of inborn grayheadedness, and those who bear its mark from childhood on surely must attain the instinctive belief in the *old age of mankind:* it is now fitting for old age, however, to engage in the activity of old men, that is, to look back, to tally and close our accounts, to seek consolation in the past through memories, in short, historical education. But the race of man is a tough and enduring thing and does not, after millennia, hardly even after hundreds of thousands of years, want to be observed in its steps—forward and backward—that is, it does not at all want to be observed as a whole by that infinitesimally small atomic speck, the individual man. Of what account, after all, are a couple of millennia (or expressed differently: the period of 34 consecutive lives of men calculated at 60 years each) that at the beginning of such a time we can still speak of a "youth" and at the end of it already of an "old age of mankind"! Does not this paralyzing belief in an already withering mankind rather harbour the misunderstanding, inherited from the Middle Ages, of a Christian theological conception, the thought that the end of the world is near, of the fearfully expected judgment? Does that conception appear in different guise through the heightened historical need to judge, as though our age, the last possible one, were itself qualified to conduct the last judgment of the whole past which the Christian faith expected not at all from man but from "the Son of Man"? At an earlier time this "*memento mori*"[30] addressed to mankind as well as the individual, was always a torturing thorn and, as it were, the high point of medieval knowledge and conscience. The counter dictum of a more recent time: "*memento vivere*"[31] frankly still sounds quite timid, lacks full-throated power and almost has something

29. [Nitric acid. Literally, strong water.]

30. [Remember you must die.]

31. [Remember to live.]

dishonest about it. For mankind is still tied to the *memento mori* and betrays it in its universal historical need: despite the most powerful beat of its wings knowledge has been unable to tear itself loose and attain freedom, a deep feeling of hopelessness has remained and has taken on that historical colouration by which all higher education and culture is now surrounded in melancholy darkness. A religion which, of all the hours of a human life, takes the last one to be the most important, which predicts an end to life on earth as such and condemns the living to live in the fifth act of the tragedy surely stimulates the deepest and noblest powers, but is hostile toward all new planting, bold attempting, free desiring; it resists every flight into the unknown because it does not love there, does not hope there: it lets all becoming be forced on it only against its will in order, in good time, to push it aside or sacrifice it as a temptation to existence, as a liar about the value of existence. What the Florentines did when, under the influence of Savonarola's penitential sermons, they committed paintings, manuscripts, mirrors and masks to those famed sacrificial flames, Christianity would like to do to every culture which incites to striving further and takes for its motto *memento vivere*; and if it is not possible to do this straightforwardly and without detour, that is through superior strength, it nevertheless attains its end if it allies itself with historical education, in most cases even without the latter's complicity, and now, speaking through this education, rejects with a shrug of the shoulders everything in the process of becoming and spreads over it the feeling of being very late arrivals and epigone, in short, of being congenitally grey haired. The austere, deeply serious observation concerning the valuelessness of all that has been, concerning the ripeness of the world for judgment has dispersed itself into the sceptical consciousness that at any rate it is good to know all that has been since it is too late to do something better. In this way the historical sense makes its servants passive and retrospective; and almost only from momentary forgetfulness, at a brief period of inactivity of that sense, does the man struck ill by historical fever become active, only to dissect his deed as soon as it is done and by observing it analytically to prevent its having any further effect and finally to pare it down to "history". In this sense we still live in the Middle Ages and history is still a disguised theology: just as the reverence which the layman accords the scientific caste is a reverence inherited from the clergy. What earlier one gave to the church one now gives, even if more sparingly, to science: but that one gives at all is a consequence of the church and not of the modern spirit which rather, along with its other good qualities, is known to be somewhat miserly and a bungler when it comes to the noble virtue of liberality.

Perhaps this observation does not please, perhaps just as little as the above derivation of the excess of history from the medieval *memento mori* and from the hopelessness which Christianity bears in its heart toward all coming times of earthly existence. But then let this explanation, which I offer with some doubt to be sure, be replaced by better explanations; for the origin of historical education—and its inner quite radical contradiction with the spirit of a "new age", a "modern consciousness"—this origin *must* itself in turn be historically understood, history *must* itself dissolve the problem of history, knowledge *must* turn its sting against itself—this threefold *must* is the imperative of the spirit of the "new age" if it really does contain something new, mighty, original and a promise of life. Or should it be true that we Germans—to leave the Romance peoples out of account—must in all higher matters of culture always only be "descendants" because this is all we *could* be; as Wilhelm Wackernagel[32] once asserted this proposition, one well worth pondering: "we Germans simply are a people of descendants, we are with all our higher knowledge and even with our faith always only successors of the ancient world; even the hostile ones who do not want it constantly breathe, beside the spirit of Christianity, the immortal spirit of ancient classical culture, and were one to succeed in eliminating these two elements from the vital air surrounding the inner man then not much would remain to sustain a spiritual life." But even if we could content ourselves with the vocation of being descendants of antiquity, even were we to resolve emphatically to take it seriously and conceive it greatly and in this emphasis to recognize our distinguishing and sole prerogative—we would

32. [Carl Heinrich Wilhelm Wackernagel (1806–1869) was, next to Jacob Grimm, the most eminent Germanist of his time.]

nevertheless be constrained to ask whether it must eternally be our destiny *to be pupils of fading antiquity*: at some time it may be allowed step by step to set our goal higher and farther, at some time we ought to be allowed to claim the merit of having recreated in ourselves—also through our universal history—the spirit of Alexandrian-Roman culture so fruitfully and magnificently as now to be entitled, as the noblest reward, to set ourselves the still mightier task of striving behind and beyond this Alexandrian world and courageously to seek our standards of the great, the natural and human in the ancient Greek world. *But there we will also find the actuality of an essentially unhistorical culture and a culture which is nevertheless, or rather therefore, unspeakably rich and full of life.* Even were we Germans nothing but descendants—we could, by looking upon such a culture as an inheritance to be appropriated, be nothing greater and prouder than just descendants.

Only this and nothing but this is meant here, that even the frequently distressing thought of being epigoni, when grandly conceived, may vouch-safe great effects and a hopeful desire for the future, in the individual as well as in a people: in so far, that is, as we conceive ourselves to be the heirs and successors of classical and astonishing powers, and see in that our honour and incentive. Not then as pale and feeble late arrivals of vigorous generations who eke out a frosty life as antiquarians and grave diggers of those generations. Such late arrivals, of course, live an ironic existence: annihilation follows upon the heels of their limping course through life; they shudder at the thought of this annihilation as they enjoy the past, for they are living memories, but, without heirs, their memory is meaningless. So the dull inkling overcomes them that their life is an injustice, for no coming life can justify it.

Yet were we to think of such antiquarian late arrivals as suddenly exchanging that ironically painful modesty for shamelessness; let us think of them as with shrill voices they proclaim: the race is at its height, for only now does it know itself and has become revealed to itself—we would then have a spectacle in which, as in a parable, we could discover the significance of a certain very famous philosophy for German education. I believe that there has been no dangerous change or turn in the German education of this century which has not become more dangerous through the enormous influence, continuing to the present moment, of this philosophy, the Hegelian. Truly the belief that one is a late arrival of the ages is paralyzing and upsetting: terrible and destructive it must seem, however, if one day such a belief, by a bold inversion, deifies this late arrival as the true meaning and purpose of all that has happened earlier, if his knowing misery is equated with a consummation of world history. Such a way of looking at things has accustomed the Germans to talk of the "world-process" and to justify their own time as the necessary result of this world-process; such a way of looking at things has established history in place of the other spiritual powers, art and religion, as solely sovereign in so far as it is "the self-realizing concept", in so far as it is "the dialectic of the spirit of people" and the "Last Judgment".

This history, understood in a Hegelian way, has contemptuously been called the sojourn of God on earth, which God, however, is himself first produced by history. But this God became transparent and intelligible to himself inside the Hegelian craniums and has already ascended all possible dialectical steps of his becoming up to that self-revelation: so that for Hegel the apex and terminus of world history coincided in his own Berlin existence. He should even have said that all things after him are properly judged to be only a musical coda of the world-historical rondo; more properly yet, to be redundant. He did not say that: and so he implanted in the generation thoroughly leavened by him that admiration for the "power of history" which practically at every moment turns into naked admiration for success and leads to the idolatry of the factual: for which service one has now generally memorized the very mythological, but apart from that quite good German turn of phrase 'to take the facts into account'. But who once has learned to bend his back and bow his head before the "power of history" finally nods his "yes", mechanically like a Chinese, to every power, be this a government or a public opinion or a numerical majority, and moves his limbs precisely in the tempo in which some "power" or other pulls the string. If every success contains within itself a rational necessity, if every event is a victory of the logical or of the "idea"—then quickly down on your knees and up and down on every rung of the

step ladder of "success"! What, there are no more ruling mythologies? What, religions are about to become extinct? Just look at the religion of historical power, take note of the priests of the idea-mythology and their abused knees! Are not even all the virtues adherents of this new faith? Or is it not selflessness when historical man permits himself to be drained to the point of becoming an objective looking glass? Is it not generosity to renounce all authority in heaven and on earth by worshiping authority as such in every authority? Is it not justice always to have the scales of powers ready to hand and always to observe meticulously which, as the stronger and heavier, will tip the balance? And what a school of decorum it is to contemplate history in this way! To take everything objectively, not to be angered by anything, to love nothing, to comprehend everything, how gentle and pliable this makes one; and even if someone raised in this school on occasion is publicly angry and frets, one is pleased by this for one knows that it is only meant artistically, it is *ira* and *studium*, and yet through and through *sine ira et studio*.[33]

What antiquated thoughts I harbour in my breast toward such a complex of mythology and virtue! But they must out for once, and may everyone have a good laugh. I would say the following: history always inculcates: "once upon a time", the moral: "you ought not" or "you ought not to have". So history becomes a compendium of actual immorality. How grievously he would err who would at the same time view history as the judge of this actual immorality! That a Raphael had to die at the age of thirty-six, for example, is offensive to morality: such a being ought never to die. If now you want to come to the aid of history, as apologists of the actual, you will say: he expressed all he had to say and given a longer life he would always only have produced beauty as the same beauty, not as new beauty, and things of this sort. Thus you are advocates of the devil, namely by making of success, of fact, your idol: while a fact is always stupid and has at all times resembled a calf more than a god. As apologists of history, moreover, you are prompted to ignorance: for only because you do not know what such a *natura naturans*[34] as Raphael is do you not begin to seethe when you realized that he existed and will exist no more. Someone has recently wanted to instruct us that at the age of eighty-two Goethe was burned out: and yet I would gladly exchange a few years of the "burned out" Goethe for whole cart loads of fresh ultra-modern lives, so as still to have a share of such conversations as Goethe held with Eckermann,[35] and so as to be preserved from the up to date instruction of the legionaries of the moment. How few living men have any right to live, compared to such dead ones! That the many live and those few live no more is nothing but a brutal truth, that is, an incorrigible stupidity, a blunt "so it happens to be" over against the moral "it ought not to be so". Yes, over against morality! For you may talk of whatever virtue you want, of justice, generosity, courage, of the wisdom and compassion of man—everywhere he is virtuous only because he was outraged by that blind power of facts, by the tyranny of the actual, and subjects himself to laws which are not laws of those fluctuations of history. He always swims against the historical waves, whether he controls his passion as the nearest stupid fact of his existence or whether he commits himself to honesty while all around him lies spin their glittering nets. Were history nothing more than "the world system of passion and error" man would have to read in it as Goethe counselled that Werther[36] be read: just as though it called "be a man and do not follow me!" Fortunately, however, it also preserves the memory of the great fighters *against history*, that is, against the blind power of the actual, and puts itself in the pillory precisely by singling out just

33. [This presents some difficulty for the translator. Nietzsche's point is that such a man's *ira* (indignation) and *studium* (involvement) are an act, performed merely for effect, remaining a case not of *studium* (Latin: involvement) but of *Studium* (German: course of objective studies maintaining proper distance from the subject matter), i.e., it remains a case of *sine ira et studio* (without indignation and involvement), which is the phrase used by Tacitus (Annals, Ch. I) to describe his approach to Roman history.]

34. [Creative nature as distinct from *natura naturata* or created nature.]

35. [Cf. J. W. von Goethe, *Conversations with Eckermann*.]

36. [Goethe's novel *The Sorrows of Young Werther* is meant.]

those as the proper historical natures who concerned themselves little with the "so it is" but rather followed a "so it ought to be" with merry pride. Not to carry their generation to the grave but to found a new generation—that drives them forward incessantly: and even if they are born as latecomers—there is a way of living which will erase this from memory—the coming generations will only know them as firstcomers.

9

Is our time perhaps such a first comer?—Indeed the vehemence of its historical sense is so great and expresses itself in such a universal and necessarily unbounded manner that coming times will praise it as a first comer in at least this—if, that is, there will be *coming times* at all understood in the cultural sense. But precisely this raises grave doubts. Hard by the pride of modern man we find his *irony* about himself, his awareness that he must live in a historicizing and, as it were, evening mood, his fear of being unable to save for the future any of his youthful hopes and youthful strength. Here and there one goes further, into *cynicism*, and justifies the course of history, of the total development of the world, essentially for the everyday use of modern man according to the cynical canon: exactly this moment had to come just as it is, man had to become what men are now and nothing else, no one may oppose this "must". He who cannot endure irony flees into the comfort of cynicism of this kind; the last decade, moreover, offers to make him a present of one of its most beautiful inventions, a well rounded and full phrase for that cynicism: it calls his way of living in step with the times and quite unreflectively "the total surrender of his personality to the world process". The personality and the world process! The world process and the personality of the flea-beetle! If only one did not eternally have to hear the hyperbole of all hyperboles, the word: world, world, world, since, after all, if we remain honest, everyone ought only to speak of man, man, man! Heirs of the Greeks and the Romans? Of Christianity? All that seems nothing to those cynics; but heirs of the world process! Peaks and targets of the world process! Meaning and solution to all riddles of becoming expressed in modern man, the ripest fruit on the tree of knowledge—that I call rising exultation; by this token the firstlings of all ages may be known even if they have come last. This far the contemplation of history has never yet flown, not even in a dream; for now the history of man is only the continuation of the history of animals and plants; even in the lowest depths of the sea the historical universalist still finds traces of himself, as living slime; astonished, as though it were a miracle, by the enormous road man has already come, his gaze is dizzied by the yet more astonishing miracle, by modern man himself who has attained an overview of this road. High and proud he stands on the pyramid of the world process; by placing the keystone of his knowledge on top he seems to be calling to nature listening round about: "we are at the goal, we are the goal, we are the completion of nature".

Overproud European of the nineteenth century, you are mad! Your knowledge does not complete nature but only kills your own. Just measure your height as a knower by your depth as a doer. Admittedly you climb the sunbeams of your knowledge upwards to heaven, but also downwards to chaos. Your manner of moving, that is, of climbing as a knower, is your doom; foundation and solid earth retreat into uncertainty for you; there are no more supports for your life, only gossamer threads which every new grip of your knowledge tears apart. —But not another serious word about this, since it is possible to say a cheerful one.

This madly thoughtless fragmentation and fraying of all foundations, their dissolution into an ever flowing and dispersing becoming, the tireless entangling and historicizing of all that has come to be by modern man, that great garden spider in the node of the world web—all this may occupy and worry the moralist, the artist, the pious man and perhaps the statesman as well; we, however, will for once be cheered up by it today by seeing all this in the glittering magic mirror of a *philosophical parodist* in whose head the age has achieved an ironical consciousness of itself, and that clearly "to the point of infamy" (to speak the language of Goethe). Hegel once taught us "when the spirit makes a move we philosophers are also at hand":[37] our time made a move, into self-irony, and

37. [The spirit at issue here is the universal knowing spirit which, according to Hegel, is the proper subject of world history. The self-transforming development of this spirit,

behold!, E. von Hartmann was also at hand and had written his famous philosophy of the unconscious[38]—or, to speak more clearly, his philosophy of unconscious irony. Rarely have we read a merrier invention and a more philosophical prank than Hartmann's; whoever is not enlightened about *becoming* and, more than that, does not have his inner life set in order by him, is surely a living anachronism. Beginning and end of the world process, from the first startled awakening to consciousness to its being flung back into the void, together with the precisely determined task of our generation for the world process, all this presented as flowing from the so wittily invented inspirational font of the unconscious and glowing in an apocalyptic light, everything fashioned so deceptively and with such staunch seriousness as though it really were serious philosophy and not merely a philosophical jest—such a composition establishes its creator as one of the foremost philosophical parodists of all time: let us then sacrifice on his altar, let us sacrifice a lock of hair to the inventor of a true panacea—to steal an expression of admiration from Schleiermacher.[39] For what medicine is more effective against an excess of historical education than Hartmann's parody of all world history?

Were one to say quite matter-of-factly what Hartmann proclaims to us from the smoke enshrouded tripod of unconscious irony one would say: he proclaims to us that our age need only be just as it is if humanity is for once to become thoroughly fed up with this life: which we believe with all our heart. That frightening ossification of the age, that restless rattling of bones—as David Strauß has naively depicted it for us as the most beautiful actuality—is justified by Hartmann not only from behind, *ex causis efficientibus*,[40] but even from before *ex causa finali*;[41] the rogue lets light stream over our age from judgment day and so it is found to be very good, for him, that is, who wants to suffer as much as possible from the indigestibility of life and for whom that judgment day cannot arrive soon enough. To be sure, Hartmann cans the stage which humanity is now approaching "manhood": according to his description, however, that is the happy condition in which there is only "sterling mediocrity" and art is perhaps what an evening performance of a farce is to a Berlin financier", in which "geniuses are no longer a requirement of the times because that would be to throw pearls before swine, or again because the times have advanced beyond the stage which deserved genuises to a more important one", i.e., to that stage of social development in which each worker "leads a comfortable life with a workday which leaves sufficient leisure time to cultivate his intellect". Rogue of rogues, you express the yearning of contemporary mankind: but you also know which spectre will stand at the end of this manhood of mankind as a result of that intellectual education to sterling mediocrity—disgust. Evidently matters are quite wretched, but they will be much more wretched yet, "the antichrist is visibly extending his grasp further and further"—but so it *must* be and so it *must* come, for with all this we are well on our way—to being disgusted with all existence. "Therefore heartily forward in the world process as workers in the vineyard of the Lord, for the process alone can lead to redemption!"

The vineyard of the Lord! The process! To redemption! Who does not here see and hear historical education, which only knows the word 'become', as it intentionally adopts the guise of a parodic monster, as it says the most wanton things about itself through

---

for which peoples and nations are the means, constitutes world history. The move referred to in the quotation is the transition from one form of the spirit to another. At such a time, when a form of life has fully unfolded itself and enters a decline, philosophers are at hand to perform a fourfold function. They capture the spirit of the declining age in thought; they contribute to the demise of the present form of life by attacking the morality, religion, and political institutions of their day; they flee from reality into an ideal world of thought which serves as a consolation in times of decay and unhappiness; their philosophy provides a birthplace for the next form of the spirit, preparing in thought for the next world historical reality.]

38. [Eduard von Hartmann, *Philosophie des Unbewußten*, Berlin, 1869.]

39. [Friedrich Daniel Ernst Schleiermacher (1768–1834), German theologian and philosopher, one of the most influential thinkers of nineteenth-century Protestantism.]

40. [Through efficient causes.]

41. [Through a final cause.]

the grotesque mask it holds up! For just what does this last roguish appeal to the workers in the vineyard demand of them? In what work are they to strive forward heartily? Or, to put the question differently: what is left to do for the historically educated man, the modern fanatic of the process, swimming and drowned in the flow of becoming, in order to gather in the harvest of that disgust, the delectable grape of that vineyard?—He has nothing to do but to continue to live as he has lived, to continue to love what he has loved, to continue to hate what he has hated, and to continue to read the newspaper which he has read; for him there is only one sin—to live differently than he has lived. But how he has lived we are told, with the exaggerated distinctness of writing carved in stone, by that famous page with the sentences printed large which has transported the whole contemporary educational ferment into blind ecstasy and ecstatic rage because it believed it read in these sentences its own justification in an apocalyptic light. For of each individual the unwitting parodist demanded "the total surrender of personality to the world process for the sake of its goal, the redemption of the world"; or still more clearly: "the affirmation of the will to live is provisionally to be proclaimed as that which alone is correct; for only in the total surrender to life and its pains, not in cowardly personal resignation and withdrawal, is something to be achieved for the world process", "striving for individual abnegation of the will is just as foolish and useless, and even more foolish than suicide". "The thoughtful reader will understand, even without further indication, what shape a practical philosophy erected on these principles will assume, and that such a philosophy cannot contain the estrangement from, but only the full reconciliation with life".

The thoughtful reader will understand: and one could misunderstand Hartmann! And how unspeakably funny it is that one did misunderstand him! Shall we say that contemporary Germans are very perceptive? A doughty Englishman misses *delicacy of perception* in them, he even ventures to say "*in the German mind there does seem to be something splay, something blunt-edged, unhandy and infelicitous*"[42]—would the great German parodist contradict this? To be sure, according to his explanation we are approaching "that ideal condition in which the human race makes its history consciously": but evidently we are still a good distance from that perhaps still more ideal condition in which mankind will read Hartmann's book consciously. Once it comes to that no man will let the words "world process" slip through his lips unless these lips are smiling; for one will be reminded of the time when the parodic gospel of Hartmann was listened to, imbibed, disputed, venerated, propagated and canonized with the whole respectability of that "*German mind*", even with the "distorted seriousness of an owl", as Goethe says. But the world must go forward, that ideal condition cannot be achieved by dreaming, we must fight and struggle to achieve it, and only through cheerfulness is there a way to redemption, the redemption from this misleading owlish seriousness. There will come a time when one will wisely refrain from all constructions of the world process or of the history of mankind, a time when one no longer considers the masses at all but once again the individuals who constitute a kind of bridge across the wild stream of becoming. These do not, as it were, continue a process but live in timeless simultaneity, thanks to history, which permits such co-operation, they live as the republic of geniuses[43] of which Schopenhauer speaks somewhere; one giant calls to the other across the bleak intervals of ages and, undisturbed by the wantonly noisy dwarfs who creep away beneath them, the lofty conversation of spirits continues. The task of history is to be the mediator between them and so again and again to provide the occasion for and lend strength to the production of greatness. No, the *goal of humanity* cannot lie at the end but only *in its highest specimens*.

Our jester, of course, responds to this with that admirable dialectic which is just as genuine as its admirers are admirable: "As little as it would be compatible with the concept of development to ascribe an infinite past duration to the world process because in that case every conceivable development would already have been gone through which, after all, is not the case (oh rogue!), just as little can we concede an infinite future duration of the process; each would

42. [The italicized passages are in English in the original. I have not found the source of the quotation.]

43. [Arthur Schopenhauer, *Neue Paralipomena*, Leipzig, Reclam, n.d, §517.]

invalidate the concept of a development toward a goal (oh more of a rogue!) and would equate the world process with the Danaides' drawing water. The complete victory of the logical over the illogical (oh rogue of rogues!), however, must coincide with the temporal end of the world process, with judgment day." No, you clear and mocking spirit, as long as the illogical still holds sway as it does these days, as long, for example, as one can still talk with general agreement of a "world process" as you do, judgment day is still far away: for it is still too cheerful on this earth, many an illusion still flourishes, for example the illusion of your contemporaries about you, we are not yet ripe to be flung back into your void: for we believe that things will become even more jolly once one has begun to understand you, you misunderstood unconscious one. But if, in spite of that, disgust should come with full force as you have prophesied it to your readers, if your depiction of your present and future should turn out to be correct—and no one has so despised both, despised with such disgust as you—then I will gladly be prepared to vote with the majority in the way proposed by you that next Saturday evening at precisely twelve o'clock your world is to end; and our decree is to conclude: beginning tomorrow there will be no more time and no more newspapers.[44] But perhaps it will have no effect and we will have decreed in vain: well, in that case we will at least not be short of time for a beautiful experiment. We take a balance and into one of the pans place Hartmann's unconscious and into the other one Hartmann's world process. There are people who believe that they will weigh the same: for each pan would contain an equally bad word and an equally good joke.—Once we understand Hartmann's joke no one will use his words about the "world process" anymore except as a joke. In fact it is high time to advance with a whole army of satirical malice against the aberrations of the historical sense, against the excessive delight with the process to the detriment of existence and life, against the thoughtless displacement of all perspectives; and we should always praise the author of the philosophy of the unconscious for being the first to succeed in clearly perceiving the ridiculous in the conception of the "world process" and, through the peculiar seriousness of his presentation, to make it possible to appreciate it even more clearly. What the "world" is there for, what "humanity" is there for is not to concern us for the time being, unless we want to be funny: for there just isn't anything funnier and more cheerful on the world's stage than the presumptuousness of those little worms called man; but do ask what you, the individual, are there for, and if no one else can tell you then just try sometime to justify the meaning of your existence *a posteriori*, as it were, by setting yourself a purpose, a goal, a "for this", a lofty and noble "for this". And perish in the attempt—I know of no better life's purpose than to perish, *animae magnae prodigus*,[45] in attempting the great and impossible. If, on the other hand, the doctrines of sovereign becoming, of the fluidity of all concepts, types and kinds, of the lack of any cardinal difference between man and the animal—doctrines which I take to be true but deadly—are flung at the people for one more lifetime in the current mania for education, then let no one be surprised if that people perishes of pettiness and misery, of ossification and selfishness, that is, if to begin with it disintegrates and ceases to be a people: it may then perhaps be replaced in the arena of the future by systems of individual egoism, fellowships intent on the rapacious exploitation of non-fellows and similar creations of utilitarian vulgarity. To prepare the way for these creations one need only continue to write history from the standpoint of the masses and to look in it for those laws which can be derived from the needs of these masses, that is, for the laws of motion of the lowest loam and clay strata of society. The masses seem to me worthy of notice in only three respects: first as blurred copies of great men, produced on bad paper with worn plates, further as resistance to the great, and finally as the tools of the great; beyond that, may the devil and statistics take them! What, statistics prove that there are laws of history? Laws? Yes, it proves how mean and disgustingly uniform the masses are: is one to call laws the effect of inertia, stupidity, aping, love and hunger?

44. [The connection between time (Zeit) and newspaper (Zeitung) is lost in translation.]

45. [Approximately: having expended all one's mental energy.]

Well, we will admit it, but with that the following proposition is also sure: so far as there are laws in history, laws are worth nothing and history is worth nothing. But just this kind of history is now universally valued, the kind which takes the great mass drives to be the important and chief point of history and regards all great men only as the clearest expression, the bubbles, as it were, which become visible on the flood. Here the masses are, out of themselves, to give birth to greatness, that is, chaos is, out of itself, to give birth to order; and in the end, of course, the hymn to the birth-giving masses is intoned. Everything is then called "great" which has for a prolonged time moved such masses and which, as one says, has been "a historical power". But is that not quite intentionally to confuse quantity with quality? If the dull masses have found some thought or other, say a religious thought, quite adequate, tenaciously defend it and drag it through centuries: then and only just then the finder and founder of that thought is said to be great. But why! The noblest and highest has no effect on the masses; the historical success of Christianity, its historical power, tenacity and endurance, all this fortunately proves nothing as regards the greatness of its founder since basically it would testify against him: but between him and that historical success there is a very earthly and dark layer of passion, error, greed for power and honour, of the continuing effects of the *imperium romanum*[46] a layer from which Christianity drew that earthy taste and bit of soil which made possible its continuation in this world and, as it were, gave it its durability. Greatness is not to depend on success, and Demosthenes had greatness even though he had no success. The purest and most truthful adherents of Christianity have always questioned and impeded rather than promoted its worldly success, its so-called "historical power"; for they used to take a stand outside the "world" and did not concern themselves with the "process of the Christian idea", which is why they have mostly remained quite unknown and unnamed by history. Expressed in a Christian way: the devil is the regent of the world and the master of successes and progress; he is the real power in all historical power, and so it will essentially remain—even though this may ring quite painfully in the ears of an age which is used to the deification of success and historical power. For it is practiced in giving things new names and rechristening the devil himself. It is certainly the hour of a great danger: men seem to be near to discovering that the egoism of individuals, of groups or of the masses has at all times been the lever of historical movements; at the same time, however, one is in no way troubled by this discovery, but rather one decrees: let egoism be our god. With this new faith one prepares quite clearly and intentionally to erect coming history on egoism: only it is to be a prudent egoism, one which imposes a few restrictions on itself to achieve lasting security, one which studies history so as to get to know imprudent egoism. With these studies one has learned that the state has a quite special mission in the world system of egoism which is to be founded: it is to be the patron of all prudent egoisms in order, with its military and police force, to guard them against the terrible eruptions of imprudent egoism. For the same reason history too—namely as the history of animals and men—is carefully stirred into the dangerous, because imprudent, mass of the people and labouring strata, because one knows that a grain of historical education is capable of breaking rude and dull instincts and desires or to guide them onto the road of refined egoism. On the whole: man is now "giving thought to a practical, livable arrangement in his earthly home, one which prudently looks to the future", as E. von Hartmann put it. The same author calls such a period the "manhood of man" and so ridicules what today is called "a man" as though only a sober selfseeker is understood by that; and he also prophesies a corresponding old age to follow such a manhood evidently also only to vent his ridicule on those of our old men who are typical of the times: for he speaks of their ripe contemplative attitude with which they "overview the wild and stormy suffering of their past lives and comprehend the vanity of the former supposed goals of their striving". No, to the manhood of that calculating and historically educated egoism corresponds an old age which clings to life with repulsive greed and without dignity, and then

"The last scene of all
That ends this strange eventful history,

46. [The Roman empire.]

Is second childishness and mere oblivion,
Sans teeth, sans eyes, sans taste, sans everything."[47]

Whether the dangers of our life and of our culture come from these vulgar, toothless and tasteless old men, or whether they come from those so-called "men" of Hartmann: against both of them we intend with our very teeth to hold fast the right of our youth and shall not tire to defend the future of our youth against those iconoclasts who would smash their image of the future. In this battle, however, we must make an especially distressing observation: *that the aberrations of the historical sense from which the present time suffers are intentionally furthered, encouraged and—used.*

And they are used against youth in order to train them to that manhood of egoism which is everywhere aspired to; they are used in order to break the natural aversion of youth with a transfiguring, that is scientific-magical illumination of that manly-unmanly egoism. One knows after all what history is capable of, owing to a certain preponderance one knows it only too well: of uprooting the strongest instincts of youth: fire, obstinacy, self-forgetting and love, of dampening the heat of its sense of justice, of suppressing or repressing its desire to ripen slowly with the counter-desire to be done quickly, to be useful quickly, to be fruitful quickly, of infecting honesty and boldness of feeling with doubt; it is even capable of defrauding youth of its fairest privilege, of its strength to plant within itself a great thought with brimful confidence and to let it grow out of itself into an even greater one. A certain excess of history is capable of all of this, we have seen it: through a continuous displacement of horizon-perspectives, through the elimination of an enveloping atmosphere it no longer permits man to feel and act *unhistorically*. From an infinite horizon he then retreats into himself, into the smallest egoistic region, and there must wither and dry up: probably he will attain to cleverness: never to wisdom. One can talk to him, he reckons with and is reconciled to the facts, is not given to emotional outbursts, blinks and understands how to seek his own advantage or that of his party in the advantage and disadvantage of others; he unlearns superfluous modesty and so step by step becomes a Hartmannian "man" and "old man". But he *ought* to become that, just that is the meaning of what is now demanded so cynically, of the "total surrender of the personality to the world process"—for the sake of its goal, of the redemption of the world, as E. von Hartmann, the rogue, assures us. Mind you, the will and goal of these Hartmannian "men" and "old men" can hardly be said to be exactly the redemption of the world: but surely the world would be more redeemed if it were redeemed from these men and old men. For then would come the realm of youth.—

47. [W. Shakespeare, *As You Like It*, Act II, Scene VII.]

10

Thinking of *youth* at this point I cry land ho! land ho! Enough and more than enough of this passionately searching and erring voyage on dark alien seas! Now a coastline is finally in sight: whatever it may be like we must land there, and the worst harbour of refuge is better than once again to stagger back into hopeless sceptical infinity. Let us just hold fast to land now; later we shall no doubt find the good harbours and make the approach of those who follow easier.

Dangerous and exciting was this voyage. How far are we now from the quiet contemplation with which we first saw our ship float out to sea. In tracking down the dangers of history we have found ourselves most severely exposed to them; we ourselves display the traces of those sufferings which, as a consequence of an excess of history, came over men of recent times, and precisely this treatise, as I will not conceal, shows its modern character, the character of weak personality, in the excess of criticism, in the immaturity of its humanity, in the frequent transition from irony to cynicism, from pride to scepticism. And yet I trust in the inspiring power which instead of a genius guides my vehicle, I trust in *youth* to have guided me correctly when now it *forces me to protest against the historical education of modern youth* and when in protest I demand that above all men must learn to live and use history only *in the service of the life they have learned to live*. One has to be young to understand this protest, and considering the early grey hair of our present youth one can hardly be young enough still to feel against what is really being protested here. An example will be helpful. Not much more than a cen-

tury ago in Germany a natural instinct for what one calls poetry awoke in a few young people. Do we perhaps think that preceding generations as well as their contemporaries did not speak at all of that art which was alien and unnatural to them? We know the reverse: that with all their strength they thought, wrote, quarrelled about "poetry" with words about words, words, words. The inception of that awakening to life of a word did not also spell the death of those word makers, in a certain sense they still live now; for if, as Gibbon[48] says, nothing but time, though much time, is required for a world to perish, so nothing but time, though much more time, is required for a false concept to perish in Germany, the "land of little-by-little". Nevertheless: there are now perhaps a hundred more people than a hundred years ago who know what poetry is; perhaps a hundred years later there will again be a hundred more people who in the meantime have also learned what culture is and that the Germans until now have no culture however much they may talk and strut about. They will find the general pleasure which the Germans take in their "culture" just as incredible and silly as we find it that Gottsched[49] was once recognized as classic or that Ramler[50] had the reputation of a German Pindar. They will perhaps judge that this culture was only a kind of knowledge about culture and quite a false and superficial knowledge at that. False and superficial, that is, because the contradiction between life and knowledge was endured because what is characteristic in the culture of truly cultured peoples was not seen at all: that culture can only grow and blossom out of life; while with the Germans it is only tacked on like a paper flower or poured over like icing and will for that reason always have to remain deceitful and unfruitful. The education of German youth, however, proceeds precisely from this false and unfruitful concept of culture: its aim, quite purely and loftily conceived, is not at all the liberally educated man but the scholar, the scientific man, namely, the scientific man who will be useful as soon as possible, who takes a position outside of life in order to know it quite clearly; its result, viewed in a mean empirical way, is the historico-aesthetic cultural Philistine, the precocious newly wise chatterbox on matters of state, church and art, the sensorium of thousands of sensations, the insatiable stomach which yet does not know what honest hunger and thirst are. That an education with that aim and this result is contrary to nature is felt only by the man who is not yet completely fashioned by it, it is only felt by the instinct of youth because it still has the instinct of nature which is first broken artificially and violently by that education. But whoever wants in turn to break this education must help youth to have its say, he must light the way for its unconscious resistance with the clarity of concepts and turn it into a conscious, loudly articulate consciousness. And how is he going to achieve such a strange goal?

Above all by destroying a superstition, the belief in the *necessity* of that educational procedure. It is, after all, a prevailing opinion that there is no other possibility at all than just our present tiresome actuality. Just examine the literature of higher education in the last decades with that in mind: the examiner will, with indignant astonishment, become aware how uniformly the whole intent of education is conceived in all the fluctuating proposals and vehemence of disagreement, how thoughtlessly the prevailing product, the "educated man" as he is understood at present, is accepted as the necessary and rational foundation of all further education. But that monotonous canon would read approximately thus: the young man has to begin with knowledge of culture, not even with knowledge of life and still less with life and experience itself. And this knowledge of culture is instilled or stirred into the youth as historical knowledge; that is, his head is filled with an enormous number of concepts which are drawn from the highly mediate knowledge of past ages and peoples, not from the immediate perception of life. His desire to experience

48. [I have not found this reference in the *Autobiography* which seems to be the only book by Gibbon that Nietzsche ever read. A reading of *The Decline and Fall of the Roman Empire* makes it unlikely that the observation is actually from Gibbon.]

49. [Johann Christoph Gottsched (1700–1766), a German literary theorist and critic who introduced French eighteenth-century classical standards of taste into German literature, especially drama.]

50. [Karl Wilhelm Ramler (1725–1798), a German poet who for forty-two years was professor of logic at the military school in Berlin and toward the end of his life (1790–1796) was director of the national theatre.]

something himself and to feel a coherent living system of his own experiences grow within—such a desire is anaesthetized and as it were intoxicated, namely with the rank illusion that it is possible in a few years to summarize within oneself the highest and most remarkable experiences of ancient times and precisely the highest times. It is the same absurd method which leads our young painters and sculptors into salons and art galleries rather than into the workshop of a master and above all into the sole workshop of the sole mistress, nature. As though one could cursorily amble around in history and so glean from past times their techniques and skills, the true harvest of their lives! As though life itself were not a craft which has to be learned from the beginning and continuously practiced without stint if it is not to breed a crawling brood of botchers and babblers!—

Plato considered it necessary that the first generation of his new society (in the perfect state) be educated with the help of a powerful *lie-in-need*; children are to learn to believe that all of them have already dwelled dreaming under the earth for a time where they were kneaded and shaped by the master artisan of nature. Impossible to rebel against this past! Impossible to oppose the work of gods! It is to count as an unbreakable law of nature: who is born as a philosopher has gold in his body, who as a guardian only silver, who as a worker only iron and bronze. Plato explains that just as it is not possible to mix these metals so it is not to be possible ever to topple and confuse the caste order; the belief in the *aeterna veritas*[51] of this order is the foundation of the new education and therewith of the new state. —And so the modern German too believes in the *aeterna veritas* of his education, of his kind of culture: and still this belief will fail, just as the Platonic state would have failed, if once the lie-in-need is confronted with a *truth-in-need*: that the German has no culture, because as a result of his education he cannot have it at all. He wants the flower without root and stem: that is, he wants it in vain. That is the simple truth, an unpleasant and rude, a real truth-in-need.

In this truth-in-need, however, *our first generation* must be raised; certainly it will suffer the most from this truth, for through it it must raise itself, and even itself against itself, into a new habit and nature out of an old and first nature and habit: so that it could talk to itself in old Spanish: "*Defienda me Dios de my*", God preserve me from myself, namely from the nature I have already acquired by my upbringing. It must taste this truth drop by drop, taste it as a bitter and violent medicine, and each individual of this generation must bring himself to a judgment about himself which as a general judgment about a whole age he would be able to endure more easily: we are without culture, still more, we are spoiled for living, for correct and simple seeing and hearing, for the happy grasping of the nearest and natural, and so far do not even have the foundation of a culture because we ourselves are not convinced of having a true life in us. Crumbled and fallen apart, on the whole half mechanically divided into an inside and an outside, sown with concepts as with dragon's teeth, engendering concept-dragons, in addition suffering from the sickness of words and without trust in any feeling of our own which has not yet been rubber-stamped with words: as such an unalive and yet uncannily active factory of concepts and words I may perhaps still have the right to say about myself *cogito, ergo sum*[52] but not *vivo, ergo cogito*.[53] Empty "being" but not full and green "life" is guaranteed me; my original feeling only guarantees that I am a thinking, not a living being, that I am not an animal but at most a *cogital*. First give me life and I will make you a culture from it!—so calls each individual of this first generation, and all these individuals will recognize each other by this call. Who will give them life?

No god and no man: only their own youth: unfetter it and you will have freed life along with it. For life only lay concealed, in prison, it is not yet withered and dead—ask yourselves!

But it is sick, this unfettered life, and must be healed. Many ills ail it and it does not only suffer from the memory of its fetters—it suffers, so far as we are principally concerned here, from the *historical malady*. The excess of history has attacked the plastic powers of life, it no longer understands how to avail itself of the past as hearty nourishment. The malady is terrible, and yet! if youth did not have the clairvoyant gift of

51. [Eternal truth.]

52. [I think, therefore I am.]

53. [I live, therefore I think.]

nature no one would know that it is a malady and that a paradise of health has been lost. This same youth also guesses with the curative instinct of that same nature how that paradise is to be regained; it knows the ointments and medicines for the historical malady, for the excess of the historical: and what are they called?

Do not be surprised, they bear the names of poisons: the antidotes to the historical are called—the *unhistorical and the superhistorical*. With these names we return to the beginnings of our essay and to their calm.

By the word 'the unhistorical' I denote the art and the strength of being able to *forget* and enclose oneself in a limited *horizon*: 'superhistorical' I call the powers which guide the eye away from becoming and toward that which gives existence an eternal and stable character, toward *art* and *religion*. *Science*—for it is science which would speak of poisons—sees in that force, in these powers, hostile powers and forces: for it only takes the observation of things to be the true and correct one, that is, to be scientific observation, which everywhere sees what has come to be, the historical, and nowhere being, the eternal; it lives in inner contradiction with the eternalizing powers of art and religion so far as it hates forgetting, the death of knowledge, so far as it seeks to remove all horizon-limitations and throws man into an endless-unlimited light-wave-sea of known becoming.

If only he could live there in! As in an earthquake cities collapse and become deserted and man erects his house on volcanic ground only hastily and trembling with fear, so life itself collapses into itself and becomes feeble and discouraged when the *concept-quake* which science provokes takes from man the foundation of his security and calm, the belief in the enduring and eternal. Now, is life to rule over knowledge, over science, or is knowledge to rule over life? Which of these two authorities is the higher and decisive one? No one will doubt: life is the higher, the ruling authority, for any knowledge which destroys life would also have destroyed itself. Knowledge presupposes life and so has the same interest in the preservation of life which every being has in its own continuing existence. Thus science requires a higher supervision and guarding: a *hygiene of life* is placed close beside science and one proposition of this hygiene would read: the unhistorical and the superhistorical are the natural antidotes to the stifling of life by history, to the historical malady. It is probable that we, the historically sick, will also have to suffer from the antidotes. But that we suffer from them is no proof that the treatment is incorrect.

And here I recognize the mission of that *youth*, that first generation of fighters and serpent slayers which precedes a happier and more beautiful culture and humanity without having more than an inkling full of promise of this future happiness and beauty to come. This youth will suffer from the malady and the antidote at the same time: and nevertheless they believe to be entitled to boast of stronger health and in general of a more natural nature than their forebears, the educated "men" and "old men" of the present. But it is their mission to shake the concepts which that present has of "health" and "education", and to generate ridicule and hatred against such hybrid concept-monsters; and the hallmark of their own robust health is to be just this that they , namely this youth, can themselves use no concept, no party slogans from the present store of current word and concept coinage to designate their own essence, but are only convinced at every appropriate moment by a power active in them, a fighting, eliminating and separating power; and by an ever heightened sense of life. One may deny that this youth already possesses culture—but for what youth would that be a reproach? One may speak of their lack of refinement and moderation—but they are not yet old and wise enough to know their place; but above all they need not feign and defend a ready-made culture and they enjoy all the consolations and privileges of youth, especially the privilege of courageous heedless honesty and the inspiring consolation of hope.

I know that these hopeful ones intimately understand all these generalities and that with their very own experience they will translate them for themselves into a doctrine meant personally; the others may meanwhile perceive nothing but covered bowls which may well be empty: until one day to their surprise they see with their own eyes that the bowls are full and that attacks, demands, drives to life, passions lay boxed up and pressed together in these generalities which could not remain covered long. Referring these doubters to time, which brings everything to light, I

turn in conclusion to that company of hopeful ones to tell them in a parable the course and progress of their cure, their rescue from the historical malady, and so their own history to the point in time at which they will again be well enough to engage in studying history anew and to use history under the dominion of life in that threefold sense, namely monumental or antiquarian or critical. At that point in time they will be more ignorant than the "educated" of the present: for they will have unlearned much and moreover will have lost all inclination even to look at what those educated ones want to know above all: their distinguishing characteristics, seen from the perspective of those educated ones, are precisely their lack of education, their indifference and reserve toward much that is famous, even toward much that is good. But at that final point in their cure they have become human again and have ceased to be humanoid aggregates—that is something! Those are still hopes! Do not your hearts leap for joy at the thought, you hopeful ones?

And how do we arrive at that goal? you will ask. Already at the beginning of a journey to that goal the Delphic god calls his motto to you: "Know thyself". It is a hard motto: for that god "does not conceal and does not reveal, but only indicates" as Heraclitus has said. What does he point out to you?

There have been centuries in which the Greeks found themselves in a danger similar to the one in which we find ourselves, namely of being swamped by what is alien and past, of perishing through "history". Never have they lived proudly untouchable: for a long time their "culture" was rather a chaos of foreign, Semitic, Babylonian, Lydian and Egyptian forms and concepts, and their religion a veritable battle of gods of the whole orient: similarly perhaps, as "German culture" and religion is now an internally battling chaos of all foreign countries, of all antiquity. And nevertheless Hellenic culture became no aggregate, thanks to that Apollinian motto. The Greeks learned gradually to *organize chaos* by reflecting on themselves in accordance with the Delphic teaching, that is, by reflecting on their genuine needs, and letting their sham needs die out. Thus they took possession of themselves again; they did not long remain the overloaded heirs and epigoni of the whole orient; after a difficult struggle with themselves and through the practical interpretation of that motto they even became the happiest enrichers and increasers of the inherited treasure and the firstcomers and models of all coming cultured peoples.

This is a parable for each one of us: he must organize the chaos within himself by reflecting on his genuine needs. His honesty, his sound and truthful character must at some time rebel against secondhand thought, secondhand learning and imitation; then he will begin to comprehend that culture can be something other still than *decoration of life*, that is, fundamentally always only dissimulation and disguise; for all adornment hides what it adorns. Thus the Greek concept of culture—in contrast to the Romance concept—will be unveiled to him, the concept of culture as a new and improved nature, without inside and outside, without dissimulation and convention, of culture as the accord of life, thought, appearing and willing. Thus he will learn from his own experience that it was through higher strength of *ethical* nature that the Greeks achieved a victory over all other cultures and that every increase of truthfulness must also be a preparatory advancement of *true* culture: even if this truthfulness may on occasion seriously harm the notion of culture which just then enjoys respect, even if it occasions the fall of an entire decorative culture.

On the Genealogy of Morality

PREFACE

1

We are unknown to ourselves, we knowers: and for a good reason. We have never sought ourselves—how then should it happen that we *find* ourselves one day? It has rightly been said: "where your treasure is, there will your heart be also";[1] *our* treasure is where the beehives of our knowledge stand. We are forever underway toward them, as born winged animals and honey-gatherers of the spirit, concerned with all our heart about only one thing—"bringing home" something. As for the rest of life, the so-called "experiences"—who of us even has enough seriousness for them? Or enough time? In such matters I'm afraid we were never really "with it": we just don't have our heart there—or even our ear! Rather, much as a divinely distracted, self-absorbed person into whose ear the bell has just boomed its twelve strokes of noon suddenly awakens and wonders, "what did it actually toll just now?" so we rub our ears *afterwards* and ask, completely amazed, completely disconcerted, "what did we actually experience just now?" still more: "who *are* we actually?" and count up, afterwards, as stated, all twelve quavering bellstrokes of our experience, of our life, of our *being*—alas! and miscount in the process . . . We remain of necessity strangers to ourselves, we do not understand ourselves, we *must* mistake ourselves, for us the maxim reads to all eternity: "each is furthest from himself,"—with respect to ourselves we are not "knowers" . . .

2

—My thoughts on the *origins* of our moral prejudices—for that is what this polemic is about—found their first, economical, and preliminary expression in the collection of aphorisms that bears the title *Human, All Too Human: A Book for Free Spirits*, the writing of that was begun in Sorrento during a winter that permitted me to pause, as a traveler pauses, and look out over the broad and dangerous land through which my spirit had thus far traveled. This occurred in the winter of 1876–77; the thoughts themselves are older. In essentials they were already the same thoughts which I now take up again in the treatises at hand: let us hope that the long period in between has been good for them, that they have become more mature, brighter, stronger, more perfect! That I still hold fast to them today, that they themselves have, in the meantime, held to each other ever more firmly, indeed have grown into each other and become intermeshed, strengthens within me the cheerful confidence that they came about not singly, not arbitrarily, not sporadically, but rather from the beginning arose out of a common root, out of a *basic will* of knowledge which commands from deep within, speaking ever more precisely, demanding something ever more precise. For this alone is fitting for a philosopher. We have no right to be *single* in anything: we may neither err singly nor hit upon the truth singly. Rather, with the necessity with which a tree bears its fruit our thoughts grow out of us, our values, our yes's and no's and if's and whether's—the whole lot related and connected among themselves, witnesses to one will, one health, one earthly kingdom, one sun.—And do they taste good *to you*, these fruits of ours?—But of what concern is that to the trees! Of what concern is that *to us*, us philosophers! . . .

3

Given a skepticism that is characteristic of me, to which I reluctantly admit—for it is directed towards *morality*, towards everything on earth that has until now been celebrated as morality—a skepticism that first appeared so early in my life, so spontaneously,

1. [Matthew 6:21.]

so irrepressibly, so much in contradiction to my environment, age, models, origins, that I almost have the right to call it my "*a priori*" — it was inevitable that early on my curiosity and my suspicion as well would stop at the question: *what*, in fact, is the *origin* of our good and evil? In fact, the problem of the origin of evil haunted me as a thirteen-year-old lad: at an age when one has "half child's play, half God in one's heart,"[2] I devoted my first literary child's play to it, my first philosophic writing exercise — and as to my "solution" to the problem back then, well, I gave the honor to God, as is fitting, and made him the *father* of evil. Was *this* what my "a priori"[3] wished of me? that new, immoral, at least immoralistic "a priori" and the, alas! so anti-Kantian, so mysterious "categorical imperative" speaking through it, to which I have since increasingly lent my ear, and not just my ear? . . . Fortunately I learned early on to distinguish theological from moral prejudice and no longer sought the origin of evil *behind* the world. A little historical and philological schooling, combined with an innate sense of discrimination in all psychological questions, soon transformed my problem into a different one: under what conditions did man invent those value judgments good and evil? *and what value do they themselves have*? Have they inhibited or furthered human flourishing up until now? Are they a sign of distress, of impoverishment, of the degeneration of life? Or, conversely, do they betray the fullness, the power, the will of life, its courage, its confidence, its future? — In response I found and ventured a number of answers; I distinguished ages, peoples, degrees of rank among individuals; I divided up my problem; out of the answers came new questions, investigations, conjectures, probabilities: until I finally had a land of my own, a ground of my own, an entire unspoken growing blossoming world, secret gardens as it were, of which no one was permitted even an inkling . . . O how we are *happy*, we knowers, provided we simply know how to be silent long enough! . . .

4

The first impetus to divulge something of my hypotheses on the origin of morality came to me from a clear, tidy, and smart, even overly smart little book in which for the first time I was clearly confronted by the reverse and perverse sort of genealogical hypotheses, the specifically *English* sort, and this book attracted me — with that power of attraction exerted by everything contrary, everything antipodal. The title of the little book was *The Origin of Moral Sensations*; its author, Dr. Paul Rée;[4] the year of its publication, 1877. I may never have read anything to which I so emphatically said "no" as I did to this book, proposition by proposition, conclusion by conclusion: and yet entirely without vexation or impatience. In the previously named volume on which I was then working, I made occasional and occasionally inopportune reference to the propositions of that book, not that I refuted them — what have I to do with refutations! — but rather, as befits a positive spirit, putting in place of the improbable the more probable, sometimes in place of one error another one. It was then, as mentioned, that I brought into the light of day those hypotheses concerning origins to which these treatises are devoted, clumsily, as I wish last of all to conceal from myself — still unfree, still without a language of my own for these things of my own, and with many a relapse and wavering. In particular, compare what I say in *Human, All Too Human* 45, on the dual prehistory of good and evil (namely out of the sphere of the nobles and that of the slaves); likewise section 136, on the value and origins of ascetic morality; likewise 96, 99, and volume II, 89, on the "morality of custom," that much older and more original kind of morality that is removed *toto caelo*[5] from the altruistic manner of valuation (which Dr. Rée, like all English genealogists of morality, sees as the moral manner of

2. [Lines 3781–82 of Goethe's *Faust, Part One* — M.C.]

3. [Nonempirical or independent of experience; literally: from what is before.]

4. [Dr. Paul Rée (1849–1901), doctor of law, philosopher, physician. N met Rée in 1873 and the two developed a close friendship. They shared a commitment to providing an explanation of morality in completely naturalistic terms, without reference to religious or metaphysical sources and taking account only of what can be known of human beings from a scientific point of view. Their relationship ended badly in the winter of 1882–83 due to complications within the "trinity" the two men had formed with a young Russian woman, Lou Andreas-Salomé.]

5. [By a tremendous distance; literally: by all of heaven.]

valuation *in itself*); likewise volume I, 92; *Wanderer*, section 26; *Daybreak*, 112, on the origins of justice as a settlement between approximately equal powers (equilibrium as presupposition of all contracts, accordingly of all law); likewise *Wanderer* 22 and 33, on the origins of punishment, for which the purpose of terrorizing is neither essential nor present at the beginning (as Dr. Rée believes:—rather this was inserted into it, under specific circumstances, and always as something incidental, as something additional).

5

Actually there was something much more important on my mind just then than my own or anyone else's hypothesizing about the origin of morality (or, more precisely: the latter concerned me solely for the sake of an end to which it is one means among many). The issue for me was the *value* of morality—and over this I had to struggle almost solely with my great teacher Schopenhauer,[6] to whom that book, the passion and the secret contradiction of that book, is directed, as if to a contemporary (—for that book, too, was a "polemic"). In particular the issue was the value of the unegoistic, of the instincts of compassion, self-denial, self-sacrifice, precisely the instincts that Schopenhauer had gilded, deified, and made otherworldly until finally they alone were left for him as the "values in themselves," on the basis of which he *said "no"* to life, also to himself. But against precisely *these* instincts there spoke from within me an ever more fundamental suspicion, an ever deeper-delving skepticism! Precisely here I saw the *great* danger to humanity, its most sublime lure and temptation—and into what? into nothingness?—precisely here I saw the beginning of the end, the standstill, the backward-glancing tiredness, the will turning *against* life, the last sickness gently and melancholically announcing itself: I understood the ever more widely spreading morality of compassion—which seized even the philosophers and made them sick—as the most uncanny symptom of our now uncanny European culture, as its detour to a new Buddhism? to a Buddhism for Europeans? to—*nihilism*? . . . For this preferential treatment and overestimation of compassion on the part of modern philosophers is something new: until this point philosophers had agreed precisely on the *worthlessness* of compassion. I name only Plato, Spinoza,[7] La Rochefoucauld,[8] and Kant, four spirits as different from each other as possible, but united on one point: their low regard for compassion.—

6

This problem of the *value* of compassion and of the morality of compassion (—I am an opponent of the disgraceful modern softening of feelings—) appears at first to be only an isolated matter, a lone question mark; whoever sticks here for once, however, and *learns* to ask questions here, will fare as I have fared:—an immense new vista opens up to him, a possibility takes hold of him like a dizziness, every sort of mistrust, suspicion, fear springs forth, the belief in morality, in all morality totters,—finally a new challenge is heard. Let us speak it aloud, this *new challenge*: we need a *critique* of moral values, *for once the value of these values must itself be called into question*—and for this we need a knowledge of the conditions and circumstances out of which they have grown, under which they have developed and shifted (morality as consequence, as symptom, as mask, as Tartuffery, as sickness, as misunderstanding; but also morality as cause, as medicine, as stimulus, as inhibitor, as poison),

6. [Arthur Schopenhauer (1788–1860), sometimes described as the "philosopher of pessimism." Largely ignored until very late in his life, he became the most widely read German philosopher in the English-speaking world during the second half of the nineteenth century.]

7. [Baruch (Benedict) Spinoza (1632–1677), Dutch-Jewish philosopher, usually grouped with Descartes and Leibniz as one of the three most important modern rationalists; known especially for his attempt to overcome the dualism between mind and matter and for his "geometrical" method of presenting philosophy. Spinoza's major work, *Ethica*, was published by his friends shortly after his death.]

8. [François VI, duc de La Rochefoucauld (1613–1680), French aristocrat and classical author. La Rochefoucauld's only major work, the *Maximes*, is a collection of maxims or aphorisms—a literary form that aims at expressing a truth in a brief and pointed and sometimes paradoxical form.]

knowledge of a kind that has neither existed up until now nor even been desired. One has taken the *value* of these "values" as given, as a fact, as beyond all calling-into-question; until now one has not had even the slightest doubt or hesitation in ranking "the good" as of higher value than "the evil," of higher value in the sense of its furtherance, usefulness, beneficiality—with respect to man *in general* (taking into account the future of man). What? if the opposite were true? What? if a symptom of regression also lay in the "good," likewise a danger, a temptation, a poison, a narcotic through which perhaps the present were living *at the expense of the future*? Perhaps more comfortably, less dangerously, but also in a reduced style, on a lower level? . . . So that precisely morality would be to blame if a *highest power and splendor* of the human type—in itself possible—were never attained? So that precisely morality were the danger of dangers? . . .

7

Suffice it to say that once this prospect opened up to me, I myself had reasons for looking about for learned, bold, and industrious comrades (I am still doing so today). It is a matter of traveling the vast, distant, and so concealed land of morality—of the morality which has really existed, really been lived—with a completely new set of questions and as it were with new eyes: and is this not virtually to *discover* this land for the first time? . . . If in the process I thought of, among others, the above named Dr. Rée, this happened because I had no doubt that he would be pushed by the very nature of his questions to a more correct method of attaining answers. Did I deceive myself in this? My wish, in any case, was to turn so sharp and disinterested an eye in a better direction, the direction of the real *history of morality* and to warn him while there was still time against such English hypothesizing *into the blue*. It is of course obvious which color must be a hundred times more important to a genealogist of morality than blue: namely *gray*, which is to say, that which can be documented, which can really be ascertained, which has really existed, in short, the very long, difficult-to-decipher hieroglyphic writing of the human moral past! *This* was unknown to Dr. Rée; but he had read Darwin:[9]—and thus in his hypothesizing we have, in a manner that is at least entertaining, the Darwinian beast politely joining hands with the most modern, unassuming moral milquetoast who "no longer bites"—the latter with an expression of a certain good-natured and refined indolence on his face, into which is mixed even a grain of pessimism, of weariness: as if there weren't really any reward for taking all these things—the problems of morality—so seriously. To me it seems that, on the contrary, there are no things which would *reward* one more for taking them seriously; to which reward belongs, for example, that one might perhaps some day gain permission to take them *cheerfully*. For cheerfulness, or to say it in my language, *gay science*—is a reward: a reward for a long, brave, industrious, and subterranean seriousness that is admittedly not for everyone. On that day, however, when we say from a full heart: "Onward! even our old morality belongs *in comedy*!" we will have discovered a new complication and possibility for the Dionysian drama of the "Destiny of the Soul"—: and he will certainly make use of it, one can bet on that, he, the great old eternal comic poet of our existence! . . .

8

—If this book is unintelligible to anyone and hard on the ears, the fault, as I see it, does not necessarily lie with me. It is clear enough, presupposing, as I do, that one has first read my earlier writings and has not spared some effort in the process: these are in fact not easily accessible. As far as my *Zarathustra* is concerned, for example, I count no one an authority on it who has not at sometime been deeply wounded and at sometime deeply delighted by each of its words: for only then may he enjoy the privilege of reverent participation in the halcyon element out of which the work was born, in its sunny brightness, distance, expanse, and certainty. In other cases the aphoristic form creates a difficulty—it lies in the fact that we don't attach *enough weight* to this form today. An aphorism honestly coined and cast has not been "deciphered" simply because it has been

9. [Charles Robert Darwin (1809–1882), English naturalist, author of *On the Origin of Species by Means of Natural Selection* (1859).]

read through; rather its *interpretation* must now begin, and for this an art of interpretation is needed. In the third treatise of this book I have offered a sample of what I call "interpretation" in such a case: — an aphorism is placed before this treatise, the treatise itself is a commentary on it. Admittedly, to practice reading as an *art* in this way one thing above all is necessary, something which these days has been unlearned better than anything else — and it will therefore be a while before my writings are "readable" — something for which one must almost be a cow and in any case *not* a "modern man": *ruminating* . . .

Sils-Maria, Upper Engadine, in July 1887.

FIRST TREATISE: "GOOD AND EVIL," "GOOD AND BAD"

1

— These English psychologists whom we also have to thank for the only attempts so far to produce a history of the genesis of morality — they themselves are no small riddle for us; I confess, in fact, that precisely as riddles in the flesh they have something substantial over their books — *they themselves are interesting*! These English psychologists — what do they actually want? One finds them, whether voluntarily or involuntarily, always at the same task, namely of pushing the *partie honteuse*[10] of our inner world into the foreground and of seeking that which is actually effective, leading, decisive for our development, precisely where the intellectual pride of man would least of all *wish* to find it (for example in the *vis inertiae*[11] of habit or in forgetfulness or in a blind and accidental interlacing and mechanism of ideas or in anything purely passive, automatic, reflexive, molecular, and fundamentally mindless) — what is it actually that always drives these psychologists in precisely *this* direction? Is it a secret, malicious, base instinct to belittle mankind, one that perhaps cannot be acknowledged even to itself ? Or, say, a pessimistic suspicion, the mistrust of disappointed, gloomy idealists who have become poisonous and green? Or a little subterranean animosity and rancor against Christianity (and Plato) that has perhaps not yet made it past the threshold of consciousness? Or even a lascivious taste for the disconcerting, for the painful-paradoxical, for the questionable and nonsensical aspects of existence? Or finally — a little of everything, a little meanness, a little gloominess, a little anti-Christianity, a little tickle and need for pepper? . . . But I am told that they are simply old, cold, boring frogs who creep and hop around on human beings, into human beings, as if they were really in their element there, namely in a *swamp*. I resist this, still more, I don't believe it; and if one is permitted to wish where one cannot know, then I wish from my heart that the reverse may be the case with them — that these explorers and microscopists of the soul are basically brave, magnanimous, and proud animals who know how to keep a rein on their hearts as well as their pain and have trained themselves to sacrifice all desirability to truth, to *every* truth, even plain, harsh, ugly, unpleasant, unchristian, immoral truth . . . For there are such truths. —

2

Hats off then to whatever good spirits may be at work in these historians of morality! Unfortunately, however, it is certain that they lack the *historical spirit* itself, that they have been left in the lurch precisely by all the good spirits of history! As is simply the age-old practice among philosophers, they all think *essentially* ahistorically; of this there is no doubt. The ineptitude of their moral genealogy is exposed right at the beginning, where it is a matter of determining the origins of the concept and judgment "good." "Originally" — so they decree — "unegoistic actions were praised and called good from the perspective of those to whom they were rendered, hence for whom they were *useful*; later one *forgot* this origin of the praise and, simply because unegoistic actions were *as a matter of habit* always praised as good, one also felt them to be good — as if they were something good in themselves." One sees immediately: this first derivation already contains all the characteristic traits

10. [Shameful part (in the plural, this expression is the equivalent of the English "private parts").]

11. [Force of inactivity. In Newtonian physics, this term denotes the resistance offered by matter to any force tending to alter its state of rest or motion.]

of the idiosyncrasy of English psychologists—we have "usefulness," "forgetting," "habit," and in the end "error," all as basis for a valuation of which the higher human being has until now been proud as if it were some kind of distinctive prerogative of humankind. This pride *must* be humbled, this valuation devalued: has this been achieved? . . . Now in the first place it is obvious to me that the actual genesis of the concept "good" is sought and fixed in the wrong place by this theory: the judgment "good" does *not* stem from those to whom "goodness" is rendered! Rather it was "the good" themselves, that is the noble, powerful, higher-ranking, and high-minded who felt and ranked themselves and their doings as good, which is to say, as of the first rank, in contrast to everything base, low-minded, common, and vulgar. Out of this *pathos of distance* they first took for themselves the right to create values, to coin names for values: what did they care about usefulness! The viewpoint of utility is as foreign and inappropriate as possible, especially in relation to so hot an outpouring of highest rank-ordering, rank-distinguishing value judgments: for here feeling has arrived at an opposite of that low degree of warmth presupposed by every calculating prudence, every assessment of utility—and not just for once, for an hour of exception, but rather for the long run. As was stated, the pathos of nobility and distance, this lasting and dominant collective and basic feeling of a higher ruling nature in relation to a lower nature, to a "below"—*that* is the origin of the opposition "good" and "bad." (The right of lords to give names goes so far that we should allow ourselves to comprehend the origin of language itself as an expression of power on the part of those who rule: they say "this *is* such and such," they seal each thing and happening with a sound and thus, as it were, take possession of it.) It is because of this origin that from the outset the word "good" does *not* necessarily attach itself to "unegoistic" actions—as is the superstition of those genealogists of morality. On the contrary, only when aristocratic value judgments begin to *decline* does this entire opposition "egoistic" "unegoistic" impose itself more and more on the human conscience—to make use of my language, it is *the herd instinct* that finally finds a voice (also *words*) in this opposition. And even then it takes a long time until this instinct becomes dominant to such an extent that moral valuation in effect gets caught and stuck at that opposition (as is the case in present-day Europe: today the prejudice that takes "moral," "unegoistic," "*désintéressé*"[12] to be concepts of equal value already rules with the force of an "*idée fixe*"[13] and sickness in the head).

3

In the second place, however: quite apart from the historical untenability of that hypothesis concerning the origins of the value judgment "good," it suffers from an inherent psychological absurdity. The usefulness of the unegoistic action is supposed to be the origin of its praise, and this origin is supposed to have been *forgotten*:—how is this forgetting even *possible*? Did the usefulness of such actions cease at some point? The opposite is the case: this usefulness has been the everyday experience in all ages, something therefore that was continually underscored anew; accordingly, instead of disappearing from consciousness, instead of becoming forgettable, it could not help but impress itself upon consciousness with ever greater clarity. How much more reasonable is that opposing theory (it is not therefore truer—) advocated for example by Herbert Spencer[14]—which ranks the concept "good" as essentially identical with the concept "useful," "purposive," so that in the judgments "good" and "bad" humanity has summed up and sanctioned its *unforgotten* and *unforgettable* experiences concerning what is useful-purposive, what is injurious-nonpurposive. Good, according to this theory, is whatever has proved itself as useful from time immemorial: it may thus claim validity as "valuable in the highest degree," as "valuable in itself." This path of explanation is also false, as noted above, but at least the explanation is in itself reasonable and psychologically tenable.

4

—The pointer to the *right* path was given to me by the question: what do the terms coined for "good" in

12. [Disinterested, unselfish, selfless.]

13. [Obsession; literally: a fixed idea.]

14. [Herbert Spencer (1820–1903), English sociologist and philosopher. An early advocate of evolutionary theory, he is the father of Social Darwinism: Spencer coined the phrase "survival of the fittest."]

the various languages actually mean from an etymological viewpoint? Here I found that they all lead back to the *same conceptual transformation*—that everywhere the basic concept is "noble," "aristocratic" in the sense related to the estates, out of which "good" in the sense of "noble of soul," "high-natured of soul," "privileged of soul" necessarily develops: a development that always runs parallel to that other one which makes "common," "vulgar," "base" pass over finally into the concept "bad." The most eloquent example of the latter is the German word "*schlecht*" [bad] itself: which is identical with "*schlicht*" [plain, simple]—compare "*schlechtweg*," "*schlechterdings*" [simply or downright]—and originally designated the plain, the common man, as yet without a suspecting sideward glance, simply in opposition to the noble one. Around the time of the Thirty-Years' War, in other words late enough, this sense shifts into the one now commonly used.—With respect to morality's genealogy this appears to me to be an *essential* insight; that it is only now being discovered is due to the inhibiting influence that democratic prejudice exercises in the modern world with regard to all questions of origins. And this influence extends all the way into that seemingly most objective realm of natural science and physiology, as I shall merely hint at here. But the nonsense that this prejudice—once unleashed to the point of hate—is able to inflict, especially on morality and history, is shown by Buckle's[15] notorious case; the *plebeianism* of the modern spirit, which is of English descent, sprang forth there once again on its native ground, vehemently like a muddy volcano and with that oversalted, overloud, common eloquence with which until now all volcanoes have spoken.—

5

With regard to *our* problem—which can for good reasons be called a *quiet* problem and which addresses itself selectively to but few ears—it is of no small interest to discover that often in those words and roots that designate "good" that main nuance still shimmers through with respect to which the nobles felt themselves to be humans of a higher rank. To be sure, they may name themselves in the most frequent cases simply after their superiority in power (as "the powerful," "the lords," "the commanders") or after the most visible distinguishing mark of this superiority, for example as "the rich," "the possessors," (that is the sense of *arya*;[16] and likewise in Iranian and Slavic). But also after a *typical character trait*: and this is the case which concerns us here. They call themselves for example "the truthful"—led by the Greek nobility, whose mouthpiece is the Megarian poet Theognis.[17] The word coined for this, *esthlos*,[18] means according to its root one who *is*, who possesses reality, who is real, who is true; then, with a subjective turn, the true one as the truthful one: in this phase of the concept's transformation it becomes the by- and catchword of the nobility and passes over completely into the sense of "aristocratic," as that which distinguishes from the *lying* common man as Theognis understands and depicts him—until finally, after the demise of the nobility, the word remains as the term for *noblesse* of soul and becomes as it were ripe and sweet. In the word *kakos*[19] as well as in *deilos*[20] (the plebeian in contrast to the *agathos*)[21] cowardliness is underscored: perhaps this gives a hint in which direction one should seek the etymological origins of *agathos*, which can be interpreted in many ways. In the Latin *malus*[22] (beside which I place *melas*),[23] the common man could be characterized as the dark-colored, above all as the black-haired ("*hic niger est*—"),[24] as the pre-Aryan occupant of Italian soil, who by his color stood out most clearly from the blonds who had become the rulers, namely the Aryan conqueror-race; at any rate Gaelic offered

15. [Henry Thomas Buckle (1821–1862), English historian. Holding in contempt the history of his day, which emphasized politics, war, and heroes, he aimed to make history scientific by discovering the fixed laws that govern the actions of men and therefore of societies.]

16. [Sanskrit: noble.]
17. [Late 6th–early 5th century B.C.E..]
18. [Good, brave, noble.]
19. [Bad, ugly, ill-born, base, cowardly, ignoble.]
20. [Cowardly, worthless, low-born, miserable, wretched.]
21. [Good, well-born, noble, brave, capable.]
22. [Bad, evil.]
23. [Black, dark.]
24. [He is black. Horace's *Satires*, I. 4, line 85.]

me an exactly corresponding case—*fin*[25] (for example in the name Fin-Gal), the distinguishing word of the nobility, in the end, the good, noble, pure one, originally the blond-headed one, in contrast to the dark, black-haired original inhabitants. The Celts, incidentally, were by all means a blond race; it is wrong to associate those tracts of an essentially dark-haired population, which are noticeable on the more careful ethnographic maps of Germany, with any Celtic origins or blood mixtures, as even Virchow[26] does: rather it is the *pre-Aryan* population of Germany that comes to the fore in these places. (The same is true for almost all of Europe: in essence, the subjected race has in the end regained the upper hand there, in color, shortness of skull, perhaps even in intellectual and social instincts—who will guarantee us that modern democracy, the even more modern anarchism, and in particular that inclination toward the "commune," the most primitive form of society—an inclination now common to all of Europe's socialists—does not signify, on the whole, a tremendous *atavism*—and that the *race of lords* and conquerors, that of the Aryans, is not in the process of succumbing physiologically as well? . . .) I believe I may interpret the Latin *bonus*[27] as "the warrior": assuming that I am correct in tracing *bonus* back to an older *duonus*[28] (compare *bellum* = *duellum* = *duen-lum*,[29] in which that *duonus* seems to me to be preserved). *Bonus* accordingly as man of strife, of division (*duo*), as man of war—one sees what it was about a man that constituted his "goodness" in ancient Rome. Our German "*gut*" [good] itself: wasn't it supposed to mean "the godly one," the man "of godly race"? And to be identical with the name for the nation (originally for the nobility) of the Goths? The reasons for this supposition do not belong here.—

6

To this rule that the concept of superiority in politics always resolves itself into a concept of superiority of soul, it is not immediately an exception (although it provides occasion for exceptions) when the highest caste is at the same time the *priestly* caste and hence prefers for its collective name a predicate that recalls its priestly function. Here, for example, "pure" and "impure" stand opposite each other for the first time as marks of distinction among the estates; and here, too, one later finds the development of a "good" and a "bad" in a sense no longer related to the estates. Incidentally, let one beware from the outset of taking these concepts "pure" and "impure" too seriously, too broadly, or even too symbolically: rather all of earlier humanity's concepts were initially understood in a coarse, crude, superficial, narrow, straightforward, and above all *unsymbolic* manner, to an extent that we can hardly imagine. The "pure one" is from the beginning simply a human being who washes himself, who forbids himself certain foods that bring about skin diseases, who doesn't sleep with the dirty women of the baser people, who abhors blood—nothing more, at least not much more! On the other hand the entire nature of an essentially priestly aristocracy admittedly makes clear why it was precisely here that the valuation opposites could so soon become internalized and heightened in a dangerous manner; and indeed through them gulfs were finally torn open between man and man across which even an Achilles of free-spiritedness will not be able to leap without shuddering. From the beginning there is something *unhealthy* in such priestly aristocracies and in the habits ruling there, ones turned away from action, partly brooding, partly emotionally explosive, habits that have as a consequence the intestinal disease and neurasthenia that almost unavoidably clings to the priests of all ages; but what they themselves invented as a medicine against this diseasedness of theirs—must we not say that in the end it has proved itself a hundred times more dangerous in its aftereffects than the disease from which it was to redeem them? Humanity itself still suffers from the aftereffects of these priestly cure naïvetés! Think, for example, of certain dietary forms (avoidance of meat), of fasting, of sexual abstinence, of the flight "into the wilderness" (Weir-Mitchellian isolation,[30] admittedly without the

25. [Gaelic: white, bright.]

26. [Rudolf Virchow (1821–1902), physician, professor of medicine, and liberal politician.]

27. [Good.]

28. [Earlier form of *bonus*.]

29. [War; the latter two are older, poetic forms.]

30. [Silas Weir Mitchell (1829–1914), Philadelphian physician and novelist who specialized in treating "ner-

ensuing fattening diet and over-feeding, which constitutes the most effective antidote for all the hysteria of the ascetic ideal): in addition, the whole anti-sensual metaphysics of priests, which makes lazy and over-refined, their self-hypnosis after the manner of the fakir and Brahmin—brahma used as glass pendant and *idée fixe*—and the final, only too understandable general satiety along with its radical cure, *nothingness* (or God—the longing for a *unio mystica*[31] with God is the longing of the Buddhist for nothingness, Nirvâna—and nothing more!) With priests *everything* simply becomes more dangerous, not only curatives and healing arts, but also arrogance, revenge, acuity, excess, love, lust to rule, virtue, disease;—though with some fairness one could also add that it was on the soil of this *essentially dangerous* form of human existence, the priestly form, that man first became *an interesting animal*, that only here did the human soul acquire *depth* in a higher sense and become *evil*—and these are, after all, the two basic forms of the previous superiority of man over other creatures! . . .

7

—One will already have guessed how easily the priestly manner of valuation can branch off from the knightly-aristocratic and then develop into its opposite; this process is especially given an impetus every time the priestly caste and the warrior caste confront each other jealously and are unable to agree on a price. The knightly-aristocratic value judgments have as their presupposition a powerful physicality, a blossoming, rich, even overflowing health, together with that which is required for its preservation: war, adventure, the hunt, dance, athletic contests, and in general everything which includes strong, free, cheerful-hearted activity. The priestly-noble manner of valuation—as we have seen—has other presuppositions: too bad for it when it comes to war! Priests are, as is well known, the *most evil enemies*—why is that? Because they are the most powerless. Out of their powerlessness their hate grows into something enormous and uncanny, into something most spiritual and most poisonous. The truly great haters in the history of the world have always been priests, also the most ingenious haters:—compared with the spirit of priestly revenge all the rest of spirit taken together hardly merits consideration. Human history would be much too stupid an affair without the spirit that has entered into it through the powerless:—let us turn right to the greatest example. Of all that has been done on earth against "the noble," "the mighty," "the lords," "the power-holders," nothing is worthy of mention in comparison with that which the *Jews* have done against them: the Jews, that priestly people who in the end were only able to obtain satisfaction from their enemies and conquerors through a radical revaluation of their values, that is, through an act of *spiritual revenge*. This was the only way that suited a priestly people, the people of the most suppressed priestly desire for revenge. It was the Jews who in opposition to the aristocratic value equation (good = noble = powerful = beautiful = happy = beloved of God) dared its inversion, with fear-inspiring consistency, and held it fast with teeth of the most unfathomable hate (the hate of powerlessness), namely: "the miserable alone are the good; the poor, powerless, lowly alone are the good; the suffering, deprived, sick, ugly are also the only pious, the only blessed in God, for them alone is there blessedness,—whereas you, you noble and powerful ones, you are in all eternity the evil, the cruel, the lustful, the insatiable, the godless, you will eternally be the wretched, accursed, and damned!" . . . We know *who* inherited this Jewish revaluation . . . In connection with the enormous and immeasurably doom-laden initiative provided by the Jews with this most fundamental of all declarations of war, I call attention to the proposition which I arrived at on another occasion ("Beyond Good and Evil" section 195)—namely, that with the Jews *the slave revolt in morality* begins: that revolt which has a two-thousand-year history behind it and which has only moved out of our sight today because it—has been victorious . . .

---

vous" disorders. He became widely known in America and Europe for his "rest cure" for such illnesses: patients were first isolated from the influence of hovering, over-careful family members and restricted to bed for four to six weeks, during which they were not allowed to have visitors or to read or write. They were fed by a nurse and given massages to keep up strength and muscle tone. When they began to show improvement, patients were ordered to get up and take exercise.]

31. [Mystical union.]

8

—But you don't understand that? You don't have eyes for something that has taken two thousand years to achieve victory? . . . There is nothing to wonder at in this: all *lengthy* things are difficult to see, to see in their entirety. *This* however is what happened: out of the trunk of that tree of revenge and hate, Jewish hate—the deepest and most sublime hate, namely an ideal-creating, value-reshaping hate whose like has never before existed on earth—grew forth something just as incomparable, a *new love*, the deepest and most sublime of all kinds of love:—and from what other trunk could it have grown? . . . But by no means should one suppose it grew upwards as, say, the true negation of that thirst for revenge, as the opposite of Jewish hate! No, the reverse is the truth! This love grew forth out of it, as its crown, as the triumphant crown unfolding itself broadly and more broadly in purest light and sunny fullness, reaching out, as it were, in the realm of light and of height, for the goals of that hate—for victory, for booty, for seduction—with the same drive with which the roots of that hate sunk themselves ever more thoroughly and greedily down into everything that had depth and was evil. This Jesus of Nazareth, as the embodied Gospel of Love, this "Redeemer" bringing blessedness and victory to the poor, the sick, the sinners—was he not precisely seduction in its most uncanny and irresistible form, the seduction and detour to precisely those *Jewish* values and reshapings of the ideal? Has not Israel reached the final goal of its sublime desire for revenge precisely via the detour of this "Redeemer," this apparent adversary and dissolver of Israel? Does it not belong to the secret black art of a truly *great* politics of revenge, of a far-seeing, subterranean, slow-working and pre-calculating revenge, that Israel itself, before all the world, should deny as its mortal enemy and nail to the cross the actual tool of its revenge, so that "all the world," namely all the opponents of Israel, could take precisely this bait without thinking twice? And, out of all sophistication of the spirit, could one think up any more *dangerous* bait? Something that in its enticing, intoxicating, anesthetizing, destructive power might equal that symbol of the "holy cross," that gruesome paradox of a "god on the cross," that mystery of an inconceivable, final, extreme cruelty and self-crucifixion of God *for the salvation of man*? . . . What is certain, at least, is that *sub hoc signo*[32] Israel, with its revenge and revaluation of all values, has thus far again and again triumphed over all other ideals, over all *more noble* ideals.——

9

—"But why are you still talking about *nobler* ideals! Let's submit to the facts: the people were victorious—or 'the slaves,' or 'the mob,' or 'the herd,' or whatever you like to call them—if this happened through the Jews, so be it! then never has a people had a more world-historic mission. 'The lords' are cast off; the morality of the common man has been victorious. One may take this victory to be at the same time a blood poisoning (it mixed the races together)—I won't contradict; in any event it is beyond doubt that this toxication *succeeded*. The 'redemption' of the human race (namely from 'the lords') is well under way; everything is jewifying or christifying or mobifying as we watch (what do the words matter!). The progress of this poisoning through the entire body of humanity appears unstoppable, from now on its tempo and step may even be slower, more refined, less audible, more thoughtful—one has time after all . . . Does the church today still have a *necessary* task in this scheme, still a right to existence at all? Or could one do without it? *Quaeritur.*[33] It seems more likely that it inhibits and holds back this progress instead of accelerating it? Well, even that could be its usefulness . . . By now it is certainly something coarse and peasant-like, which repels a more delicate intelligence, a truly modern taste. Shouldn't it at least become somewhat refined? . . . Today it alienates more than it seduces . . . Which of us indeed would be a free spirit if there were no church? The church, *not* its poison, repels us . . . Leaving the church aside, we, too, love the poison . . ."—This, the epilogue of a "free spirit" to my speech, an honest animal, as he has richly betrayed, moreover a democrat; he had listened to me up until then and couldn't stand to hear me be silent. For at this point I have much to be silent about.—

32. [Under this sign.]

33. [One asks, i.e., that is the question.]

10

The slave revolt in morality begins when *ressentiment* itself becomes creative and gives birth to values: the *ressentiment* of beings denied the true reaction, that of the deed, who recover their losses only through an imaginary revenge. Whereas all noble morality grows out of a triumphant yes-saying to oneself, from the outset slave morality says "no" to an "outside," to a "different," to a "not-self": and *this* "no" is its creative deed. This reversal of the value-establishing glance—this *necessary* direction toward the outside instead of back onto oneself—belongs to the very nature of *ressentiment*: in order to come into being, slave-morality always needs an opposite and external world; it needs, psychologically speaking, external stimuli in order to be able to act at all,—its action is, from the ground up, reaction. The reverse is the case with the noble manner of valuation: it acts and grows spontaneously, it seeks out its opposite only in order to say "yes" to itself still more gratefully and more jubilantly—its negative concept "low" "common" "bad" is only an after-birth, a pale contrast-image in relation to its positive basic concept, saturated through and through with life and passion: "we noble ones, we good ones, we beautiful ones, we happy ones!" When the noble manner of valuation lays a hand on reality and sins against it, this occurs relative to the sphere with which it is *not* sufficiently acquainted, indeed against a real knowledge of which it rigidly defends itself: in some cases it forms a wrong idea of the sphere it holds in contempt, that of the common man, of the lower people; on the other hand, consider that the affect of contempt, of looking down on, of the superior glance—assuming that it does *falsify* the image of the one held in contempt—will in any case fall far short of the falsification with which the suppressed hate, the revenge of the powerless, lays a hand on its opponent—in effigy, of course. Indeed there is too much carelessness in contempt, too much taking-lightly, too much looking-away and impatience mixed in, even too much of a feeling of cheer in oneself, for it to be capable of transforming its object into a real caricature and monster. Do not fail to hear the almost benevolent nuances that, for example, the Greek nobility places in all words by which it distinguishes the lower people from itself; how they are mixed with and sugared by a kind of pity, considerateness, leniency to the point that almost all words that apply to the common man ultimately survive as expressions for "unhappy" "pitiful" (compare *deilos*, *deilaios*, *poneros*, *mochtheros*, the latter two actually designating the common man as work-slave and beast of burden)[34]—and how, on the other hand, to the Greek ear "bad" "low" "unhappy" have never ceased to end on the same note, with a tone color in which "unhappy" predominates: this as inheritance of the old, nobler aristocratic manner of valuation that does not deny itself even in its contempt (let philologists be reminded of the sense in which *oizyros*, *anolbos*, *tlemon*, *dystychein*, *xymphora* are used).[35] The "well-born" simply *felt* themselves to be the "happy"; they did not first have to construct their happiness artificially by looking at their enemies, to talk themselves into it, to *lie themselves into it* (as all human beings of *ressentiment* tend to do); and as full human beings, overloaded with power and therefore *necessarily* active, they likewise did not know how to separate activity out from happiness,—for them being active is of necessity included in happiness (whence *eu prattein*[36] takes its origins)—all of this very much in opposition to "happiness" on the level of the powerless, oppressed, those festering with poisonous and hostile feelings, in whom it essentially appears as narcotic, anesthetic, calm, peace, "Sabbath," relaxation of mind and stretching of limbs, in short, *passively*. While the noble human being lives with himself in confidence and openness (*gennaios* "noble-born" underscores the nuance "sincere" and probably also "naive") the human being of *ressentiment* is neither sincere, nor naive, nor honest and frank with himself.

34. [*Deilos:* cowardly, worthless, low-born, miserable, wretched; *deilaios:* wretched, sorry, paltry; *poneros:* wretched, oppressed by toils, worthless, base, cowardly; *mochtheros:* wretched, suffering hardship, miserable, worthless, knavish.]

35. [*Oizyros:* woeful, pitiable, miserable, sorry, poor; *anolbos:* unblest, wretched, luckless, poor; *tlemon:* suffering, enduring; hence: "steadfast, stouthearted," but also "wretched, miserable"; *dystychein:* to be unlucky, unhappy, unfortunate; *xymphora:* originally "chance," then usually in a bad sense, that is, "misfortune."]

36. [To do well, to fare well, or to do good.]

His soul *looks obliquely* at things; his spirit loves hiding places, secret passages and backdoors, everything hidden strikes him as *his* world, *his* security, *his* balm; he knows all about being silent, not forgetting, waiting, belittling oneself for the moment, humbling oneself. A race of such human beings of *ressentiment* in the end necessarily becomes *more prudent* than any noble race, it will also honor prudence in an entirely different measure: namely as a primary condition of existence. With noble human beings, in contrast, prudence is likely to have a refined aftertaste of luxury and sophistication about it:—here it is not nearly as essential as the complete functional reliability of the regulating *unconscious* instincts or even a certain imprudence, for example the gallant making-straight-for-it, be it toward danger, be it toward the enemy, or that impassioned suddenness of anger, love, reverence, gratitude, and revenge by which noble souls in all ages have recognized each other. For the *ressentiment* of the noble human being, when it appears in him, runs its course and exhausts itself in an immediate reaction, therefore it does not *poison*—on the other hand it does not appear at all in countless cases where it is unavoidable in all the weak and powerless. To be unable for any length of time to take his enemies, his accidents, his *misdeeds* themselves seriously—that is the sign of strong, full natures in which there is an excess of formative, reconstructive, healing power that also makes one forget (a good example of this from the modern world is Mirabeau,[37] who had no memory for insults and base deeds committed against him and who was only unable to forgive because he—forgot). Such a human is simply able to shake off with a single shrug a collection of worms that in others would dig itself in; here alone is also possible—assuming that it is at all possible on earth—the true "*love* of one's enemies." What great reverence for his enemies a noble human being has!—and such reverence is already a bridge to love . . . After all, he demands his enemy for himself, as his distinction; he can stand no other enemy than one in whom there is nothing to hold in contempt and *a very great deal* to honor! On the other hand, imagine "the enemy" as the human being of *ressentiment* conceives of him—and precisely here is his deed, his creation: he has conceived of "the evil enemy," "*the evil one*," and this indeed as the basic concept, starting from which he now also thinks up, as reaction and counterpart, a "good one"—himself! . . .

37. [Honoré Gabriel Riqueti, Comte de Mirabeau (1749–1791), French politician, orator, and writer.]

11

Precisely the reverse, therefore, of the case of the noble one, who conceives the basic concept "good" in advance and spontaneously, starting from himself that is, and from there first creates for himself an idea of "bad"! This "bad" of noble origin and that "evil" out of the brewing cauldron of unsatiated hate—the first, an after-creation, something on the side, a complementary color; the second, in contrast, the original, the beginning, the true *deed* in the conception of a slave morality—how differently the two words "bad" and "evil" stand there, seemingly set in opposition to the same concept "good"! But it is *not* the same concept "good": on the contrary, just ask yourself *who* is actually "evil" in the sense of the morality of *ressentiment*. To answer in all strictness: *precisely* the "good one" of the other morality, precisely the noble, the powerful, the ruling one, only recolored, only reinterpreted, only reseen through the poisonous eye of *ressentiment*. There is one point we wish to deny least of all here: whoever encounters those "good ones" only as enemies encounters nothing but *evil enemies*, and the same humans who are kept so strictly within limits *inter pares*,[38] by mores, worship, custom, gratitude, still more by mutual surveillance, by jealousy, and who on the other hand in their conduct towards each other prove themselves so inventive in consideration, self-control, tact, loyalty, pride, and friendship,—they are not much better than uncaged beasts of prey toward the outside world, where that which is foreign, the foreign world, begins. There they enjoy freedom from all social constraint; in the wilderness they recover the losses incured through the tension that comes from a long enclosure and fencing-in within the peace of the community; they step *back* into the innocence of the beast-of-prey conscience, as jubilant monsters, who perhaps walk

38. [Among equals; here, "among themselves."]

away from a hideous succession of murder, arson, rape, torture with such high spirits and equanimity that it seems as if they have only played a student prank, convinced that for years to come the poets will again have something to sing and to praise. At the base of all these noble races one cannot fail to recognize the beast of prey, the splendid *blond beast* who roams about lusting after booty and victory; from time to time this hidden base needs to discharge itself, the animal must get out, must go back into the wilderness: Roman, Arab, Germanic, Japanese nobility, Homeric heroes, Scandinavian Vikings—in this need they are all alike. It is the noble races who have left the concept "barbarian" in all their tracks wherever they have gone; indeed from within their highest culture a consciousness of this betrays itself and even a pride in it (for example when Pericles says to his Athenians in that famous funeral oration, "to every land and sea our boldness has broken a path, everywhere setting up unperishing monuments in good *and bad*"). This "boldness" of noble races—mad, absurd, sudden in its expression; the unpredictable, in their enterprises even the improbable—Pericles singles out for distinction the *rhathymia*[39] of the Athenians—their indifference and contempt toward all security, body, life, comfort; their appalling light-heartedness and depth of desire in all destruction, in all the delights of victory and of cruelty—all was summed up for those who suffered from it in the image of the "barbarian," of the "evil enemy," for example the "Goth," the "Vandal." The deep, icy mistrust that the German stirs up as soon as he comes into power, today once again—is still an atavism of that inextinguishable horror with which Europe has for centuries watched the raging of the blond Germanic beast (although there is hardly a conceptual, much less a blood-relationship between the ancient Teutons and us Germans). I once called attention to Hesiod's embarrassment as he was devising the succession of the cultural ages and attempted to express it in terms of gold, silver, bronze: he knew of no other way to cope with the contradiction posed by the glorious but likewise so gruesome, so violent world of Homer, than by making one age into two, which he now placed one after the other—first the age of the heroes and demigods of Troy and Thebes, as this world had remained in the memory of the noble dynasties who had their own ancestors there; then the bronze age, which was that same world as it appeared to the descendants of the downtrodden, plundered, mistreated, dragged-off, sold-off: an age of bronze, as stated—hard, cold, cruel, without feeling or conscience, crushing everything and covering it with blood. Assuming it were true, that which is now in any case believed as "truth," that the *meaning of all culture* is simply to breed a tame and civilized animal, a *domestic animal*, out of the beast of prey "man," then one would have to regard all those instincts of reaction and *ressentiment*, with the help of which the noble dynasties together with their ideals were finally brought to ruin and overwhelmed, as the actual *tools of culture*; which is admittedly not to say that the *bearers* of these instincts themselves at the same time also represent culture. On the contrary, the opposite would not simply be probable—no! today it is *obvious*! These bearers of the oppressing and retaliation-craving instincts, the descendants of all European and non-European slavery, of all pre-Aryan population in particular—they represent the *regression* of humankind! These "tools of culture" are a disgrace to humanity, and rather something that raises a suspicion, a counter-argument against "culture" in general! It may be entirely justifiable if one cannot escape one's fear of the blond beast at the base of all noble races and is on guard: but who would not a hundred times sooner fear if he might at the same time admire, than *not* fear but be unable to escape the disgusting sight of the deformed, reduced, atrophied, poisoned? And is that not *our* doom? What causes *our* aversion to "man"?—for we *suffer* from man, there is no doubt.—*Not* fear; rather that we have nothing left to fear in man; that the worm "man" is in the foreground and teeming; that the "tame man," this hopelessly mediocre and uninspiring being, has already learned to feel himself as the goal and pinnacle, as the meaning of history, as "higher man"—indeed that he has a certain right to feel this way, insofar as he feels himself distanced from the profusion of the deformed, sickly, tired, worn-out of which Europe today is beginning to stink; hence as something that is at least relatively well-formed, at least still capable of living, that at least says "yes" to life . . .

39. [Easiness of temper; indifference, rashness. Thucydides 2. 39.]

12

—At this point I will not suppress a sigh and a final confidence. What is it that I in particular find utterly unbearable? That with which I cannot cope alone, that causes me to suffocate and languish? Bad air! Bad air! That something deformed comes near me; that I should have to smell the entrails of a deformed soul! . . . How much can one not otherwise bear of distress, deprivation, foul weather, infirmity, drudgery, isolation? Basically one deals with everything else, born as one is to a subterranean and fighting existence; again and again one reaches the light, again and again one experiences one's golden hour of victory,—and then one stands there as one was born, unbreakable, tensed, ready for something new, something still more difficult, more distant, like a bow that any distress simply pulls tauter still.—But from time to time grant me—assuming that there are heavenly patronesses beyond good and evil—a glimpse, grant me just one glimpse of something perfect, completely formed, happy, powerful, triumphant, in which there is still something to fear! Of a human being who justifies man *himself*; a human being who is a stroke of luck, completing and redeeming man, and for whose sake one may hold fast to *belief in man*! . . . For things stand thus: the reduction and equalization of the European human conceals *our* greatest danger, for this sight makes tired . . . We see today nothing that wishes to become greater, we sense that things are still going downhill, downhill—into something thinner, more good-natured, more prudent, more comfortable, more mediocre, more apathetic, more Chinese, more Christian—man, there is no doubt, is becoming ever "better" . . . Precisely here lies Europe's doom—with the fear of man we have also forfeited the love of him, the reverence toward him, the hope for him, indeed the will to him. The sight of man now makes tired—what is nihilism today if it is not *that*? . . . We are tired of *man* . . .

13

—But let us come back: the problem of the *other* origin of "good," of the good one as conceived by the man of *ressentiment*, demands its conclusion.—That the lambs feel anger toward the great birds of prey does not strike us as odd: but that is no reason for holding it against the great birds of prey that they snatch up little lambs for themselves. And when the lambs say among themselves "these birds of prey are evil; and whoever is as little as possible a bird of prey but rather its opposite, a lamb,—isn't he good?" there is nothing to criticize in this setting up of an ideal, even if the birds of prey should look on this a little mockingly and perhaps say to themselves: "*we* do not feel any anger towards them, these good lambs, as a matter of fact, we love them: nothing is more tasty than a tender lamb."—To demand of strength that it *not* express itself as strength, that it *not* be a desire to overwhelm, a desire to cast down, a desire to become lord, a thirst for enemies and resistances and triumphs, is just as nonsensical as to demand of weakness that it express itself as strength. A quantum of power is just such a quantum of drive, will, effect—more precisely, it is nothing other than this very driving, willing, effecting, and only through the seduction of language (and the basic errors of reason petrified therein), which understands and misunderstands all effecting as conditioned by an effecting something, by a "subject," can it appear otherwise. For just as common people separate the lightning from its flash and take the latter as a *doing*, as an effect of a subject called lightning, so popular morality also separates strength from the expressions of strength as if there were behind the strong an indifferent substratum that is free to express strength—or not to. But there is no such substratum; there is no "being" behind the doing, effecting, becoming; "the doer" is simply fabricated into the doing—the doing is everything. Common people basically double the doing when they have the lightning flash; this is a doing-doing: the same happening is posited first as cause and then once again as its effect. Natural scientists do no better when they say "force moves, force causes," and so on—our entire science, despite all its coolness, its freedom from affect, still stands under the seduction of language and has not gotten rid of the changelings slipped over on it, the "subjects" (the atom, for example, is such a changeling, likewise the Kantian "thing in itself "): small wonder if the suppressed, hiddenly glowing affects of revenge and hate exploit this belief and basically even uphold no other belief more ardently than this one, that *the strong one is free* to be

weak, and the bird of prey to be a lamb: — they thereby gain for themselves the right to hold the bird of prey *accountable* for being a bird of prey . . . When out of the vengeful cunning of powerlessness the oppressed, downtrodden, violated say to themselves: "let us be different from the evil ones, namely good! And good is what everyone is who does not do violence, who injures no one, who doesn't attack, who doesn't retaliate, who leaves vengeance to God, who keeps himself concealed, as we do, who avoids all evil, and in general demands very little of life, like us, the patient, humble, righteous" — it means, when listened to coldly and without prejudice, actually nothing more than: "we weak ones are simply weak; it is good if we do nothing *for which we are not strong enough*" — but this harsh matter of fact, this prudence of the lowest order, which even insects have (presumably playing dead when in great danger in order not to do "too much"), has, thanks to that counterfeiting and self-deception of powerlessness, clothed itself in the pomp of renouncing, quiet, patiently waiting virtue, as if the very weakness of the weak — that is to say, his *essence*, his effecting, his whole unique, unavoidable, undetachable reality — were a voluntary achievement, something willed, something chosen, a *deed*, a *merit*. This kind of human *needs* the belief in a neutral "subject" with free choice, out of an instinct of self-preservation, self-affirmation, in which every lie tends to hallow itself. It is perhaps for this reason that the subject (or, to speak more popularly, the *soul*) has until now been the best article of faith on earth, because it made possible for the majority of mortals, the weak and oppressed of every kind, that sublime self-deception of interpreting weakness itself as freedom, of interpreting their being-such-and-such as a *merit*.

14

Would anyone like to go down and take a little look into the secret of how they *fabricate ideals* on earth? Who has the courage to do so? . . . Well then! The view into these dark workplaces is unobstructed here. Wait just a moment, Mr. Wanton-Curiosity and Daredevil: your eyes must first get used to this falsely shimmering light . . . So! Enough! Now speak! What's going on down there? Tell me what you see, man of the most dangerous curiosity — now *I* am the one listening. —

— "I don't see anything, but I hear all the more. There is a cautious malicious quiet whispering and muttering-together out of all corners and nooks. It seems to me that they are lying; a sugary mildness sticks to each sound. Weakness is to be lied into a *merit*, there is no doubt about it — it is just as you said." —

— Go on!

— "and the powerlessness that does not retaliate into kindness; fearful baseness into 'humility'; subjection to those whom one hates into 'obedience' (namely to one whom they say orders this subjection — they call him God). The inoffensiveness of the weak one, cowardice itself, which he possesses in abundance, his standing-at-the-door, his unavoidable having-to-wait, acquires good names here, such as 'patience,' it is even called virtue *itself*; not being able to avenge oneself is called not wanting to avenge oneself, perhaps even forgiveness ('for *they* know not what they do — we alone know what *they* do!'). They also talk of 'love of one's enemies' — and sweat while doing so."

— Go on!

— "They are miserable, there is no doubt, all of these whisperers and nook-and-cranny counterfeiters, even if they are crouching together warmly — but they tell me that their misery is a distinction and election from God, that one beats the dogs one loves the most; perhaps this misery is also a preparation, a test, a schooling, perhaps it is still more — something for which there will one day be retribution, paid out with enormous interest in gold, no! in happiness. This they call 'blessedness.'"

— Go on!

— "Now they are giving me to understand that they are not only better than the powerful, the lords of the earth, whose saliva they must lick (*not* out of fear, not at all out of fear! but rather because God commands that they honor all authority) — that they are not only better, but that they are also 'better off,' at least will be better off one day. But enough! enough! I can't stand it anymore. Bad air! Bad air! This workplace where they *fabricate ideals* — it seems to me it stinks of sheer lies."

— No! A moment more! You haven't said anything

about the masterpiece of these artists of black magic who produce white, milk, and innocence out of every black:—haven't you noticed what the height of their sophistication is, their boldest, finest, most ingenious, most mendacious artistic stroke? Pay attention! These cellar animals full of revenge and hate—what is it they make precisely out of this revenge and hate? Did you ever hear these words? Would you guess, if you trusted their words alone, that those around you are all humans of *ressentiment*? . . .

—"I understand, I'll open my ears once again (oh! oh! oh! and *close* my nose). Now for the first time I hear what they have said so often: 'We good ones—we *are the just*'—what they demand they call not retaliation but rather 'the triumph of *justice*'; what they hate is not their enemy, no! they hate '*injustice*,' 'ungodliness'; what they believe and hope for is not the hope for revenge, the drunkenness of sweet revenge (—already Homer called it 'sweeter than honey'), but rather the victory of God, of the *just* God over the ungodly; what is left on earth for them to love are not their brothers in hate but rather their 'brothers in love,' as they say, all the good and just on earth."

—And what do they call that which serves them as comfort against all the sufferings of life—their phantasmagoria of the anticipated future blessedness?

—"What? Did I hear right? They call that 'the last judgment,' the coming of *their* kingdom, of the 'kingdom of God'—*meanwhile*, however, they live 'in faith,' 'in love,' 'in hope.'"

—Enough! Enough!

15

In faith in what? In love of what? In hope of what?—These weak ones—someday *they* too want to be the strong ones, there is no doubt, someday *their* "kingdom" too shall come—among them it is called "the kingdom of God" pure and simple, as was noted: they are of course so humble in all things! Even to experience *that* they need to live long, beyond death—indeed they need eternal life so that in the 'kingdom of God' they can also recover eternally the losses incurred during that earth-life "in faith, in love, in hope." Recover their losses for what? Recover their losses through what? . . . It was a gross blunder on Dante's part, it seems to me, when, with terror-instilling ingenuousness, he placed over the gate to his hell the inscription "I, too, was created by eternal love":—in any case, over the gate of the Christian paradise and its "eternal blessedness" there would be better justification for allowing the inscription to stand "I, too, was created by eternal *hate*"—assuming that a truth may stand above the gate to a lie! For *what* is the blessedness of that paradise? . . . We would perhaps guess it already; but it is better that it is expressly documented for us by an authority not to be underestimated in such matters, Thomas Aquinas,[40] the great teacher and saint. "*Beati in regno coelestia*," he says meekly as a lamb, "*videbunt poenas damnatorum*, ***ut beatitudo illis magis complaceat.***"[41] Or would you like to hear it in a stronger key, for instance from the mouth of a triumphant church father[42] who counseled his Christians against the cruel pleasures of the public spectacles—and why? "Faith offers us much more,"—he says, *De spectac. c.* 29 ss.—"*something much stronger*; thanks to salvation there are entirely different joys at our disposal; in place of the athletes we have our martyrs; if we desire blood, well, we have the blood of Christ . . . But what awaits us above all on the day of his return, of his triumph!"—and now he continues, the enraptured visionary: "*At enim supersunt alia spectacula, ille ultimus et perpetuus judicii dies, ille nationibus insperatus, ille derisus, cum tanta saeculi vetustas et tot ejus nativitates uno igne haurientur. Quae tunc spectaculi latitudo!* ***Quid admirer! Quid rideam! Ubi gaudeam! Ubi exultem,*** *spectans tot et tantos reges, qui in coelum recepti nuntiabantur, cum ipso Jove et ipsis suis testibus in imis tenebris congemescentes! Item praesides* (the provincial governor) *persecutores dominici nominis*

40. [Thomas Aquinas (1225–1274), Christian theologian and philosopher, canonized by Pope John XXII in 1323 and declared a Doctor of the Church by Pope Pius V in 1567.]

41. ["The blessed in the kingdom of heaven will see the punishments of the damned, *in order that their bliss be more delightful to them.*" *Summa Theologica* III *Supplementum* Q. 94, Art. 1.]

42. [Tertullian (ca. 155–after 220), important early Christian theologian, polemicist, and moralist from Carthage in North Africa.]

saevioribus quam ipsi flammis saevierunt insultantibus contra Christianos liquescentes! Quos praeterea sapientes illos philosophos coram discipulis suis una conflagrantibus erubescentes, quibus nihil ad deum pertinere suadebant, quibus animas aut nullas aut non in pristina corpora redituras affirmabant! Etiam poëtàs non ad Rhadamanti nec ad Minois, sed ad inopinati Christi tribunal palpitantes! Tunc magis tragoedi audiendi, magis scilicet vocales (in better voice, even more awful screamers) *in sua propria calamitate; tunc histriones cognoscendi, solutiores multo per ignem; tunc spectandus auriga in flammea rota totus rubens, tunc xystici contemplandi non in gymnasiis, sed in igne jaculati, nisi quod ne tunc quidem illos velim vivos, ut qui malim ad eos potius conspectum* ***insatiabilem*** *conferre, qui in dominum desaevierunt. 'Hic est ille, dicam, fabri aut quaestuariae filius* (as everything that follows shows, and in particular this well-known designation from the Talmud for the mother of Jesus, from here on Tertullian means the Jews), *sabbati destructor, Samarites et daemonium habens. Hic est, quem a Juda redemistis, hic est ille arundine et colaphis diverberatus, sputamentis dedecoratus, felle et aceto potatus. Hic est, quem clam discentes subripuerunt, ut resurrexisse dicatur vel hortulanus detraxit, ne lactucae suae frequentia commeantium laederentur.' Ut talia spectes,* ***ut talibus exultes,*** *quis tibi praetor aut consul aut quaestor aut sacerdos de sua liberalitate praestabit? Et tamen haec jam habemus quodammodo* ***per fidem*** *spiritu imaginante repraesentata. Ceterum qualia illa sunt, quae nec oculus vidit nec auris audivit nec in cor hominis ascenderunt?* (1 Cor. 2:9) *Credo circo et utraque cavea* (first and fourth tiers, or, according to others, comic and tragic stages) *et omni stadio gratiora."*[43]—***Per fidem***:[44] thus it is written.

43. ["But indeed there are still other sights, that last and eternal day of judgment, that day unlooked for by the nations, that day they laughed at, when the world so great with age and all its generations shall be consumed by one fire. What variety of sights then! *What should I admire! What should I laugh at! In which should I feel joy! In which should I exult*, seeing so many and great *kings* who were reported to have been received into heaven, now groaning in deepest darkness with Jove himself and those who testified of their reception into heaven! Likewise the praesides *(the provincial governor)*, persecutors of the name of the Lord, being liquefied by flames fiercer than those with which they themselves raged against the Christians! What wise men besides, those very philosophers reddening before their disciples as they blaze together, the disciples to whom they suggested that nothing was of any concern to God; to whom they asserted that our souls are either nothing or they will not return to their former bodies! And also the poets, trembling before the judgment seat, not of Rhadamanthys or Minos but of the Christ, whom they did not expect! Then the great tragedians will be heard, in great voice, no doubt *(in better voice, even more awful screamers)*, in their own calamities; then the actors will be recognized, made a great deal more limber by the fire; then the charioteer will be seen, all red on a flaming wheel; then the athletes will be observed, not in their gymnasiums but cast in the fire—were it not for the fact that not even then would I wish to see them since I would much rather bestow my *insatiable* gaze on those who raged against the Lord. 'This is he,' I shall say, 'the son of the carpenter or the prostitute *(as everything that follows shows, and in particular also this well-known designation from the Talmud for the mother of Jesus, from here on Tertullian means the Jews)*, the Sabbath-breaker, the Samaritan, the one possessed of a devil. This is he whom you bought from Judas, this is the one struck by reed and fist, defiled by spit, given gall and vinegar to drink. This is he whom the disciples secretly stole away that it might be said he had risen, or perhaps the gardener dragged him away so that his lettuce would not be damaged by the crowd of those coming and going.' That you may see such things, *that you may exult in such things*—what praetor or consul or quaestor or priest will, out of his generosity, see to this? And yet even now we have them in a way, *by faith*, represented through the imagining spirit. On the other hand, what are those things which eye hath not seen nor ear heard, nor have ever entered into the heart of man? *(1 Cor. 2:9)* I believe they are more pleasing than circus and both theaters *(first and fourth tiers, or, according to others, comic and tragic stages)* and any stadium."]

44. [By (my) faith.]

16

Let us conclude. The two *opposed* values 'good and bad,' 'good and evil,' have fought a terrible millennia-long battle on earth; and as certainly as the second value has had the upper hand for a long time, even so there is still no shortage of places where the battle goes on, undecided. One could even say that it has

in the meantime been borne up ever higher and precisely thereby become ever deeper, ever more spiritual: so that today there is perhaps no more decisive mark of the "*higher nature*," of the more spiritual nature, than to be conflicted in that sense and still a real battleground for those opposites. The symbol of this battle, written in a script that has so far remained legible across all of human history, is "Rome against Judea, Judea against Rome":—so far there has been no greater event than *this* battle, *this* formulation of the problem, *this* mortally hostile contradiction. Rome sensed in the Jew something like anti-nature itself, its antipodal monstrosity as it were; in Rome the Jew was held to have been "*convicted* of hatred against the entire human race": rightly so, insofar as one has a right to tie the salvation and the future of the human race to the unconditional rule of aristocratic values, of Roman values. What the Jews on the other hand felt towards Rome? One can guess it from a thousand indications; but it will suffice to recall again the Johannine Apocalypse, that most immoderate of all written outbursts that revenge has on its conscience. (Do not underestimate, by the way, the profound consistency of the Christian instinct when it gave precisely this book of hate the name of the disciple of love, the same one to whom it attributed that enamored-rapturous gospel—: therein lies a piece of truth, however much literary counterfeiting may have been needed for this purpose.) The Romans were after all the strong and noble ones, such that none stronger and nobler have ever existed, ever even been dreamt of; everything that remains of them, every inscription thrills, supposing that one can guess *what* is doing the writing there. The Jews, conversely, were that priestly people of *ressentiment* par excellence, in whom there dwelt a popular-moral genius without parallel: just compare the peoples with related talents—for instance the Chinese or the Germans—with the Jews in order to feel what is first and what fifth rank. Which of them has been victorious in the meantime, Rome or Judea? But there is no doubt at all: just consider before whom one bows today in Rome itself as before the quintessence of all the highest values—and not only in Rome, but over almost half the earth, everywhere that man has become tame or wants to become tame,—before *three Jews*, as everyone knows, and *one Jewess* (before Jesus of Nazareth, the fisher Peter, the carpet-weaver Paul, and the mother of the aforementioned Jesus, called Mary). This is very remarkable: Rome has succumbed without any doubt. To be sure, in the Renaissance there was a brilliant-uncanny reawakening of the classical ideal, of the noble manner of valuing all things: Rome itself moved like one awakened from apparent death, under the pressure of the new Judaized Rome built above it, which presented the appearance of an ecumenical synagogue and was called "church": but immediately Judea triumphed again, thanks to that thoroughly mobbish (German and English) *ressentiment* movement called the Reformation, and that which had to follow from it, the restoration of the church—also the restoration of the old sepulchral sleep of classical Rome. In an even more decisive and more profound sense than before, Judea once again achieved a victory over the classical ideal with the French Revolution: the last political nobleness there was in Europe, that of the seventeenth and eighteenth *French* centuries, collapsed under the instincts of popular *ressentiment*—never on earth has a greater jubilation, a noisier enthusiasm been heard! It is true that in the midst of all this the most enormous, most unexpected thing occurred: the classical ideal itself stepped *bodily* and with unheard of splendor before the eyes and conscience of humanity—and once again, more strongly, more simply, more penetratingly than ever, the terrible and thrilling counter-slogan "the *privilege of the few*" resounded in the face of the old lie-slogan of *ressentiment*, "the privilege of the majority," in the face of the will to lowering, to debasement, to leveling, to the downward and evening-ward of man! Like a last sign pointing to the *other* path, Napoleon appeared, that most individual and late-born human being there ever was, and in him the incarnate problem of the *noble ideal in itself*—consider well, *what* kind of problem it is: Napoleon, this synthesis of an *inhuman* and a *superhuman* . . .

17

—Was that the end of it? Was that greatest of all conflicts of ideals thus placed *ad acta*[45] for all time? Or just postponed, postponed for a long time? . . .

45. [Shelved, filed away.]

Won't there have to be a still much more terrible, much more thoroughly prepared flaming up of the old fire someday? Still more: wouldn't precisely *this* be something to desire with all our might? even to will? even to promote? . . . Whoever starts at this point, like my readers, to ponder, to think further, will hardly come to an end any time soon—reason enough for me to come to an end myself, assuming that it has long since become sufficiently clear what I *want*, what I want precisely with that dangerous slogan that is so perfectly tailored to my last book: "*Beyond Good and Evil*" . . . At the very least this does *not* mean "Beyond Good and Bad."—

Note. I take advantage of the opportunity that this treatise gives me to express publicly and formally a wish that until now I have expressed only in occasional conversations with scholars: namely that some philosophical faculty might do a great service for the promotion of *moral-historical* studies through a series of academic essay contests:—perhaps this book will serve to give a forceful impetus in just such a direction. With respect to a possibility of this sort let me suggest the following question: it merits the attention of philologists and historians as much as that of those who are actual scholars of philosophy by profession.

> *"What clues does the study of language, in particular etymological research, provide for the history of the development of moral concepts?"*

—On the other hand it is admittedly just as necessary to win the participation of physiologists and physicians for these problems (of the *value* of previous estimations of value): it may be left to the professional philosophers to act as advocates and mediators in this individual case as well, after they have succeeded in reshaping in general the relationship between philosophy, physiology, and medicine—originally so standoffish, so mistrustful—into the friendliest and most fruit-bearing exchange. Indeed every value table, every "thou shalt," of which history or ethnological research is aware, needs *physiological* illumination and interpretation first of all, in any case before the psychological; all of them likewise await a critique on the part of medical science. The question: what is the *value* of this or that value table or "morality"? demands to be raised from the most diverse perspectives; for this "value relative *to what end*?" cannot be analyzed too finely. Something, for example, that clearly had value with regard to the greatest possible longevity of a race (or to a heightening of its powers of adaptation to a specific climate, or to the preservation of the greatest number), would by no means have the same value if it were an issue of developing a stronger type. The welfare of the majority and the welfare of the few are opposing value viewpoints: to hold the former one to be of higher value already *in itself*, this we will leave to the naïveté of English biologists . . . *All* sciences are henceforth to do preparatory work for the philosopher's task of the future: understanding this task such that the philosopher is to solve the *problem of value*, that he is to determine the *order of rank among values*.—

SECOND TREATISE: "GUILT," "BAD CONSCIENCE," AND RELATED MATTERS

1

To breed an animal that *is permitted to promise*—isn't this precisely the paradoxical task nature has set for itself with regard to man? isn't this the true problem *of* man? . . . That this problem has been solved to a high degree must appear all the more amazing to one who can fully appreciate the force working in opposition, that of *forgetfulness*. Forgetfulness is no mere *vis inertiae* as the superficial believe; rather, it is an active and in the strictest sense positive faculty of suppression, and is responsible for the fact that whatever we experience, learn, or take into ourselves enters just as little into our consciousness during the condition of digestion (one might call it "inanima-

tion") as does the entire thousand-fold process through which the nourishing of our body, so-called "incorporation," runs its course. To temporarily close the doors and windows of consciousness; to remain undisturbed by the noise and struggle with which our underworld of subservient organs works for and against each other; a little stillness, a little *tabula rasa* of consciousness so that there is again space for new things, above all for the nobler functions and functionaries, for ruling, foreseeing, predetermining (for our organism is set up oligarchically)—that is the use of this active forgetfulness, a doorkeeper as it were, an upholder of psychic order, of rest, of etiquette: from which one can immediately anticipate the degree to which there could be no happiness, no cheerfulness, no hope, no pride, no *present* without forgetfulness. The human being in whom this suppression apparatus is damaged and stops functioning is comparable to a dyspeptic (and not just comparable—) he can't "process" anything . . . Precisely this necessarily forgetful animal in whom forgetting represents a force, a form of *strong* health, has now bred in itself an opposite faculty, a memory, with whose help forgetfulness is disconnected for certain cases,—namely for those cases where a promise is to be made: it is thus by no means simply a passive no-longer-being-able-to-get-rid-of the impression once it has been inscribed, not simply indigestion from a once-pledged word over which one cannot regain control, but rather an active no-longer-wanting-to-get-rid-of, a willing on and on of something one has once willed, a true *memory of the will*: so that a world of new strange things, circumstances, even acts of the will may be placed without reservation between the original "I want," "I will do," and the actual discharge of the will, its *act*, without this long chain of the will breaking. But how much this presupposes! In order to have this kind of command over the future in advance, man must first have learned to separate the necessary from the accidental occurrence, to think causally, to see and anticipate what is distant as if it were present, to fix with certainty what is end, what is means thereto, in general to be able to reckon, to calculate,—for this, man himself must first of all have become *calculable*, *regular*, *necessary*, in his own image of himself as well, in order to be able to vouch for himself *as future*, as one who promises does!

2

Precisely this is the long history of the origins of *responsibility*. As we have already grasped, the task of breeding an animal that is permitted to promise includes, as condition and preparation, the more specific task of first *making* man to a certain degree necessary, uniform, like among like, regular, and accordingly predictable. The enormous work of what I have called "morality of custom" (cf. *Daybreak* 9, 14, 16)—the true work of man on himself for the longest part of the duration of the human race, his entire *prehistoric* work, has in this its meaning, its great justification—however much hardness, tyranny, mindlessness, and idiocy may be inherent in it: with the help of the morality of custom and the social straightjacket man was *made* truly calculable. If, on the other hand, we place ourselves at the end of the enormous process, where the tree finally produces its fruit, where society and its morality of custom finally brings to light that *to which* it was only the means: then we will find as the ripest fruit on its tree the *sovereign individual*, the individual resembling only himself, free again from the morality of custom, autonomous and supermoral (for "autonomous" and "moral" are mutually exclusive), in short, the human being with his own independent long will, the human being who *is permitted to promise*—and in him a proud consciousness, twitching in all his muscles, of *what* has finally been achieved and become flesh in him, a true consciousness of power and freedom, a feeling of the completion of man himself. This being who has become free, who is really *permitted* to promise, this lord of the *free* will, this sovereign—how could he not know what superiority he thus has over all else that is not permitted to promise and vouch for itself, how much trust, how much fear, how much reverence he awakens—he "*earns*" all three—and how this mastery over himself also necessarily brings with it mastery over circumstances, over nature and all lesser-willed and more unreliable creatures? The "free" human being, the possessor of a long, unbreakable will, has in this possession his *standard of value* as well: looking from himself toward the others, he honors or holds in contempt; and just as necessarily as he honors the ones like him, the strong and reliable (those who are *permitted* to promise),—that is, every-

one who promises like a sovereign, weightily, seldom, slowly, who is stingy with his trust, who *conveys a mark of distinction* when he trusts, who gives his word as something on which one can rely because he knows himself to be strong enough to uphold it even against accidents, even "against fate"—: just as necessarily he will hold his kick in readiness for the frail dogs who promise although they are not permitted to do so, and his switch for the liar who breaks his word already the moment it leaves his mouth. The proud knowledge of the extraordinary privilege of *responsibility*, the consciousness of this rare freedom, this power over oneself and fate, has sunk into his lowest depth and has become instinct, the dominant instinct:—what will he call it, this dominant instinct, assuming that he feels the need to have a word for it? But there is no doubt: this sovereign human being calls it his *conscience* . . .

3

His conscience? . . . One can guess in advance that the concept "conscience," which we encounter here in its highest, almost disconcerting form, already has behind it a long history and metamorphosis. To be permitted to vouch for oneself, and with pride, hence to be *permitted to say "yes"* to oneself too—that is, as noted, a ripe fruit, but also a *late* fruit:—how long this fruit had to hang on the tree harsh and sour! And for a still much longer time one could see nothing of such a fruit,—no one could have promised it, however certainly everything on the tree was prepared and in the process of growing towards it!—"How does one make a memory for the human animal? How does one impress something onto this partly dull, partly scattered momentary understanding, this forgetfulness in the flesh, so that it remains present?" . . . As one can imagine, the answers and means used to solve this age-old problem were not exactly delicate; there is perhaps nothing more terrible and more uncanny in all of man's prehistory than his *mnemotechnique*. "One burns something in so that it remains in one's memory: only what does not cease *to give pain* remains in one's memory"—that is a first principle from the most ancient (unfortunately also longest) psychology on earth. One might even say that everywhere on earth where there is still solemnity, seriousness, secrecy, gloomy colors in the life of man and of a people, something of that terribleness *continues to be felt* with which everywhere on earth one formerly promised, pledged, vowed: the past, the longest deepest hardest past, breathes on us and wells up in us when we become "serious." Whenever man considered it necessary to make a memory for himself it was never done without blood, torment, sacrifice; the most gruesome sacrifices and pledges (to which sacrifices of firstborn belong), the most repulsive mutilations (castrations, for example), the cruelest ritual forms of all religious cults (and all religions are in their deepest foundations systems of cruelties)—all of this has its origin in that instinct that intuited in pain the most powerful aid of mnemonics. In a certain sense the entirety of asceticism belongs here: a few ideas are to be made indelible, omnipresent, unforgettable, "fixed," for the sake of hypnotizing the entire nervous and intellectual system with these "fixed ideas"—and the ascetic procedures and forms of life are means for taking these ideas out of competition with all other ideas in order to make them "unforgettable." The worse humanity was "at memory" the more terrible is the appearance of its practices; the harshness of penal laws in particular provides a measuring stick for the amount of effort it took to achieve victory over forgetfulness and to keep a few primitive requirements of social co-existence *present* for these slaves of momentary affect and desire. We Germans certainly do not regard ourselves as a particularly cruel and hard-hearted people, still less as particularly frivolous or living-for-the-day; but one need only look at our old penal codes to discover what amount of effort it takes to breed a "people of thinkers" on earth (that is to say: *the* people of Europe, among whom one still finds even today the maximum of confidence, seriousness, tastelessness, and matter-of-factness, qualities which give it a right to breed every type of European mandarin). Using terrible means these Germans have made a memory for themselves in order to become master over their mobbish basic instincts and the brutal heavy-handedness of the same: think of the old German punishments, for example of stoning (—even legend has the millstone fall on the head of the guilty one), breaking on the wheel (the most characteristic invention and specialty of German genius in the realm of punishment!), casting stakes,

having torn or trampled by horses ("quartering"), boiling the criminal in oil or wine (as late as the fourteenth and fifteenth centuries), the popular flaying ("*Riemenschneiden*"), cutting flesh from the breast; also, no doubt, that the evil-doer was smeared with honey and abandoned to the flies under a burning sun. With the help of such images and processes one finally retains in memory five, six "I will nots," in connection with which one has given one's *promise* in order to live within the advantages of society,—and truly! with the help of this kind of memory one finally came "to reason"!—Ah, reason, seriousness, mastery over the affects, this entire gloomy matter called reflection, all these prerogatives and showpieces of man: how dearly they have been paid for! how much blood and horror there is at the base of all "good things"! . . .

4

But how then did that other "gloomy thing," the consciousness of guilt, the entire "bad conscience" come into the world?—And thus we return to our genealogists of morality. To say it once more—or haven't I said it at all yet?—they aren't good for anything. Their own five-span-long, merely "modern" experience; no knowledge, no will to knowledge of the past; still less an instinct for history, a "second sight" necessary precisely here—and nonetheless doing history of morality: this must in all fairness end with results that stand in a relation to truth that is not even flirtatious. Have these previous genealogists of morality even remotely dreamt, for example, that that central moral concept "guilt" had its origins in the very material concept "debt"? Or that punishment as *retribution* developed completely apart from any presupposition concerning freedom or lack of freedom of the will?—and to such a degree that in fact a *high* level of humanization is always necessary before the animal "man" can begin to make those much more primitive distinctions "intentional," "negligent," "accidental," "accountable," and their opposites, and to take them into account when measuring out punishment. The thought, now so cheap and apparently so natural, so unavoidable, a thought that has even had to serve as an explanation of how the feeling of justice came into being at all on earth—"the criminal has earned his punishment *because* he could have acted otherwise"—is in fact a sophisticated form of human judging and inferring that was attained extremely late; whoever shifts it to the beginnings lays a hand on the psychology of older humanity in a particularly crude manner. Throughout the greatest part of human history punishment was definitely *not* imposed *because* one held the evil-doer responsible for his deed, that is, *not* under the presupposition that only the guilty one is to be punished:—rather, as parents even today punish their children, from anger over an injury suffered, which is vented on the agent of the injury—anger held within bounds, however, and modified through the idea that every injury has its *equivalent* in something and can really be paid off, even if only through the *pain* of its agent. Whence has this age-old, deeply-rooted, perhaps now no longer eradicable idea taken its power—the idea of an equivalence between injury and pain? I have already given it away: in the contractual relationship between *creditor* and *debtor*, which is as old as the existence of "legal subjects" and in turn points back to the basic forms of purchase, sale, exchange, trade, and commerce.

5

Calling to mind these contract relationships admittedly awakens various kinds of suspicion and resistance toward the earlier humanity that created or permitted them, as is, after the preceding remarks, to be expected from the outset. Precisely here there are *promises* made; precisely here it is a matter of *making* a memory for the one who promises; precisely here, one may suspect, will be a place where one finds things that are hard, cruel, embarrassing. In order to instill trust in his promise of repayment, to provide a guarantee for the seriousness and the sacredness of his promise, to impress repayment on his conscience as a duty, as an obligation, the debtor—by virtue of a contract—pledges to the creditor in the case of non-payment something else that he "possesses," over which he still has power, for example his body or his wife or his freedom or even his life (or, under certain religious conditions, even his blessedness, the salvation of his soul, finally even his peace in the grave: as in Egypt where the corpse of the debtor found no rest from the creditor, even in the grave—and indeed there was something to this rest, precisely among the

Egyptians.) Above all, however, the creditor could subject the body of the debtor to all manner of ignominy and torture, for example cutting as much from it as appeared commensurate to the magnitude of the debt:—and everywhere and early on there were exact assessments of value developed from this viewpoint—some going horribly into the smallest detail—*legally* established assessments of the individual limbs and areas on the body. I take it already as progress, as proof of a freer, more grandly calculating, *more Roman* conception of the law when the Twelve Tables legislation of Rome decreed it was of no consequence how much or how little the creditors cut off in such a case, "*si plus minusve secuerunt, ne fraude esto.*"[46] Let us make clear to ourselves the logic of this whole form of compensation: it is foreign enough. The equivalence consists in this: that in place of an advantage that directly makes good for the injury (hence in place of a compensation in money, land, possession of any kind) the creditor is granted a certain *feeling of satisfaction* as repayment and compensation,—the feeling of satisfaction that comes from being permitted to vent his power without a second thought on one who is powerless, the carnal delight "*de faire le mal pour le plaisir de le faire*,"[47] the enjoyment of doing violence: which enjoyment is valued all the higher the lower and baser the creditor's standing in the social order and can easily appear to him as a most delectable morsel, indeed as a foretaste of a higher status. Through his "punishment" of the debtor the creditor participates in a *right of lords*: finally he, too, for once attains the elevating feeling of being permitted to hold a being in contempt and maltreat it as something "beneath himself"—or at least, if the actual power of punishment, the execution of punishment has already passed over into the hands of the "authorities," of *seeing* it held in contempt and maltreated. The compensation thus consists in a directive and right to cruelty.—

6

In *this* sphere, in contract law that is, the moral conceptual world "guilt," "conscience," "duty," "sacredness of duty" has its genesis—its beginning, like the beginning of everything great on earth, was thoroughly and prolongedly drenched in blood. And might one not add that this world has in essence never again entirely lost a certain odor of blood and torture? (not even in old Kant: the categorical imperative smells of cruelty . . .) It was likewise here that that uncanny and perhaps now inextricable meshing of ideas, "guilt and suffering," was first knitted. Asking once again: to what extent can suffering be a compensation for "debts"? To the extent that *making*-suffer felt good, and in the highest degree; to the extent that the injured one exchanged for what was lost, including the displeasure over the loss, an extraordinary counter-pleasure: *making*-suffer,—a true *festival*, something that, as stated, stood that much higher in price, the more it contradicted the rank and social standing of the creditor. This stated as conjecture: for it is difficult to see to the bottom of such subterranean things, not to mention that it is embarrassing; and whoever clumsily throws the concept of "revenge" into the middle of it all has covered and obscured his insight into the matter rather than making it easier (—revenge simply leads back to the same problem: "how can making-suffer be a satisfaction?). It seems to me that it is repugnant to the delicacy, even more to the Tartuffery of tame domestic animals (which is to say modern humans, which is to say us) to imagine in all its force the degree to which *cruelty* constitutes the great festival joy of earlier humanity, indeed is an ingredient mixed in with almost all of their joys; how naïvely, on the other hand, how innocently its need for cruelty manifests itself, how universally they rank precisely "disinterested malice" (or, to speak with Spinoza, *sympathia malevolens*)[48] as a *normal* quality of man—: thus as something to which the conscience heartily says "*yes*"! Perhaps even today there is enough of this oldest and most pervasive festival joy of man for a more profound eye to perceive; in *Beyond Good and Evil* 229 (even earlier in *Daybreak* 18, 77, 113), I pointed with a cautious finger to the ever-growing spiritualization and "deification" of cruelty that runs though the entire history of higher culture (and in a significant sense even constitutes it). In any case it

46. [If they have secured more or less, let that be no crime.]

47. [To do evil for the pleasure of doing it.]

48. [Ill-willing sympathy.]

has not been all that long since one could not imagine royal marriages and folk festivals in the grandest style without executions, torturings, or perhaps an *auto-da-fé*, likewise no noble household without beings on whom one could vent one's malice and cruel teasing without a second thought (—think for example of Don Quixote at the court of the Duchess: today we read the entire *Don Quixote* with a bitter taste on our tongue, almost with anguish, and would as a result appear very strange, very puzzling to its author and his contemporaries—they read it with the very clearest conscience as the most lighthearted of books, they practically laughed themselves to death over it). Seeing-suffer feels good, making-suffer even more so—that is a hard proposition, but a central one, an old powerful human-all-too-human proposition, to which, by the way, even the apes might subscribe: for it is said that in thinking up bizarre cruelties they already abundantly herald and, as it were, "prelude" man. Without cruelty, no festival: thus teaches the oldest, longest part of man's history—and in punishment too there is so much that is *festive*!—

7

—With these thoughts, incidentally, it is by no means my intent to help our pessimists to new grist for their discordant and creaking mills of life-weariness; on the contrary they are meant expressly to show that back then, when humanity was not yet ashamed of its cruelty, life on earth was more lighthearted than it is now that there are pessimists. The darkening of the heavens over man has always increased proportionally as man has grown ashamed *of man*. The tired pessimistic glance, the mistrust toward the riddle of life, the icy "no" of disgust at life—these are not the distinguishing marks of the *most evil* ages of the human race: rather, being the swamp plants they are, they first enter the light of day when the swamp to which they belong appears,—I mean the diseased softening and moralization by virtue of which the creature "man" finally learns to be ashamed of all of his instincts. Along the way to "angel" (to avoid using a harsher word here) man has bred for himself that upset stomach and coated tongue through which not only have the joy and innocence of the animal become repulsive but life itself has become unsavory:—so that he at times stands before himself holding his nose and, along with Pope Innocent the Third, disapprovingly catalogues his repulsive traits ("impure begetting, disgusting nourishment in the womb, vileness of the matter out of which man develops, revolting stench, excretion of saliva, urine, and feces"). Now, when suffering is always marshalled forth as the first among the arguments *against* existence, as its nastiest question mark, one would do well to remember the times when one made the reverse judgment because one did not wish to do without *making*-suffer and saw in it an enchantment of the first rank, an actual seductive lure *to* life. Perhaps back then—to the comfort of delicate souls—pain didn't yet hurt as much as it does today; at least such a conclusion will be permissible for a physician who has treated Negroes (taken as representatives of prehistorical man—) for cases of serious internal infection that would almost drive even the best constituted European to despair;—in Negroes they do *not* do this. (Indeed the curve of human capacity for feeling pain appears to sink extraordinarily and almost abruptly as soon as one gets beyond the upper ten thousand or ten million of the highest level of culture; and I, for my part, do not doubt that when held up against one painful night of a single hysterical educated female the combined suffering of all the animals thus far questioned with the knife to obtain scientific answers simply isn't worth considering.) Perhaps one may even be allowed to admit the possibility that this pleasure in cruelty needn't actually have died out: but, in the same proportion as the pain hurts more today, it would need a certain sublimation and subtilization, namely it would have to appear translated into the imaginative and inward, adorned with all kinds of names so harmless that they arouse no suspicion, not even in the most delicate, most hypocritical conscience ("tragic pity" is such a name; another is "*les nostalgies de la croix*").[49] What actually arouses indignation against suffering is not suffering in itself, but rather the senselessness of suffering; but neither for the Christian, who has interpreted into suffering an entire secret salvation machinery, nor for the naive human of older times, who knew how to interpret all suffering in

49. [The nostalgias of the cross.]

terms of spectators or agents of suffering, was there any such *meaningless* suffering at all. So that concealed, undiscovered, unwitnessed suffering could be banished from the world and honestly negated, one was almost compelled back then to invent gods and intermediate beings of all heights and depths, in short, something that also roams in secret, that also sees in the dark, and that does not easily let an interesting painful spectacle escape it. For with the help of such inventions life back then was expert at the trick at which it has always been expert, of justifying itself, of justifying its "evil"; today it would perhaps need other auxiliary inventions for this (for example life as riddle, life as epistemological problem). "Every evil is justified, the sight of which edifies a god": thus went the prehistoric logic of feeling—and, really, was it only the prehistoric? The gods, conceived of as friends of *cruel* spectacles—oh how far this age-old conception extends even into our humanized Europe! on this point one may consult with Calvin[50] and Luther[51] for instance. It is certain in any case that the *Greeks* still knew of no more pleasant offering with which to garnish the happiness of their gods than the joys of cruelty. With what sort of eyes then do you think Homer had his gods look down on the fates of humans? What was the ultimate meaning of Trojan wars and similar tragic horrors? There can be no doubt at all: they were meant as *festival games* for the gods: and, insofar as the poet is in this respect more "godlike" than other humans, probably also as festival games for the poets . . . The moral philosophers of Greece later imagined the eyes of the gods no differently, still glancing down at the moral struggle, at the heroism and the self-torture of the virtuous: the "Heracles of duty" was on a stage, he also knew he was on it; virtue without witnesses was something entirely inconceivable for this people of spectacles. Wasn't that philosophers' invention, so audacious, so fateful, which was first devised for Europe back then—that of "free will," of the absolute spontaneity of man in good and evil—devised above all in order to create a right to the idea that the interest of the gods in man, in human virtue, *could never be exhausted*? On this stage, the earth, there would never be a shortage of truly new things, of truly unheard-of tensions, complications, catastrophes: a world conceived as completely deterministic would have been predictable for the gods and accordingly soon tiring—reason enough for these *friends of the gods*, the philosophers, not to expect their gods to be able to deal with such a deterministic world! In antiquity all of humanity is full of tender considerations for "the spectator," as an essentially public, essentially visible world that could not imagine happiness without spectacles and festivals.—And, as already mentioned, in great *punishment* too there is so much that is festive! . . .

51. [Martin Luther (1483–1546), instigator of the 16th century Reformation and of Protestantism.]

8

The feeling of guilt, of personal obligation—to take up the train of our investigation again—had its origin, as we have seen, in the oldest and most primitive relationship among persons there is, in the relationship between buyer and seller, creditor and debtor: here for the first time person stepped up against person, here for the first time a person *measured himself* by another person. No degree of civilization however low has yet been discovered in which something of this relationship was not already noticeable. Making prices, gauging values, thinking out equivalents, exchanging—this preoccupied man's very first thinking to such an extent that it is in a certain sense thinking *itself*: here that oldest kind of acumen was bred, here likewise we may suspect the first beginnings of human pride, man's feeling of pre-eminence with respect to other creatures. Perhaps our word "man" (*manas*)[52] still expresses precisely something of this self-esteem: man designated himself as the being who measures values, who values and measures, as the "appraising animal in itself." Purchase and sale, together with their psychological accessories, are older than even the beginnings of any societal associations and organizational forms: it was out of the most rudimentary form of personal legal rights that the budding feeling of exchange, contract, guilt, right, obligation,

52. [Sanskrit: mind; understanding or the conscious will.]

compensation first *transferred* itself onto the coarsest and earliest communal complexes (in their relationship to similar complexes), together with the habit of comparing, measuring, and calculating power against power. The eye was simply set to this perspective: and with that clumsy consistency characteristic of earlier humanity's thinking—which has difficulty moving but then continues relentlessly in the same direction—one arrived straightaway at the grand generalization "every thing has its price; *everything* can be paid off"—at the oldest and most naive moral canon of *justice*, at the beginning of all "good-naturedness," all "fairness," all "good will," all "objectivity" on earth. Justice at this first stage is the good will among parties of approximately equal power to come to terms with one another, to reach an "understanding" again by means of a settlement—and in regard to less powerful parties, to *force* them to a settlement among themselves.—

9

Always measured by the standard of an earlier time (which earlier time is, by the way, at all times present or again possible): the community, too, thus stands to its members in that important basic relationship, that of the creditor to his debtor. One lives in a community, one enjoys the advantages of a community (oh what advantages! we sometimes underestimate this today), one lives protected, shielded, in peace and trust, free from care with regard to certain injuries and hostilities to which the human *outside*, the "outlaw," is exposed—a German understands what "Elend," *êlend*[53] originally means—, since one has pledged and obligated oneself to the community precisely in view of these injuries and hostilities. What happens *in the other case*? The community, the deceived creditor, will exact payment as best it can, one can count on that. Here it is least of all a matter of the direct injury inflicted by the injuring party; quite apart from this, the criminal is above all a "breaker," one who breaks his contract and word *with the whole*, in relation to all goods and conveniences of communal life in which he has until this point had a share. The criminal is a debtor who not only fails to pay back the advantages and advances rendered him, but also even lays a hand on his creditor: he therefore not only forfeits all of these goods and advantages from now on, as is fair,—he is also now reminded *how much there is to these goods*. The anger of the injured creditor, of the community, gives him back again to the wild and outlawed condition from which he was previously protected: it expels him from itself,—and now every kind of hostility may vent itself on him. At this level of civilization "punishment" is simply the copy, the ***mimus*** of normal behavior toward the hated, disarmed, defeated enemy, who has forfeited not only every right and protection, but also every mercy; in other words, the law of war and the victory celebration of *vae victis!*[54] in all their ruthlessness and cruelty:—which explains why war itself (including the warlike cult of sacrifice) has supplied all the *forms* in which punishment appears in history.

10

As its power grows, a community no longer takes the transgressions of the individual so seriously because they can no longer count as dangerous and subversive for the continued existence of the whole to the same extent as formerly: the evildoer is no longer "made an outlaw" and cast out; the general anger is no longer allowed to vent itself in the same unbridled manner as formerly—rather, from now on, the evildoer is carefully defended against this anger, particularly that of the ones directly injured, and taken under the protection of the whole. Compromise with the anger of the one immediately affected by the misdeed; a striving to localize the case and prevent a further or indeed general participation and unrest; attempts to find equivalents and to settle the entire affair (the *compositio*);[55] above all the increasingly more resolute will to understand every offense as in some sense *capable of being paid off*, hence, at least to a certain

53. [The New High German *Elend* (misery) derives from the Old High German adjective *elilenti* (in another land or country; banished) via the shortened Middle High German *ellende* or *êlend* (foreign, miserable).]

54. [Woe to the conquered! Livy, *Ab urbe condita*, Book V, 48, 9.]

55. [Term from Roman law referring to the settlement in a case of injury or damage caused by an illegal act.]

extent, to *isolate* the criminal and his deed from each other—these are the traits that are imprinted with increasing clarity onto the further development of penal law. If the power and the self-confidence of a community grow, the penal law also always becomes milder; every weakening and deeper endangering of the former brings the latter's harsher forms to light again. The "creditor" has always become more humane to the degree that he has become richer; finally the amount of injury he can bear without suffering from it even becomes the *measure* of his wealth. It would not be impossible to imagine a *consciousness of power* in society such that society might allow itself the noblest luxury there is for it—to leave the one who injures it *unpunished*. "What concern are my parasites to me?" it might then say. "Let them live and prosper: I am strong enough for that!" . . . The justice that began with "everything can be paid off, everything must be paid off," ends by looking the other way and letting the one unable to pay go free,—it ends like every good thing on earth, by *cancelling itself*. This self-cancellation of justice: we know what pretty name it gives itself—*mercy*; as goes without saying, it remains the privilege of the most powerful, better still, his beyond-the-law.

11

—Here a word in opposition to recent attempts to seek the origin of justice on an entirely different ground,—namely that of *ressentiment*. First, for the ears of psychologists, supposing they should have the desire to study *ressentiment* itself up close for once: this plant now blooms most beautifully among anarchists and anti-Semites—in secret, incidentally, as it has always bloomed, like the violet, albeit with a different scent. And as like must necessarily always proceed from like, so it will not surprise us to see proceeding again from just such circles attempts like those often made before—compare above, section 14—to hallow *revenge* under the name of *justice*—as if justice were basically only a further development of the feeling of being wounded—and retroactively to raise to honor along with revenge the *reactive* affects in general and without exception. At the latter I would least take offense: with respect to the entire biological problem (in relation to which the value of these affects has thus far been underestimated) it would even appear to me to be a *merit*. I call attention only to the circumstance that it is from the spirit of *ressentiment* itself that this new nuance of scientific fairness (in favor of hate, envy, ill will, suspicion, rancor, revenge) grows forth. For this "scientific fairness" immediately shuts down and makes room for accents of mortal hostility and prejudice as soon as it is a matter of another group of affects that are, it seems to me, of still much higher biological value than those reactive ones, and accordingly deserve all the more to be *scientifically* appraised and esteemed: namely the truly *active* affects like desire to rule, greed, and the like. (E. Dühring,[56] *Value of Life*; *Course in Philosophy*; basically everywhere.) So much against this tendency in general: as for Dühring's particular proposition that the homeland of justice is to be sought on the ground of reactive feeling, one must, for love of the truth, pit against it in stark reversal this alternative proposition: the *last* ground conquered by the spirit of justice is the ground of reactive feeling! If it really happens that the just man remains just even toward those who injure him (and not merely cold, moderate, distant, indifferent: being just is always a *positive* way of behaving), if the high, clear objectivity—that sees as deeply as it does generously—of the just eye, the *judging* eye, does not cloud even under the assault of personal injury, derision, accusation, well, then that is a piece of perfection and highest mastery on earth—what is more, something one would be prudent not to expect here, in which one in any case should not all too easily *believe*. Even with the most righteous persons it is certain that a small dose of attack, malice, insinuation is, on the average, already enough to chase the blood into their eyes and the fairness *out*. The active, the attacking, encroaching human is still located a hundred paces nearer to justice than the reactive one; he simply has no need to appraise his object falsely and with prejudice as the reactive human does, must do. Therefore in all ages the aggressive human, as the stronger, more

56. [Eugen Karl Dühring (1833–1921). Philosopher and political economist. In his autobiography (1882) he claims to have been the founder of anti-Semitism, and he was a major figure in the anti-Semitic movement in Germany.]

courageous, more noble one, has in fact also had the *freer* eye, the *better* conscience on his side: conversely one can already guess who actually has the invention of the "bad conscience" on his conscience,—the human being of *ressentiment*! Finally, just look around in history: in which sphere has the entire administration of justice, also the true need for justice, thus far been at home on earth? Perhaps in the sphere of the reactive human? Absolutely *not*: rather in that of the active, strong, spontaneous, aggressive. Considered historically, justice on earth represents—let it be said to the annoyance of the above-named agitator (who himself once confessed: "the doctrine of revenge runs through all my works and efforts as the red thread of justice")—precisely the battle *against* reactive feelings, the war against them on the part of active and aggressive powers that have used their strength in part to call a halt to and impose measure on the excess of reactive pathos and to force a settlement. Everywhere justice is practiced and upheld one sees a stronger power seeking means to put an end to the senseless raging of *ressentiment* among weaker parties subordinated to it (whether groups or individuals), in part by pulling the object of *ressentiment* out of the hands of revenge, in part by setting in the place of revenge the battle against the enemies of peace and order, in part by inventing, suggesting, in some cases imposing compensations, in part by raising certain equivalents for injuries to the status of a norm to which *ressentiment* is henceforth once and for all restricted. But the most decisive thing the highest power does and forces through against the predominance of counter- and after-feelings—which it always does as soon as it is in any way strong enough to do so—is the establishment of the *law*, the imperative declaration of what in general is to count in its eyes as permitted, as just, what as forbidden, as unjust: after it has established the law, it treats infringements and arbitrary actions of individuals or entire groups as wanton acts against the law, as rebellion against the highest power itself, thereby diverting the feeling of its subjects away from the most immediate injury caused by such wanton acts and thus achieving in the long run the opposite of what all revenge wants, which sees only the viewpoint of the injured one, allows only it to count—from now on the eye is trained for an ever *more impersonal* appraisal of deeds, even the eye of the injured one himself (although this last of all, as was mentioned at the start).—Accordingly, only once the law has been established do "justice" and "injustice" exist (and *not* as Dühring would have it, beginning with the act of injuring). To talk of justice and injustice *in themselves* is devoid of all sense; *in itself* injuring, doing violence, pillaging, destroying naturally cannot be "unjust," insofar as life acts *essentially*—that is, in its basic functions—in an injuring, violating, pillaging, destroying manner and cannot be *thought* at all without this character. One must even admit to oneself something still more problematic: that, from the highest biological standpoint, conditions of justice can never be anything but *exceptional conditions*, as partial restrictions of the true will of life—which is out after power—and subordinating themselves as individual means to its overall end: that is, as means for creating *greater* units of power. A legal system conceived of as sovereign and universal, not as a means in the battle of power complexes, but rather as means *against* all battle generally, say in accordance with Dühring's communist cliché that every will must accept every other will as equal, would be a principle *hostile to life*, a destroyer and dissolver of man, an attempt to kill the future of man, a sign of weariness, a secret pathway to nothingness.—

12

Yet a word on the origin and purpose of punishment—two problems that fall out or ought to fall out separately: unfortunately they are usually lumped together. How do the previous genealogists of morality carry on in this case? Naively, as they have always carried on—: they discover some "purpose" or other in punishment, for example revenge or deterrence, then innocently place this purpose at the beginning as *causa fiendi*[57] of punishment, and—are done. The "purpose in law," however, is the last thing that is usable for the history of the genesis of law: on the contrary, for history of every kind there is no more important proposition than that one which is gained with such effort but also really *ought to be* gained,—

57. [Cause of the coming into being.]

namely, that the cause of the genesis of a thing and its final usefulness, its actual employment and integration into a system of purposes, lie *toto caelo* apart; that something extant, something that has somehow or other come into being, is again and again interpreted according to new views, monopolized in a new way, transformed and rearranged for a new use by a power superior to it; that all happening in the organic world is an *overpowering, a becoming-lord-over*; and that, in turn, all overpowering and becoming-lord-over is a new interpreting, an arranging by means of which the previous "meaning" and "purpose" must of necessity become obscured or entirely extinguished. However well one has grasped the *utility* of some physiological organ (or of a legal institution, a social custom, a political practice, a form in the arts or in religious cult), one has still not comprehended anything regarding its genesis: as uncomfortable and unpleasant as this may sound to earlier ears,—for from time immemorial one had thought that in comprehending the demonstrable purpose, the usefulness of a thing, a form, an arrangement, one also comprehended the reason for its coming into being—the eye as made to see, the hand as made to grasp. Thus one also imagined punishment as invented for punishing. But all purposes, all utilities, are only *signs* that a will to power has become lord over something less powerful and has stamped its own functional meaning onto it; and in this manner the entire history of a "thing," an organ, a practice can be a continuous sign-chain of ever new interpretations and arrangements, whose causes need not be connected even among themselves—on the contrary, in some cases only accidentally follow and replace one another. The "development" of a thing, a practice, an organ is accordingly least of all its *progressus* toward a goal, still less a logical and shortest *progressus*, reached with the smallest expenditure of energy and cost,—but rather the succession of more or less profound, more or less independent processes of overpowering that play themselves out in it, including the resistances expended each time against these processes, the attempted changes of form for the purpose of defense and reaction, also the results of successful counteractions. The form is fluid but the "meaning" is even more so . . . Even in the individual organism things are no different: with each essential growth of the whole the "meaning" of the individual organs shifts as well,—in some cases their partial destruction, their reduction in number (for example through destruction of the intermediate members), can be a sign of growing strength and perfection. I wanted to say: even the partial *loss of utility*, atrophying and degenerating, the forfeiture of meaning and purposiveness, in short death, belongs to the conditions of true *progressus*: which always appears in the form of a will and way to *greater power* and is always pushed through at the expense of numerous smaller powers. The magnitude of a "progress" is even *measured* by the mass of all that had to be sacrificed for it; humanity as mass sacrificed for the flourishing of a single *stronger* species of human being—that *would be* progress . . . —I emphasize this main viewpoint of historical methodology all the more because it basically goes against the presently ruling instincts and taste of the times, which would rather learn to live with the absolute randomness, indeed the mechanistic senselessness of all happening than with the theory of a *power-will* playing itself out in all happening. The democratic idiosyncrasy against everything that rules and desires to rule, the modern *misarchism* (to create a bad word for a bad thing) has gradually transformed and disguised itself into something spiritual, most spiritual, to such an extent that today it is already penetrating, is *allowed* to penetrate, step by step into the most rigorous, apparently most objective sciences; indeed it appears to me already to have become lord over the whole of physiology and the doctrine of life—to its detriment, as goes without saying—by removing through sleight of hand one of its basic concepts, that of true *activity*. Under the pressure of that idiosyncrasy one instead places "adaptation" in the foreground, that is to say an activity of second rank, a mere reactivity; indeed life itself is defined as an ever more purposive inner adaptation to external circumstances (Herbert Spencer). In so doing, however, one mistakes the essence of life, its *will to power*; in so doing one overlooks the essential pre-eminence of the spontaneous, attacking, infringing, reinterpreting, reordering, and formative forces, upon whose effect the "adaptation" first follows; in so doing one denies the lordly role of the highest functionaries in the organism itself, in which the will of life appears active and form-giving. One recalls that for

which Huxley[58] reproached Spencer—his "administrative nihilism": but it is a matter of *more* than just "administering" . . .

13

—To return to our topic, namely to *punishment*, one must then distinguish in it two sorts of things: first that which is relatively *permanent* in it, the practice, the act, the "drama," a certain strict sequence of procedures; on the other hand that which is *fluid* in it, the meaning, the purpose, the expectation tied to the execution of such procedures. It is presupposed here without further ado, per analogy, according to the main viewpoint of the historical methodology just developed, that the procedure itself will be something older, earlier than its use for punishment, that the latter was first placed into, interpreted into the procedure (which had long existed, but was practiced in another sense)—in short, that things are *not* as our naive genealogists of morality and law have thus far assumed, all of whom thought of the procedure as *invented* for the purpose of punishing, as one once thought of the hand as invented for the purpose of grasping. Now as for that other element in punishment—that which is fluid, its "meaning"—in a very late state of culture (for example in present-day Europe), the concept "punishment" in fact no longer represents a single meaning at all but rather an entire synthesis of "meanings": the previous history of punishment in general, the history of its exploitation for the most diverse purposes, finally crystallizes into a kind of unity that is difficult to dissolve, difficult to analyze and—one must emphasize—is completely and utterly *undefinable*. (Today it is impossible to say for sure why we actually punish: all concepts in which an entire process is semiotically summarized elude definition; only that which has no history is definable.) In an earlier stage, by contrast, that synthesis of "meanings" still appears more soluble, also more capable of shifts; one can still perceive in each individual case how the elements of the synthesis change their valence and rearrange themselves accordingly, so that now this, now that element comes to the fore and dominates at the expense of the remaining ones, indeed in some cases one element (say the purpose of deterrence) seems to cancel out all the rest of the elements. To give at least some idea of how uncertain, how after-the-fact, how accidental "the meaning" of punishment is and how one and the same procedure can be used, interpreted, arranged with respect to fundamentally different intentions: I offer here the schema that offered itself to me on the basis of a relatively small and random body of material. Punishment as rendering-harmless, as prevention of further injury. Punishment as payment to the injured party for the injury, in any form (even in that of a compensating affect). Punishment as isolation of a disturbance of equilibrium in order to prevent a further spreading of the disturbance. Punishment as instilling fear of those who determine and execute the punishment. Punishment as a kind of compensation for the benefits the criminal has enjoyed up to that point (for example when he is made useful as a slave in the mines). Punishment as elimination of a degenerating element (in some cases of an entire branch, as according to Chinese law: thus as a means for preserving the purity of the race or for maintaining a social type). Punishment as festival, namely as mocking and doing violence to a finally defeated enemy. Punishment as making a memory, whether for the one who suffers the punishment—so-called "improvement"—or for the witnesses of the execution. Punishment as payment of an honorarium, stipulated on the part of the power that protects the evil-doer from the excesses of revenge. Punishment as compromise with the natural state of revenge, insofar as the latter is still upheld and claimed as a privilege by powerful clans. Punishment as declaration of war and war-time measure against an enemy of peace, of law, of order, of authority, whom one battles—with the means that war furnishes—as dangerous to the community, as in breach of contract with respect to its presuppositions, as a rebel, traitor, and breaker of the peace.—

14

This list is certainly not complete; obviously punishment is overladen with utilities of all kinds. All the

58. [T(homas) H(enry) Huxley (1825–1895), English biologist. He was one of Darwin's close associates and perhaps his chief defender in the public debates concerning the theory of evolution.]

more reason to subtract from it a *supposed* utility that admittedly counts in popular consciousness as its most essential one,—precisely the one in which belief in punishment, teetering today for several reasons, still finds its most forceful support. Punishment is supposed to have the value of awakening in the guilty one the *feeling of guilt*; one seeks in it the true *instrumentum* of that reaction of the soul called "bad conscience," "pang of conscience." But by so doing one lays a hand on reality and on psychology, even for today—and how much more for the longest part of the history of man, his prehistory! Precisely among criminals and prisoners the genuine pang of conscience is something extremely rare; the prisons, the penitentiaries are *not* the breeding places where this species of gnawing worm most loves to flourish:—on this there is agreement among all conscientious observers, who in many cases render a judgment of this sort reluctantly enough and against their most personal wishes. In general, punishment makes hard and cold; it concentrates; it sharpens the feeling of alienation; it strengthens the power of resistance. If it should happen that it breaks the vigor and brings about a pitiful prostration and self-abasement, such a result is surely even less pleasing than the average effect of punishment—which is characterized by a dry gloomy seriousness. But if we think, say, of those millennia *before* the history of man, then one may unhesitatingly judge that it is precisely through punishment that the development of the feeling of guilt has been most forcefully *held back*—at least with respect to the victims on whom the punishing force vented itself. For let us not underestimate the extent to which precisely the sight of the judicial and executive procedures prevents the criminal from feeling his deed, the nature of his action, as *in itself* reprehensible, for he sees the very same kind of actions committed in the service of justice and then approved, committed with a good conscience: thus spying, outwitting, bribery, entrapment, the whole tricky and cunning art of police and prosecutors; moreover—based on principle, without even the excuse of emotion—robbing, overpowering, slandering, taking captive, torturing, murdering as displayed in the various kinds of punishment—all of these thus actions his judges in no way reject and condemn *in themselves*, but rather only in a certain respect and practical application. The "bad conscience," this most uncanny and interesting plant of our earthly vegetation, did *not* grow on this ground,—indeed, in the consciousness of the ones judging, the ones punishing, there was for the longest time *nothing* expressed that suggested one was dealing with a "guilty one." But rather with an instigator of injury, with an irresponsible piece of fate. And the one himself upon whom the punishment afterwards fell, again like a piece of fate, had no other "inner pain" than he would have had at the sudden occurrence of something unanticipated, of a frightful natural event, of a plummeting, crushing boulder against which one can no longer fight.

15

This once entered Spinoza's consciousness in an ensnaring manner (to the vexation of his interpreters, who really *exert* themselves to misunderstand him at this point, for example Kuno Fischer)[59] when one afternoon, bothered by who knows what kind of memory, he dwelt on the question of what actually remained for him of the famous ***morsus conscientiae***[60]—he who had sent good and evil into exile among the human illusions and had fiercely defended the honor of his "free" God against those blasphemers who claimed something to the effect that God works everything *sub ratione boni*[61] ("that, however, would be to subject God to fate and would in truth be the greatest of all absurdities"—). For Spinoza the world had stepped back again into that innocence in which it had lain before the invention of the bad conscience: what had become of the *morsus conscientiae* in the process? "The opposite of *gaudium*,"[62] he finally said to himself,—"a sadness, accompanied by the image of a past matter that has turned out in a manner contrary to all expectation." Eth. III propos. XVIII schol. I. II. For thousands of years instigators of evil

61. [For the sake of the good.]

62. [Joy.]

overtaken by punishment have felt *no different than Spinoza* with regard to their "transgression": "something has unexpectedly gone wrong here," *not*: "I should not have done that"—they submitted themselves to the punishment as one submits to a sickness or a misfortune or to death, with that stouthearted fatalism without revolt by which the Russians, for example, even today have the advantage over us Westerners in dealing with life. If there was a critique of the deed back then, it was prudence that exercised this critique on the deed: without question we must seek the actual *effect* of punishment above all in a sharpening of prudence, in a lengthening of memory, in a will hereafter to proceed more cautiously, more mistrustfully, more secretively, in the insight that one is once and for all too weak for many things, in a kind of improvement in self-assessment. Generally what can be achieved among humans and animals through punishment is an increase of fear, a sharpening of prudence, mastery of the appetites: punishment thus *tames* man, but it does not make him "better"—one might with greater justification maintain the opposite. ("Injury makes prudent," say the common folk: insofar as it makes prudent, it also makes bad. Fortunately, it often enough makes stupid.)

16

At this point I can no longer avoid helping my own hypothesis on the origin of the "bad conscience" to a first, preliminary expression: it is not easy to present and needs to be considered, guarded, and slept over for a long time. I take bad conscience to be the deep sickness into which man had to fall under the pressure of that most fundamental of all changes he ever experienced—the change of finding himself enclosed once and for all within the sway of society and peace. Just as water animals must have fared when they were forced either to become land animals or to perish, so fared these half animals who were happily adapted to wilderness, war, roaming about, adventure—all at once all of their instincts were devalued and "disconnected." From now on they were to go on foot and "carry themselves" where they had previously been carried by the water: a horrible heaviness lay upon them. They felt awkward doing the simplest tasks; for this new, unfamiliar world they no longer had their old leaders, the regulating drives that unconsciously guided them safely—they were reduced to thinking, inferring, calculating, connecting cause and effect, these unhappy ones, reduced to their "consciousness," to their poorest and most erring organ! I do not believe there has ever been such a feeling of misery on earth, such a leaden discomfort—and yet those old instincts had not all at once ceased to make their demands! It's just that it was difficult and seldom possible to yield to them: for the most part they had to seek new and as it were subterranean gratifications. All instincts that do not discharge themselves outwardly *turn themselves inwards*—this is what I call the *internalizing* of man: thus first grows in man that which he later calls his "soul." The entire inner world, originally thin as if inserted between two skins, has spread and unfolded, has taken on depth, breadth, height to the same extent that man's outward discharging has been *obstructed*. Those terrible bulwarks with which the organization of the state protects itself against the old instincts of freedom—punishments belong above all else to these bulwarks—brought it about that all those instincts of the wild free roaming human turned themselves backwards *against man himself*. Hostility, cruelty, pleasure in persecution, in assault, in change, in destruction—all of that turning itself against the possessors of such instincts: *that* is the origin of "bad conscience." The man who, for lack of external enemies and resistance, and wedged into an oppressive narrowness and regularity of custom, impatiently tore apart, persecuted, gnawed at, stirred up, maltreated himself; this animal that one wants to "tame" and that beats itself raw on the bars of its cage; this deprived one, consumed by homesickness for the desert, who had to create out of himself an adventure, a place of torture, an uncertain and dangerous wilderness—this fool, this longing and desperate prisoner became the inventor of "bad conscience." In him, however, the greatest and most uncanny of sicknesses was introduced, one from which man has not recovered to this day, the suffering of man *from man*, from *himself*—as the consequence of a forceful separation from his animal past, of a leap and plunge, as it were, into new situations and conditions of existence, of a declaration of war against the old instincts on which his energy, desire, and terribleness had thus far rested. Let us immediately

add that, on the other hand, with the appearance on earth of an animal soul turned against itself, taking sides against itself, something so new, deep, unheard of, enigmatic, contradictory, *and full of future* had come into being that the appearance of the earth was thereby essentially changed. Indeed, divine spectators were necessary to appreciate the spectacle that thus began and whose end is still by no means in sight—a spectacle too refined, too wonderful, too paradoxical to be permitted to play itself out senselessly-unnoticed on some ridiculous star! Since that time man is *included* among the most unexpected and exciting lucky throws in the game played by the "big child" of Heraclitus, whether called Zeus or chance—he awakens for himself an interest, an anticipation, a hope, almost a certainty, as if with him something were announcing itself, something preparing itself, as if man were not a goal but only a path, an incident, a bridge, a great promise . . .

17

To the presupposition of this hypothesis on the origin of bad conscience belongs first, that this change was not gradual, not voluntary, and that it presented itself not as an organic growing into new conditions, but rather as a break, a leap, a compulsion, an inescapable doom, against which there was no struggle and not even any *ressentiment*. Second, however, that this fitting of a previously unrestrained and unformed population into a fixed form, given its beginning in an act of force, could be brought to its completion only by acts of force—that the oldest "state" accordingly made its appearance as a terrible tyranny, as a crushing and ruthless machinery, and continued to work until finally such a raw material of people and half-animals was not only thoroughly kneaded and pliable but also *formed*. I use the word "state": it goes without saying who is meant by this—some pack of blond beasts of prey, a race of conquerors and lords, which, organized in a warlike manner and with the power to organize, unhesitatingly lays its terrible paws on a population enormously superior in number perhaps, but still formless, still roaming about. It is in this manner, then, that the "state" begins on earth: I think the flight of fancy that had it beginning with a "contract" has been abandoned. Whoever can give orders, whoever is "lord" by nature, whoever steps forth violently, in deed and gesture—what does he have to do with contracts! With such beings one does not reckon, they come like fate, without basis, reason, consideration, pretext; they are there like lightning is there: too terrible, too sudden, too convincing, too "different" even to be so much as hated. Their work is an instinctive creating of forms, impressing of forms; they are the most involuntary, unconscious artists there are:—where they appear, in a short time something new stands there, a ruling structure that *lives*, in which parts and functions are delimited and related to one another, in which nothing at all finds a place that has not first had placed into it a "meaning" with respect to the whole. They do not know what guilt, what responsibility, what consideration is, these born organizers; in them that terrible artists' egoism rules, that has a gaze like bronze and that knows itself already justified to all eternity in its "work," like the mother in her child. *They* are not the ones among whom "bad conscience" grew, that is clear from the outset—but it would not have grown *without them*, this ugly growth, it would be missing, if an enormous quantity of freedom had not been banished from the world, at least from visibility, and made *latent* as it were, under the pressure of the blows of their hammers, of their artist's violence. This *instinct for freedom*, forcibly made latent—we have already grasped it—this instinct for freedom, driven back, suppressed, imprisoned within, and finally discharging and venting itself only on itself: this, only this, is *bad conscience* in its beginnings.

18

One should guard against forming a low opinion of this entire phenomenon just because it is ugly and painful from the outset. After all, the active force that is at work on a grander scale in those violence-artists and organizers and that builds states, is basically the same force that here—inwardly, on a smaller, pettier scale, in a backwards direction, in the "labyrinth of the breast," to use Goethe's words—creates for itself the bad conscience and builds negative ideals: namely that *instinct for freedom* (speaking in my language: the will to power). Only here the matter on which this force's formative and violating nature vents itself

is precisely man himself, his entire animal old self—and *not*, as in that larger and more conspicuous phenomenon, the *other* human, the *other* humans. This secret self-violation, this artists' cruelty, this pleasure in giving oneself—as heavy resisting suffering matter—a form, in burning into oneself a will, a critique, a contradiction, a contempt, a "no"; this uncanny and horrifying-pleasurable work of a soul compliant-conflicted with itself, that makes itself suffer out of pleasure in making-suffer, this entire *active* "bad conscience," as the true womb of ideal and imaginative events, finally brought to light—one can guess it already—a wealth of new disconcerting beauty and affirmation and perhaps for the first time beauty *itself* . . . For what would be "beautiful" if contradiction had not first come to a consciousness of itself, if the ugly had not first said to itself "I am ugly"? . . . After this hint, that enigma will at the least be less enigmatic, namely, to what extent an ideal, a beauty can be suggested by contradictory concepts like *selflessness*, *self-denial*, *self-sacrifice*; and we know one thing henceforth, this I do not doubt—namely what kind of *pleasure* it is that the selfless, the self-denying, the self-sacrificing feel from the very start: this pleasure belongs to cruelty.—So much for the present on the origins of the "unegoistic" as a *moral* value and toward staking out the ground from which this value has grown: bad conscience, the will to self-maltreatment, first supplies the presupposition for the *value* of the unegoistic.—

19

It is a sickness, bad conscience—this admits of no doubt—but a sickness as pregnancy is a sickness. Let us seek out the conditions under which this sickness has come to its most terrible and most sublime pinnacle:—we shall see just what it was that thus first made its entry into the world. For this we need a long breath,—and to start off we must return once again to an earlier viewpoint. The civil-law relationship of the debtor to his creditor, of which I have already spoken at length, was once again—and indeed in a manner that is historically exceedingly curious and questionable—interpreted into a relationship in which it is for us modern humans perhaps at its most incomprehensible: namely the relationship of *those presently living* to their *ancestors*. Within the original clan association—we are speaking of primeval times—the living generation always acknowledges a juridical obligation to the earlier generation, and particularly to the earliest one, which founded the clan (and by no means a mere sentimental obligation: one might with good reason even deny the latter altogether for the longest part of the existence of the human race). Here the conviction holds sway that it is only through the sacrifices and achievements of the ancestors that the clan *exists* at all,—and that one has to *repay* them through sacrifices and achievements: one thereby acknowledges a *debt* that is continually growing, since these ancestors, in their continued existence as powerful spirits, do not cease to use their strength to bestow on the clan new benefits and advances. For nothing perhaps? But to those brutal and "soul-poor" ages there is no "for nothing." What can one give back to them? Sacrifices (initially only nourishment, in the coarsest sense), festivals, shrines, tributes, above all obedience—for all customs, as works of the ancestors, are also their statutes and commands—: does one ever give them enough? This suspicion remains and grows: from time to time it forces a great redemption, lock, stock, and barrel, some enormity of a counter-payment to the "creditor" (the notorious sacrifice of the firstborn, for example; blood, human blood in any case). The fear of the progenitor and his power, the consciousness of debts toward him necessarily increases, according to this kind of logic, to exactly the same degree that the power of the clan itself increases, that the clan itself stands ever more victorious, independent, honored, feared. By no means the other way around! Rather every step toward the atrophying of the clan, all miserable chance occurrences, all signs of degeneration, of approaching dissolution always *diminish* the fear of the spirit of the founder and give an ever more reduced notion of his shrewdness, his foresightedness, and his presence as power. If one imagines this brutal kind of logic carried through to its end: finally, through the imagination of growing fear the progenitors of the *most powerful* clans must have grown into enormous proportions and have been pushed back into the darkness of a divine uncanniness and unimaginability:—in the end the progenitor is necessarily transfigured into a *god*. This may even be the origin of the gods,

an origin, that is, out of *fear*! . . . And those who think it necessary to add: "but also out of piety!" would hardly be right with regard to the longest period of the human race, its primeval period. All the more, admittedly, for the *middle* period in which the noble clans take shape: — who in fact returned, with interest, to their originators, the ancestors (heroes, gods) all of the qualities that had in the meantime become apparent in them, the *noble* qualities. Later we will take another look at the aristocratizing and ennobling of the gods (which is by no means their "hallowing"): for the present let us simply bring the course of this whole development of guilt consciousness to a conclusion.

20

As history teaches, the consciousness of having debts to the deity by no means came to an end even after the decline of the "community" organized according to blood-relationships; in the same way that it inherited the concepts "good and bad" from the clan nobility (together with its basic psychological propensity for establishing orders of rank), humanity also inherited, along with the deities of the clan and tribe, the pressure of the still unpaid debts and of the longing for the redemption of the same. (The transition is made by those broad slave and serf populations who adapted themselves to the cult of the gods practiced by their lords, whether through force or through submissiveness and mimicry: starting from them, this inheritance then overflows in all directions.) For several millennia the feeling of guilt toward the deity did not stop growing and indeed grew ever onward in the same proportion as the concept of god and the feeling for god grew on earth and was borne up on high. (The whole history of ethnic fighting, triumphing, reconciling, merging — everything that precedes the final rank-ordering of all ethnic elements in every great racial synthesis — is reflected in the genealogical confusion of their gods, in the legends of their fights, triumphs, and reconciliations; development toward universal empires is also always development toward universal deities; despotism with its overpowering of the independent nobility also always prepares the way for some kind of monotheism.) The rise of the Christian god as the maximum god that has been attained thus far therefore also brought a maximum of feelings of guilt into appearance on earth. Assuming that we have by now entered into the *reverse* movement, one might with no little probability deduce from the unstoppable decline of faith in the Christian god that there would already be a considerable decline in human consciousness of guilt as well; indeed the prospect cannot be dismissed that the perfect and final victory of atheism might free humanity from this entire feeling of having debts to its beginnings, its *causa prima*.[63] Atheism and a kind of *second innocence* belong together. —

21

So much for the present, in short and roughly speaking, on the connection of the concepts "guilt," "duty" to religious presuppositions: I have until now intentionally left aside the actual moralization of these concepts (their being pushed back into conscience, more precisely the entanglement of *bad* conscience with the concept of god) and at the end of the previous section even spoke as if there were no such moralization, consequently, as if those concepts were now necessarily coming to an end now that their presupposition, the faith in our "creditor," in God, has fallen. The facts of the case diverge from this in a terrible manner. With the moralization of the concepts guilt and duty, with their being pushed back into *bad* conscience, we have in actual fact the attempt to *reverse* the direction of the development just described, at least to bring its movement to a standstill: precisely the prospect of a conclusive redemption *shall* now pessimistically close itself off once and for all; the gaze *shall* now bleakly deflect off, deflect back from a brazen impossibility; those concepts "guilt" and "duty" *shall* now turn themselves backwards — and against whom? There can be no doubt: first against the "debtor," in whom bad conscience now fixes itself firmly, eats into him, spreads out, and grows like a polyp in every breadth and depth until finally, with the impossibility of discharging the debt, the impossibility of discharging penance is also conceived of, the idea that it cannot be paid off ("*eternal* punish-

63. [First cause.]

ment")—; finally, however, even against the "creditor," think here of the *causa prima* of man, of the beginning of the human race, of its progenitor, who is now burdened with a curse ("Adam," "Original Sin," "unfreedom of the will") or of nature, from whose womb man arises and into which the evil principle is now placed ("demonizing of nature") or of existence generally, which is left as *valueless in itself* (nihilistic turning away from it, longing into nothingness or longing into its "opposite," a being-other, Buddhism and related things)—until all at once we stand before the paradoxical and horrifying remedy in which tortured humanity found temporary relief, *Christianity's* stroke of genius: God sacrificing himself for the guilt of man, God himself exacting payment of himself, God as the only one who can redeem from man what has become irredeemable for man himself—the creditor sacrificing himself for his debtor, out of *love* (is that credible?—), out of love for his debtor! . . .

22

One will already have guessed *what* actually happened with all of this and *under* all of this: that will to self-torment, that suppressed cruelty of the animal-human who had been made inward, scared back into himself, of the one locked up in the "state" for the purpose of taming, who invented the bad conscience in order to cause himself pain after the *more natural* outlet for this *desire to cause pain* was blocked,—this man of bad conscience has taken over the religious presupposition in order to drive his self-torture to its most gruesome severity and sharpness. Guilt before *God*: this thought becomes an instrument of torture for him. In "God" he captures the most extreme opposites he can find to his actual and inescapable animal instincts; he reinterprets these animal instincts themselves as guilt before God (as hostility, rebellion, insurrection against the "lord," the "father," the primal ancestor and beginning of the world); he harnesses himself into the contradiction "God" and "devil"; he takes all the "no" that he says to himself, to nature, naturalness, the facticity of his being and casts it out of himself as a "yes," as existing, corporeal, real, as God, as holiness of God, as judgeship of God, as executionership of God, as beyond, as eternity, as torture without end, as hell, as immeasurability of punishment and guilt. This is a kind of madness of the will in psychic cruelty that has absolutely no equal: the *will* of man to find himself guilty and reprehensible to the point that it cannot be atoned for; his *will* to imagine himself punished without the possibility of the punishment ever becoming equivalent to the guilt; his *will* to infect and make poisonous the deepest ground of things with the problem of punishment and guilt in order to cut off the way out of this labyrinth of "*idées fixes*" once and for all; his *will* to erect an ideal—that of the "holy God"—in order, in the face of the same, to be tangibly certain of his absolute unworthiness. Oh, this insane sad beast man! What ideas occur to it, what anti-nature, what paroxysms of nonsense; what *bestiality of idea* immediately breaks forth when it is hindered only a little from being a *beast of deed*! . . . All of this is interesting to the point of excess, but also of such black gloomy unnerving sadness that one must forcibly forbid oneself to look too long into these abysses. Here there is *sickness*, beyond all doubt, the most terrible sickness that has thus far raged in man:—and whoever is still capable of hearing (but one no longer has the ears for it today!—) how in this night of torture and absurdity the cry *love* resounded, the cry of the most longing delight, of redemption in *love*, will turn away, seized by an invincible horror . . . There is so much in man that is horrifying! . . . The earth has been a madhouse for too long! . . .

23

Let this suffice once and for all concerning the origins of the "holy God."—That *in itself* the conception of gods does not necessarily lead to this degradation of the imagination, which we could not spare ourselves from calling to mind for a moment, that there are *more noble* ways of making use of the fabrication of gods than for this self-crucifixion and self-defilement of man in which Europe's last millennia have had their mastery—this can fortunately be read from every glance one casts on the *Greek gods*, these reflections of noble and autocratic human beings in whom the *animal* in man felt itself deified and *did not* tear itself apart, *did not* rage against itself! For the longest time these Greeks used their gods precisely to keep "bad

conscience" at arm's length, to be able to remain cheerful about their freedom of soul: that is, the reverse of the use which Christianity made of its god. They took this to *great lengths*, these splendid and lionhearted childish ones; and no lesser authority than that of the Homeric Zeus himself gives them to understand here and there that they make it too easy for themselves. "A wonder!" he says once—it concerns the case of Aegisthus, a *very* bad case—

> A wonder, how much the mortals complain
> against the gods!
> *Only from us is there evil*, they think; but
> they themselves
> Create their own misery through lack of
> understanding, even counter to fate.

But one hears and sees at the same time that even this Olympian spectator and judge is far from being angry at them for this and from thinking evil of them: "how *foolish* they are!" so he thinks in the face of the misdeeds of the mortals,—and "foolishness," "lack of understanding," a little "disturbance in the head," this much even the Greeks of the strongest, bravest age *allowed* themselves as the reason for much that was bad and doom-laden:—foolishness, *not* sin! do you understand that? . . . But even this disturbance in the head was a problem—"indeed, how is it even possible? whence could it actually have come, given heads such as *we* have, we men of noble descent, of happiness, of optimal form, of the best society, of nobility, of virtue?"—thus the noble Greek wondered for centuries in the face of every incomprehensible atrocity and wanton act with which one of his equals had sullied himself. "A god must have beguiled him," he said to himself finally, shaking his head . . . This way out is *typical* of the Greeks . . . In this manner the gods served in those days to justify humans to a certain degree even in bad things, they served as causes of evil—in those days it was not the punishment they took upon themselves but rather, as is *more noble*, the guilt . . .

24

—I close with three question marks, as one can of course see. "Is an ideal actually being erected here or is one being demolished?" thus one might ask me . . . But have you ever asked yourselves enough how dearly the erection of *every* ideal on earth has exacted its payment? How much reality always had to be libeled and mistaken, how much lying sanctified, how much conscience disturbed, how much "god" had to be sacrificed each time? So that a sanctuary can be erected, *a sanctuary must be shattered:* that is the law—show me a case where it is not fulfilled! . . . We modern humans, we are the heirs of millennia of conscience-vivisection and cruelty to the animal-self: in this we have our longest practice, our artistry perhaps, in any case our sophistication, our over-refinement of taste. For all too long man has regarded his natural inclinations with an "evil eye," so that in him they have finally become wedded to "bad conscience." A reverse attempt would *in itself* be possible—but who is strong enough for it?—namely to wed to bad conscience the *unnatural* inclinations, all those aspirations to the beyond, to that which is contrary to the senses, contrary to the instincts, contrary to nature, contrary to the animal—in short the previous ideals which are all ideals hostile to life, ideals of those who libel the world. To whom to turn today with *such* hopes and demands? . . . In so doing one would have precisely the *good* human beings against oneself; and, in fairness, the comfortable, the reconciled, the vain, the enraptured, the tired . . . What is there that insults more deeply, that separates off so fundamentally, as letting others notice something of the strictness and height with which one treats oneself? And on the other hand—how accommodating, how full of love the whole world shows itself toward us as soon as we do like all the world and "let ourselves go" like all the world! . . . For this goal one would need a *different* kind of spirits than are probable in this of all ages: spirits strengthened by wars and victories, for whom conquering, adventure, danger, pain have even become a need; for this one would need acclimatization to sharp high air, to wintry journeys, to ice and mountain ranges in every sense; for this one would need a kind of sublime malice itself, an ultimate most self-assured mischievousness of knowledge, which belongs to great health; one would need, in brief and gravely enough, precisely this *great health*! . . . Is this even possible today? . . . But someday, in a stronger time than this decaying, self-doubting present, he really must come to us,

the *redeeming* human of the great love and contempt, the creative spirit whose compelling strength again and again drives him out of any apart or beyond, whose loneliness is misunderstood by the people as if it were a flight *from* reality—: whereas it is only his submersion, burial, absorption *in* reality so that one day, when he again comes to light, he can bring home the *redemption* of this reality: its redemption from the curse that the previous ideal placed upon it. This human of the future who will redeem us from the previous ideal as much as from that *which had to grow out of it*, from the great disgust, from the will to nothingness; this bell-stroke of noon and of the great decision, that makes the will free again, that gives back to the earth its goal and to man his hope; this Anti-Christ and anti-nihilist; this conqueror of God and of nothingness—*he must one day come* . . .

25

—But what am I saying? Enough! Enough! At this point there is only one thing fitting for me, to be silent: otherwise I would be laying a hand on that which only a younger one is free to choose, a "more future one," a stronger one than I am—which only *Zarathustra* is free to choose, *Zarathustra the godless* . . .

THIRD TREATISE: WHAT DO ASCETIC IDEALS MEAN?

Carefree, mocking, violent—thus wisdom wants *us*: she is a woman, she always loves only a warrior.

Thus Spoke Zarathustra

1

What do ascetic ideals mean?—Among artists nothing or too many different things; among philosophers and scholars something like a nose and instinct for the most favorable preconditions of higher spirituality; among women, at best, one *more* charming trait of seduction, a little *morbidezza* on beautiful flesh, the angelicalness of a pretty, fat animal; among the physiologically failed and out of sorts (among the *majority* of mortals) an attempt to appear to oneself to be "too good" for this world, a holy form of excess, their principal instrument in the battle with slow pain and with boredom; among priests the true priests' faith, their best tool of power, also the "most high" permission to power; among saints, finally, a pretext for hibernation, their *novissima gloriae cupido*,[64] their rest in nothingness ("God"), their form of madness. *That* the ascetic ideal has meant so much to man, however, is an expression of the basic fact of the human will, its *horror vacui*:[65] *it needs a goal*,—and it would rather will *nothingness* than *not* will.—Am I understood? Have I been understood? . . . "*Absolutely not! dear Sir*!"—Then let us start at the beginning.

2

What do ascetic ideals mean?—Or, to take an individual case, about which I have often enough been asked for advice, what does it mean, for example, when, in his old age, an artist like Richard Wagner[66] pays homage to chastity? In a certain sense, admittedly, he has always done this; but only at the very end in an ascetic sense. What does this change of "sense," this radical reversal of sense mean?—for that is what it was, Wagner thus suddenly somersaulted directly into his opposite. What does it mean when an artist suddenly somersaults into his opposite? . . . Here we are at once reminded—supposing we are willing to pause a moment at this question—of what was perhaps the best, strongest, most cheerful-hearted, *most courageous* time in Wagner's life: it was back when the idea of Luther's marriage occupied him inwardly and deeply. Who knows on what chance events it actually depended that today instead of this marriage music we have the *Meistersinger*? And how much of the former still resounds in the latter? But there is no doubt that this "Marriage of Luther," too, would have been a praise of chastity. To be sure, also a

64. [The last thing, passion for glory. Tacitus, *Histories* IV, 6.]

65. [Horror of emptiness.]

66. [Richard Wagner (1813–1883), German composer and music theorist.]

praise of sensuality:—and precisely so would it seem to me to be in order, precisely so would it also have been "Wagnerian." For between chastity and sensuality there is no necessary opposition; every good marriage, every true affair of the heart is beyond this opposition. Wagner would have done well, it seems to me, to have brought home this *pleasant* fact to his Germans once again with the help of a lovely and stout-hearted Luther comedy, for there are and always have been many libelers of sensuality among the Germans; and perhaps nowhere has Luther performed a greater service than precisely in having had the courage to his *sensuality* (it was called in those days, delicately enough, the "Protestant freedom" . . .) But even in the case where there really is that opposition between chastity and sensuality, it is fortunately by no means necessary that it be a tragic opposition. This would seem to hold at least for all better-formed, more high-spirited mortals who are far from automatically counting their labile balance between "animal and angel" among the arguments against existence,—the subtlest and brightest, like Goethe, like Hafiz, have even seen in this one *more* enticement to life. Precisely such "contradictions" seduce to existence . . . On the other hand it is only too clear that when swine who have come to ruin are once brought to the point of worshipping chastity—and there are such swine!—they will see and worship in it only their opposite, the opposite of swine come to ruin—oh with what tragic grunting and zeal! one can imagine it—the embarrassing and superfluous opposite that Richard Wagner indisputably still wanted to set to music and put on stage at the end of his life. *And to what end*? as one may in fairness ask. For what were the swine to him, what are they to us?—

3

And yet admittedly that other question cannot be avoided here: just what was that manly (alas, so unmanly) "simplicity from the country" to him, that poor devil and lad of nature Parsifal, whom he with such ensnaring means finally made Catholic—what? was this Parsifal meant at all *seriously*? For one could be tempted to conjecture, even to wish the opposite—that the Wagnerian Parsifal were meant lightheartedly, a closing piece and satyr-play, as it were, with which the tragedian Wagner wanted to take leave of us, also of himself, above all *of tragedy* in a manner fitting for and worthy of him, namely with an excess of highest and most mischievous parody of the tragic itself, of the entire gruesome earthly seriousness and wretchedness of earlier times, of the *coarsest form*—now finally overcome—found in the anti-nature of the ascetic ideal. This, as noted, would have been worthy precisely of a great tragedian: who, like every artist, only arrives at the final pinnacle of his greatness when he is able to see himself and his art *beneath* him,—when he is able to *laugh* at himself. Is Wagner's *Parsifal* his secret laughter of superiority at himself, the triumph of this final highest artist's freedom, artist's otherworldliness? As stated, one would like to wish it: for what would a *seriously intended Parsifal* be? Is it really necessary to see in it (as someone put it in conversation with me) "the product of an insane hatred of knowledge, spirit, and sensuality"? A curse on senses and spirit in a single hatred and breath? An apostasy and return to obscurantist and Christian-diseased ideals? And finally even a negating of self, a crossing-out of self on the part of an artist who until that point had been out with all the might of his will after the opposite, namely the *highest spiritualization and sensualization* of his art? And not only of his art: also of his life. Recall how enthusiastically in his day Wagner walked in the footsteps of the philosopher Feuerbach:[67] Feuerbach's word concerning "healthy sensuality"—in the thirties and forties this sounded to Wagner as to many Germans (—they called themselves the "*young* Germans") like the word of redemption. Did he in the end *learn otherwise*? Since it seems at least that in the end he had the will *to teach otherwise* . . . And not only from the stage, with the *Parsifal*-trombones:—in the murky writings of his last years, just as unfree as they are clueless, there are a hundred passages in which a secret wish and will betrays itself,

67. [Ludwig Feuerbach (1804–1872) was in his own time the most famous of the "Young" or leftist Hegelians—only later eclipsed by Marx—and was influential not only among philosophers but also writers, especially the writers of the movement known as "Young Germany." Feuerbach's philosophy was a radical humanism.]

a despondent, uncertain, unacknowledged will to preach, in essence, changing of one's way, conversion, negation, Christianity, Middle Ages and to say to his disciples: "it is nothing! Seek your salvation elsewhere!" Even the "blood of the Redeemer" is invoked at one point . . .

4

To state my opinion in a case of this sort, in which there is much that is embarrassing—and it is a *typical* case—: one certainly does best to separate an artist from his work to the extent of not taking him as seriously as his work. He is in the end only the precondition of his work, the womb, the ground, in some cases the fertilizer and manure on which, out of which, it grows,—and thus in most cases something one must forget if one wants to enjoy the work itself. Looking into the *origins* of a work is the business of physiologists and vivisectors of the spirit: never ever of the aesthetic human being, the artist! The poet and shaper of *Parsifal* was no more spared a deep, thorough, even frightening acclimatization and descent into medieval contrasts of the soul, a hostile aloofness from all height, rigor, and discipline of the spirit, a kind of intellectual *perversity* (if one will pardon the word) than a pregnant woman is spared the repulsive and strange aspects of pregnancy: which one must *forget*, as noted, in order to enjoy the child. One should be on guard against the confusion into which an artist himself all too easily falls, out of psychological contiguity, to put it as the English do: as if he himself *were* what he is able to depict, think up, express. In fact, the situation is such that *if* he were precisely that, he would certainly not depict, think up, express it; a Homer would not have written an Achilles nor Goethe a Faust if Homer had been an Achilles or if Goethe had been a Faust. A perfect and whole artist is separated to all eternity from the "real," the actual; on the other hand one understands how he can at times become tired to the point of despair of this eternal "irreality" and falseness of his innermost existence—and that he makes the attempt to encroach for once upon what is most forbidden precisely to him, upon what is real—makes the attempt truly to *be*. With what success? One can guess . . . It is *the typical velleity* of the artist: the same velleity into which Wagner lapsed, having grown old, and for which he had to pay so dearly, so fatefully (—through it he lost the valuable part of his friends). Finally, however, still disregarding this velleity entirely, who would not like to wish for Wagner's own sake that he had taken leave of us and of his art *differently*, not with a *Parsifal*, but rather in a manner that was more victorious, more self-assured, more Wagnerian—less misleading, less ambiguous about what he really wanted, less Schopenhauerian, less nihilistic? . . .

5

—What then do ascetic ideals mean? In the case of an artist, as we have grasped by now: *absolutely nothing*! . . . Or so many things that it is as good as absolutely nothing! . . . Let us first of all eliminate artists: they are far from standing independently enough in the world and *against* the world for their valuations and the changes in these to deserve interest *in themselves*! In all ages they have been valets of a morality or philosophy or religion; quite apart from the fact that, unfortunately, they have often enough been the all-too-pliant courtiers of their disciples and patrons, and flatterers with a good nose for old or newly rising powers. At the very least they always need a protective armor, a backing, a previously established authority: artists never stand by themselves, standing alone goes against their deepest instincts. Thus Richard Wagner, for example, took the philosopher Schopenhauer as his front man, as his protective armor when "the time had come":—who could consider it even thinkable that he would have had the courage for an ascetic ideal without the backing that Schopenhauer's philosophy offered him, without Schopenhauer's authority, which was gaining *predominance* in Europe in the seventies? (not yet having assessed whether an artist would have even been possible in the *new* Germany without the milk of a pious, imperially pious way of thinking).—And with this we have arrived at the more serious question: what does it mean when a real *philosopher* pays homage to the ascetic ideal, a spirit who really stands on his own, like Schopenhauer, a man and knight with a brazen glance, who has the courage to himself, who knows how to stand alone and does not first wait for front men and nods from on high?—

Let us immediately consider here the strange and for many kinds of people even fascinating stance Schopenhauer took toward *art*: it was, after all, clearly for the sake of this that Richard Wagner *initially* converted to Schopenhauer (convinced to do so by a poet, as is well known, by Herwegh),[68] and to such an extent that a complete theoretical contradiction thus opened up between his earlier and his later aesthetic beliefs—the former expressed for example in "Opera and Drama," the latter in the writings he published from 1870 on. In particular, from here on Wagner ruthlessly changed—this is perhaps the most disconcerting thing of all—his judgment concerning the value and status of *music* itself: what did it matter to him that he had previously made a means out of it, a medium, a "woman," that simply had to have a purpose, a man in order to prosper—namely drama! He grasped all at once that with Schopenhauer's theory and innovation more could be done *in majorem musicae gloriam*[69]—namely with the *sovereignty* of music as Schopenhauer understood it: music set apart from all other arts, the independent art in itself, *not*, like these, offering representations of phenomenality, but rather speaking the language of *the* will itself, directly out of the "abyss," as its most authentic, most original, least derivative revelation. With this extraordinary rise in the value of music, as it seemed to grow forth out of Schopenhauerian philosophy, *the musician* himself all at once rose in price to an unheard-of degree: he now became an oracle, a priest, indeed more than a priest, a kind of mouthpiece of the "in itself " of things, a telephone of the beyond—henceforth he spoke not only music, this ventriloquist of God—he spoke metaphysics: any wonder that one day he finally spoke *ascetic ideals*? . . .

6

Schopenhauer used the Kantian formulation of the aesthetic problem for his own purpose—although he most certainly did not view it with Kantian eyes. Kant intended to honor art when, among the predicates of the beautiful, he privileged and placed in the foreground those that constitute the honor of knowledge: impersonality and universal validity. Whether this was not on the whole a mistake cannot be dealt with here; I wish only to underscore that Kant, like all philosophers, instead of envisaging the aesthetic problem starting from the experiences of the artist (the one who creates), thought about art and the beautiful from the viewpoint of the "spectator" and thus, without it being noticed, got the "spectator" himself into the concept "beautiful." If only this "spectator" had at least been sufficiently familiar to the philosophers of the beautiful, however!—namely as a great *personal* fact and experience, as a wealth of most personal intense experiences, desires, surprises, delights in the realm of the beautiful! But I fear the opposite was always the case: and thus we receive from them, right from the beginning, definitions in which, as in that famous definition Kant gives of the beautiful, the lack of more refined self-experience sits in the form of a fat worm of basic error. "The beautiful," Kant said, "is what pleases *without interest*." Without interest! Compare this definition with one made by a real "spectator" and artist—Stendhal,[70] who in one place calls the beautiful *une promesse de bonheur*.[71] What is *rejected* and crossed out here, in any case, is precisely the one thing Kant emphasizes in the aesthetic condition: *le désintéressement*. Who is right, Kant or Stendhal?—Admittedly, if our aestheticians never tire of throwing into the balance in Kant's favor that under the enchantment of beauty one can look at *even* robeless female statues "without interest," then certainly one may laugh a little at their expense:—the experiences of *artists* in connection with this sensitive point are "more interesting," and Pygmalion was in any case *not* necessarily an "unaesthetic human being." Let us think all the more highly of the innocence of our aestheticians that is reflected in such arguments; for example, let us give Kant credit for what he knows to teach—with the naïveté of a country priest—about the characteristic nature of the sense of touch!—And here we come back to Schopenhauer, who stood

68. [Georg Herwegh (1817–1875), one of the most prominent of the Young German poets.]

69. [For the greater glory of music.]

70. [Pseudonym of Henri Beyle (1783–1842), French author.]

71. [A promise of happiness.]

much closer to the arts than Kant and still did not get out from under the spell of the Kantian definition: how did this happen? The circumstance is odd enough: he interpreted the expression "without interest" in the most personal manner, on the basis of what must have been one of his most regular experiences. There are few things about which Schopenhauer speaks so certainly as about the effect of aesthetic contemplation: he says of it that it counteracts precisely *sexual* "interestedness," much like lupulin and camphor, that is; he never grew tired of glorifying *this* breaking free from the "will" as the greatest merit and use of the aesthetic condition. Indeed, one might be tempted to ask whether his basic conception of "will and representation," the thought that there can be a redemption from the "will" only through "representation," did not originate from a generalization of that sexual experience. (In all questions relating to Schopenhauerian philosophy, by the way, one must never ignore the fact that it is the conception of a twenty-six-year-old young man; so that it participates not only in that which is specific to Schopenhauer but also in that which is specific to that season of life.) Let us hear, for example, one of the most explicit of the countless passages he wrote in honor of the aesthetic condition (World as Will and Representation I, 231), let us hear the tone, the suffering, the happiness, the gratitude with which such words were spoken. "This is the painless condition that Epicurus praised as the highest good and as the condition of the gods; we are, for that moment, freed from the base drive of the will, we celebrate the Sabbath of the prison-house work of willing, the wheel of Ixion stands still" . . . What vehemence of words! What images of torture and of prolonged satiety! What an almost pathological temporal juxtaposition of "that moment" and the usual "wheel of Ixion," the "prison-house work of willing," the "base drive of the will"! But supposing that Schopenhauer were right a hundred times over for himself, what would this have contributed to our insight into the essence of the beautiful? Schopenhauer described *one* effect of the beautiful, the will-calming one—is it even a regularly occurring one? Stendhal, as noted, a no less sensual but more happily-formed nature than Schopenhauer, emphasizes a different effect of the beautiful: "the beautiful *promises* happiness"—to him it is precisely the *excitement of the will* ("of interest") by the beautiful that seems to be the fact of the matter. And could one not finally urge upon Schopenhauer himself the objection that he was very wrong in thinking himself a Kantian in this, that he did not at all understand the Kantian definition of the beautiful in a Kantian sense—that the beautiful is pleasing to him, too, out of an "interest," even out of the strongest of all, the most personal of all interests: that of the tortured one who breaks free from his torture? . . . And, to come back to our first question, "what does it *mean* when a philosopher pays homage to the ascetic ideal?," we get at least a first hint here: he wants *to break free from a torture*.—

7

Let us take care not to make gloomy faces right away at the word "torture": in this case in particular there is still plenty to count on the other side of the ledger, plenty to deduct—there is even still something to laugh at. For let us not underestimate the fact that Schopenhauer, who in fact treated sexuality as a personal enemy (including its tool, woman, this "*instrumentum diaboli*"),[72] *needed* enemies in order to remain in good spirits; that he loved grim bilious black-green words; that he became angry for the sake of being angry, out of passion; that he would have become sick, would have become a *pessimist* (—for he was not one, as much as he wished it) without his enemies, without Hegel, woman, sensuality, and the entire will to being-here, remaining-here. Schopenhauer would otherwise *not* have remained here, one can bet on that, he would have run away: his enemies, however, held him fast, his enemies seduced him again and again into existence, just as with the ancient Cynics, his anger was his balm, his recreation, his compensation, his *remedium*[73] against disgust, his *happiness*. So much with respect to what is most personal in Schopenhauer's case; on the other hand there is also something typical in him—and only here do we again come to our problem. It is indisputable that for as long as there have been philosophers on

72. [Instrument of the devil.]
73. [Medicine.]

earth and wherever there have been philosophers (from India to England, to take the polar opposites in talent for philosophy) there has existed a characteristic philosophers' irritability and rancor against sensuality—Schopenhauer is only its most eloquent and, if one has the ear for it, also most rousing and most enchanting outburst;—there has likewise existed a characteristic philosophers' prepossession and cordiality regarding the whole ascetic ideal; one ought not to entertain any illusions about or against this. Both belong, as noted, to the type; if both are absent in a philosopher then he is always—of this one may be certain—only a "so-called" philosopher. What does that *mean*? For one must first interpret this set of facts: in itself it stands there, stupid to all eternity, like every "thing in itself." Every animal, thus also *la bête philosophe*,[74] instinctively strives for an optimum of favorable conditions under which it can vent its power completely and attain its maximum in the feeling of power; just as instinctively, and with a keenness of scent that "surpasses all understanding," every animal abhors troublemakers and obstacles of every kind that do or could lay themselves across its path to the optimum (—it is *not* its path to "happiness" of which I speak, but rather its path to power, to the deed, to the most powerful doing, and in most cases in actual fact its path to unhappiness). In this manner the philosopher abhors *marriage* together with that which might persuade him to it—marriage as obstacle and doom along his path to the optimum. What great philosopher thus far has been married? Heraclitus, Plato, Descartes, Spinoza, Leibniz, Kant, Schopenhauer—they were not; still more, one cannot even *imagine* them being married. A married philosopher belongs *in comedy*, that is my proposition: and that exception Socrates, the malicious Socrates, it seems, married *ironice*, expressly to demonstrate *this* very proposition. Every philosopher would speak as Buddha once spoke when the birth of a son was announced to him: "Râhula has been born to me, a fetter has been forged for me" (here Râhula means "a small daemon"); to every "free spirit" a thoughtful hour must come, supposing he has previously had a thoughtless one, such as once came to the same Buddha—"narrowly constrained, he thought to himself, is life in the house, a place of impurity; freedom is in leaving the house": "as he was thinking thus, he left the house." The ascetic ideal points out so many bridges to *independence* that a philosopher cannot, without inner jubilation and clapping of hands, hear the story of all those determined ones who one day said "no" to all unfreedom and went into some sort of *desert*—even supposing that they were merely strong asses and completely and utterly the opposite of a strong spirit. What, accordingly, does the ascetic ideal mean for a philosopher? My answer is—one will have guessed it long ago: at its sight the philosopher smiles at an optimum of the conditions for highest and boldest spirituality—in this he does *not* negate "existence," rather he affirms *his* existence and *only* his existence, and this perhaps to the degree that the wanton wish is never far away: *pereat mundus, fiat philosophia, fiat philosophus, **fiam***! . . .[75]

8

One can see these are no unbribed witnesses and judges of the *value* of the ascetic ideal, these philosophers! They are thinking of *themselves*—what is "the saint" to them! They are thinking all the while of what is most indispensable precisely *to them*: freedom from compulsion, disturbance, noise, from business, duties, cares; clarity in the head; dance, leap, and flight of ideas; good air, thin, clear, free, dry, as the air in high places is, in which all animal being becomes more spiritual and acquires wings; quiet in all souterrains; all dogs neatly put on a chain; no barking of hostility and shaggy rancor; no gnawing worms of injured ambition; undemanding and submissive intestines, diligent as mill-works but distant; the heart in a foreign place, in the beyond, in the future, posthumous—at the mention of the ascetic ideal they think, all in all, of the lighthearted asceticism of an animal that has been deified and become fully fledged, that roams more than rests above life. One knows the three great pomp words of the ascetic ideal: poverty, humility, chastity: and now just look at the lives of all great fruitful inventive spirits close up—one will

74. [The philosophical animal.]

75. [Let the world perish, let there be philosophy, let there be the philosopher, *let there be me!*]

always find all three to a certain degree. Certainly *not*, as goes without saying, as if these were their "virtues"—what does this kind of human being have to do with virtues!—but rather as the truest and most natural conditions of their *best* existence, of their *most beautiful* fruitfulness. At the same time it is entirely possible that for the present their dominant spirituality had to put reins on an unbridled and irritable pride or a willful sensuality or that it perhaps had a difficult enough time keeping up its will to the "desert" against an inclination to luxury and to the most exquisite things, likewise against a wasteful liberality of heart and hand. But it did it, precisely as the *dominant* instinct that forced through all its demands against those of all other instincts—it is still doing so; if it didn't do so, it would not dominate. In this, then, there is nothing of "virtue." Incidentally, the *desert* of which I just spoke, into which the strong, independent-natured spirits retreat and grow lonely—oh how different it looks from the desert as the learned dream it!—for in some cases they themselves are this desert, these learned ones. And it is certain that no actor of the spirit would be at all able to endure living in it—for them it is not nearly romantic and Syrian enough, not nearly enough of a stage desert! Admittedly there is also no lack of camels in it: but here the entire similarity ends. A voluntary obscurity perhaps; a steering-clear of oneself; an aversion to noise, veneration, newspaper, influence; a modest position, a daily routine, something that conceals more so than it brings to light; an occasional association with harmless lighthearted beasts and fowl, the sight of which refreshes; a mountain range for company, but not a dead one, rather one with *eyes* (that is with lakes); perhaps even a room in a crowded run-of-the-mill inn, where one is sure of being mistaken for someone else and can speak to anyone with impunity—that is "desert" here: oh it is lonely enough, believe me! When Heraclitus retreated into the courtyards and colonnades of the enormous temple of Artemis, this "desert" was more dignified, I concede: why are we *lacking* such temples? (—perhaps we are not lacking them: I was just thinking of my most beautiful study, of the Piazza di San Marco, assuming it is spring, likewise forenoon, the time between 10 and 12.) That which Heraclitus was evading, however, is still the same thing *we* steer clear of: the noise and the democratic chatter of the Ephesians, their politics, their news from the "empire" (Persia, you understand me), their market stuff of "today"—for we philosophers need rest from *one* thing before all else: from all "today." We venerate what is silent, cold, noble, distant, past, in general every kind of thing at whose sight the soul does not have to defend itself and lace itself shut—something with which one can talk without talking *out loud*. Just listen to the sound a spirit has when he talks: every spirit has its sound, loves its sound. This one over there, for example, must be an agitator, that is to say a hollow head, hollow pot: whatever it is that goes into him, each thing comes back out dull and thick, weighed down with the echo of great emptiness. That one there seldom speaks other than hoarsely: did he perhaps *think* himself hoarse? That would be possible—ask the physiologists—but whoever thinks in *words* thinks as a speaker and not as a thinker (it betrays the fact that he basically does not think facts, not factually, but rather only with respect to facts, that he really thinks *himself* and his listeners). This third one talks obtrusively, he steps too close to us, his breath brushes us—we close our mouths involuntarily although it is a book through which he speaks to us: the sound of his style tells us the reason—that he has no time, that he has little faith in himself, that he will never again get a word in if not today. A spirit who is sure of itself, however, speaks softly; it seeks seclusion, it makes others wait. One can recognize a philosopher by the fact that he keeps clear of three bright and loud things: fame, princes, and women—which is not to say they don't come to him. He shies away from all-too-bright light: therefore he shies away from his time and its "day." In this he is like a shadow: the more the sun sets for him the greater he becomes. As for his "humility," he can also bear, as he bears the dark, a certain dependence and obscurity: still more, he fears being disturbed by lightning, he shrinks back from the unprotectedness of an all-too-isolated and exposed tree on which every bad weather vents its moods, every mood its bad weather. His "motherly" instinct, the secret love of that which grows in him directs him to situations where one relieves him of thinking of *himself*, in the same sense in which the instinct of the *mother* in woman has until now preserved the dependent situation of woman generally. In the end they demand little enough, these philoso-

phers; their motto is "whoever possesses, will be possessed"—: *not*, as I must say again and again, out of a virtue, out of a meritorious will to contentedness and simplicity, but rather because their supreme lord demands it *thus* of them, demands prudently and relentlessly: he has a mind for only one thing and gathers everything—time, energy, love, interest—only for this, saves it only for this. This kind of human does not like to be disturbed by enmities, also not by friendships: he forgets or holds in contempt easily. He thinks it in bad taste to play the martyr; "to *suffer* for the truth"—he leaves that to the ambitious and to the stage heroes of the spirit and whoever else has time enough for it (—the philosophers themselves, they have something to *do* for the truth). They use great words sparingly; it is said that they even find the word "truth" repellent: it sounds pompous . . . Finally, as for the "chastity" of philosophers, this kind of spirit obviously has its fruitfulness somewhere other than in children; perhaps elsewhere also the continued existence of their name, their little immortality (among philosophers in ancient India one expressed oneself still more immodestly: "to what end progeny for one whose soul is the world?"). In this there is nothing of chastity out of any ascetic scruple and hatred of the senses, just as little as it is chastity when an athlete or jockey abstains from women: rather it is their dominant instinct that wants it this way, at least during times of great pregnancy. Every artist knows how harmful the effect of intercourse is in conditions of great spiritual tension and preparation; the most powerful and sure-of-instinct among them do not first require experience, negative experience—rather it is their "motherly" instinct here that ruthlessly commands all other stores and allowances of energy, of animal vigor, for the benefit of the growing work: the greater energy then *consumes* the lesser one.—Incidentally, piece together the above discussed case of Schopenhauer according to this interpretation: in him the sight of the beautiful apparently acted as a triggering stimulus on the *principal force* of his nature (the force of contemplation and of the engrossed gaze); so that this then exploded and became all at once lord of his consciousness. This is in no way meant to preclude the possibility that the peculiar sweetness and fullness characteristic of the aesthetic condition might have its origins precisely in the ingredient "sensuality" (just as that "idealism" characteristic of marriageable girls stems from the same source)—that sensuality is thus not suspended at the onset of the aesthetic condition, as Schopenhauer believed, but rather only transfigures itself and no longer enters consciousness as sexual stimulus. (I will return to this viewpoint at another time in connection with still more delicate problems of the thus far so untouched, so unexplored *physiology of aesthetics*.)

9

A certain asceticism—we have seen it—a hard and lighthearted renunciation with the best of intentions, belongs to the most favorable conditions of highest spirituality, likewise also to its most natural consequences: from the outset, then, it will not astonish us if the ascetic ideal has always been treated with considerable prepossession precisely by philosophers. A serious historical reckoning proves the tie between ascetic ideal and philosophy to be even closer and stricter still. One could say that it was only on the apron strings of this ideal that philosophy ever learned to take its first steps and half-steps on earth—alas, ever so clumsily, alas, with ever so discouraged faces, alas, so ready to fall down and lie on its belly, this shy little blunderer and milquetoast with crooked legs! In the beginning philosophy fared as have all good things,—for a long time they hadn't the courage to themselves, they were always looking around to see if there weren't someone who would come to their help, still more, they were afraid of everyone who watched them. Just list the individual drives and virtues of the philosopher one after the other—his doubting drive, his negating drive, his wait-and-see ("ephectic") drive, his analytical drive, his exploring, searching, venturing drive, his comparing, balancing drive, his will to neutrality and objectivity, his will to every "***sine** ira et studio*"[76]—: have we already grasped that for the longest time they all went against the first demands of morality and of conscience? (not to mention *reason* itself, which, even in his late day, Luther loved to call Fraw Klüglin[77] the shrewd

76. [*Without* anger and partiality. Tacitus, *Annales* I, 1.]
77. [Early New High German: "Lady Shrewd."]

whore). That a philosopher, if he *were* to come to a consciousness of himself, would have had to feel himself to be none other than the "*nitimur in* ***vetitum***"[78] incarnate—and accordingly was on guard against "feeling himself," against coming to a consciousness of himself? . . . Things are, as stated, no different with all good things of which we are proud today; even measured by the standard of the ancient Greeks our entire modern being, insofar as it is not weakness but rather power and consciousness of power, appears as nothing but hubris and godlessness: for the longest time those very things that are the reverse of what we venerate today had conscience on their side and God as their watchman. Hubris is our entire stance toward nature today, our violation of nature with the help of machines and the so thoughtless inventiveness of technicians and engineers; hubris is our stance toward God, that is to say toward some alleged spider of purpose and morality behind the great snare-web of causality—we could say with Charles the Bold in battle with Louis XI "*je combats l'universelle araignée*"[79]—; hubris is our stance toward *ourselves*—for we experiment with ourselves as we would not permit ourselves to do with any animal and merrily and curiously slit open our souls while the body is still living: what do we care anymore about the "salvation" of the soul! Afterwards we heal ourselves: being sick is instructive, we have no doubt, even more instructive than being healthy—today the *ones who make sick* appear to us to be even more necessary than any medicine men and "saviors." We do violence to ourselves now, there is no doubt, we nutcrackers of souls, we questioners and questionable ones, as if life were nothing but nutcracking; precisely in so doing we must of necessity become, with each passing day, ever more questionable, *worthier* of questioning, perhaps also worthier—of living? . . . All good things were once bad things; every original sin has become an original virtue. Marriage, for example, seemed for a long time to be a sin against the rights of the community; one once paid a penalty for having been so immodest and having arrogated a wife for oneself alone (the *jus primae noctis*[80] belongs here, for example—even today still the privilege of the priests in Cambodia, these guardians of "old good customs"). For the longest time meek, benevolent, yielding, compassionate feelings—by now so high in value that they are almost "the values in themselves"—had precisely self-contempt against them: one was ashamed of leniency as one is today ashamed of harshness (cf. *Beyond Good and Evil* section 260). Submission to the *law*:—oh with what resistance of conscience the noble dynasties everywhere on earth renounced vendettas and granted the law power over themselves! For a long time the "law" was a *vetitum*,[81] a wanton act, an innovation; it appeared with force, *as* force, to which one could not yield without feeling ashamed of oneself. In former times every smallest step on earth was won through spiritual and bodily torments: this entire viewpoint "that not only marching forward, no! marching, movement, change had need of their countless martyrs" sounds so foreign precisely today—I first brought this to light in *Daybreak* 18. "Nothing has been more dearly bought," it says there, "than that little bit of human reason and feeling of freedom that now makes up our pride. Because of this pride, however, it is now becoming almost impossible for us to empathize with those enormous stretches of time characterized by the 'morality of custom,' which lie before 'world history' as the real and decisive principal history that established the character of humankind: when suffering counted everywhere as virtue, cruelty as virtue, dissimulation as virtue, revenge as virtue, denial of reason as virtue; on the other hand well-being as danger, desire for knowledge as danger, peace as danger, compassion as danger, being pitied as disgrace, work as disgrace, madness as divinity, *change* as the essence of what is immoral and pregnant with ruin!"—

10

In the same book, section 42, is set forth within what valuation, under what *pressure* of valuation the earliest race of contemplative humans had to live,—held in

78. [We strive for *what is forbidden*. Ovid, *Amores*, III, 4, 17.]

79. [I combat the universal spider.]

80. [Right of the first night—alleged right of the feudal lord to have sexual intercourse with his vassal's bride on the wedding night.]

81. [Something forbidden.]

contempt to the same degree they were not feared! Contemplation first appeared on earth in disguised form, with an ambiguous appearance, with an evil heart and often with a frightened head: of this there is no doubt. The inactive, brooding, unwarriorlike elements in the instincts of contemplative human beings laid a deep mistrust around them for a long time: against this there was no other remedy than decisively to awaken *fear* of themselves. And in this the ancient Brahmins, for example, were experts! The earliest philosophers knew how to give their existence and appearance a meaning, a support and background against which one learned to *fear* them: more precisely considered, out of an even more fundamental need, namely to win fear and reverence from themselves. For within themselves they found all value judgments turned *against* them, they had to fight down every kind of suspicion and resistance against "the philosopher in them." This they did, as human beings of terrible ages, with terrible means: cruelty against themselves, inventive self-castigation—that was the principal means of these power-thirsty hermits and innovators of ideas who first needed to lay waste to the gods and tradition within themselves in order even to be able to *believe* in their innovation. I call attention to the famous story of king Vishvamitra, who from a thousand years of self-torments won such a feeling of power and self-confidence that he undertook to build a *new heaven*: an uncanny symbol of the earliest and latest histories of philosophers on earth—anyone who ever built a "new heaven" first found the power to do so in his *own hell* . . . Let us compress the whole state of affairs into brief formulas: at first the philosophical spirit always had to slip into the disguise and chrysalis of the *previously established* types of contemplative human beings—as priest, magician, soothsayer, as religious human generally—in order even to *be possible* in any degree at all: for a long time *the ascetic ideal* served the philosopher as the form in which he could appear, as presupposition of existence—he had to *act* it in order to be able to be a philosopher, he had to *believe* it in order to be able to act it. The characteristic aloof stance of philosophers, world-negating, hostile toward life, not believing in the senses, de-sensualized, a stance which has been preserved up to the most recent time and has thus won acceptance as the virtual *philosopher's pose in itself*,—it is above all a consequence of the poverty of conditions under which philosophy came about and survived at all: for the longest time philosophy would *not* have been *at all possible* on earth without an ascetic covering and mantle, without an ascetic self-misunderstanding. Graphically and clearly expressed: until the most recent time the *ascetic priest* has functioned as the repulsive and gloomy caterpillar-form in which alone philosophy was allowed to live and in which it crept around . . . Has this really *changed*? Has the colorful and dangerous winged animal, the "spirit" that this caterpillar concealed within itself, really—thanks to a sunnier, warmer, more brightly lit world—finally been unfrocked after all and let out into the light? Is there already enough pride, daring, bravery, self-assuredness in existence today, enough will of the spirit, will to responsibility, *freedom of the will* so that henceforth on earth "the philosopher" is truly—*possible*? . . .

11

Only now that we have gotten the *ascetic priest* in sight do we seriously begin to tackle our problem: what does the ascetic ideal mean?—only now does it become "serious": henceforth we have opposite us the true *representative of seriousness* itself. "What does all seriousness mean?"—perhaps already here this still more fundamental question comes to our lips: a question for physiologists, as is fair, but one we will still slip past for the present. The ascetic priest has not only his faith in that ideal but also his will, his power, his interest. His *right* to existence stands and falls with that ideal: no wonder we run into a terrible opponent here—supposing, that is, that we were the opponents of that ideal?—one who fights for his existence against the deniers of that ideal? . . . On the other hand it is from the outset improbable that so interested a stance toward our problem will be of particular use to it; the ascetic priest will hardly even be the most successful defender of his ideal—for the same reason that a woman tends to fail when she wishes to defend "woman in herself"—much less the most objective assessor and judge in the controversy that has been stirred up here. It is hence more likely that we will yet have to help him defend himself effectively against us—this much is already clear as day—than that we

should have to fear being too effectively refuted by him . . . The idea we are fighting about here is the *valuation* of our life on the part of the ascetic priest: he relates our life (together with that to which it belongs: "nature," "world," the entire sphere of becoming and of transitoriness) to an entirely different kind of existence, which it opposes and excludes, *unless*, perhaps, it were to turn against itself, *to negate itself*: in this case, the case of an ascetic life, life is held to be a bridge for that other existence. The ascetic treats life as a wrong path that one must finally retrace back to the point where it begins; or as an error that one refutes through deeds—*should* refute: for he *demands* that one go along with him; where he can, he forces *his* valuation of existence. What does that mean? Such a monstrous manner of valuation is not inscribed into the history of humankind as an exception and curiosity: it is one of the broadest and longest facts there is. Read from a distant star the majuscule script of our earthly existence would perhaps tempt one to conclude that the earth is the true *ascetic star*, a nook of discontented, arrogant, and repulsive creatures who could not get rid of a deep displeasure with themselves, with the earth, with all life and who caused themselves as much pain as possible out of pleasure in causing pain:—probably their only pleasure. Let us consider after all how regularly, how universally, how in almost all ages the ascetic priest emerges; he does not belong to any single race; he flourishes everywhere; he grows forth from every social rank. Not that he breeds and propagates his manner of valuation through heredity: the opposite is the case—a deep instinct forbids him, broadly speaking, reproduction. It must be a necessity of the first rank that makes this species that is *hostile to life* grow and prosper again and again—it must be in the *interest of life itself* that this type of self-contradiction not die out. For an ascetic life is a self-contradiction: here a *ressentiment* without equal rules, that of an unsatiated instinct and power-will that would like to become lord not over something living but rather over life itself, over its deepest, strongest, most fundamental preconditions; an attempt is made here to use energy to stop up the source of the energy; here the gaze is directed greenly and maliciously against physiological flourishing itself, in particular against its expression, beauty, joy; whereas pleasure is felt and *sought* in deformation, atrophy, in pain, in accident, in the ugly, in voluntary forfeit, in unselfing, self-flagellation, self-sacrifice. This is all paradoxical in the highest degree: we stand here before a conflict that *wants* itself to be conflicted, that *enjoys* itself in this suffering and even becomes ever more self-assured and triumphant to the extent that its own presupposition, physiological viability, *decreases*. "Triumph precisely in the final agony": under this hyperbolic sign the ascetic ideal has fought from time immemorial; in this enigma of seduction, in this image of delight and torment it recognized its brightest light, its salvation, its ultimate victory. *Crux, nux, lux*[82]—in the ascetic ideal they all belong together.—

12

Supposing that such an incarnate will to contradiction and anti-nature is prevailed upon to *philosophize*: on what will he vent his innermost capricious will? On what is most certainly felt to be true, real: he will seek *error* precisely where the true life instinct most unconditionally posits truth. For example, he will—as the ascetics of the Vedânta philosophy did—demote physicality to an illusion, likewise pain, multiplicity, the whole conceptual opposition "subject" and "object"—errors, nothing but errors! To refuse to believe in the self, to deny one's own "reality"—what a triumph!—already no longer merely over the senses, over appearance, but a much higher kind of triumph, a violence and cruelty to *reason*: this lust reaches its peak when the ascetic self-contempt, self-derision of reason decrees: "there *is* a realm of truth and being, but precisely reason is *excluded* from it!" . . . (Incidentally: even in the Kantian concept of the "intelligible character of things" there remains something of this lascivious ascetic conflict, which loves to turn reason against reason: for in Kant "intelligible character" means a kind of constitution of things, of which the intellect comprehends just this much: that for the intellect it is—*completely and utterly incomprehensible*.)—Finally let us, particularly as knowers, not be ungrateful toward such resolute reversals of the familiar perspectives and valuations with which the spirit

82. [Cross, nut, light.]

has raged against itself all too long now, apparently wantonly and futilely: to see differently in this way for once, *to want* to see differently, is no small discipline and preparation of the intellect for its future "objectivity"—the latter understood not as "disinterested contemplation" (which is a non-concept and absurdity), but rather as the capacity to have one's pro and contra *in one's power*, and to shift them in and out: so that one knows how to make precisely the *difference* in perspectives and affective interpretations useful for knowledge. For let us guard ourselves better from now on, gentlemen philosophers, against the dangerous old conceptual fabrication that posited a "pure, will-less, painless, timeless subject of knowledge"; let us guard ourselves against the tentacles of such contradictory concepts as "pure reason," "absolute spirituality," "knowledge in itself ": here it is always demanded that we think an eye that cannot possibly be thought, an eye that must not have any direction, in which the active and interpretive forces through which seeing first becomes seeing-something are to be shut off, are to be absent; thus, what is demanded here is always an absurdity and non-concept of an eye. There is *only* a perspectival seeing, *only* a perspectival "knowing"; and *the more* affects we allow to speak about a matter, *the more* eyes, different eyes, we know how to bring to bear on one and the same matter, that much more complete will our "concept" of this matter, our "objectivity" be. But to eliminate the will altogether, to disconnect the affects one and all, supposing that we were capable of this: what? would that not be to *castrate* the intellect? . . .

13

But let us return to our problem. In an accounting that is physiological and no longer psychological, a contradiction such as the ascetic seems to represent, "life *against* life," is—this much is immediately clear as day—simply nonsense. It can only be *apparent*; it must be a kind of provisional expression, an interpretation, formula, arrangement, a psychological misunderstanding of something whose actual nature could not be understood for a long time, could not be designated *in itself*—a mere word, jammed into an old *gap* in human knowledge. And to oppose this with a brief statement of the facts of the matter: *the ascetic ideal springs from the protective and healing instincts of a degenerating life* that seeks with every means to hold its ground and is fighting for its existence; it points to a partial physiological hindrance and tiredness against which the deepest instincts of life, which have remained intact, fight incessantly with new means and inventions. The ascetic ideal is such a means: it is exactly the opposite of what its venerators suppose—in it and through it life is wrestling with death and *against* death; the ascetic ideal is an artifice for the *preservation* of life. That this ideal has been able to rule and achieve power over humans to the extent that history teaches us it has, in particular wherever the civilization and taming of man has been successfully carried out, expresses a great fact: the *diseasedness* of the previous type of human, at least of the human made tame, the physiological struggle of man with death (more precisely: with satiety with life, with tiredness, with the wish for the "end"). The ascetic priest is the incarnate wish for a different existence, an existence somewhere else, and in fact the highest degree of this wish, its true fervor and passion: but the very *power* of his wishing is the shackle that binds him here; in this very process he becomes a tool that must work at creating more favorable conditions for being-here and being-human—with this very *power* he ties to existence the entire herd of the deformed, out of sorts, short-changed, failed, those of every kind who suffer from themselves, by instinctively going before them as shepherd. One understands me already: this ascetic priest, this seeming enemy of life, this *negating one*—precisely he belongs to the very great *conserving* and yes-*creating* forces of life . . . Whence it stems, this diseasedness? For man is sicker, more unsure, more changing, more undetermined than any other animal, of this there is no doubt—he is *the* sick animal: how does this come about? Certainly he has also dared more, innovated more, defied more, challenged fate more than all the other animals taken together: he, the great experimenter with himself, the unsatisfied, unsatiated one who wrestles with animal, nature, and gods for final dominion—he, the one yet unconquered, the eternally future one who no longer finds any rest from his own pressing energy, so that his future digs inexorably like a spur into the flesh of every present:—

how could such a courageous and rich animal not also be the most endangered, the most prolongedly and most deeply sick among all sick animals? . . . Man is fed up with it, often enough, there are entire epidemics of this being-fed-up (—around 1348, at the time of the Dance of Death): but even this loathing, this tiredness, this vexation with himself—everything emerges so powerfully in him that it immediately becomes a new shackle. As if by magic, the "no" that he says to life brings to light an abundance of tender "yes's"; even when he *wounds* himself, this master of destruction, self-destruction—afterwards it is the wound itself that compels him *to live* . . .

14

The more normal the diseasedness in man is—and we cannot deny this normality—the higher one should honor the rare cases of powerfulness in soul and body, the *strokes of luck* among humans; the more strictly one should guard the well-formed against the worst air, against the air of the sick. Do we do this? . . . The sick are the greatest danger to the healthy; it is *not* from the strongest that harm comes to the strong, but rather from the weakest. Do we know this? . . . Broadly speaking, it is by no means the fear of man one might wish lessened: for this fear compels the strong to be strong, in some cases to be terrible—it keeps the well-formed type of human *upright*. What is to be feared, what has a doomful effect such as no other doom, would not be the great fear but rather the great *disgust* at man; likewise the great *compassion* for man. Supposing that these two should mate one day, then immediately something of the most uncanny nature would unavoidably come into the world, the "last will" of man, his will to nothingness, nihilism. And indeed: much is prepared for this. Whoever has not only a nose for smelling but also eyes and ears will sense something like madhouse air, like hospital air almost everywhere he might go today—I am speaking, in fairness, of the man's cultural regions, of every kind of "Europe" there is on earth by now. The *diseased* are man's great danger: *not* the evil, *not* the "beasts of prey." Those who from the outset are failed, downcast, broken—they are the ones, the *weakest* are the ones who most undermine life among humans, who most dangerously poison and call into question our confidence in life, in man, in ourselves. Where might one escape it, that veiled look from which one carries away a deep sadness, that backward-turned look of one deformed from the beginning, a look that betrays how such a human speaks to himself—that look that is a sigh. "If only I might be someone else!" thus sighs this look: but there is no hope. "I am who I am: how could I get free from myself. And yet—I *am fed up with myself*!" . . . On such ground of self-contempt, a true swamp-ground, every weed grows, every poisonous plant, and all of it so small, so hidden, so dishonest, so cloying. Here the worms of vengeful and grudging feelings teem; here the air stinks of things that are secret and cannot be acknowledged; here the web of the most vicious conspiracy spins itself constantly—the conspiracy of the sufferers against the well-formed and victorious; here the appearance of the victorious one is *hated*. And what mendacity not to acknowledge this hate as hate! What expenditure of great words and poses, what art of "righteous" defamation! These deformed ones: what noble eloquence streams forth from their lips! How much sugary, slimy, humble submission swims in their eyes! What do they actually want? At least to *represent* justice, love, wisdom, superiority—that is the ambition of these "undermost ones," of these sick ones! And how skillful such an ambition makes one! One should particularly admire the counterfeiter's skill with which the stamp of virtue, even the cling-clang, the golden tone of virtue, is copied. They have now taken virtue in lease completely and utterly for themselves, these weak and incurably diseased ones, of this there is no doubt: "we alone are the good, the just," so they speak, "we alone are the *homines bonae voluntatis*."[83] They walk about among us as bodily reproaches, as warnings to us—as if health, being well-formed, strength, pride, a feeling of power were depraved things in themselves, for which one will someday have to atone, bitterly atone: oh how ready they themselves basically are to *make* others atone, how they thirst to be *hangmen*! Among them there are plenty of vengeful ones disguised as judges, who constantly carry the word "justice" in their mouths like poisonous saliva, forever

83. [Men of good will. Luke 2:14.]

with pursed lips, forever ready to spit on everything that does not look dissatisfied and that goes its way in good spirits. Among them there is no lack of that most disgusting species of the vain—the mendacious misbirths who are out to play the role of "beautiful souls" and who for instance bring their mangled sensuality, wrapped in verses and other diapers, onto the market as "purity of heart": the species of the moral onanist and "self-gratifier." The will of the sick to represent *any* form of superiority, their instinct for secret paths that lead to a tyranny over the healthy—where might this not be found, this will of precisely the weakest to power! The sick woman in particular: no one excels her in refinements for ruling, oppressing, tyrannizing. Furthermore the sick woman does not spare anything living, anything dead; she digs the most buried of things up again (the Bogos say: "woman is a hyena"). Look into the background of every family, every corporation, every community: everywhere the battle of the sick against the healthy—a silent battle for the most part with little poisonous powders, with needle pricks, with insidious plays of martyr expressions, at times, however, even with the *loud* gestures of an invalid's pharisaism, which loves most of all to play "noble indignation." It would like to make itself heard all the way into the hallowed halls of science, this hoarse indignant bark of the diseased dogs, the biting mendacity and rage of such "noble" Pharisees (—once again I remind readers who have ears of that Berliner apostle of revenge, Eugen Dühring, who is making the most indecent and repulsive use of moral boom-boom in present-day Germany: Dühring, the foremost moral big-mouth there now is, even among his own kind, the anti-Semites). They are all human beings of *ressentiment*, these physiologically failed and worm-eaten ones, a whole trembling earth of subterranean revenge, inexhaustible, insatiable in outbursts against the happy, and likewise in masquerades of revenge, in pretexts for revenge: when would they actually arrive at their last, finest, most sublime triumph of revenge? Undoubtedly, if they should succeed in *shoving* their own misery, all misery generally *into the conscience* of the happy: so that the happy would one day begin to be ashamed of their happiness and perhaps say among themselves: "it is a disgrace to be happy! *there is too much misery*!" . . . But there could not be any greater and more doomful misunderstanding than when the happy, the well-formed, the powerful of body and soul begin to doubt their *right to happiness*. Away with this "inverted world"! Away with this disgraceful softening of the feelings! That the sick *not* make the healthy sick—and this would be such a softening—that should certainly be the highest viewpoint on earth:—but this would require above all else that the healthy remain *separated* from the sick, guarded even against the sight of the sick, that they not confuse themselves with the sick. Or would it perhaps be their task to be nurses or physicians? . . . But they could in no way more gravely mistake and deny *their* task—the higher *must* not degrade itself to a tool of the lower, the pathos of distance *must* also keep their tasks separated to all eternity! Their right to exist, the privilege of the bell with full sound over the dissonant, cracked one is of course a thousandfold greater one: they alone are the *guarantors* of the future, they alone have been *given responsibility* for the human future. What *they* can do, what *they* should do, a sick person can never and should never do: but *in order for* them to be able to do what only *they* should do, how could they be free to choose to be physician, comforter, "savior" for the sick? . . . And therefore good air! good air! And in any case away from the proximity of all madhouses and hospitals of culture! And therefore good company, *our* company! Or solitude if it must be! But in any case away from the foul vapors of inward corruption and the secret wormfodder of invalids! . . . So that we may defend ourselves, my friends, at least for a while yet, against what may be the two gravest epidemics that have been reserved just for us—against the *great disgust at the sight of man*! against the *great compassion for man*! . . .

15

If one has grasped in all its depth—and I demand that precisely here one *reach* deeply, grasp deeply—why it positively can *not* be the task of the healthy to nurse the sick, to make the sick well, then a further necessity has also been grasped—the necessity of physicians and nurses *who are themselves sick*: and now we have and hold with both hands the meaning of the ascetic priest. The ascetic priest must be counted

as the foreordained savior, shepherd, and advocate of the sick herd: only then do we understand his historic mission. *Dominion over ones who suffer* is his realm, it is to this that his instinct directs him, in this he has his most characteristic art, his mastery, his kind of happiness. He must be sick himself, he must be related to the sick and short-changed from the ground up in order to understand them—in order to get along with them; but he must also be strong, lord over himself more than over others, with his will to power intact, so that he has the confidence and the fear of the sick, so that for them he can be a foothold, resistance, support, compulsion, disciplinarian, tyrant, god. He is to defend them, his herd—against whom? Against the healthy, no doubt, also against envying the healthy; he must by nature oppose *and hold in contempt* all coarse, tempestuous, unbridled, hard, violent-predatory health and powerfulness. The priest is the first form of the *more delicate* animal that holds in contempt even more readily than it hates. He will not be spared waging war with the beasts of prey, a war of cunning (of the "spirit") more than of force, as goes without saying—to this end he will perhaps need almost to develop in himself, at least *to signify*, a new type of beast of prey—a new animal terribleness in which the polar bear, the lithe cold wait-and-see tiger cat, and not least of all the fox appear to be bound into a unity just as attractive as it is fear-inspiring. Supposing that necessity compels him, he then steps into the very midst of the other kind of beast of prey with bearish seriousness, venerable, cold, shrewd, deceptively superior, as herald and mouthpiece of mysterious forces, determined to sow sorrow, conflict, self-contradiction on this ground wherever he can and, only too sure of his art, to become lord over *sufferers* at all times. He brings along ointments and balm, no doubt; but he first needs to wound in order to be a physician; as he then stills the pain that the wound causes, *he poisons the wound at the same time*—for in this above all he is an expert, this magician and tamer of beasts of prey, in whose vicinity everything healthy necessarily becomes sick and everything sick, tame. He defends his sick herd well enough indeed, this strange shepherd—he defends it against itself as well, against what smolders within the herd itself: badness, deceitfulness, maliciousness and whatever else is characteristic of all the sick and invalids when among themselves; he fights shrewdly, hard, and secretively against the anarchy and ever-incipient self-dissolution within the herd, where that most dangerous blasting and explosive material, ***ressentiment***, is constantly mounting and mounting. To discharge this explosive in such a way that it does not blow up either the herd or the shepherd, that is his true feat, also his supreme usefulness; if one wanted to sum up the value of the priestly mode of existence in the shortest formula one would have to say straight away: the priest *changes the direction* of *ressentiment*. For every sufferer instinctively seeks a cause for his suffering; still more precisely, a perpetrator, still more specifically, a *guilty* perpetrator who is receptive to suffering—in short, some living thing on which, in response to some pretext or other, he can discharge his affects in deed or in effigy: for the discharge of affect is the sufferer's greatest attempt at relief, namely at *anesthetization*—his involuntarily craved narcotic against torment of any kind. It is here alone, according to my surmise, that one finds the true physiological causality of *ressentiment*, of revenge, and of their relatives—that is, in a longing for *anesthetization of pain through affect*:—this causality has been commonly sought, very mistakenly it seems to me, in the defensive counterblow, a mere reactive protective measure, a "reflex movement" in the case of some sudden harm and endangerment, of the kind that a frog without a head still carries out in order to get rid of a corrosive acid. But the difference is fundamental: in the one case, one wishes to prevent further damage; in the other case, one wishes, by means of a more vehement emotion of any kind, to *anesthetize* a tormenting, secret pain that is becoming unbearable and, at least for the moment, to put it out of consciousness—for this one needs an affect, as wild an affect as possible and, for its excitation, the first best pretext. "Someone must be to blame for the fact that I feel bad"—this kind of reasoning is characteristic of all those who are diseased, indeed the more the true cause of their feeling bad, the physiological one, remains concealed from them (—it can lie for instance in a sickening of the *nervus sympathicus*[84] or in an excessive secretion of bile, or in a deficiency of potassium sulfate

84. [Sympathetic nerve (nervous system).]

or phosphate in the blood or in pressure conditions in the abdomen that stop the circulation of the blood, or in degeneration of the ovaries and the like). Those who suffer are one and all possessed of a horrifying readiness and inventiveness in pretexts for painful affects; they savor even their suspicion, their brooding over bad deeds and apparent curtailments; they dig around after dark questionable stories in the viscera of their past and present, where they are free to wallow in a tormenting suspicion and to intoxicate themselves on their own poison of malice—they tear open the oldest wounds, they bleed to death from scars long healed, they make malefactors out of friend, wife, child and whatever else stands closest to them. "I am suffering: for this someone must be to blame"—thus every diseased sheep thinks. But his shepherd, the ascetic priest, says to him: "That's right, my sheep! someone must be to blame for it: but you yourself are this someone, you alone are to blame for it—you *alone are to blame for yourself*!" . . . That is bold enough, false enough: but one thing at least has been achieved by it, in this way, as noted, the direction of the *ressentiment* has been—*changed*.

16

One can guess by now what I think life's healing-artist instinct has at least *attempted* through the ascetic priest and to what end a temporary tyranny of such paradoxical and paralogical concepts as "guilt," "sin," "sinfulness," "corruption," "damnation" has had to serve him: to make the sick to a certain degree *harmless*, to destroy the incurable through themselves, to strictly direct the more mildly sick toward themselves, to give a backwards direction to their *ressentiment* ("one thing is needful") and in this manner to *exploit* the bad instincts of all sufferers for the purpose of self-discipline, self-supervision, self-overcoming. As goes without saying, with a "medication" of this kind, a mere affect-medication, it absolutely cannot be a matter of a true *healing* of the sick in the physiological sense; one could not even claim that the instinct of life in any way has healing in mind or in intention. A kind of crowding together and organizing of the sick, on the one hand (—the word "church" is the most popular name for this), a kind of provisional securing of the more healthily formed, the more fully cast, on the other, thus the tearing open of a chasm between healthy and sick—for a long time that was all! And it was a great deal! it was a *very great deal*! . . . [In this treatise I am proceeding, as one can see, on the presupposition, which I do not first have to justify as far as readers of the type I need are concerned: that "sinfulness" in humans is not a factual state but rather only the interpretation of a factual state, namely of being physiologically out of sorts—the latter seen from a moral-religious perspective that is no longer binding on us.—That someone *feels* "guilty," "sinful" does not at all prove he is right in feeling so; just as little as someone is healthy merely because he feels healthy. Just recall the famous witch trials: back then the most sharp-sighted and philanthropic judges did not doubt that there was guilt; the "witches" *themselves did not doubt it*—and still there was no guilt.—To express that presupposition in expanded form: "pain of the soul" itself does not at all count as a factual state but rather only as an interpretation (causal interpretation) of factual states that could not yet be exactly formulated: thus something that is still entirely up in the air and is not scientifically binding—actually only a fat word in the place of a very thin question mark. If someone cannot cope with his "pain of the soul" it is *not*, crudely put, due to his "soul"; more likely to his belly (crudely put, as stated: which in no way expresses a wish also to be heard crudely, understood crudely . . .) A strong and well-formed human digests his experiences (deeds, misdeeds included) as he digests his meals, even when he has hard bites to swallow. If he "cannot cope" with an experience, this kind of indigestion is just as physiological as that other one—and in many cases in fact only one of the consequences of that other.—With such a conception one can, speaking among ourselves, still be the strictest opponent of all materialism . . .]

17

But is he actually a *physician*, this ascetic priest?—We have already grasped why it is hardly permissible to call him a physician, as much as he likes to feel himself to be a "savior," to allow himself to be venerated as a "savior." He combats only suffering itself, the listlessness of the one suffering, *not* its cause, *not*

the actual state of sickness—this must form our most fundamental objection to priestly medication. If, however, one adopts for once that perspective as only the priest knows and has it, one will not easily come to the end of one's amazement at all he has seen, sought, and found from within it. The *alleviation* of suffering, "comforting" of every kind—this turns out to be his very genius: how inventively he has understood his task as comforter, how unhesitatingly and boldly he has chosen the means for it! One might call Christianity in particular a great treasury of the most ingenious means for comforting, so much that is invigorating, alleviating, narcotizing has been heaped up in it; so much that is most dangerous and most audacious has been ventured for this purpose; so subtle, so sophisticated, so Mediterraneanly sophisticated has Christianity been in intuiting what kind of stimulant-affects can conquer, at least for a time, the deep depression, the leaden tiredness, the black sadness of the physiologically inhibited. For stated generally: with all great religions the main concern is to combat a certain tiredness and heaviness that have become epidemic. From the outset one can posit as probable that from time to time at certain places on earth a *feeling of physiological inhibition* must almost necessarily become lord over broad masses of people; from a lack of physiological knowledge, however, this feeling does not enter into consciousness as such, so that its "cause," its remedy can only be sought and attempted in the psychological-moral realm (—indeed this is my most general formula for that which is commonly called a "*religion*"). Such a feeling of inhibition can be of the most varied extraction: for instance as consequence of the crossbreeding of races that are too different from each other (or of social ranks—social ranks always express differences of extraction and race as well: the European "*Weltschmerz*,"[85] the "pessimism" of the nineteenth century is essentially the consequence of a nonsensically sudden mixing of the social ranks); or conditioned by a flawed emigration—a race that has ended up in a climate for which its power of adaptation is not sufficient (the case of the Indians in India); or the after-effect of age and exhaustion of the race (Parisian pessimism from 1850 on); or of a wrong diet (alcoholism of the Middle Ages; the nonsense of vegetarians, who admittedly have the authority of Sir Andrew[86] in Shakespeare on their side); or of corruption of the blood, malaria, syphilis, and the like (German depression after the Thirty-Years' War, which infected half of Germany with bad diseases and thereby prepared the soil for German servility, German timidity). In such cases a *battle with the feeling of listlessness* is always attempted on the grandest scale; let us instruct ourselves briefly in its most important practices and forms. (I ignore here entirely, as is fair, the actual *philosophers*' battle against the feeling of listlessness, which always tends to go on simultaneously—it is interesting enough, but too absurd, too inconsequential in practical terms, too much in the manner of cobweb-spinners and idlers, as, say, when pain is to be proven an error under the naive presupposition that the pain *would have to* disappear once the error in it has been recognized—but behold! it guarded itself against disappearing . . .) This dominant feeling of listlessness is combatted, *first*, by means that reduce the general feeling of life to its lowest point. If possible no willing at all, not another wish; avoiding whatever stirs up affect, whatever stirs up "blood" (no eating salt: hygiene of the fakir); no loving; no hating; apathy; no avenging oneself; no making oneself rich; no working; begging; if possible no woman, or as little woman as possible: in respect to the spiritual the principle of Pascal[87] *"il faut s'abêtir."*[88] The result, expressed in psychological-moral terms: "un-selfing," "hallowing"; expressed physiologically: hypnotization—the attempt to achieve something for man that approximates what *hibernation* is for some species of animals, what *aestivation* is for many plants in hot climates, a minimum of consumption and metabolism whereby life just barely continues without actually entering into our consciousness anymore. An astounding amount of human energy has been expended on this

85. ["World-pain," an emotional state in which the predominant tone is a feeling of pain or sadness because of the inadequacy of the world.]

86. [A character in Shakespeare's *Twelfth Night*. The passage in question is I, iii.]

88. [One must make oneself stupid.]

goal—perhaps in vain? . . . There is certainly no doubt that such sportsmen of "holiness," who abound in all ages, among almost all peoples, have in fact found a real redemption from that which they combatted with such rigorous training—in countless cases they really got *free* of that deep physiological depression with the help of their system of hypnotics: for which reason their methodology counts as one of the most universal ethnological facts. There is likewise nothing that would permit us to count such an intention to starve physicality and desire as in itself among the symptoms of madness (as it pleases a clumsy kind of roastbeef-eating "free spirit" and Sir Andrew to do). It is all the more certain that it forms, can form, the *path* to all kinds of mental disturbances, to "inner lights," for example, as with the Hesychasts of Mount Athos, to hallucinations of sounds and figures, to lustful effusions and ecstasies of sensuality (story of Saint Theresa). The interpretation given to conditions of this kind by those who are afflicted with them has always been as fanatically false as possible, this goes without saying: but do not fail to hear the tone of the most convinced gratitude that resounds already in the *will* to such a manner of interpretation. The highest condition, *redemption* itself, that final achievement of total hypnotization and stillness, always counts for them as the mystery in itself, for the expression of which even the highest symbols are insufficient, as a turning in and returning home into the ground of things, as becoming free from all illusion, as "knowledge," as "truth," as "being," as escaping from every goal, every wish, every doing, as a state beyond good and evil as well. "Good and evil," the Buddhist says,—"both are shackles: over both the perfect one became lord"; "that which has been done and that which has been left undone," says the believer of the Vedânta, "cause him no pain; good and evil he shakes from himself, as a wise man; his realm no longer suffers through any deed; over good and evil, over both he passed beyond": a pan-Indian conception then, just as brahmanistic as buddhistic. (Neither in the Indian nor in the Christian manner of thinking is this "redemption" considered to be *attainable* through virtue, through moral improvement, however high they may fix the value of virtue as a hypnotic: make note of this,—it corresponds, moreover, to the facts of the matter. To have remained *true* in this may perhaps be considered the best piece of realism in the three greatest, otherwise so fundamentally moralized religions. "For the knowing one there is no duty" . . . "Redemption is not brought about by the *addition* of virtues—for it consists in being one with brahma, which is not capable of any addition of perfection—and just as little by the *discarding* of faults: for brahma, to be one with which constitutes redemption, is eternally pure"—these passages from the commentary of Shankara,[89] quoted from Europe's first real *expert* on Indian philosophy, my friend Paul Deussen.) Let us then honor "redemption" in the great religions; but it is a bit difficult to remain serious when faced with the esteem in which *deep sleep* is held by these people, who are tired of life, too tired even for dreaming—deep sleep, that is, as already an entering into brahma, as *achieved unio mystica* with God. "When he has then fallen asleep completely and utterly"—it says concerning this in the oldest most venerable "Scripture"—"and has completely come to rest so that he no longer sees any dream images, then he is, oh dear one, united with That Which Is, he has entered into himself—embraced by the knowledge-like self, he no longer has any consciousness of that which is outside or inside. Day and night do not cross over this bridge, age does not, death does not, suffering does not, good works do not, evil works do not." "In deep sleep," the faithful of this deepest of the three great religions likewise say, "the soul raises itself out of this body, enters into the highest light, and thereby appears in its own form: there it is the highest spirit itself, which walks about while joking and playing and delighting itself, be it with women or with carriages or with friends; there it no longer thinks back on this appendage of a body to which the *prâna* (the breath of life) is harnessed like a draught animal to the cart." Nevertheless let us bear in mind here, too, as in the case of "redemption," that what is expressed in the preceding, however much in the splendor of oriental exaggeration, is simply the same esteem as that of the clear, cool, Greek-cool, but suffering Epicurus: the hypnotic feeling of nothingness, the rest of the deepest sleep, in short, *absence of suffering*—this may count already as the highest good, as value of values for

89. [Indian philosopher and theologian (ca. 788–ca. 820)].

those who suffer and are thoroughly out of sorts, this *must* be appraised by them as positive, felt to be *the* positive itself. (According to the same logic of feelings, in all pessimistic religions nothingness is called *God*.)

18

Much more frequent than this sort of hypnotic general suppression of sensitivity, of susceptibility to pain—which presupposes even rarer forces, above all courage, contempt of opinion, "intellectual stoicism,"—is the attempt at a different kind of training against conditions of depression, one that is in any case easier: *mechanical activity*. That this relieves a suffering existence to a not inconsiderable degree is beyond all doubt: today this fact is called, somewhat dishonestly, "the blessing of work." The relief consists in this: that the interest of the sufferer is thoroughly diverted from the suffering—that it is continually doing and yet again only doing that enters into consciousness and, consequently, that little room remains in it for suffering: for it is *narrow*, this chamber of human consciousness! Mechanical activity and that which belongs to it—like absolute regularity, punctual unreflected obedience, one's way of life set once and for all, the filling up of time, a certain permission for, indeed discipline in "impersonality," in self-forgetfulness, in "*incuria sui*"[90]—: how thoroughly, how subtly the ascetic priest knew how to use these in the battle with pain! Precisely when he had to deal with sufferers of the lower social ranks, with work slaves or prisoners (or with women: who are of course usually both at the same time, work slaves and prisoners), it required little more than a small art of name-changing and rebaptizing to make them henceforth see in hated things a boon, a relative bit of good fortune:—in any case the dissatisfaction of the slave with his lot was *not* invented by priests.—A still more valued means in the battle with depression is the prescription of a *small joy* that is easily accessible and can be made a regular practice; this medication is frequently made use of in connection with the one just discussed. The most frequent form in which joy is thus prescribed as a means to a cure is the joy of *giving* joy (as doing good, giving gifts, relieving, helping, encouraging, comforting, praising, honoring); by prescribing "love of one's neighbor" the ascetic priest is basically prescribing an arousal of the strongest, most life-affirming drive, even if in the most cautious of doses—the *will to power*. The happiness of the "smallest superiority," such as accompanies all doing good, being useful, helping, honoring, is the most plentiful means of consolation that the physiologically inhibited tend to make use of, assuming they are well advised: otherwise they cause each other pain, in obedience to the same basic instinct, naturally. When one looks for the beginnings of Christianity in the Roman world, one finds associations for mutual support, pauper-, invalid-, burial-associations, which sprung up on the undermost soil of the society of that time, and in which that principal medicine against depression, the small joy, that of mutual good deeds was consciously cultivated—perhaps this was something new back then, a true discovery? In a "will to mutuality," to herd-formation, to "community," to "cenacle" elicited in this manner, the will to power thus aroused in the process—even if it is on the smallest scale—must now in turn come to a new and much fuller outburst: *herd-formation* is an essential step and victory in the battle with depression. With the growth of the community a new interest also grows strong in the individual, one that often enough lifts him above and beyond that which is most personal in his ill-humor, his aversion to *himself* (the "*despectio sui*"[91] of Geulincx). Out of a longing to shake off the dull listlessness and the feeling of weakness, all the sick, the diseased strive instinctively for a herd organization: the ascetic priest intuits this instinct and fosters it; wherever there are herds it is the instinct of weakness that willed the herds and the shrewdness of priests that organized them. For do not overlook this: the strong strive just as naturally and necessarily *away* from each other as the weak strive *toward* each other; when the former band together it occurs only with a view to an aggressive joint action and joint satisfaction of their will to power, with a great deal of resistance from the individual conscience; the latter, on the other hand, arrange themselves into groups with *plea-*

90. [Neglect of oneself.]

91. [Contempt of oneself.]

sure precisely in the arrangement into groups—their instinct is satisfied in the process just as much as the instinct of the born "lords" (that is of the solitary beast-of-prey species of human) is at bottom irritated and disquieted by organization. Beneath every oligarchy—all of history teaches this—*tyrannical* craving always lies hidden; every oligarchy trembles constantly from the tension that every individual in it needs in order to remain lord over this craving. (Thus it was for example with the *Greeks*: Plato attests it in a hundred passages, Plato who knew his own kind—*and* himself . . .)

19

The means employed by the ascetic priest with which we have thus far become acquainted—the general muffling of the feeling of life, mechanical activity, the small joy, above all that of "love of one's neighbor," the herd organization, the awakening of the communal feeling of power, whereby the individual's vexation with himself is drowned out by his pleasure in the prospering of the community—these are, measured according to a modern standard, his *innocent* means in the battle with listlessness: let us now turn to the more interesting ones, the "guilty" ones. They are all concerned with one thing: some kind of *excess of the emotions*—used as the most effective means of anesthetizing the dull paralyzing long painfulness; for which reason priestly inventiveness has been virtually inexhaustible in thinking through this single question: "*by what means* does one achieve an emotional excess?" . . . That sounds harsh: it is clear as day that it would sound more pleasant and perhaps suit the ears better if I said, for instance, "the ascetic priest has always taken advantage of the *enthusiasm* that lies in all strong affects." But why stroke the tender ears of our modern milquetoasts? Why should *we* give in even one step to their Tartuffery of words? For us psychologists there would already be a Tartuffery *of deed* in this; not to mention that it would disgust us. For in this, if in anything, a psychologist today has his *good taste* (—others may say: his righteousness), that he resists the disgracefully *moralized* manner of speaking that clings like slime to virtually all modern judging of humans and things. For do not deceive yourself in this: what constitutes the most characteristic feature of modern souls, modern books is not the lie, but rather the ingrained *innocence* in their moralistic mendacity. To have to discover this "innocence" everywhere again and again—this constitutes perhaps the most repulsive piece of work in all the questionable work a psychologist must take upon himself today; it is a piece of *our* great danger—it is a path that perhaps leads precisely *us* to the great disgust . . . I do not doubt *what purpose* alone modern books (supposing that they have any permanence, which is admittedly not to be feared, and likewise supposing that there will one day be a posterity with stricter, harsher, *healthier* taste)—what purpose absolutely *everything* modern would serve, could serve for this posterity: as emetics—and this by virtue of its moral cloyingness and falseness, of its innermost feminism that likes to call itself "idealism" and in any case believes itself to be idealism. Our educated ones of today, our "good ones" do not lie—this is true; but it is *not* to their credit! The true lie, the authentic resolute "honest" lie (concerning whose value one should listen to Plato) would be something far too rigorous, too strong for them; it would demand what one is not *permitted* to demand of them, that they open their eyes toward themselves, that they know how to distinguish between "true" and "false" in their own case. The *dishonest lie* alone befits them; whatever feels itself to be a "good human being" today is completely incapable of relating to any issue except in a manner that is *dishonestly mendacious*, abysmally mendacious, but innocently mendacious, trustingly mendacious, blue-eyedly mendacious, virtuously mendacious. These "good human beings"—they are all moralized down to the roots now and with respect to honesty spoiled and ruined to all eternity: which of them could still endure a *truth* "about humankind"! . . . Or, more concretely asked: which of them could bear a *true* biography! . . . A few signs of this: Lord Byron wrote down a considerable number of most personal things about himself but Thomas Moore was "too good" for it: he burned the papers of his friend. Dr. Gwinner, the executor of Schopenhauer's will, is supposed to have done the same thing: for Schopenhauer as well had written down a considerable amount about himself and perhaps even against himself ("*eis heauton*").[92] The able American

92. [About himself *or* against himself.]

Thayer, the biographer of Beethoven, stopped all at once in his work: having arrived at some point or other in this venerable and naive life he could no longer endure it . . . Moral: what prudent man would write an honest word about himself anymore today?—for he would have to belong to the Order of Holy Foolhardiness. We are promised an autobiography of Richard Wagner: who doubts that it will be a *prudent* autobiography? . . . Let us also call to mind the comical horror that the Catholic priest Janssen aroused in Germany with his inconceivably simplistic and innocuous picture of the German Reformation movement; what would one do if someone were to narrate this movement *differently* some day, if a real psychologist were to narrate a real Luther some day, no longer with the moralistic simplicity of a country cleric, no longer with the cloying and discreet prudishness of Protestant historians, but rather, say, with a *Taine*-[93] like dauntlessness, out of *strength of the soul* and not out of a prudent indulgence toward strength? . . . (The Germans, incidentally, have in the end brought forth the classical type of the latter nicely enough—they may indeed count him as one of their own, count him to their credit: namely their Leopold Ranke,[94] this born classical *advocatus* of every *causa fortior*,[95] this most prudent of all prudent "factual ones.")

20

But you will have understood me already:—all in all reason enough, isn't there, that we psychologists nowadays cannot get rid of considerable mistrust *of ourselves*? . . . We, too, are probably still "too good" for our trade; we, too, are probably still the victims, the booty, the invalids of this moralized taste of the times, as much as we may feel ourselves to be ones who hold it in contempt—it probably infects *us* too. What was it of which that diplomat[96] warned when speaking to his peers? "Let us mistrust above all, gentlemen, our first impulses!" he said, "*they are almost always good*" . . . Thus, too, every psychologist today should speak to his peers . . . And with that we come back to our problem, which indeed demands considerable strictness of us, considerable mistrust, in particular of "first impulses." *The ascetic ideal serving an intent to produce emotional excess*:—whoever recalls the previous treatise will already anticipate the essential content of what remains to be presented—pressed into these ten words. To free the human soul from all its moorings for once, to immerse it in terrors, frosts, blazes, and ecstasies in such a way that it is freed from everything that is small and small-minded in listlessness, dullness, being out of sorts as if by a bolt of lightning: which paths lead to *this* goal? And which of them most surely? . . . Basically all great affects have the capacity to do so, assuming that they discharge themselves suddenly: anger, fear, lust, revenge, hope, triumph, despair, cruelty; and indeed the ascetic priest has unhesitatingly taken into his service the *whole* pack of wild dogs in man and unleashed first this one, then that one, always for the same purpose, to waken man out of slow sadness, to put to flight, at least for a time, his dull pain, his lingering misery, always under a religious interpretation and "justification." Every such emotional excess *exacts payment* afterwards, that goes without saying—it makes the sick sicker—and therefore this kind of remedy for pain is, measured by a modern standard, a "guilty" kind. Since fairness demands it, however, one must insist all the more that it has been applied *with a good conscience*, that the ascetic priest has prescribed it with the deepest faith in its usefulness, indeed indispensability—and often enough almost breaking down in the face of the wretchedness he has created; likewise, that the vehement physiological avengings of such excesses, perhaps even mental disturbances, do not actually contradict the overall sense of this kind of medication: which, as has previously been shown, is *not* out to heal sicknesses, but rather to combat the listlessness of depression, to alleviate it, to anesthetize it. And it was *thus* that this goal was achieved. The principal bow stroke the ascetic priest

94. [Leopold Ranke (1795–1886), highly successful and influential historian, author of over fifty volumes of history.]

95. [Stronger cause.]

96. [Charles-Maurice de Talleyrand (-Périgord), Prince de Bénévent (1754–1838). French statesman and diplomat known for his lack of scruples and for his capacity for political survival.]

allowed himself in order to cause the human soul to resound with wrenching and ecstatic music of every kind was executed—everyone knows this—by exploiting the *feeling of guilt*. The previous treatise briefly suggested its origins—as a piece of animal psychology, no more: there the feeling of guilt first confronted us in its raw state as it were. Only in the hands of the priest, this true artist of the feeling of guilt, did it take on form—oh what a form! "Sin"—for thus reads the priestly reinterpretation of the animal's "bad conscience" (cruelty turned backwards)—has so far been the greatest event in the history of the sick soul: in it we have the most dangerous and doom-laden feat of religious interpretation. Man, suffering from himself in some way or other, physiologically in any case, somewhat like an animal locked in a cage, uncertain why, to what end? desirous of reasons—reasons alleviate—desirous also of cures and narcotics, finally holds counsel with one who also knows concealed things—and behold! he receives a hint; from his magician, the ascetic priest, he receives the *first* hint concerning the "cause" of his suffering: he is to seek it in *himself*, in a *guilt*, in a piece of the past, he is to understand his suffering itself as a *state of punishment* . . . He has heard, he has understood, the unhappy one: now things stand with him as with the hen around whom a line has been drawn. He can no longer get out of this circle of lines: out of the invalid "the sinner" has been made . . . And now one will not be rid of the sight of this invalid, of "the sinner," for a couple of millennia—will one ever be rid of him again?—wherever one looks, everywhere the hypnotic gaze of the sinner forever moving in the same direction (in the direction of "guilt" as the *only* causality of suffering); everywhere bad conscience, this "hideous animal," to use Luther's words; everywhere the past regurgitated, the deed twisted around, the "green eye" for all activity; everywhere that *wanting*-to-misunderstand-suffering made into life's meaning, the reinterpretation of suffering into feelings of guilt, fear, and punishment; everywhere the whip, the hair shirt, the starving body, contrition; everywhere the sinner breaking himself on the cruel wheels of a restless, diseased-lascivious conscience; everywhere mute torment, extreme fear, the agony of a tortured heart, the cramps of an unknown happiness, the cry for "redemption." Indeed, through this system of procedures the old depression, heaviness, and tiredness was thoroughly *overcome*, life became *very* interesting again: awake, eternally awake, in need of sleep, glowing, charred, exhausted and still not tired—this is what the human being looked like, "the sinner" who was initiated into *these* mysteries. This old great magician in the battle with listlessness, the ascetic priest—he had obviously been victorious, *his* kingdom had come: people no longer protested *against* pain, they *thirsted* after pain; "*more* pain! *more* pain!" thus cried the longing of his disciples and initiates for centuries. Every emotional excess that caused pain, everything that shattered, toppled, crushed, entranced, enraptured, the secret of places of torture, the inventiveness of hell itself—everything had now been discovered, guessed, exploited, everything stood at the disposal of the magician, everything served henceforth to the victory of his ideal, of the ascetic ideal . . . "My kingdom is not of *this* world"—he spoke now as before: did he really still have the right to speak so? . . . Goethe claimed that there were only thirty-six tragic situations: one can guess from this, if one didn't already know it, that Goethe was no ascetic priest. He—knows more . . .

21

With respect to *this* entire kind of priestly medication, the "guilty" kind, any word of criticism is too much. That an emotional excess such as the ascetic priest tends to prescribe for his sick ones in this case (under the holiest name, as goes without saying, likewise imbued with the holiness of his purpose) has really *been of use* to any sick person, who would have any desire to uphold a claim of this kind? One should at least be clear about the expression "be of use." If by this one intends to express that such a system of treatment has *improved* man, then I will not contradict: I only add what "improve" means for me—the same as "tamed," "weakened," "discouraged," "sophisticated," "pampered," "emasculated" (hence almost the same as *injured* . . .) If, however, we are dealing chiefly with those who are sick, out of sorts, depressed, then such a system makes the sick, even supposing that it makes him "better," at all events *sicker*; just ask doctors who work with the insane what a methodical application of penitential torments,

contritions, and cramps of redemption always brings on. Likewise interrogate history: wherever the ascetic priest has succeeded in establishing this treatment of the sick, diseasedness has always grown in depth and breadth with uncanny speed. What was the "success" in every case? A shattered nervous system, added to that which was already sick anyway; and this on the largest as on the smallest scale, with individuals as with masses. In the wake of penitence and redemption training we find enormous epileptic epidemics, the greatest known to history, like those of the St. Vitus' and St. John's dancers of the Middle Ages; as another form of its postlude we find terrible paralyses and chronic depressions with which in some cases the temperament of a people or city (Geneva, Basel) changes once and for all into its opposite;—witch hysteria belongs here as well, something related to somnambulism (eight great epidemic outbursts between 1564 and 1605 alone)—; in its wake we likewise find those death-seeking mass deliria whose horrifying cry "*evviva la morte*"[97] was heard across all of Europe, interrupted now by lustful, now by destructive idiosyncrasies: even today the same alternation of affects, with the same intermittences and sudden leaps, is still to be observed everywhere, in every case in which the ascetic doctrine of sin once again achieves a great success (religious neurosis *appears* as a form of "evil spirit": there is no doubt about this. What it is? *Quaeritur.*)[98] To put it bluntly, the ascetic ideal and its sublime-moral cult, this most ingenious, most unsuspected and most dangerous systematizing of all the instruments of emotional excess under the aegis of holy intentions, has inscribed itself in a terrible and unforgettable way into the entire history of man; and unfortunately *not only* into his history . . . There is hardly anything else I could point out that has pressed so destructively upon *health* and racial robustness, particularly of Europeans, as this ideal; without any exaggeration one may call it *the true doom* in the history of European health. At best, that the specifically Germanic influence might be comparable to its influence: I mean the alcohol poisoning of Europe that has thus far kept strict pace with the political and racial predominance of the Germanic peoples (—wherever they injected their blood, they injected their vice as well).—Third in line one ought to mention syphilis—*magno sed proxima intervallo.*[99]

22

The ascetic priest has ruined the health of the soul wherever he has come to power, he has consequently ruined *taste* in *artibus et litteris* as well—he is still ruining it. "Consequently"?—I hope one will simply concede me this consequently; at any rate, I do not wish to prove it first. A single pointer: it is directed at the basic book of Christian literature, its true model, its "book in itself." Even in the midst of Greco-Roman glory, which was also a glory of books, in the face of a classical scripture-world that was not yet atrophied and decimated, at a time when one could still read a few books for whose possession one would now give half of a nation's literature, the simplicity and vanity of Christian agitators—one calls them Church Fathers—already dared to decree: "*we* too have our classical literature, *we do not need that of the Greeks*"—and at the same time one pointed proudly to books of legends, apostolic epistles, and little apologetic tracts, in roughly the same way as the English "Salvation Army" today fights its battle against Shakespeare and other "heathens" with a related literature. I have no love for the "New Testament," one can guess that already; it almost makes me uneasy to stand so alone in my taste regarding this most esteemed, most overestimated scriptural work (the taste of two millennia is *against* me): but what good does it do! "Here I stand, I can do no other"—I have the courage of my bad taste. The *Old* Testament—now that is something entirely different: I take my hat off to the Old Testament! In it I find great human beings, a heroic landscape, and something most rare on earth, the incomparable naïveté of the *strong heart*; still more, I find a people. In the New, on the other hand, nothing but petty sectarian economy, nothing but rococo of the soul, nothing but embellishment, crookedness, oddness, nothing but conventicle air, not to forget an occasional breath of bucolic cloyingness

97. [Long live death!]

98. [One asks—i.e., "that is the question."]

99. [Next, but by a great distance. Cf. Virgil, *Aeneid*, Book 5, line 320.]

that belongs to that epoch (*and* to the Roman province) and is not so much Jewish as Hellenistic. Humility and pomposity side by side; a garrulousness of feeling that almost numbs; passionateness, no passion; embarrassing play of gestures; it is obvious that all good breeding was lacking here. How can one be allowed to make such a fuss about one's little bad habits as these pious little men do! No cock will crow about this, much less God. Finally they even want to have "the crown of eternal life," all these little people from the province: and to what end? and for what? one cannot push immodesty further than this. An "immortal" Peter: who could endure *that*! They have an ambition that makes one laugh: *this one* openly chews what is most personal to him, his foolishnesses, sadnesses, and idler's worries, as if the in-itself-of-things were obliged to take care of it all; *that one* never tires of drawing God himself into the pettiest distress in which they are stuck. And this constant familiarity with God, in the worst taste! This Jewish, not merely Jewish impertinence toward God with muzzle and paw! . . . There are minor despised "heathen peoples" in the east of Asia from whom these first Christians could have learned something substantial, some *tact* of reverence; as Christian missionaries attest, the former do not permit themselves to give voice to the name of their god at all. This seems delicate enough to me; what is certain is that it is not only "first" Christians who find it too delicate: to feel the contrast just recall Luther, for instance, this "most eloquent" and immodest peasant that Germany has had, and the Lutheran tone that precisely he liked best in his conversations with God. In the final analysis, Luther's resistance to the mediator saints of the Church (particularly to "the devil's sow, the pope") was, there is no doubt, the resistance of a boor annoyed by the *good etiquette* of the Church, that reverential etiquette of hieratic taste, which admits only the more devoted and more silent into the Holy of Holies and locks it against the boors. Precisely here these boors are absolutely not to be allowed to speak—but Luther, the peasant, wanted it otherwise, it wasn't *German* enough for him as it was: above all he wanted to speak directly, to speak himself, to speak "uninhibitedly" with his God . . . Well, he did it.—The ascetic ideal, one will likely guess it, was never and nowhere a school of good taste, still less of good manners—in the best case it was a school of hieratic manners—: that is because it has something in its very flesh that is the mortal enemy of all good manners—lack of measure, aversion to measure, it is itself a "*non plus ultra*."[100]

23

The ascetic ideal has not only ruined health and taste, it has also ruined a third, fourth, fifth, sixth something—I will restrain myself from saying *what* all (when would I come to an end!). It is not what this ideal has *done* that I propose to bring to light here; rather solely what it *means*, what it hints at, what lies hidden behind it, beneath it, in it, for which it is the provisional, indistinct expression, overladen with question marks and misunderstandings. And it is only with respect to *this* purpose that I am not permitted to spare my readers a look at the enormity of its effects, of its doomful effects as well: namely in order to prepare them for the last and most terrible aspect that the question of the meaning of this ideal has for me. What does the very *power* of this ideal mean, the *enormity* of its power? Why has it been given room to this extent? why has there not been better resistance? The ascetic ideal expresses a will: *where* is the opposing will in which an *opposing ideal* expresses itself ? The ascetic ideal has a *goal*—it is general enough that all other interests of human existence appear small-minded and narrow measured against it; it relentlessly interprets ages, peoples, human beings according to this one goal, it refuses to tolerate any other interpretation, any other goal, it rejects, negates, affirms, confirms solely in accordance with *its* interpretation (—and was there ever a system of interpretation more thoroughly thought to the end?); it submits itself to no power, rather it believes in its privilege over every other power, in its unconditional *distance of rank* with respect to every power—it believes that there is no instance of power on earth that does not first have to receive from it a meaning, a right to existence, a value, as a tool in *its* work, as a way and means to *its* goal, to *one* goal . . . Where is the *counterpart* to this closed system of will, goal, and interpretation? Why is the counterpart *lacking*?

100. [The highest or ultimate of its kind; literally: not more beyond.]

. . . Where is the *other* "*one* goal"? . . . But I am told it is *not* lacking, it has not only fought a long successful battle with this ideal but rather has already become lord over that ideal in all essential matters: our entire modern *science* is said to be witness to this—this modern science, which, as a true philosophy of reality, clearly believes in itself alone, clearly possesses the courage to itself, the will to itself and has so far got along well enough without God, the beyond, and virtues that negate. Nevertheless, in my case one accomplishes nothing with such noise and agitator-babble: these trumpeters of reality are bad musicians, it is easy enough to hear that their voices do *not* come from the depths, it is *not* the abyss of the scientific conscience that speaks through them—for the scientific conscience is an abyss today—in such trumpeter-mouths the word "science" is simply an obscenity, a misuse, a shameless act. Precisely the opposite of what is claimed here is the truth: science has utterly *no* faith in itself today, to say nothing of an ideal *above* itself—and where it is at all still passion, love, ardor, *suffering*, it is not the opposite of that ascetic ideal but rather *its most recent and noblest form*. Does that sound strange to you? . . . Of course even among the scholars of today there are enough steady and modest working folk who like their little corner and therefore, because they like it there, from time to time speak up rather immodestly with the demand that one *should* be satisfied in general today, above all in the sciences—there is so much that is useful that needs doing precisely there. I won't contradict; least of all do I want to ruin the pleasure these honest workers take in their craft: for I enjoy their work. But the fact that one now works rigorously in the sciences and that there are contented workers does *not* by any means prove that as a whole science today has a goal, a will, an ideal, the passion of a great faith. As stated, the opposite is the case: where it is not the most recent manifestation of the ascetic ideal—there it is a matter of cases too rare, noble, select to overturn the general judgment—science today is a *hiding place* for every kind of ill-humor, unbelief, gnawing worm, *despectio sui*, bad conscience—it is the very *unrest* of being without an ideal, the suffering from the *lack* of a great love, the discontent in an *involuntary* contentedness. Oh what does science today not conceal! how much it is at least *supposed* to conceal! The competence of our best scholars, their mindless diligence, their heads smoking day and night, their very mastery of their craft—how often all this has its true sense in preventing something from becoming visible to oneself! Science as a means of self-anesthetization: *are you acquainted with that*? . . . By means of a harmless word one sometimes cuts them to the quick—everyone who keeps company with scholars experiences this—one embitters one's scholarly friends toward oneself at the very moment one means to honor them, one drives them beside themselves merely because one was too coarse to guess with whom one was actually dealing—with *sufferers* who do not want to admit to themselves what they are, with anesthetized and unconscious ones who fear only one thing: *coming to consciousness* . . .

24

—And now take a look, by comparison, at those rarer cases of which I spoke, the last idealists there are among philosophers and scholars today: do we perhaps have in them the sought-after *opponents* of the ascetic ideal, its *counter-idealists*? Indeed they *believe* themselves to be such, these "unbelieving ones" (for that they all are); they are so serious on this point, here in particular becoming so passionate in word, in gesture, that precisely this seems to be their last bit of belief, that they are opponents of this ideal:—need it therefore be *true*, what they believe? . . . We "knowers" are mistrustful of every kind of believer by now; our mistrust has gradually trained us to infer the opposite of what one formerly inferred: namely, wherever the strength of a belief comes strikingly to the fore to infer a certain weakness of demonstrability, even the *improbability* of what is believed. We too do not deny that faith "makes blessed": it is *precisely for this reason* that we deny that faith *proves* anything—a strong faith that makes blessed raises suspicion against that in which it believes, it does not establish "truth," it establishes a certain probability—of *deception*. And how do things stand in this case?—These negating and aloof ones of today, these who are unconditional on one point—the claim to intellectual cleanliness—these hard, strict, abstinent, heroic spirits who constitute the honor of our age, all these pale atheists, anti-Christians, immoralists, nihil-

ists, these skeptics, ephectics, *hectics* of the spirit (all of them are the latter in some sense or other), these last idealists of knowledge in whom alone the intellectual conscience today dwells and has become flesh—in fact they believe themselves to be as detached as possible from the ascetic ideal, these "free, *very* free spirits": and yet, to divulge to them what they themselves cannot see—for they stand too close to themselves—this ideal is precisely *their* ideal as well, they themselves represent it today, and perhaps they alone; they themselves are its most spiritualized outgrowth, the troop of warriors and scouts it deploys on the front line, its most entrapping, most tender, most incomprehensible form of seduction:—if I am a guesser of riddles in anything then let it be with *this* proposition! . . . These are by no means *free* spirits: *for they still believe in truth* . . . When the Christian crusaders in the Orient came across that invincible order of Assassins, that order of free spirits *par excellence* whose lowest degree lived in an obedience the like of which no order of monks has attained, they also received, through some channel or other, a hint about that symbol and tally-word reserved for the uppermost degrees alone, as their *secretum*[101]: "nothing is true, everything is permitted" . . . Now *that* was *freedom* of the spirit, *with that*, belief in truth itself was *renounced* . . . Has any European, any Christian free spirit ever lost his way in this proposition and its labyrinthine *consequences*? does he know the Minotaur of this cave *from experience*? . . . I doubt it, still more, I know otherwise:—nothing is more foreign to these who are unconditional on one point, these *so-called* "free spirits," than precisely freedom and breaking one's fetters in this sense, in no respect are they more firmly bound; precisely in their belief in truth they are more firm and unconditional than anyone else. I know all of this from too close a proximity perhaps: that commendable philosophers' abstinence to which such a belief obligates; that stoicism of the intellect that finally forbids itself a "no" just as strictly as a "yes"; that *wanting* to halt before the factual, the *factum* ***brutum***; that fatalism of "*petits faits*"[102] (*ce petit faitalisme*, as I call it), in which French science now seeks a kind of moral superiority over German science, that renunciation of all interpretation (of doing violence, pressing into orderly form, abridging, omitting, padding, fabricating, falsifying and whatever else belongs to the *essence* of all interpreting)—broadly speaking, this expresses asceticism of virtue as forcefully as does any negation of sensuality (it is basically only a *modus* of this negation). What *compels* one to this, however, this unconditional will to truth, is the *belief in the ascetic ideal itself*, even if as its unconscious imperative—do not deceive yourself about this,—it is the belief in a *metaphysical* value, a value *in itself of truth* as it is established and guaranteed by that ideal alone (it stands and falls with that ideal). There is, strictly speaking, absolutely no science "without presuppositions," the thought of such a science is unthinkable, paralogical: a philosophy, a "belief" must always be there first so that science can derive a direction from it, a meaning, a boundary, a method, a *right* to existence. (Whoever understands it the other way around—for example, whoever sets out to place philosophy "on a strictly scientific foundation"—first needs to turn not only philosophy but also truth itself *on its head*: the grossest violation of propriety there can be with regard to two such venerable ladies!) Why, there is no doubt—and with this I will give my *Gay Science* a chance to speak, cf. its fifth book (section 344)—"the truthful one, in that audacious and ultimate sense presupposed by the belief in science, *thus affirms another world* than that of life, nature, and history; and insofar as he affirms this "other world," what? must he not, precisely in so doing, negate its counterpart, this world, *our* world? . . . It is still a *metaphysical* belief on which our belief in science rests—we knowers today, we godless ones and anti-metaphysicians, we too still take *our* fire from that great fire that was ignited by a thousand-year old belief, that belief of Christians, which was also Plato's belief, that God is truth, that truth is *divine* . . . But what if precisely this is becoming ever more implausible, if nothing proves to be divine any longer, unless perhaps error, blindness, lie—if God himself proves

101. [Medieval Latin, elliptical for: *sigillum secretum*, "privy seal"—a personal or private seal.]

102. [Little facts. The parenthesis that follows puns on the word *fait* (fact) by replacing the first three letters of the French *fatalism* (fatalism) with this similar-sounding word, a pun that doesn't quite work in English: "that little *fact*alism."]

to be our *longest lie*?" — —At this point it is necessary to pause and to reflect for a long time. Science itself now is *in need of* a justification (which is not to say that there is one). On this question, just look at the earliest and the most recent philosophies: all of them lack a consciousness of the extent to which the will to truth itself first needs a justification, here there is a gap in every philosophy—why is that? Because the ascetic ideal has until now been *lord* over all philosophy, because truth was posited as being, as God, as highest authority; because truth was simply not *permitted* to be a problem. Do you understand this "permitted"?—From the moment belief in the god of the ascetic ideal is negated, *there is also a new problem*: that of the *value* of truth.—The will to truth is in need of a critique—let us thus define our own task—the value of truth is for once to be experimentally *called into question* . . . (Anyone who finds this stated too briefly is advised to read the section of the *Gay Science* that bears the title: "To What Extent We Too Are Still Pious" (section 344), or, best of all, the entire fifth book of said work, likewise the preface to *Daybreak*.)

25

No! Don't give me science as an answer when I look for the natural antagonist of the ascetic ideal, when I ask: "*where* is the opposing will in which its *opposing ideal* expresses itself ?" Science is far from standing enough on its own for this, in every respect it first needs a value-ideal, a value-creating power in whose *service* it *may believe* in itself—it is itself never value-creating. Its relationship to the ascetic ideal is still by no means inherently antagonistic; on the whole it is even more likely that science represents the forward-driving force in the inner shaping of this ideal. On closer scrutiny its protest and battle are not in the least directed at the ideal itself, but rather only at its outworks, sheathing, play of masks, at its temporary solidification, lignification, dogmatization—by negating what is exoteric about this ideal, it sets the life in it free again. These two, science and ascetic ideal, they do, after all, stand on one and the same ground—I have already suggested that this is so—: namely on the same overestimation of truth (more correctly: on the same belief in the *in*assessability, the *un*criticizability of truth), precisely in this they are *necessarily* confederates—so that, supposing one combats them, they can only be combatted and called into question together. An assessment of the value of the ascetic ideal unavoidably entails an assessment of the value of science as well: open your eyes and prick up your ears to this while the time is right! (*Art*, to state it beforehand, for I will come back to it sometime in greater length—art, in which precisely the *lie* hallows itself, in which the *will to deception* has good conscience on its side, is much more fundamentally opposed to the ascetic ideal than is science: this was sensed instinctively by Plato, this greatest enemy of art that Europe has yet produced. Plato *contra* Homer: that is the complete, the genuine antagonism—there the "otherworldly one" with the best of wills, the great slanderer of life; here its involuntary deifier, *golden* nature. An artist's subservience in the service of the ascetic ideal is therefore the truest *corruption* of the artist there can be, unfortunately one of the most common: for nothing is more corruptible than an artist.) Science also rests on the same ground as the ascetic ideal when calculated physiologically: a certain *impoverishment of life* is a presupposition here as well as there—the affects become cool, the tempo slowed, dialectic in place of instinct, *seriousness* impressed on faces and gestures (seriousness, this most unmistakable mark of a more laborious metabolism, of a struggling, harder-working life). Look at those ages in the history of a people when the scholar comes to the fore: they are ages of tiredness, often of evening, of decline—overflowing energy, certainty of life, certainty of the *future* are lost. The predominance of the mandarin is never a sign of anything good: any more than the rise of democracy, of peace-arbitration courts in place of wars, of equal rights for women, of the religion of compassion, and whatever other symptoms of declining life there are. (Science understood as problem; what does science mean?—on this cf. the preface to "The Birth of Tragedy.")—No! this "modern science"—just keep your eyes open for this!—is for the present the *best* confederate of the ascetic ideal, and this precisely because it is the most unconscious, the most involuntary, the most secret and subterranean one! They have until now played one game, the "poor of the spirit" and the scientific adversaries of that ideal (beware, by the way, of thinking that

they are the antithesis of the former, say, as the *rich* of the spirit:—this they are *not*; I called them hectics of the spirit). These famous *victories* of the latter: undoubtedly they are victories—but over what? The ascetic ideal was in no way conquered in them, rather it was made stronger, which is to say more incomprehensible, more spiritual, more ensnaring by the fact that again and again a wall, an outwork that had attached itself to this ideal and was coarsening its appearance was ruthlessly removed, demolished by science. Does anyone really think that, for instance, the defeat of theological astronomy meant the defeat of that ideal? . . . Has man perhaps become *less in need* of an otherworldly solution to his riddle of existence now that this existence looks even more arbitrary, more loiterer-like, more dispensable in the *visible* order of things? Hasn't precisely the self-belittlement of man, his *will* to self-belittlement been marching relentlessly forward since Copernicus? Alas, the belief in his dignity, uniqueness, irreplaceability in the hierarchy of beings is lost—he has become an *animal*, without simile, qualification, or reservation an animal, he who in his earlier belief was almost god ("child of God," "God-man") . . . Since Copernicus[103] man seems to have stumbled onto an inclined plane—he is now rolling faster and faster away from the center—whither? into nothingness? into the "*penetrating* feeling of his nothingness?" . . . So be it! exactly this would be the straight path—into the *old* ideal? . . . *All* science (and by no means only astronomy, concerning whose humiliating and debasing effect Kant made a noteworthy confession, "it annihilates my importance" . . .), all science, the natural as well as the *unnatural*—which is what I call the self-critique of knowledge—today aims to talk man out of his previous respect for himself, as if this were nothing but a bizarre self-conceit; one could even say that science's own pride, its own austere form of stoical ataraxy consists in upholding this hard-won *self-contempt* of man as his last, most serious claim to respect from himself (with good reason in fact: for the one who holds in contempt is still one who "has not forgotten how to respect" . . .) Does this actually *work against* the ascetic ideal? Does anyone in all seriousness still think (as the theologians for a time imagined) that, say, Kant's *victory* over the conceptual dogmatism of theology ("God," "soul," "freedom," "immortality") did damage to that ideal?—it is of no concern for the present whether Kant himself even remotely intended anything of the kind. What is certain is that since Kant all kinds of transcendentalists are again playing a winning game—they are emancipated from the theologians: what good fortune!—he betrayed to them that secret path on which they may now pursue their "heart's desires" on their own initiative and with the best scientific decorum. Likewise: who could henceforth hold it against the agnostics, as the venerators of the unknown and mysterious in itself, if they now worship *the question mark itself* as God? (Xaver Doudan speaks at one point of the ravages caused by "*l'habitude* ***d'admirer*** *l'inintelligible au lieu de rester tout simplement dans l'inconnu*";[104] it is his opinion that the ancients were free of this. Supposing that everything man "knows" fails to satisfy his desires, moreover, that it contradicts them and makes one shudder—what divine escape, to be permitted to seek the blame for this not in "desiring" but rather in "knowing"! . . . "There is no knowing: *consequently*—there is a God": what a novel *elegantia syllogismi*![105] what a *triumph* of the ascetic ideal!—

103. [Nicolaus Copernicus (1473–1543), Polish scholar and astronomer, founder of modern astronomy.]

26

—Or did the whole of modern historiography perhaps show a stance more sure of life, more sure of its ideal? Its most noble claim now runs in the direction of being a *mirror*; it rejects all teleology; it no longer wants to "prove" anything; it scorns playing the judge and has its good taste in this—it affirms as little as it negates, it ascertains, it "describes" . . . All of this is to a high degree ascetic; at the same time, however, it is to a still higher degree *nihilistic*, do not deceive yourselves about this! One sees a sad, hard, but determined look—an eye that *looks outward* as an isolated arctic traveller looks outward (perhaps in order not

104. ["The habit *of admiring* the unintelligible instead of staying quite simply in the unknown."]

105. [Elegance of the syllogism.]

to look inward? in order not to look back? . . .) Here there is snow, here life has become silent; the last crowings heard here are "To what end?," "In vain!," "*Nada*!"—here nothing more prospers or grows, at best St. Petersburg metapolitics and Tolstoyian "compassion." As for that other kind of historian, however, an even more "modern" kind perhaps, a hedonistic, lascivious kind, who makes eyes at life just as much as at the ascetic ideal, who uses the word "artist" as a glove and has leased the praise of contemplation completely and utterly for himself these days: oh what thirst these sweet ingenious ones arouse, even for ascetics and winter landscapes! No! the devil take this "contemplative" folk! How much more would I prefer to journey with those historical nihilists through the most dismal gray cold fogs!—indeed, supposing I must choose, I wouldn't be against lending an ear even to one who is truly unhistorical, anti-historical (like Dühring, whose tones have intoxicated a previously still shy, still unacknowledgeable species of "beautiful souls" in present-day Germany, the species *anarchistica* within the educated proletariat). A hundred times worse are the "contemplatives"—: I know of nothing as disgusting as this sort of "objective" armchair, this sort of sweet-smelling hedonist facing history, half priest, half satyr, perfume Renan,[106] who betrays already with the high falsetto of his cheers what he is lacking, *where* he is lacking, *where* in this case the Fate has oh! all-too-surgically wielded her cruel scissors! This goes against my taste, also against my patience: let those who have nothing to lose by it keep their patience at such sights—such a sight enrages me, such "spectators" embitter me toward the "spectacle" still more than the spectacle itself (history itself, you understand me), in the process Anacreontic moods come over me unawares. This nature that gave to the bull its horns, to the lion *chasm' odonton*,[107] why did nature give me a foot? . . . To kick with, by holy Anacreon! and not just for running away: for kicking apart the rotted armchairs, the cowardly contemplativeness, the lecherous eunuchry in the face of history, the making-eyes at ascetic ideals, the justice-Tartuffery of impotence! All my reverence to the ascetic ideal, *as long as it is honest*! as long as it believes in itself and does not present us with a facade of clownery! But I do not like all these coquettish bugs who have an insatiable ambition for smelling out the infinite, until finally the infinite smells of bugs; I do not like the whited sepulchers that play-act life; I do not like the tired and used-up who wrap themselves in wisdom and look about "objectively"; I do not like the agitators spruced up into heroes, who wear a magic concealing-cap of an ideal on their straw-whisk of a head; I do not like the ambitious artists who would like to act the role of ascetics and priests and are basically only tragic buffoons; I do not like them either, these newest speculators in idealism, the anti-Semites, who roll their eyes nowadays in a Christian-Aryan-Philistine manner and try to stir up all the horned-cattle elements among the people through a misuse of the cheapest tool of agitation, moral posturing—a misuse that exhausts all patience (—that *no* kind of swindle-spiritism goes without success in present-day Germany is linked to the positively undeniable and already tangible desolation of the German spirit, whose cause I seek in an all-too-exclusive diet of newspapers, politics, beer, and Wagnerian music, including that which supplies the presupposition for this diet: first, the national constriction and vanity, the strong but narrow principle *"Deutschland, Deutschland über alles,"*[108] second, however, the *paralysis agitans*[109] of "modern ideas"). Europe today is rich and inventive above all in excitants, it seems there is nothing it needs more than stimulants and fire-waters: hence also the enormous counterfeiting of ideals, these fieriest waters of the spirit; hence also the repulsive, foul-smelling, mendacious, pseudo-alcoholic air everywhere. I would like to know how many shiploads of imitation idealism, of hero-costumes and grand-word-noisemakers, how many barrels of sugared spirituous sympathy (firm of: *la*

106. [Ernest Renan (1823–1892), French historian of religion and critic, best known for his *La vie de Jésus* (Life of Jesus, 1863), the first volume in his multivolume work, *Origins of Christianity*. He and Taine were the most influential French intellectuals of their time.]

107. ["Chasm of teeth," from *Anacreonta*, Poem 24.]

109. [Shaking disability, i.e., "shaking palsy" or Parkinson's disease.]

religion de la souffrance),[110] how many wooden legs of "noble indignation" for the assistance of the spiritually flat-footed, how many *comedians* of the Christian-moral ideal would have to be exported out of Europe today in order for its air to smell cleaner again . . . Obviously a new *trade* opportunity has opened up with respect to this overproduction; obviously there is a new "business" to transact in little ideal-idols and accompanying "idealists"—don't overlook this none-too-subtle hint! Who has enough courage for it?—we have the means in *hand* to "idealize" the entire earth! . . . But why am I talking about courage: here only one thing is needed, precisely the hand, an uninhibited, a very uninhibited hand . . .

27

—Enough! Enough! let's leave these curiosities and complexities of the modern spirit, where there is as much to laugh about as to be vexed at: precisely *our* problem can do without them, the problem of the *meaning* of the ascetic ideal—what does it have to do with yesterday and today! I will tackle those things more rigorously and more thoroughly in another context (under the title "On the History of European Nihilism"; with regard to this I refer to a work that I am preparing: ***The Will to Power***, *Attempt at a Revaluation of All Values*). All I care to have pointed out here is this: in the spiritual sphere as well, the ascetic ideal has in the meantime only one kind of real enemy and *injurer*: the comedians of this ideal—for they arouse mistrust. Everywhere else that the spirit is strictly and powerfully at work today without any counterfeiting, it now does without ideals entirely—the popular expression for this abstinence is "atheism"—except *for its will to truth*. This will, however, this *remnant* of an ideal is, if one is willing to believe me, that ideal itself in its strictest, most spiritual formulation, completely and utterly esoteric, stripped of all outworks, thus not so much its remnant as its *core*. Unconditional honest atheism (—and *its* is the only air we breathe, we more spiritual human beings of this age!) is accordingly *not* in opposition to that ideal, as appearance would have it; it is rather only one of its last stages of development, one of its final forms and inner logical consequences—it is the awe-inspiring *catastrophe* of a two-thousand-year discipline in truth, which in the end forbids itself the *lie involved in belief in God*. (The same course of development in India, completely independent of the former and therefore proving something; the same ideal compelling to the same conclusion; the decisive point reached five centuries before the point from which Europeans reckon time, with Buddha, more precisely: already with the Samkhya philosophy, this then popularized and made into a religion by Buddha.) Asking in all strictness, *what* actually *triumphed* over the Christian god? The answer is found in my *Gay Science* (section 357); "Christian morality itself, the ever more strictly understood concept of truthfulness, the father-confessor subtlety of the Christian conscience, translated and sublimated into the scientific conscience, into intellectual cleanliness at any price. Looking at nature as if it were a proof of the goodness and guardianship of a god; interpreting history to the honor of divine reason, as constant witness of a moral world order and moral final intentions; interpreting one's own experiences as pious human beings have long enough interpreted them, as if everything were an act of providence, everything a sign, everything thought up and sent for the sake of the soul's salvation: this is henceforth *past*, it has conscience *against* it, it is regarded by all subtler consciences as indecent, dishonest, as mendacity, feminism, weakness, cowardice—it is precisely in this strictness, if in anything, that we are *good Europeans* and heirs of Europe's longest and bravest self-overcoming" . . . All great things perish through themselves, through an act of self-cancellation: thus the law of life wills it, the law of the *necessary* "self-overcoming" in the essence of life—in the end the call always goes forth to the lawgiver himself: "*patere legem, quam ipse tulisti.*"[111] In this manner Christianity *as dogma* perished of its own morality; in this manner Christianity *as morality* must now also perish—we stand at the threshold of *this* event. Now that Christian truthfulness has drawn one conclusion

110. [The religion of suffering.]

111. [Submit to the law you yourself proposed.]

after the other, in the end it draws its *strongest conclusion*, its conclusion *against* itself; this occurs, however, when it poses the question, "*what does all will to truth mean*?" . . . And here I again touch on my problem, on our problem, my *unknown* friends (— for I as yet *know* of no friends): what meaning would *our* entire being have if not this, that in us this will to truth has come to a consciousness of itself *as a problem*? . . . It is from the will to truth's becoming conscious of itself that from now on—there is no doubt about it—morality will gradually *perish*: that great spectacle in a hundred acts that is reserved for Europe's next two centuries, the most terrible, most questionable, and perhaps also most hopeful of all spectacles . . .

28

If one disregards the ascetic ideal: man, the *animal* man, has until now had no meaning. His existence on earth contained no goal; "to what end man at all?"—was a question without answer; the *will* for man and earth was lacking; behind every great human destiny a still greater "for nothing!" resounded as refrain. Precisely *this* is what the ascetic ideal means: that something *was lacking*, that an enormous *void* surrounded man—he did not know how to justify, to explain, to affirm himself; he *suffered* from the problem of his meaning. He suffered otherwise as well, he was for the most part a *diseased* animal: but the suffering itself was *not* his problem, rather that the answer was missing to the scream of his question: "*to what end* suffering?" Man, the bravest animal and the one most accustomed to suffering, does *not* negate suffering in itself: he *wants* it, he even seeks it out, provided one shows him a *meaning* for it, a *to-this-end* of suffering. The meaninglessness of suffering, not the suffering itself, was the curse that thus far lay stretched out over humanity—*and the ascetic ideal offered it a meaning*! Thus far it has been the only meaning; any meaning is better than no meaning at all; in every respect the ascetic ideal has been the "*faute de mieux*"[112] *par excellence* there has been thus far. In it suffering was *interpreted*; the enormous emptiness seemed filled; the door fell shut to all suicidal nihilism. The interpretation—there is no doubt—brought new suffering with it, deeper, more inward, more poisonous, gnawing more at life: it brought all suffering under the perspective of *guilt* . . . But in spite of all this—man was *rescued* by it, he had a *meaning*, he was henceforth no longer like a leaf in the wind, a plaything of nonsense, "without-sense," now he could *will* something—no matter for the moment in what direction, to what end, with what he willed: *the will itself was saved*. One simply cannot conceal from oneself *what* all the willing that has received its direction from the ascetic ideal actually expresses: this hatred of the human, still more of the animal, still more of the material, this abhorrence of the senses, of reason itself, this fear of happiness and of beauty, this longing away from all appearance, change, becoming, death, wish, longing itself—all of this means—let us dare to grasp this—a *will to nothingness*, an aversion to life, a rebellion against the most fundamental presuppositions of life; but it is and remains a *will*! . . . And, to say again at the end what I said at the beginning: man would much rather will *nothingness* than *not* will . . .

112. [For lack of anything better.]

MAX WEBER

Near the end of his famous lecture, "Politics as a Vocation," delivered in 1918, written in the wake of the collapse of Germany and the rise of Bolshevism, Weber delivered an eerie prognosis: "not summer's bloom lies ahead of us, but rather a polar night of icy darkness and hardness. . . . " Two years later Weber was dead, a victim of pneumonia but also perhaps its beneficiary, a nationalist kindly relieved of the burden of seeing Germany sink into an "icy darkness" beyond any he could have conceived. He was perhaps the most important social theorist of the century, a legal thinker, historian of law and economics, student of religion, and much more. Weber left behind an extraordinary legacy: a methodology of ideal types, brilliant studies of religion and politics, and conceptual innovations that have pervaded our language and our thinking. To the degree that we cannot see the world without the vocabulary of charisma, bureaucracy, disenchantment, and rationalization, we cannot see the world without Weber. And yet, as rational and scientific as he was, committed to empirical and historical work of detail and comprehensiveness, he was also sensitive to the spiritual and creative dimensions of life. It is no surprise to learn that at the same time that he was writing the lecture on politics as a "calling," in which he examined the modes, qualities and ethic of political leadership, Weber was also turning for solace to the Book of Job and the prophetic writings of Jeremiah, and in his own way he was venturing his personal prophecies of a foreboding future.

Like the world that he lived in, Weber's own life was torn apart. Born in Erfurt, Thuringia, on April 21, 1864, Weber grew up in Berlin and took a degree in law at Heidelberg. He wrote his thesis on trading companies in the Middle Ages and his *habilitation*, which had to be in a different area, on agrarian institutions in ancient Rome. In the fall of 1894, Weber accepted a position at Freiburg in economics; in 1896 he returned to Heidelberg, where he met the historian of the Church, Ernst Troeltsch, who became a close friend and intellectual companion. Blessed with an extraordinary gift for languages and a sense for detailed historical research, Weber established himself as a student of law and economics.

But in 1897 Weber's father died, and shortly thereafter Weber collapsed. It is likely that his physical and psychological problems were the outcome of an exhausting regimen, coupled with strain and the guilt about his father's death. For the rest of his life, he suffered from bouts of depression and worse; for much of the next two decades he was unable to teach. The initial years of illness lasted until 1903. By 1904 he was working again, and in that year he was invited to the United States to give a paper as part of the Universal Exposition in St. Louis. After his enthusiastic and illuminating trip, Weber resumed work as an independent scholar in Heidelberg, completing his famous work *The Protestant Ethic and the Spirit of Capitalism*, which was published in 1905–1906. From 1906 until 1918, Weber was the center of an intellectual circle in Heidelberg that met weekly to discuss current events, art, literature, politics, and more. This circle included figures such as Wilhelm Windelband, Georg Jellinek, Ernst Troeltsch, Emil Lask, and Friedrich Gundolf, as well as younger scholars such as Ernst Bloch and Georg Lukács. When the war broke out, Weber's initial enthusiasm quickly dissipated, and he was an outspoken critic of the Kaiser and the failure of leadership in Germany.

By the fall of 1916 Weber was studying the Hebrew prophets, as part of his interest in charismatic leadership and in preparation for what would become *Ancient Judaism*, published in 1917, a year after his sociological studies of the religions of India and China. In 1918 he accepted a position at the University of Vienna, his first regular teaching position in nearly two decades. After moving to Munich to become the Chair of Economics, Weber died of pneumonia on June 14, 1920.

In many ways, Weber was a thinker whose towering intellect was drawn to profound, powerful tensions. He had a spiritual and almost religious sensibility without being a religious person, and yet he was devoted to the empirical, scientific, and extensive examination of legal, economic, social, and political conduct. In his view, individual agents are the ultimate subjects of examination, but the comparative analysis he engaged in yielded generalizations configured into what he called ideal types. He was a dedicated, almost fanatical scholar and intellectual, and yet he was also a prominent and engaged public figure, deeply involved in the political affairs of Germany in the years around World War I. His work evidences broad and detailed knowledge of history and institutions, and, at the same time, extraordinary moments of insight and creativity. It can be said that the centerpiece of his sociology and theory of history is the principle of rationalization and bureaucratization; he saw everywhere ways in which magical and religious influence was being replaced by rational structures. Yet, at the same time, the initiators of such rationalization, the original agencies of it, are ultimately special individuals with a distinct kind of authority—what he calls "charisma"—whose reforms, once instituted, become routinized and organized. Thus, Weber is able to understand historical, social, and political developments as the dialectical developments of moments of charismatic revolution with periods of bureaucratic institutionalization.

But perhaps the most poignant tension in Weber's thought concerns what he calls, in "Politics as a Vocation," that of two ethics, the ethic of ultimate ends and the ethic of responsibility. As he makes clear, we all live with this tension, between a commitment to ultimate ends and a commitment to the means to accomplish such ends, for life is such that what we aim at and hope for, what we value most, often requires of us actions that conflict with those very goals. Politics, he tells us, concerns the legitimate use of violence, for the state is the institutional locus of the monopoly of force in a given territory. Built into politics—and built into life—is the tension between violence and the good. But the fault of the tension does not lie all on one side; nor is it a tension that is all bad. After all, as Weber sees it, the vocation or "calling" of politics requires a commitment to responsibility, to appreciate the results or consequences of one's actions; also, ideals without regard for life can be just as destructive as life without the governance of ideals. In the pages of the famous lecture printed here we find challenging reflections and comparative analysis coupled with a special kind of poignancy, in part born out of this tension and the dark times that Weber saw on the horizon.

Politics as a Vocation

The lecture I shall give in response to your wishes will necessarily frustrate you in a number of ways. In a talk about politics as a vocation[1] you will naturally expect to hear my opinions on topical questions. But I shall say something about these only toward the end of my lecture, and then in a purely formal way, in connection with specific questions about the significance of political action in the context of our conduct of life in general. What will have to be completely ignored in the present talk will be all questions about *the kind* of politics that should be pursued, that is to say, the specific *policies* [*Inhalte*] that *should* be adopted in the course of our political activities. For such matters have no connection with the general question of what politics is as a vocation and what it can mean. This brings us directly to our subject.

What do we mean by politics?[2] The concept is extremely broad and includes every kind of independent *leadership* activity. We can speak of the foreign exchange policies of the banks, the interest rate policy of the *Reichsbank*, the politics of a trade union in a strike; we can speak of educational policy in a town or village community, the policies of the board of management of an association, and even of the political maneuverings [*Politik*] of a shrewd wife seeking to influence her husband. Needless to say, this concept is far too broad for us to consider this evening. Today we shall consider only the leadership, or the exercise of influence on the leadership, of a *political* organization, in other words a *state*.

But looking at the question through the eyes of a sociologist, what is a "political" organization? What is a "state"? A state, too, cannot be defined sociologically by enumerating its activities. There is almost no task that a political organization has not undertaken at one time or another; but by the same token there are no tasks of which we could say that they were always, let alone *exclusively*, proper to the organizations that we call political, and nowadays refer to as states, or that historically were the forerunners of the modern state. It is rather the case that in the final analysis the modern state can be defined only sociologically by the specific *means* that are peculiar to it, as to every political organization: namely, physical violence. "Every state is based on force," Trotsky remarked at Brest-Litovsk.[3] That is indeed the case. If there existed only societies in which violence was unknown as a means, *then* the concept of the "state" would disappear; *in that event* what would have emerged is what, in this specific meaning of the word, we might call "anarchy." Violence is, of course, not the normal or the only means available to the state. That is undeniable. But it is the means specific to the state. And the relationship of the state to violence is particularly close at the present time. In the past the use of physical violence by widely differing organizations—starting with the clan—was completely normal. Nowadays, in contrast, we must say that the state is the form of human community that (successfully) lays claim to the *monopoly of legitimate physical violence* within a particular territory—and this idea of "territory" is an essential

1. [The German word *Beruf* has a workaday meaning of "profession" but, rooted as it is in *rufen*, "to call," has strong overtones of "vocation" or "calling." Both meanings are active in Weber's usage, and each has been used here where it seemed appropriate.—D.O. and T.B.S.]

2. [*Politik* in German means both politics and policy. Here again the choice of word is determined by the context.]

3. [That is to say, during the negotiations with Germany early in 1918 that led to the withdrawal of Russia from World War I.]

defining feature. For what is specific to the present is that all other organizations or individuals can assert the right to use physical violence only insofar as the *state* permits them to do so. The state is regarded as the sole source of the "right" to use violence. Hence, what "politics" means for us is to strive for a share of power or to influence the distribution of power, whether between states or between the groups of people contained within a state.

This corresponds in all essentials to common parlance. When we say that a question is "political," that a minister or official is "political," or that a decision has been made on "political" grounds, we always mean the same thing. This is that the interests involved in the distribution or preservation of power, or a shift in power, play a decisive role in resolving that question, or in influencing that decision or defining the sphere of activity of the official concerned. Whoever is active in politics strives for power, either power as a means in the service of other goals, whether idealistic or selfish, or power "for its own sake," in other words, so as to enjoy the feeling of prestige that it confers.

Like the political organizations that preceded it historically, the state represents a relationship in which people *rule over* other people. This relationship is based on the legitimate use of force (that is to say, force that is perceived as legitimate). If the state is to survive, those who are ruled over must always *acquiesce* in the authority that is claimed by the rulers of the day. When do they do so and why? By what internal reasons is this rule justified, and on what external supports is it based?

To start with the internal justifications: there are in principle three grounds that *legitimate* any rule. First, the authority of "the eternal past," of *custom*, sanctified by a validity that extends back into the mists of time and is perpetuated by habit. This is "traditional" rule, as exercised by patriarchs and patrimonial rulers of the old style. Second, there is the authority of the extraordinary, personal *gift of grace* or charisma, that is, the wholly personal devotion to, and a personal trust in, the revelations, heroism, or other leadership qualities of an individual. This is "charismatic" rule of the kind practiced by prophets or—in the political sphere—the elected warlord or the ruler chosen by popular vote, the great demagogue, and the leaders of political parties. Lastly, there is rule by virtue of "legality," by virtue of the belief in the validity of legal *statutes* and practical "competence" based on rational rules. This type of rule is based on a person's willingness to carry out statutory duties obediently. Rule of this kind is to be found in the modern "servant of the state" and all those agents of power who resemble him in this respect.

It is quite obvious that in reality this compliance is the product of interests of the most varied kinds, but chiefly of hope and fear. This includes fear of the vengeance of magic powers or of the ruler, and hope of a reward in this world or the next. More about this in a moment. But when we inquire into the grounds of the "legitimacy" of this compliance, what we discover is these three "pure" types. These ideas of legitimation and their internal justification are of considerable importance for the structure of rule. Admittedly, these types rarely occur in their pure form in reality. But it is not possible today to enter into a discussion of the highly complex variations, transitional forms, and combinations of these pure types. All that belongs to the problem of "general political theory."

What interests us here above all is the second of these types: rule based on the acquiescence of those who submit to the purely personal "charisma" of the "leader." For this is where we discover the root of the idea of "vocation" in its highest form. Submission to the charisma of the prophet or warlord or of the great demagogues of the assemblies, the *ekklesia*, of ancient Greece or of Parliament means that such men are held to be the inwardly "chosen" leaders of humankind. People do not submit to them because of any customs or statutes, but because they believe in them. Such a leader does indeed live for his cause and "strives to create his work,"[4] if he is anything more than a narrow-minded and vain upstart, a passing product of his age. But the devotion of his followers, that is, his disciples and liegemen, or his entirely personal band of supporters, is directed toward his

4. [This is effectively a quotation from Nietzsche: "My suffering and my pity—what of them! For do I aspire after *happiness*? I aspire after my *work*!" *Thus Spoke Zarathustra*, translated by R. J. Hollingdale (Harmondsworth: Penguin, 1969), p. 336.]

person and his qualities. Leadership has manifested itself in all parts of the globe and throughout history in the shape of two dominant figures of the past: the magician and prophet on the one hand, and the chosen warlord, gang leader, and *condottiere* on the other. What is peculiar to the Western world, however, is something of greater concern to us: *political* leadership in the shape, first, of the free "demagogue" who emerged in the city-state, a political form confined to the West, and in particular to the Mediterranean world, and then, following him, the parliamentary "party leader" who grew up in the constitutional state, an institution that is likewise unique to the West.

These men are politicians by virtue of their "calling" in the deepest meaning of the word. But of course in no country are they the only influential figures in the machinery of political power struggles. What is decisive is, rather, the kind of resources that they have at their disposal. How do the ruling powers set about the task of asserting their dominant position? This question holds good for rule of every kind, and hence also for political rule in all its forms: for the traditional type, as well as for legal and charismatic rule.

Every ruling apparatus that calls for continuous administration has two prerequisites. On the one hand, it requires that human action should be predisposed to obedience toward the rulers who claim to be the agents of legitimate force. On the other hand, thanks to this obedience, the rulers should have at their disposal the material resources necessary to make use of physical force where required, in other words, the administrative personnel and the material resources of administration.

Like any other apparatus, the administrative personnel that constitutes the external form of the political ruling apparatus are not just bound in their obedience to the ruling powers by the idea of legitimacy of which we have just spoken. It is bound equally by two other factors that appeal to personal interest: material reward and social prestige. The fiefs of vassals, the livings granted to patrimonial officials, the salaries of modern civil servants—knightly honor, the privileges of the estates, the status of the official—these are the rewards, and it is the fear of losing them that cements the ultimate and decisive foundation of the solidarity that exists between the administrative personnel and the ruling powers. The same thing holds true for charismatic leadership: glory in war and booty for the military, while the followers of the demagogue look for "spoils,"[5] namely, the license to exploit the ruled through the monopoly of public offices, profits to reward their political loyalty, and prizes to flatter their vanity.

In order to maintain any rule by force, certain external, material goods are required, just as much as in a business enterprise. All forms of state can be divided into two categories. The first is based on the principle that the staff on whose obedience the ruler depends—officials or whatever else they may be—own their *own* means of administration, whether these consist of money, buildings, the materials of war, vehicle pools, horses, or whatever. The alternative is for the administrative staff to be "separated" from the tools of administration in just the same way as the white-collar worker and the proletarian are "separated" from the material means of production in a capitalist enterprise today. The question is, then, whether the ruler has *control* over the administration *himself* and administers matters through personal servants or officials in his employ or personal favorites and confidants, in short, people who are not owners, that is to say, who do not possess in their own right any of the material means of production, but who work under their master's direction—or whether the opposite is the case. This distinction runs through all administrative organizations of the past.

We shall call a political organization in which the material means of administration are wholly or partly under the autonomous control of a dependent administrative staff an "organization subdivided into estates" [*ständisch gegliedert*]. The vassal in a feudal organization, for example, paid for the administrative and legal costs of the fief entrusted to him out of his own pocket. He also paid for the equipment and provisioning needed for a war; his subvassals did likewise. This naturally had consequences for the lord's authority, for that authority was based exclusively on personal fealty and on the fact that the feudal tenure and the vassal's social status derived their "legitimacy" from the lord.

5. [Weber used the English word.]

But everywhere, as far back as the earliest political organizations, we also find the lord exercising direct control himself. He seeks to take control of the administration through personal dependents: slaves, household officials, servants, personal "favorites," and beneficiaries remunerated in money or in kind from his own storerooms. He seeks to defray his costs from his own pocket, out of the revenues from his patrimonial estates; and he seeks to create an army that depends solely on himself because it has been equipped and provisioned from his own granaries, storerooms, and armories. Thus in a society based on "estates," the lord governs with the assistance of an autonomous "aristocracy," that is to say, he shares the rule with them. In this second case he relies either on members of his household or else on plebeians, men from strata of society without either property or honor of their own, men who are dependent upon him entirely for their material well-being, since they have no power at their disposal to compete with his. All forms of patriarchal and patrimonial[6] rule, the despotism of the sultans, and the bureaucratic state are of this type. This applies particularly to the bureaucratic state, that is to say, the type of organization that in its most rational form is specifically characteristic of the modern state.

The modern state begins to develop wherever the monarch sets in train the process of dispossessing the autonomous, "private" agents of administrative power who exist in parallel to him, that is to say, all the independent owners of the materials of war and the administration, financial resources, and politically useful goods of every kind. The entire process provides a perfect analogy to the development of a capitalist enterprise through the gradual expropriation of the independent producers. We end up with a situation in which in the modern state control of the entire political means of production is concentrated in a single culminating point so that not a single official is left who personally owns the money he spends, or the buildings, supplies, tools, and military equipment that are under his control. In the modern "state"—and this is an essential element of its definition—the "separation" of the administrative staff, that is, of officials and employees, from the material resources of administration, has been completed. It is at this point that the very latest development emerges, for we now see before our very eyes the attempt to bring about the expropriation of this expropriator of the resources of politics and hence of political power.[7] The revolution has accomplished this at least to the extent that the legally established authorities have been supplanted by leaders who, through usurpation or election, have obtained political power over the personnel and the administrative machinery, and who derive their legitimacy—whether rightly or wrongly is immaterial—from the will of the governed. It is quite another question whether on the basis of this at least ostensible success they have the right to hope for one further achievement. That achievement would be to proceed with the expropriation of businesses within the capitalist economy whose management is organized at its core in accordance with quite different laws from the political administration, despite far-reaching similarities. This is not an issue on which I shall comment today. I shall confine myself to the purely *conceptual* point that the modern state is an institutional form of rule that has successfully fought to create a monopoly of legitimate physical force as a means of government within a particular territory. For this purpose it has concentrated all the material resources of organization in the hands of its leaders. The modern state has expropriated all the

6. [Patriarchal rule, according to Weber, is traditional rule, based originally on the household, in which the patriarch rules without administrative machinery. Such rule is based entirely on personal loyalty. Patrimonialism arises wherever the ruler develops an administration and a military force that, however, are purely the personal instruments of the master. "Sultanism" is seen as an extreme case of patrimonialism. See *Economy and Society* (Berkeley and Los Angeles: University of California Press, 1978), chapter 3, section 7a, pp. 231 ff.; and also chapter 12, pp. 1006 ff.]

7. [Weber here takes up a phrase from Karl Marx's prediction of the end of capitalist society as a consequence of its own contradictory development. "The monopoly of capital becomes a fetter upon the mode of production, which has sprung up and flourished along with, and under it. . . . The knell of capitalist private property sounds. The expropriators are expropriated." *Capital* (London: Lawrence and Wishart, 1967), vol. 1, p. 763.]

autonomous officials of the "estates" who previously controlled such things as of right and has put itself in the shape of its highest representative in their place.

This process of political expropriation has been enacted with varying success in every country of the world. In it there arose, initially in the service of the monarch, the first categories of "professional politicians" in a *second* sense. This consisted of people who, unlike the charismatic leaders, did not wish to become masters themselves, but to enter *into the service* of political masters. In these conflicts they put themselves at the disposal of the monarch and treated the implementation of his policies as a way of earning their own material living, on the one hand, and of acquiring a life's ideal on the other. Once again, it is *only* in the Western world that we discover professional politicians of *this* stamp in the service of powers other than just the monarchs. In the past they were their most important instruments of power and of their acts of political expropriation.

Before we take a closer look at this question, let us make the meaning of the existence of such "professional politicians" perfectly clear in all its implications. It is possible to engage in "politics," that is to say, to seek to influence the distribution of power between and within political structures, both as an "occasional" politician and as a part-time or full-time politician, in the same way as with economic activity. We are all "occasional" politicians when we cast our votes or in any similar expression of our will, such as applauding or protesting during a "political" meeting, making a "political" speech, and so on. And for many people this is the extent of their connection with politics. Today, for example, part-time politicians include all the local agents and committee members of political party associations who, as a rule, pursue such activities only as occasion demands and who do not make it the *primary* "task of their lives," either materially or as an ideal. The same thing can be said of the members of councils of state and similar advisory bodies who spring into action only on request. This applies also to broad swathes of our parliamentarians who are only politically active while Parliament is in session. In the past such groups of people were to be found above all among the "estates."

By the "estates" we understand the owners in their own right of the material possessions vital for military or administrative functions, or the exercise of personal seigneurial authority. A major portion of them were far from willing to pass their lives wholly or chiefly, or even more than occasionally, in the service of politics. Instead, they used their seigneurial power to maximize their own rents or profits and became politically active in the service of their political associations only when their overlord or their peers expressly called for it. The same thing may be said of a proportion of the assistants whom the monarch recruited in his struggle to create an independent political organization that would be responsible to himself alone. The household advisers[8] and, going back even further, a considerable proportion of the monarch's counselors in the "*curia*"[9] and other advisory bodies were of this type.

But, of course, the monarch could not make do with assistants who functioned only part-time or occasionally. He had to try to assemble a staff of assistants consisting of people who were entirely and exclusively devoted to serving him as their *principal* profession. The structure of the emerging dynastic political system depended very crucially on where he found them, as did the entire character of the relevant culture. And the same necessity was enjoined even more powerfully on the political entities that had completely eliminated or strictly confined the royal power and thus constituted themselves politically as (so-called) "free" polities. These polities were "free" not in the sense of freedom from the rule of force, but in the sense of the absence of monarchical power legitimated by tradition (and for the most part sanctified by religion), as the exclusive source of all authority. Historically, such polities had their home in the West, and their nucleus was the city as a political entity. It was in this form that it first appeared in the Mediterranean cultures.

What did the "*full-time*" politicians look like in all these cases?

8. [The *Räte vom Hause aus* (literally, counselors [based out of] their own homes) was a term used to describe advisers in a number of German territories who did not normally live at court. Instead, they provided their services only when the king's council was convened in their region.]

9. [The *curia regis* or king's court was convened wherever the king was in residence.]

There are two ways of engaging in politics as a vocation. You can either live "for" politics or "from" politics. These alternatives are not by any means mutually exclusive. On the contrary, as a rule people do both, mentally at least, but for the most part materially, as well. Whoever lives "for" politics makes "this his life" in an *inward* sense. Either he enjoys the naked exercise of the power he possesses or he feeds his inner equilibrium and his self-esteem with the consciousness that by serving a "cause" he gives his own life a *meaning*. In this inner sense, probably every serious person who lives for a cause also lives from it. The distinction, then, refers to a far weightier aspect of the matter: its economic dimension. The people who live "from" politics as a profession are those who seek to make it their permanent source of *income*; those who live "for" politics are those for whom this is not the case.

In a society based on private property, for anyone to be able to live "for" politics in this economic sense, a number of apparently trivial preconditions must be satisfied. Such a person must be economically independent, in normal circumstances, of the income that politics may bring him. This means quite simply that he must be affluent or have a position in private life that affords him an adequate income. This at least is the normal situation. Admittedly, the followers of a warlord are as incurious about normal economic conditions as are the followers of a revolutionary hero of the street. Both live from booty, robbery, confiscations, levies, the imposition of worthless currencies whose use is obligatory—all of which amount essentially to the same thing. But these are necessarily phenomena that go beyond the everyday world; in the workaday economy only independent means can perform this service. But more than this is required; in addition, a would-be politician must be economically in a position to make himself "available." This means that his sources of income must not require him constantly to devote all or most of his thoughts and energy personally to the task of earning his living. The person who is most readily available in this sense is the *rentier*, that is, a person whose income does not depend on doing any work at all. This applies to the lords of the manor of the past, and large landowners and persons of high rank of the present who derive their income from ground rents—in antiquity and the Middle Ages, there were also rents for slaves or bondsmen. In modern times, it applies also to people who obtain a living from securities or other modern sources of investment income. Neither the worker *nor*—and this is particularly noteworthy—the employer, and *especially* the large-scale modern employer, is able to absent himself from his work in this way. The employer in particular is tied to his business and *cannot* easily take time off. This is true especially of the industrial businessman, far more than of the big agricultural employer, in view of the seasonal nature of farming. It is mostly very difficult for the businessman to find a substitute, even on a temporary basis. The same thing applies, for example, to doctors, and the more eminent and the busier they are, the harder it is for them to take leave of absence from work. It is easier for the lawyer if only for purely technical reasons arising from the nature of his work, and this explains why lawyers have often played an incomparably greater and even dominant role as professional politicians. We have no need to pursue this line of argument further, but should make clear some of its implications.

Where a state or a party is governed by people who (in the economic sense of the word) live exclusively for politics and not from politics, this necessarily implies that the leading political strata must be recruited on the basis of a "plutocratic" policy. This is not of course to assert the opposite, namely, that the existence of a plutocratic leadership *exempts* the politically dominant class from also striving to live "from" politics, that is to say, to exploit its political dominance for the sake of its own private economic interests. There can be no question of that. There has never been a social stratum that has failed to exploit its position in one way or another. It means only that professional politicians are not directly compelled to seek remuneration *for* their political services as everyone without means is forced to do. But by the same token, this is not to suggest that politicians with no independent means entered politics solely or even principally with an eye to providing for their own material welfare, or that their concern for their "cause" was not uppermost in their minds, or even present at all. Nothing could be more mistaken. Experience tells us that consciously or unconsciously, the concern of the well-to-do man for the economic

"security" of his own existence is a cardinal issue for the entire conduct of his life. A ruthless and unconditioned political idealism is to be found, if not exclusively, then at least for preference, in the strata that own nothing, and who because of that fact stand outside the circle of those who have an interest in maintaining the economic order of a given society. This applies with particular force to exceptional, in other words, revolutionary, epochs. Instead, it means only that to recruit politically interested people, both leaders and their followers, *non*-plutocratically, is based on the self-evident assumption that these interested parties can extract a regular and reliable income from the practice of politics.

Politics can either be conducted on an "honorary" basis and thus by what are normally called "independent," that is, well-to-do people, above all, people with unearned income. Alternatively, the leadership can be opened up to those who own nothing and who must then be recompensed. The professional politician who lives *from* politics can be a pure "beneficiary" [*Pfründner*] or a salaried "official." He either derives an income from fees and perquisites for specific services—tips and bribes are merely an irregular and formally illegal variant of this income category—or else he receives fixed benefits in kind or a salary in cash form, or a combination of the two. He may assume the character of an "entrepreneur," like the *condottiere* or the owner of a leased or purchased office in the past, or like the American boss[10] who regards his expenses as a capital investment from which he obtains a return by exploiting his influence. Alternatively, he can draw a fixed wage, like an editor or a party secretary or a modern minister or party official. In the past, fiefs, gifts of land, benefices of every kind, and particularly, with the growth of the money economy, perquisites formed the typical remuneration bestowed on their followers by rulers, victorious conquerors, or successful party chiefs. Today, the rewards that are handed out by the party leaders in return for loyal services consist of offices of every kind in parties, newspapers, cooperatives, health insurance companies, municipalities, and states. *All* party struggles are conflicts not just for concrete goals, but also and above all for the patronage of office. All conflicts between particularist and centralist aspirations in Germany also revolve above all around the question of which authority will have offices in its gift, whether it be the authorities in Berlin or Munich, Karlsruhe or Dresden. Any loss of influence in the distribution of offices is more keenly felt by the parties than setbacks on matters concerning their political goals.

In France a politically influenced change in prefect[11] was always regarded as a greater upheaval, and it caused more uproar than a modification in the government's program since this had for the most part no more than a verbal significance.

Many parties, above all in America, have ceased to be concerned with the old quarrels about the interpretation of the Constitution and have become purely parties of careerists that readily adapt their substantive programs to improve their chances of catching votes.

In Spain until recently "elections" were fixed from above on the basis of an agreement between the two major parties to take turns governing in order to provide their respective followers with posts. In both the so-called "elections" and the so-called "revolutions" in the Spanish colonies, what was really at stake was the state gravy train in which the victors hoped to be fed.

In Switzerland the parties amicably share the posts on the basis of proportionality, and here in Germany, some of our "revolutionary" draft constitutions, such as the one recently proposed for Baden, even envisaged extending this system to include ministerial posts. They thus treat the state and its offices purely as an agency for distributing bounty.

The Center Party in particular was enthusiastic about this idea and in Baden it even proposed including in its program the proportional distribution of

10. [Weber used the English word, here and elsewhere in this essay.]

11. [In the administrative reforms introduced in the wake of the French Revolution, France was divided into *départements* headed by prefects who were appointed for their political reliability. Their duties included the maintenance of order, but also the implementation of government policies locally. They were therefore severely affected by changes of government. In the Third Republic, for example, more than one-third of the prefects were replaced after the elections of 1898.]

offices according to religious affiliation, without regard to merit. With the growing number of offices resulting from the general process of bureaucratization, they are increasingly in demand as a form of *secure* provision. This trend is strengthening among all the parties and in the eyes of their followers the parties are increasingly regarded as a means to the end of providing such support.

However, an opposing trend is to be found in the development of modern bureaucracy into a specialized, highly qualified, intellectual workforce that has undergone a lengthy preparatory period of training. This workforce has a highly developed sense of professional *honor* with an emphasis on probity. Without that sense of honor the risk of terrible corruption and vulgar philistinism would loom over us like fate. This would even threaten to undermine the purely technical activity of the state apparatus whose importance for the economy has constantly grown and will continue to grow, particularly with the increasing trend toward socialization. In the United States, where a professional civil service with tenure for life was once quite unknown, amateurish administration by politicians on the make brought about a situation in which hundreds of thousands of officials, right down to the local postman, had to be changed as a result of the presidential election. This system has long since been undermined by the Civil Service Reform.[12] This change was made inevitable by the irresistible, purely technical needs of administration.

In Europe the professional bureaucracy with its division of labor into specialized fields of expertise gradually came into being over the course of half a millennium. This process began with the Italian cities and *signorie*;[13] and among the monarchies it was the conquering Norman states who took the lead. The decisive step was triggered in the sphere of the rulers' *finances*. We can see from the administrative reforms of Emperor Maximilian[14] how difficult it was for the officials to oust the ruler from this sphere of activity, even under the pressure of extreme necessity and the threat of Turkish domination.[15] This was all the more remarkable, given that finance was the realm that found it hardest to accommodate the dilettantism of a ruler who at the time was bent primarily on being a model of chivalry. Advances in the techniques of warfare produced the expert officer, while the growing sophistication of the legal process resulted in the emergence of the trained lawyer. In all three areas the skilled official finally triumphed in the more developed states during the sixteenth century. And the rise of princely absolutism at the expense of the estates coincided with the gradual surrender of the ruler's autonomous power to the bureaucratic experts to whom he owed his victory over the estates in the first place.

The rise of the trained *bureaucracy* went hand in hand, albeit in a far less obvious process of transition, with the emergence of the "leading *politicians*." Of course, such influential royal advisers have always existed from time immemorial and in every part of the globe. In the Orient the need to relieve the sultan as far as possible of his personal responsibility for the success of government led to the creation of the typical figure of the "Grand Vizier." In the West diplomacy first became a *consciously* cultivated art during

12. [The Civil Service Reform to which Weber is referring here was inaugurated by the so-called Pendleton Act of 1883. This began the transition from the spoils system to the merit system. Initially, only about one in ten federal employees were appointed on the basis of examinations.]

13. [The *signoria* was a form of government by a lord or despot (*signore*) in the Italian city-states between the middle of the thirteenth and the beginning of the sixteenth centuries, replacing earlier republican institutions. The lord who had usually started in a particular office, such as Captain of the People, sought to extend his authority until it was made permanent and hereditary in his family. Notable examples are the Visconti family in Milan, the Estes in Ferrara, and the Della Scala in Verona. In places that escaped the rule of one lord, the term refers to the ruling body of magistrates, as in Florence.]

14. [This was Maximilian I (1459–1519), who became Holy Roman Emperor in 1508. His interest in chivalry was intense; he has been given the epithet of "the last knight" and even wrote a lengthy epic poem of knightly deeds.]

15. [During the reigns of Maximilian and his successor, Charles V, as Holy Roman Emperors, the expansion of the Ottoman Empire to the west reached its high point under the leadership of the Sultan Süleyman I, with the conquest of Hungary and the siege of Vienna in 1529.]

the reign of Charles V, the age of Machiavelli.[16] This took place above all under the influence of the Venetian ambassadors, whose reports were studied with passionate zeal in diplomatic circles. The adepts of this diplomacy had mostly received a humanist education and regarded one another as a trained class of initiates. In this respect they resembled the humanist Chinese statesmen of the last phase of the period of the Warring States.[17]

The need for politics as a *whole*, including domestic policy, to be conducted in a formally unified manner by a leading statesman arose in a decisive and compelling way only as the result of constitutional developments. Up to that point there had always been individuals who had acted as the prince's advisers or rather, in reality, leaders. But initially, the organization of the authorities had taken a different path, even in the most advanced states. The supreme administrative authorities that had emerged were *collegiate*[18] in nature. In theory and also in practice, though to a decreasing extent, their meetings were presided over by the monarch in person. It was he who made the decisions. This collegiate system led to the growth of expert opinions, counteropinions, and reasoned votes on the part of majorities and minorities. As a counterweight to these supreme official authorities, the ruler tended to surround himself with purely personal confidants—the cabinet—whom he delegated to convey his decisions in response to the resolutions of the council of state, or whatever name the supreme state authority went by. By such methods the ruler, who increasingly slipped into the role of a dilettante, sought to escape from the inexorable growth of his officials' expertise and to keep hold of the reins of power. This latent conflict between trained officials and autocratic rule was to be found everywhere.

The situation changed only when the prince was faced with parliaments and the desire of their party leaders for power. However, conditions that were pitched very differently led to what was outwardly the same result—admittedly, with certain distinctions. Wherever the dynasties retained genuine power, as was the case especially in Germany, the monarchs' interests were aligned with those of the officials in *opposition* to the parliament and its claims to power. The officials had an interest in ensuring that the leading posts, that is to say, ministerial posts, should be filled from their ranks, and that these posts should become the goals to which civil servants might legitimately hope to be promoted. For his part, the monarch had an interest in being able to nominate ministers from the ranks of the officials beholden to him in accordance with his own judgment. Both sides, however, had an interest in ensuring that the political leadership should face the parliament with a united and coherent front. This meant the replacement of the collegiate system by a single cabinet leader. In addition, the monarch stood in need of a single responsible individual who could cover for him, and who would be both answerable to the parliament and able to confront it, while negotiating with the parties. This was essential if he was to be raised above party conflicts and party attacks.

All these interests came together and exerted pressure in the same direction: the emergence of a single minister to preside over the officials and to provide unified leadership. The trend toward a unified parliamentary power became even stronger where, as in Britain, it gained the upper hand in its struggle with the monarch. In Britain the "cabinet," with a single parliamentary "leader"[19] at its head, became a committee representing the power that was ignored by

16. [Charles V (1500–1558) was Holy Roman Emperor from 1530 to 1556. Niccolò Machiavelli (1469–1527) was the celebrated Florentine writer and statesman.]

17. [The period of the Warring States (475–221 B.C.E.) was an age in which China was split up into six or seven feuding kingdoms. It was one of the most fertile and influential of Chinese history. It not only saw the rise of some of the most important Confucian thinkers, but also witnessed the emergence of some of the political structures and cultural patterns that shaped China over the subsequent 2,000 years. It came to an end in 221 B.C.E. when the Qin dynasty established the first unified Chinese empire.]

18. [Weber has in mind bodies like the Conseil d'État in France and the Privy Council in England, but also the Councils of Workers and Soldiers of the German revolution after 1918. For Weber's discussion of collegiate bodies, see *Economy and Society*, chapter 3, section 8, pp. 271 ff., and chapter 11, section 12, pp. 994 ff.]

19. [Weber used the English word.]

the official laws, but was in fact the sole decisive political power: the *party* of the day that could command a majority. The official collegiate bodies were as such not the organs of the true ruling power, namely, the party, and could not therefore act as the agents of the real government. If the dominant party was to maintain its power at home and pursue grand policy abroad, it needed an effective organization at its disposal, consisting exclusively of the true leaders of the party and able to deal with business in confidence. In short, it needed a cabinet. At the same time, the party also needed a leader who would be responsible to the public, and above all the parliamentary public, for all decisions, in short, the head of the cabinet. In the shape of parliamentary ministries, this British system was then adopted on the Continent, and only in America and the democracies influenced by it was an entirely different system introduced. In this system the chosen leader of the victorious party was elected directly by the people and placed at the head of an official apparatus nominated by himself; his dependence on the approval of Congress was confined to budgetary and legislative matters.

The growth of politics into an "operation" that required a schooling in the struggle for power and its methods led to a twofold division of public servants as these methods were developed by the modern party system. This division was by no means absolute, but it was clear-cut. There were the professional officials on the one hand and the "political officials" on the other. The "political" officials in the true sense can be recognized outwardly by the ease with which they can be transferred and dismissed at any time or at least temporarily "retired," like the prefects in France and the comparable officials in other countries. This presents a striking contrast to the "independence" of officials in the judiciary. In Britain this class of political officials includes those who, according to long-standing convention, lose their posts with every change of parliamentary majority and hence of the cabinet. This category includes, in particular, officials concerned with the general "administration of home affairs"; and the "political" element in this is above all the task of maintaining "law and order" in the land, in other words, upholding the existing system of rule.

In Prussia the Puttkamer decree[20] laid down that these officials had the duty of "representing government policy" or else having to face disciplinary measures, and like the prefects in France, they were used as an official apparatus with which to influence elections.

Under the German system and in contrast to other countries, most of the "political" officials were of the same quality as all other civil servants, since appointment to these posts likewise depended on university study, specialist examinations, and a fixed period of preparatory service. This specific feature of the professional modern civil service is waived in Germany only for the heads of the political apparatus, namely, the ministers. Under the old regime, a man could become minister of education in Prussia without ever having studied at an institution of higher education, whereas it was possible to become a senior civil servant [*Vortragender Rat*] only after passing the prescribed examinations. Under Althoff,[21] for example, in the Prussian Ministry of Education, it went without saying that the departmental head [*Dezernent*] and senior civil servant was professionally trained and hence infinitely better informed about the real technical problems of his department than his boss. In Britain it was no different. It follows that in dealing with everyday business the civil servant was also the more powerful figure. That was not necessarily absurd. The

20. [Robert von Puttkamer (1828–1900), a conservative politician who was Minister for Home Affairs (1881–8) under Bismarck. His decree of January 1882 proclaimed that the emperor was responsible for the direction of government and that civil servants were bound by their oath of allegiance to support that policy. His period of office was notable for the rigor with which he enforced the laws proscribing socialism and the thoroughness with which he ensured that officials with liberal views were excluded from state service.]

21. [Friedrich Althoff (1839–1908) was the Prussian Minister of Education from 1897 to 1907 and head of its universities section for fifteen years before that. In this capacity he largely determined the shape of secondary and higher education in Germany in the early twentieth century. While expanding the universities and scientific institutes, he intervened regularly in academic affairs. Weber believed that Althoff had tried to block his appointment to a chair in Freiburg in 1893.]

minister was in fact the representative of the nexus of *political* power; his task was to represent its political norms and to apply them to the proposals of his specialized subordinates or else to give his officials the relevant political directives.

It is very similar to the management of a business in the private sector. There the real "sovereign," the shareholders' meeting, has as little influence on the management of the business as does a "nation" ruled by professional officials. And the people of decisive importance for the policy of the business, namely, the "supervisory board" dominated by the banks, only give economic directives and select the administrative personnel, since they do not possess the technical expertise with which to run the business themselves. In this respect the present structure of the revolutionary state does not represent any fundamental innovation. For what one finds there is that complete amateurs have been handed power over the administration simply because they have machine guns in their possession, and they wish for nothing better than to use the trained officials as executive heads and hands.[22] The difficulties of the present system lie elsewhere but need not concern us today.

We shall inquire instead about the typical characteristics of professional politicians, both the "leaders" and their followers. These have undergone changes in the course of time and are very diverse today, as well.

"Professional politicians" developed in the past, as we have seen, in the course of struggles between the rulers and the estates of the nobility, and in these struggles they acted as the servants of the rulers. Let us examine their principal types.

In his struggles with the estates, the ruler sought the assistance of politically exploitable strata who did not form part of the estates. These included, first and foremost, the clergy. This was what happened in India and Indo-China, in Buddhist China and Japan and in Lamaist Mongolia, as well as the Christian lands of the Middle Ages. Technically, this was because the clergy were literate. In all these countries, Brahmans, Buddhist priests, and Lamas were imported, and bishops and priests were employed as political advisers. The aim everywhere was to acquire literate administrators who could be deployed by the emperor or princes or the khan in their struggle with the aristocracy. Members of the clergy, especially if they were celibate, stood outside the hustle and bustle of ordinary political and economic interests and, unlike the ruler's vassals, were not exposed to the temptation to compete with him for political power of their own to pass on to their heirs. The cleric was "separated" from the machinery of the ruler's administration by the characteristics of his own status group.

A second stratum of this kind consisted of men of letters with a humanist education. There was a time when men learned to make speeches in Latin and write verses in Greek in order to qualify as political advisers and above all to compose political memoranda on behalf of a ruler. That was the age of the first flowering of the humanist schools and the establishment by the crown of professorial chairs of "poetics." In Germany this phase soon passed without leaving deeper traces politically, although it had a lasting impact on our education system. Matters were different in Eastern Asia. The Chinese mandarin is, or rather, was originally, the approximate equivalent of our Renaissance humanist: a humanist man of letters who was educated and who passed examinations in the literary monuments of the distant past. If you read the diaries of Li Hung-chang,[23] you will find that what he took most pride in was the fact that he wrote poetry and was a good calligrapher. This social stratum, with its conventions derived from Chinese antiquity, has determined the entire fate of China. Our own fate might have been similar if there had been the slightest opportunity for the humanists to impose their influence with equal success.

22. [During the brief revolutions in Germany in 1918–19, the Councils of Workers and Soldiers permitted the traditional administrative authorities to continue their work but sent trusted representatives into their meetings to oversee what was done, without directly intervening, however.]

23. [Li Hung-chang (1823–1901), a distinguished Chinese statesman who sought to open up China to technology from the West. After the Boxer uprising of 1896–98 against Western influence, he was instrumental in mediating between the imperial court and the Western powers, leading to the treaty that ended the uprising.]

The third social stratum was the court nobility. Once the rulers had succeeded in depriving the aristocracy of its political power as an estate, they attracted the nobility to the court and enrolled them in their political and diplomatic service. One of the factors in the transformation of our education system in the seventeenth century was that the place of the humanist men of letters in the service of the monarchs was taken by professional politicians drawn from the nobility.

The fourth category was a specifically British phenomenon: this was a patrician class comprising the minor nobility and the urban inhabitants of independent means, known technically as the "gentry."[24] This was a stratum that the monarch had originally attracted in his conflict with the barons and that he put in charge of the offices of "self-government,"[25] only to become increasingly dependent upon them subsequently. This stratum remained in possession of all the offices of local government that it took over gratis in the interests of its own social power. The gentry saved Britain from bureaucratization, the fate of all continental states.

A fifth stratum was peculiar to the West, particularly on the Continent, and it was of crucial importance for its entire political structure. This was the class of university-trained lawyers. Once Roman law had been transformed under the late Roman bureaucratic state, it continued to exert a powerful influence over a long period of time. Nowhere was this more evident than in the circumstance that, in its advance toward the rational state, the revolution of the machinery of politics was undertaken everywhere by trained lawyers. This applied even in Britain, although there the great national guilds of lawyers hampered the introduction of Roman law. Nowhere on earth can we find anything analogous to this. Neither the approaches to rational legal thinking in the Indian Mimamsa[26] school nor the further development in Islam of the legal thinking of antiquity was able to prevent rational legal thought from being stifled by theological ways of thinking. Above all, there was a failure completely to rationalize trial procedure. Three factors were blended together to achieve this rationalization: first, the success with which Italian jurists took over ancient Roman jurisprudence, the product of an entirely unique political system that rose from a city-state to world dominance; second, the *usus modernus*, the modern practice, of the late medieval pandect jurists[27] and canon lawyers; and third, the theories of natural law that had sprung from legal and Christian thought and were subsequently secularized. This legal rationalism had its greatest representatives in the Italian *podestà*,[28] in the royal French jurists who created the formal instruments that enabled the royal power to undermine seigneurial rule, in the canon lawyers and the theologians of the conciliar tradition[29] with their theories of natural law, in the court jurists and learned judges of the continental rulers, in the teachers of natural law in the Netherlands and in the monarcho-

25. [Weber used the English word.]

26. [Mimamsa ("reflection," "study") is the name given to the earliest of the six orthodox systems of Indian philosophy. It dates back to c. fourth century B.C.E. and involves a rational examination of the sacred Vedic texts but was also applied to the analysis of legal texts. It was a powerful intellectual force and is traditionally credited with the defeat of Buddhism in India.]

27. [The *Pandects* or Digests were a compendium of fifty books of Roman civil law made by the order of Emperor Justinian and published in 533 C.E. Roman law came to Germany in the Middle Ages but did not develop until early in the seventeenth century when lawyers, including specialists in canon law, began to interpret the law more freely and to adapt it to modern needs. It was this development that was referred to as the "*usus modernus pandecticum*."]

28. [The *podestà* (sometimes translated as "mayor") was an elected official in a commune, normally from the nobility of another locality, and invested with supreme legal authority for a fixed salary and for a set period of time. Weber attached great importance to this institution and its role in the development of Italian law in the Middle Ages. His account of it can be found in *Economy and Society*, chapter 16, section 3, pp. 1273 ff.]

29. [The conciliar tradition arose as a response to a crisis in the papacy in the fourteenth and fifteenth centuries. It means that as well as the pope, the councils representing the church as a whole have the authority to establish binding norms for church doctrine.]

machs,[30] in the lawyers of the English crown and Parliament, in the *noblesse de robe* of the French *parlements*,[31] and finally, in the lawyers of the period of the [French] Revolution. Without this legal rationalism the emergence of the absolute state is as inconceivable as the Revolution. If you look through the remonstrances of the French *parlements* or the *cahiers*[32] of the French Estates General[33] from the sixteenth century until 1789, you will see everywhere the legal mind at work. And if you look into the professions of the members of the French Convention,[34] you will find there—even though they were elected on the basis of equal suffrage—no more than a single proletarian, a very few bourgeois businessmen, but, in contrast, a whole mass of lawyers of every kind without whose participation the specific spirit that animated these radical intellectuals and their proposals would be quite inconceivable. The modern advocate and modern democracy have always been inseparable ever since, while advocates in our sense, as an independent status group, have existed in their turn only in the West. They emerged there under the influence of the gradual rationalization of trial procedure since the Middle Ages, as a development from the spokesman [*Fürsprech*] of the formalistic Germanic legal process.

There is nothing accidental about the importance of lawyers in Western politics since the rise of political parties. Party politics just means politics as engaged in by interested parties; we shall soon see what that means. And to conduct a case effectively on behalf of interested parties is the business of the trained lawyer. In this respect he is the superior of any "official," a lesson we have learned from the superiority of enemy propaganda.[35] Admittedly, a lawyer can emerge victorious in a "bad" case, in other words, a case that only has logically feeble arguments on its side; he triumphs by conducting the case "ably," technically speaking. But it is also true that only a lawyer has the skill to plead a cause that has intrinsically "powerful" arguments in its favor and thus to handle a "good" case "ably." An official acting as a politician all too often turns a "good" case into a "bad" one through his technically "incompetent" pleading. This is something we have learned from painful experience. For politics nowadays is conducted preeminently in public and through the medium of the spoken or written word. Weighing the effect of words lies at the heart of the activity of the lawyer but is remote from the skills of the professional civil servant, who neither is nor should be a demagogue, and if he nevertheless undertakes to assume the role of a demagogue he normally turns out to do it very badly.

Given the nature of his true vocation, the genuine official—and this is crucial for our assessment of our former regime here in Germany—should not be politically active but, above all else, should "administer," *impartially*. This applies also to so-called "political" civil servants, officially at least, as long as there is no threat to "*raison d'état*," that is, the vital interests of the dominant order. *Sine ira et studio*, "without anger

30. [The term "monarchomach," meaning "fighter against the king" or "king-killer," was introduced by the royalist William Barclay (1543–1608) to describe a group of political thinkers in France who had argued for the restriction of the monarch's powers and the right to resist him. See William Barclay's *De Regno et regali potestate* (Paris, 1600).]

31. [The *noblesse de robe* was a hereditary nobility conferred on holders of high judicial or legal office in the sixteenth and seventeenth centuries. The *parlement* was not a parliament in the English sense but a judicial assembly, descended from the *curia regis*, or king's court, from the thirteenth century on.]

32. [That is, the *cahiers de doléances* or memoranda of grievances that were drawn up at the time of elections to the Estates General. They were collected up and presented to the king estate by estate.]

33. [The Estates General was the legislative body in France until the Revolution of 1789. It provided representation for the three estates of the realm, that is, the nobility, the clergy, and the commons (in practice, the burghers of the towns).]

34. [The chief of the revolutionary assemblies that governed France after 1789. It followed the Legislative Assembly in 1792 and culminated in the Reign of Terror, after which it was succeeded in 1795 by the Directory.]

35. [Weber is referring to the propaganda campaign waged during World War I. The allegation that by invading Belgium the Germans had violated international law and the principle of national self-determination proved particularly damaging.]

or partiality"[36]—that should be the official's motto in the performance of his duties. He should therefore abstain from doing what politicians, the leaders as well as followers, must always necessarily do, namely, to *fight*. For taking sides, struggle, passion—*ira et studium*—are the politician's element, especially the political *leader's*. *His* activity is subject to an entirely different principle of *responsibility*, in fact, the very opposite principle to that of the official. When an official receives an order, his honor lies in his ability to carry it out, on his superior's *responsibility*, conscientiously and exactly as if it corresponded to his own convictions. This remains the case even if the order seems wrong to him and if, despite his protests, his superior insists on his compliance. Without this discipline and self-denial, which is ethical in the highest degree, the entire apparatus would collapse. In contrast, the point of honor of the political leader, that is, the leading statesman, is that he acts exclusively on his *own* responsibility, a responsibility that he may not and cannot refuse or shuffle off onto someone else. It is precisely civil servants of high moral stature who make bad politicians, in other words, who act irresponsibly from a political standpoint. We must judge them, therefore, to be ethically inferior politicians of the kind we in Germany have unfortunately had time and again in leading positions. That is what we call "government by civil servants" [*Beamtenherrschaft*]. I must make it clear that it is not my intention to cast a slur on the honor of our civil service by exposing what are political defects of this system, if we judge it by its success. But let us return once more to the typology of political figures.

Since the founding of the constitutional state, and even more markedly since the establishment of democracy, the demagogue has been the typical political leader in the West. The unpleasant connotations of this word should not obscure the fact that it was not Cleon, but Pericles,[37] who was the first to bear this name. Without office, or rather as the incumbent of the only elective office of military commander[38] (in contrast to the other offices in ancient democracy, which were filled by casting lots), he presided over the sovereign assembly [*ekklesia*] of the people [*demos*] of Athens. Modern demagogues, too, make use of speech, and they do so to a formidable degree, when you consider the election speeches that a modern candidate has to make. But they use the printed word even more. The political publicist, and above all, the *journalist* is the most important representative of the species today.

To provide even an outline of the sociology of modern political journalism would go well beyond the framework of this lecture, since that would be a separate topic in its own right. But a few points must be made. The journalist shares with all demagogues and lawyers (as well as artists) the fate of being denied a fixed place in the social structure. This is true on the Continent, at least, and it contrasts with conditions in Britain and, incidentally, with the situation that formerly obtained in Prussia. He belongs to a kind of pariah caste that in the eyes of "society" is always judged socially by its lowest representatives from the point of view of morality. Hence, the strangest ideas are prevalent about journalists and their work. Not everyone realizes that to write a really *good* piece of journalism is at least as demanding intellectually as the achievement of any scholar. This is particularly true when we recollect that it has to be written on the spot, to order, and that it must create an immediate *effect*, even though it is produced under completely different conditions from that of scholarly research. It is generally overlooked that a journalist's actual responsibility is far greater than a scholar's, and that on average every reputable journalist's *sense* of responsibility is by no means inferior, as indeed we saw during the war. It is overlooked because in the nature of the case it is the *irresponsible* pieces of journalism that tend to remain in the memory because of their often terrible effects. And no one believes it possible for competent journalists to be more

36. [Tacitus, *Annals*, book 1, chapter 1.]

37. [Cleon, an Athenian politician of the fifth century B.C.E., who succeeded Pericles as "leader of the people" in 427. He had mixed success as a general in the wars against Sparta but is known for the brutal treatment of his enemies once he had defeated them. His long-term reputation is that of a conventional vulgar demagogue. Pericles (495–427 B.C.E.) was one of the outstanding figures of Athenian democracy.]

38. [Weber uses *Oberstrategen*—"high strategist"—and clearly means what the Greeks call *strategos*.]

discreet on average than other people. And yet it is so. The incomparably greater temptations to which this profession is exposed, together with the other conditions of working as a journalist at the present time, have conditioned the public to regard the press with a mixture of disdain and abject cowardice. It is not possible to discuss today how this might be remedied. What interests us here is the *political* destiny that journalists can aspire to, the opportunities they have to gain positions of leadership in politics. Hitherto, openings occurred only in the Social Democratic Party. However, within the party editorial posts resembled civil service posts for the most part but have not proved to be a springboard to a position in the *leadership*.

In the bourgeois parties the prospects of gaining political power by this route have, if anything, deteriorated on the whole, when compared to the previous generation. Needless to say, every politician of importance has stood in need of press influence and hence also connections with the press. But contrary to what might have been expected, for party *leaders* to emerge from the ranks of the press was very much the exception. The reason for this lies in the journalist's greatly reduced ability to obtain time off from his work. This applies above all to the journalist with no private means since he is necessarily tied to his professional duties. A journalist's duties, moreover, have become much more intensive, as has the importance of being up to date. The need to earn a living by writing articles on a daily or weekly basis is a millstone around the neck of politicians, and I know of some who are leaders by nature but whose rise to power has been outwardly and, even more importantly, inwardly paralyzed by this burden. The fact that under the old regime relations between the press and the ruling powers in the state and in the parties had a dire effect on the quality of journalism is a story in its own right. These relations were different in the countries of our enemies. But even there, and indeed in all modern states, it appears that the political influence of the ordinary working journalist is constantly being eroded, while the influence of the capitalist press magnate, such as "Lord" Northcliffe,[39] grows apace.

Admittedly, in Germany hitherto the great capitalist newspaper concerns have mainly taken over the newspapers with the "small ads," that is, the various "General Advertisers," and as a general rule they have promoted political apathy. For no profits were to be made from an independent line in politics, and such independence was even less likely to earn the commercially helpful goodwill of the ruling political powers. During the war the revenues brought in by advertising could be targeted as a way of exerting political influence on the press, and this practice looks set to continue. Even if the major newspapers can be expected to resist this pressure, the position of the smaller ones is far more precarious. In any case, in Germany at present a journalistic career is not a normal career route for aspiring political leaders. Whether we should add "any longer" or "not yet," we shall perhaps have to wait to see. This is not to discount its other attractions or to deny its opportunities for influencing and changing politics and, above all, the degree of political responsibility it may entail.

Whether the position would change at all if the principle of anonymity were to be abandoned, as some but not all journalists propose, is hard to say. During the war some newspapers in Germany were edited by talented writers who had been specially hired for the purpose and who made a point of writing under their own names. Unfortunately, what we found in a number of the better-known cases was that this approach does *not* necessarily foster the enhanced sense of responsibility that we might have expected. It was in part the most notorious elements of the popular press who, regardless of party allegiance, used this tactic to strive for higher sales—and who did in fact achieve them. This practice undoubtedly increased the wealth of the gentlemen concerned, the publishers as well as the sensation-seeking journalists—but not their *honor*. This does not amount to an argument against the principle; the question is highly complex, and we should not generalize from this one experience.

Hitherto, however, journalism has not proved to be the road to genuine leadership or to the *responsible*

39. [Alfred, Lord Northcliffe (1865–1922), was a British press lord. He founded papers like the *Daily Mail* (1903) and *Daily Mirror* (1904), rescued the *Observer* (1908), and bought up *The Times*. He worked closely with his younger brother, who became Viscount Rothermere.]

conduct of political life. How matters will develop further, only time will tell. Whatever happens, however, a career in journalism will remain one of the most important paths to professional political activity. Not a path for just anybody, however, least of all for people of weak character, especially for people who can maintain their inner equilibrium only where their social and professional status is secure. A young scholar's life involves something of a gamble, but he is at least surrounded by the stable conventions of social status that help to prevent him from going off the rails. A journalist's life, however, is in every sense a gamble pure and simple. Moreover, he works under conditions that subject his inner sense of security to a sterner test than almost any other situation. His often bitter professional disappointments may not even be the worst aspect of this.

Indeed, it is above all the successful journalists who find themselves having to face particularly onerous inner challenges. It is no small thing to consort with the powerful people of this earth in their drawing rooms, apparently on a basis of equality, to be flattered because you are feared, while all the time knowing that no sooner has the door closed behind you than your host may have to defend himself to his guests for having invited the "scoundrels from the press." In the same way, it is no small thing to deliver prompt and yet convincing judgments on anything and everything that the "market" happens to call for, on every conceivable problem of life, without succumbing to absolute superficiality, or what is even worse, to the humiliation of self-exposure with its inexorable consequences. We should not find it astonishing that so many journalists have gone off the rails or have otherwise lost their value as human beings. What is surprising is that, despite everything, this stratum of society contains a much greater number of valuable and absolutely genuine human beings than outsiders tend to suppose.

As a type of professional politician, the journalist can look back on what is a considerable past. The figure of the *party official*, in contrast, is a phenomenon of recent decades or, in some cases, just the last few years. We must turn our attention to an examination of the party system and party organization if we are to gain an understanding of the historical significance of this figure.

In all political entities of any size where the rulers are elected periodically, that is to say, in all entities that exceed the scope and authority of small, rural cantons, the organization of politics is necessarily an *organization of interested parties*. This means that a relatively small number of people with a primary interest in political activity, that is, in sharing in political power, create a following through open recruitment, offer themselves or their protégés as candidates for election, raise funds, and sally forth in search of votes. It is not possible to imagine how in large organizations elections could take place effectively in the absence of these activities. In practice, it means the division of all enfranchised citizens into politically active and politically passive segments. Since this distinction is voluntary, it cannot be eliminated by such measures as compulsory voting, representation according to membership of a "professional group," or other proposals designed explicitly or in fact to combat this state of affairs and thus do away with the dominance of the professional politicians. Leaders and followers are the indispensable vital components of every party: the leadership so as actively to recruit the followers, while the followers enlist the support of the passive electorate for the election of the leader.

Differences arise, however, in party structure. The "parties" in medieval city-states, the Guelphs and the Ghibellines, for example, had purely personal followings. Consider the *Statuto della parte Guelfa*,[40] with its call for the confiscation of the property of the *nobili* (this term referred originally to all families who lived like knights, that is to say, were entitled to hold a fief), their exclusion from office and the franchise, the party committees linking different localities, the strictly military organizations, and the bonuses paid for denunciations. If we consider these things, we find ourselves strongly reminded of Bolshevism with

40. [The Guelphs and the Ghibellines were the two great factions in Italian politics during the Middle Ages. In the protracted conflicts between the papacy and the Holy Roman Emperors, the Guelphs supported the former and the Ghibellines the latter. After the end of the thirteenth century, these party names came to be used to designate different social classes, especially in the northern and central Italian states. The *Statuto della parte Guelfa* was published in 1335.]

its Soviets, its strictly screened organization of military personnel, and—above all, in Russia—its armies of informers, its confiscations, and the disarming and political disenfranchisement of its "bourgeois," in other words, its entrepreneurs, tradesmen, *rentiers*, clerics, descendants of the royal dynasty, and police agents.

The analogy is even more striking on closer inspection. On the one hand, you find that the military organization of the Guelph party consisted of a purely knightly army, drawn up on the basis of registered feudal estates, and that almost all its leading positions were filled by the nobility. On the other, the Soviets retained, or rather reintroduced, highly paid entrepreneurs, the piecework system of wages, Taylorism, and discipline in both the armed forces and the workplace, all the while on the lookout for foreign capital. In a word, then, simply in order to keep the state and the economy functioning, they were forced to accept once again absolutely *all* the things they had combated as bourgeois class institutions, and they were forced even to take over, as a principal instrument of their state power, the agents of the old Okhrana.[41] However, we are not dealing here with organizations concerned with force but with professional politicians who strive to gain power through sober, "peaceful" party campaigning in the electoral marketplace.

In the same way, these parties in our ordinary understanding of the word started life, in Britain, for example, as pure followers of the aristocracy. Every time a peer changed sides, for whatever reason, everyone who depended on him changed sides with him. Until the Reform Bill [of 1832] the great aristocratic families, and not least the king himself, controlled the patronage of a vast number of constituencies. Closely associated with these aristocratic parties are the parties of notables of the kind that emerged everywhere with the growth of the power of the bourgeoisie. Under the leadership of the typical strata of intellectuals of the West, the property-owning and educated classes divided into parties, which they led and which were based partly on class interests, partly on family tradition, and partly on pure ideology. Clergymen, teachers, professors, lawyers, doctors, pharmacists, wealthy farmers, factory owners—in Britain, an entire stratum whose members called themselves gentlemen—initially formed associations as opportunity offered and at the most established political clubs at the local level. In unsettled times the petty bourgeoisie would speak up, and on occasion even the proletariat found its voice, when it obtained leaders, although these leaders did not, generally speaking, arise from their ranks.

In the country, regionally organized parties on a permanent basis did not yet exist at this stage. It was simply the members of Parliament themselves who kept the parties together. The selection of candidates lay crucially in the hands of the local notables. Party programs came into being partly through the candidates' campaign appeals, partly on the basis of congresses of notables or decisions of the parliamentary party. The clubs were run on a part-time or honorary basis, as occasional work. Where there were no clubs (as was mostly the case), one found nothing but the entirely informal political activity of the few people with a lasting interest in politics in normal times. The journalist alone was a paid professional politician, and only the newspapers were able to act as a continuous form of political organization. Aside from that, there was only Parliament in session. Of course, parliamentarians and parliamentary leaders knew perfectly well which local notables to approach when a specific political course of action was desired. But only large towns had party associations that could count on modest members' contributions, periodic conferences, and public meetings at which the local member of Parliament could report on his activities. Politics came to life only at election time.

The driving force behind the progressive tightening of party organization was the interest that members of Parliament had in the possibility of electoral compromises between localities and the impact of unified programs recognized by broad sections of the public throughout the country, as well as of unified electioneering platforms. But the party apparatus remains that of an association of notables, and no change in principle is involved even when the entire country is covered by a network of local party branches,

41. [The Okhrana was the secret police department in tsarist Russia. It was replaced in 1917, after the October Revolution, by the Cheka (the Extraordinary Commission [for Combating Counterrevolution, Sabotage, and Speculation]).]

including medium-sized towns, as well as a set of "party agents" with whom a member of Parliament in charge of the central party bureau is in constant correspondence. There are as yet no paid officials outside the central party headquarters. The affairs of the local branches are still conducted by "reputable" people who take on this task because of the esteem they otherwise enjoy. They are the nonparliamentary "notables" who exert influence alongside the political notables who actually have seats in Parliament. Increasingly, however, the intellectual nourishment of both the press and the local branches is provided by the party correspondence published by the party. Regular members' contributions become indispensable; a fraction of the money received is used to defray the costs of party headquarters. This was the position of the majority of party organizations in Germany until fairly recently.

Even more strikingly, in France the first stage still prevailed in part. By this is meant the whole unstable system of parliamentary alliances, the small number of local notables in the country beyond, programs drafted by the candidates or by their sponsors on their behalf, in some instances at the moment of recruiting them, although with a more or less local interpretation of directives and programs issued by the parliamentarians. This system was only gradually superseded. The number of full-time politicians remained small and consisted chiefly of elected deputies, the few officials in party headquarters, the journalists, and—in France—the careerists who happened to fill a "political post" or were on the lookout for one. Formally, politics was predominantly a part-time profession. Likewise, the number of deputies eligible for ministerial posts was very restricted, and since places were confined to notables, the number of candidates for election was limited, too. However, the number of people with an indirect interest in the conduct of politics, particularly a material interest, was very great. For all measures taken by a ministry, above all everything to do with questions of personnel, could be dealt with only by taking into consideration their influence on the chances of being elected. Thus everyone tried to channel their wishes of any and every kind through the local deputy, and, whether he liked it or not, the minister was forced to listen to him if he belonged to his majority, which was therefore the goal to which everyone aspired. The individual deputy had all offices in his gift, as well as every other kind of patronage within his constituency, and, for his part, he cultivated his own contacts to the local notables so as to ensure his own reelection.

The most modern forms of party organization stand in stark contrast to this idyllic state of affairs dominated by notables and, above all, by the members of Parliament. They are the offspring of democracy, the mass suffrage, the need to woo the masses and for mass organization, the development of the greatest degree of unity in the leadership and the strictest possible discipline. The rule by notables and the control exercised by members of Parliament dies out. "Full-time" politicians *outside* Parliament take the operations of politics into their own hands, either as "entrepreneurs," which is what the American "boss"[42] and the English "election agent" essentially were, or else as officials on a fixed salary.

In formal terms, a far-reaching process of democratization takes place. It is no longer the parliamentary party that creates the authoritative programs, nor the local notables who still exercise control over the nomination of candidates. Instead, the organized party members meet to choose the candidates and delegate members to attend assemblies at a higher level, of which there may be several, right up to the general "party congress." In the nature of the case, however, power lies in the hands of those who do the *continuous* day-to-day work within the organization or of those on whom the party apparatus depends for either money or personnel, whether as patrons or as the leaders of powerful clubs representing vested interests (such as Tammany Hall). What is crucial is that this entire human apparatus—the party "machine," as it is significantly called in the Anglo-Saxon nations—or rather, the people in charge of it, holds the members of Parliament in check and is well placed to impose its will on them. This has particular importance for the selection of the party *leadership*. You become a leader only if you are supported by the machine, even over the heads of the members of Parliament. The creation of such machines, in other words, signifies the emergence of a *plebiscitary* democracy.

42. ["Boss" and "election agent" are used in the original.]

Needless to say, the party followers, particularly the party officials and bosses, look to the victory of their leader for personal reward in the form of offices or other benefits. The crucial point is that they expect to obtain these things from him and not, or not only, from the individual members of Parliament. They expect above all that the demagogic effect of the leader's *personality* in the election campaign will bring the party both votes and seats, and hence power, and that this will improve as far as possible its supporters' chances of obtaining the hoped-for rewards. At the level of ideals, there is the satisfaction of working for a person to whom you are personally devoted and in whom you have faith, instead of merely for the abstract program of a party composed of mediocrities. This is the *charismatic* element in all leadership and one of its mainsprings.

This form ultimately prevailed, though its triumph was uneven and it involved a latent conflict with the local notables and members of Parliament eager to retain their influence. The process could be seen among the bourgeois parties, first of all in the United States, and then in the Social Democratic Party, especially in Germany. There are constant setbacks whenever a universally acknowledged leader fails to appear, and even when there is one, all sorts of concessions have to be made to the vanity and self-interest of the party notables. Above all, however, even the party machine can succumb to the dominance of the party *officials* who control the day-to-day business. Many members of the Social Democratic Party believe that their party has been unable to resist this process of "bureaucratization." However, the fact is that "officials" tend to submit fairly readily to a demagogic leader with a powerful personality. Their ideal and material interests are intimately bound up with what they hope the party will achieve thanks to him, while working for a leader is psychologically more satisfying. It is much more difficult for leaders to emerge where, as in the majority of bourgeois parties, the "notables" exert an influence on party affairs alongside the officials. For in their *minds*, the little posts the notables occupy on the board or the committees come to "constitute their life." Their actions are determined by resentment toward the demagogue as a *homo novus*, an upstart, by their firm belief in the superiority of the "experience" of party politics (which is in fact of considerable importance) and by ideological anxieties that the old party traditions may be at risk. In the party they have all the traditionalist elements on their side. The rural voters, above all, but also voters from the petty bourgeoisie look up to the name of the notable with whom they have long been familiar and mistrust the new man whom they do not know. Nevertheless, *if* the latter proves successful, these voters switch their loyalty and support him all the more steadfastly. Let us consider a few of the chief examples of this conflict between competing political structures and, in particular, the rise of the plebiscitary form as Ostrogorski describes it.[43]

Let us start with Britain: there until 1868 party organization consisted almost entirely of notables.[44] In rural districts, the Tories relied on such people as the Anglican vicar, schoolmasters, for the most part, and above all the large landowners of the county. The Whigs looked for their support to such people as nonconformist preachers (where they were to be found), the postmaster, the blacksmith, the tailor, the rope maker, in short, skilled artisans who could exert political influence because it was easy to chat with them. In the towns the parties were divided partly along economic lines, partly on religious ones, or even simply by the political opinions that were handed down through the family. But in all cases the notables were the active agents in the political organizations. Above them, there was Parliament and

43. [M. Ostrogorski, *Democracy and the Organization of Political Parties* (London: Macmillan, 1902). Moisei Ostrogorski (1854–1919) was a Russian political scientist and politician. After lengthy periods of study in Britain and the United States in the 1880s and 1890s, he published pioneering works on the history of the political parties. After the revolution of 1905, he returned to Russia and was elected to the First Duma as a liberal. Following the dissolution of the Duma, he withdrew from politics and settled in the United States.]

44. [Weber alludes here to Disraeli's Reform Bill of 1867. This more or less doubled the electorate in the towns by reducing the property qualification, enabling some working men to take part in the electoral process for the first time. At the same time it greatly increased the number of constituencies, particularly in the countryside. These measures forced the British parties to adopt tighter forms of organization.]

the parties with the cabinet and the "leader"[45] who either presided over the cabinet or led the opposition. This leader had at his side the most important professional figure in the party organization, namely, the "whip."[46] It was he who had the desirable offices in his gift; it was to him, therefore, that the careerists had to apply. His practice was to come to an understanding with the individual constituency members about such matters. In the constituencies a stratum of professional politicians gradually began to emerge. Local agents were recruited who initially were unpaid and were roughly comparable to our "party agents" [*Vertrauensmänner*] in Germany. Alongside them, however, there developed in the constituencies a form of capitalist entrepreneur known as the "election agent."[47] In modern British legislation, with its emphasis on fairness in the conduct of elections, the appearance of the election agent was unavoidable. This legislation sought to control the costs of elections and to stem the power of money, since it obliged candidates to declare their electoral expenses. For in Britain, to a far greater extent than was the case here in Germany, the candidate had the pleasure of loosening his purse strings, in addition to straining his voice. He had to pay the election agent a lump sum to cover all his expenses and from which the latter normally made a good profit. In Britain, in the distribution of power between the "leader" and the party notables, both in Parliament and in the country, it had always been the leader who had the more significant position. There were compelling reasons for this in the need to make large-scale policy making possible in a consistent manner. Notwithstanding this, the influence of members of Parliament and party notables remained considerable.

This, then, is what the old party organization looked like: half a club for notables, half already a business complete with employees and entrepreneurs. From 1868 on, however, we can see the development of the "caucus system,"[48] first for local elections in Birmingham, and then throughout the country. This system was brought into being by a nonconformist parson together with Joseph Chamberlain.[49] What caused it was the democratization of the franchise. In order to win the support of the masses, it was necessary to summon into existence a vast apparatus of organizations that were democratic in appearance. The aim was to create an electoral association in every district of each town, to keep the organization in operation at all times, and to run it strictly on bureaucratic lines. This involved the recruitment of growing numbers of paid officials, while the formal representatives of party policy were leading negotiators with the right to co-opt, who had been elected by the local electoral committees in which as many as 10 percent of the voters were soon to be organized. The driving force consisted of local people with a particular interest in municipal politics, which were everywhere the source of the juiciest profits. It was they who were primarily responsible for raising the necessary funds. This newly emerging machine, which was no longer led by parliamentarians, soon found itself embroiled in conflicts with the previous power brokers and especially with the whip. Nevertheless, supported by interested local parties, the machine triumphed so convincingly that the whip was forced to accept the situation and come to terms with it. The upshot was the centralization of power in the hands of a few people, and ultimately just one person, who stood at the head of the party. For in the Liberal Party, the entire system had come into being in con-

45. [Weber used the English word.]

49. [Joseph Chamberlain (1836–1914) was a leading radical politician based in Birmingham. He subsequently made a career in national politics and rose to the position of president of the Board of Trade in Gladstone's second ministry. However, having broken with the Liberals over Gladstone's policy of Home Rule for Ireland, his views gradually became increasingly imperialistic. Under the Tories he served as secretary of state for the colonies.

The notes to Weber's lecture make it clear that the parson in question is Chamberlain's long-standing collaborator, Francis Schnadhorst, who was in actual fact not a parson but a cloth merchant of nonconformist background. He became the secretary to the Birmingham Liberal Association in 1873. Later on, he was responsible for the reorganization of the party branches in other towns on the model of the Birmingham caucus.]

nection with Gladstone's rise to power. What led to such a swift victory over the notables was the fascination exerted by Gladstone's "grand demagogic" skills and the masses' firm belief in the moral nature of his policies and, above all, in his personal moral qualities. A Caesarist, plebiscitary element now made its entrance on the political stage. It was the dictator of the electoral battlefield, and it quickly made itself felt. In 1877 the caucus became active for the first time in a general election, with stunning success. The result was Disraeli's fall from power in the midst of his great triumphs. By 1886 the machine had become completely identified through the power of charisma with the personality of the leader. This reached its climax at the start of the Home Rule debate,[50] when the entire apparatus from top to bottom did not ask, "Do we agree with Gladstone's policy on this question?" but simply swung behind him at his command, taking the view that "Whatever he does, we shall follow him." In so doing, the caucus simply abandoned Chamberlain, its own creator, leaving him stranded.

This machinery calls for a considerable body of people to work for it. There are probably as many as two thousand people in Britain who live directly from party politics. Far more numerous, of course, are those who are involved in politics in search of some office or other, or to serve a specific interest, especially in local government politics. For the useful caucus politician there are opportunities to gratify his vanity, in addition to the prospects for improving his economic position. In the nature of the case, to become a JP or an MP[51] is the height of (normal) ambition, and people who have had a good upbringing, and are "gentlemen," are rewarded by these titles. And in the light of the fact that perhaps as much as 50 percent of the parties' finances came in the form of gifts from anonymous donors, the greatest prize of all, particularly for wealthy benefactors, was a peerage.

What, then, has been the effect of the entire system? It is that today, with the exception of a few members of the cabinet (and a number of independently minded eccentrics), British members of Parliament have become nothing more than well-disciplined voting fodder. In Germany deputies have at least taken the trouble to deal with their private correspondence while sitting at their desks in the Reichstag and thus to act as if they were working for the good of the nation. No such gesture is required in Britain. There the member of Parliament has only to vote and to avoid betraying his party. He must appear when summoned by the whips and do whatever is required by the cabinet or the leader of the opposition. And as for the caucus machine outside in the country, if the leader is strong, it is almost entirely unprincipled and wholly under his control. Above Parliament, then, stands a man who is in all essentials an elected dictator who makes use of the party "machine" in order to bring the masses to heel behind him, and who regards the parliamentarians merely as political beneficiaries of the spoils system to be numbered among his followers.

Now, how does the process of selecting these leaders work? To start with: For what accomplishments are they chosen? What is crucial here, apart from the qualities of will that are decisive all over the world, is, of course, the power of demagogic speech making. The style of rhetoric has changed from what it was in Cobden's day, when it addressed itself to reason.[52] It then moved on to Gladstone, who was an expert in the seemingly sober art of "letting the facts speak for themselves," and from there it came down to the present day, when speakers frequently make use of purely emotive language of the kind also employed by the Salvation Army in order to set the masses in motion. The existing situation can properly be described as a "dictatorship based on the exploitation of the emotional nature of the masses." But the very advanced system of committee work in the British Parliament makes it possible to *take part* and also forces every politician who contemplates joining the

50. [Gladstone was converted to the cause of Irish Home Rule in 1885. His attempts to gain parliamentary approval for it were rejected in 1886 and again in 1893.]

51. [Weber used the English initials JP and MP, as well as the term "gentlemen," here and subsequently.]

52. [Richard Cobden (1804–1865), a British politician, was one of the leading spokesmen of the free-trade movement in Britain. From 1838 he led the Anti-Corn Law League in its successful campaign to repeal the Corn Laws in 1846. The Corn Laws had sought to protect the price of grain.]

leadership to do so. All ministers worthy of note in recent decades have undergone this very real and effective training, while the practice of reporting and criticizing the work of these committees publicly ensures that this school produces a true selection process and that it is able to eliminate the mere demagogue.

That, then, is the position in Britain. The caucus system there, however, was very diluted compared with the party organization in America, where the plebiscitary principle emerged especially early and in an especially pure form. Washington's America was supposed to be a polity administered according to his idea of a "gentleman."[53] A gentleman over there at that time was a landowner or a man with a college education. That was indeed how America was governed initially. When parties began to form, the members of the House of Representatives at first claimed a leadership role, as in Britain at the time of the rule of the notables. Party organization was quite loose. This lasted until 1824. Even before the 1820s the party machine had started to develop in a number of local municipalities, which here, too, were the starting point of modern developments. But it was only with the election of Andrew Jackson as president, the candidate of farmers in the West, that the old traditions were jettisoned. Soon after 1840 the role of congressmen in leading the parties formally came to an end when the great parliamentarians, like Calhoun and Webster,[54] bowed out of political life because Congress had lost almost all its power to the party machine in the country. The fact that the plebiscitary "machine" developed so early in America can be ascribed to the circumstance that there, and there alone, the head of the executive branch and hence the man in charge of official patronage—which is what counted—was a president elected by the popular will and that because of the "separation of powers" he was almost entirely independent of Congress in the conduct of his office. This meant that above all, in the case of the election of the president, genuine booty beckoned as the reward of victory and took the shape of the fruits of office. The consequence of this was the "spoils system,"[55] which Andrew Jackson systematically elevated into a principle.

What is the meaning for the parties nowadays of the "spoils system," that is, the allocation of all federal offices to the followers of the victorious candidate? It means that the contending parties have no principles at all; they are purely careerist organizations that change their programs for each election in accordance with what they see as their best chances of catching votes. And notwithstanding all other similarities, these programs change at a rate not to be matched elsewhere. The parties are shaped with an eye to the election campaign that is of supreme importance for the patronage of offices: the election of the president of the Union and the governorships of the individual states. Programs and candidates are finalized in the parties' "national conventions"[56] without the intervention of the parliamentarians. These "conventions" are party congresses that, formally, consist of representatives who have been chosen in a highly democratic manner by assemblies of delegates who, for their part, owe their own mandates to the party "primaries,"[57] the fundamental voting assemblies of the party. Even in the primaries, the delegates are selected in the name of the candidates for the supreme office of state. *Within* the individual parties bitter struggles rage for the privilege of "nomination." The fact is that between three and four hundred thousand official nominations are in the president's hands, and the task of filling them is one he undertakes himself, assisted only by the advice he receives from the senators representing the individual states. Thus the senators are powerful politicians. The House of Representatives, in contrast, is relatively impotent politically, because it lacks the authority to bestow patronage and because

53. [Weber used the English word.]

54. [John Calhoun (1782–1850) was a leading politician who served as a congressman, secretary of war, vice president (1825–32), and secretary of state. He was known as a champion of states' rights and became a symbol of the Old South. Daniel Webster (1782–1852) was an orator and politician. As a young lawyer, he practiced before the Supreme Court. He subsequently became a congressman, senator, and secretary of state, where he made a name for himself as a defender of the Union against states' rights.]

55. [Weber used the English term.]

56. [In English in the original.]

57. [Weber used the English word.]

the ministers who are purely assistants to the president, whose rights have been legitimated by the people against everyone, including Congress, can administer their office independently of whether they enjoy its confidence or not. This, too, is a consequence of the "separation of powers."

Underpinned in this way, the spoils system was technically *possible* in America because only a youthful civilization could sustain such a purely amateurish approach to the conduct of its affairs. For it is self-evident that the existence of three to four hundred thousand party supporters who had nothing to show by way of their qualifications for office but the fact that they had served their party well—such a state of affairs could not survive without major abuses: corruption and the squandering of resources on a vast scale such as could only be borne by a nation with as yet unlimited economic prospects.

The figure who now makes his appearance together with this system of the plebiscitary party machine is the "boss." What is the boss? A political capitalist entrepreneur who procures votes at his own expense and his own risk. He may have acquired his first contacts as a lawyer or a saloon keeper or as the owner of a similar business, or perhaps as a lender. From there he casts his net still wider until he is able to "control" a certain number of votes. Once he has reached this stage, he establishes links with the neighboring bosses. Through his energy, astuteness, and, above all, discretion, he attracts the attention of men already further advanced in their careers, and he begins to rise. The boss is indispensable to the organization of the party. It is centralized in his hands. By and large, it is he who procures the necessary funds. How does he achieve this? Well, partly through members' dues; above all, by levying a tax on the wages of the officials who have acquired their office through him and his party. And then through bribes and gratuities. Whoever wishes to circumvent one of the many laws with impunity stands in need of the boss's connivance and must pay for it. Otherwise, he has to reckon with unpleasant consequences. But even all this is not enough to provide the necessary operating capital. The boss is indispensable as the direct recipient of the donations of the great finance magnates. These magnates would not entrust sums of money for electoral purposes to any paid party official or to any person who has to make his accounts available in public. The boss with his shrewd discretion in money matters is the natural person for the capitalist circles who fund elections. The typical boss is a man of absolute sobriety. He does not strive for social standing; the "professional"[58] is looked down on in "high society." He seeks nothing but power, power as the source of money but also for its own sake. He works in the shadows; that is where he differs from the British "leader." You will not hear him speak in public; he suggests to speakers what they would be best advised to say, but he himself remains silent. He normally accepts no office for himself, except that of senator in the second chamber. For, since the constitution empowers senators to take part in the patronage of offices, the leading bosses often take up seats there in person. Offices are allocated primarily for services rendered to the party. But the allocation of posts in return for money donations is very common, and some offices have particular rates attached to them. This is a system for selling offices that would have been very familiar from the monarchies of the seventeenth and eighteenth centuries, inclusive of the papal states.

The boss has no firm political "principles"; he is completely without convictions and is interested only in how to attract votes. Not infrequently, he is a fairly uneducated man. In private, however, his life is normally correct and beyond reproach. Only in his political ethics does he inevitably adjust to the average standards of morality in political action that happen to be the norm, just as many of us Germans are likely to have done in the realm of the economy when goods were in short supply and hoarding was rife.[59] The fact that as a "professional," as a professional politician, he is looked down on socially leaves him cold. The fact that he neither fills the great offices of the Union himself nor desires to do so has the advantage that where the bosses think it will attract votes, it is not uncommon for intelligent people

58. [Weber used the English word.]

59. [When food was in short supply during the war, as a consequence of the Allied blockade of Germany, it became customary to make excursions to the countryside, where the farmers still had food supplies that they were willing to sell.]

outside the party to be adopted as candidates, well-known figures of repute and not just the old party notables, as is the case in Germany. Thus the very structure of these unprincipled parties with their socially despised power brokers has propelled able men into the presidency who would never have managed to achieve high office in Germany. Needless to say, the bosses will resist any outsider who represents a threat to their own sources of money and power. But in the competition for the goodwill of the voters, it is not unusual for them to have found themselves obliged to stoop to endorse candidates who are thought to be the enemies of corruption.

In America, then, we have party machines built on strikingly capitalist lines. They are tightly organized from top to bottom and are underpinned by stable political clubs of the type of Tammany Hall. These clubs are organized almost like religious orders and strive exclusively to maximize profits by achieving political control of town halls, above all, since these are the most desirable objects of exploitation. What made this structure of party life possible was the high degree of democratization of the United States because it was "a young country." This connection between youth and democracy means that now, however, the system is in slow decline. America cannot continue to be ruled by amateurs. Fifteen years ago, when one asked American workers why they let themselves be governed by politicians whom they professed to despise, they would answer: "We would rather our officials were people we spit on, than be like you and be ruled by a caste of officials who spit on us." That was the old attitude of American "democracy." Yet even at that time the socialists took a completely different view, and this situation is no longer tolerated. Government by amateurs no longer suffices, and the Civil Service Reform[60] is now creating lifelong pensionable posts in constantly growing numbers. In consequence, posts are now being filled by university-educated officials who are just as incorruptible and competent as in Germany. Around one hundred thousand offices are no longer objects for booty after each election but are pensionable and dependent upon a candidate's qualifications. This will gradually push the spoils system into the background, and the face of the party leadership will probably change then, as well. The only thing is that we do not yet know in what way.

In *Germany*, the crucial factors influencing the operation of politics have been essentially as follows. First, the impotence of the parliaments. The consequence was that no one with leadership qualities wished to stay in Parliament for the longer term. Suppose anyone did wish to enter Parliament—what could he achieve there? If a post fell vacant in a chancellory he could say to the departmental head concerned: "I have a very competent man in my constituency. He would be a suitable candidate. Why don't you take him?" And this was readily agreed. But that was more or less all that a German member of Parliament could do to satisfy his instincts for power—if he had any. In addition, and this second factor was what underlay the first, there was the enormous importance of the trained, professional civil service in Germany. In this respect we in Germany led the world. The professional civil service was so important that it was able to assert its claims not just to civil service posts but also to ministerial office. Only last year someone remarked during the debate on "parliamentarization" in the Bavarian Provincial Diet that talented people would refuse to become officials if ministerial posts were given to members of Parliament. Officialdom proved able to evade systematically the kind of control exerted in Britain by debates in committee. In this way the German parliaments were prevented (with very few exceptions) from producing really competent administrative heads from among their numbers.

The third factor was that Germany, in contrast to America, had parties based on political conviction that claimed, at least ostensibly in good faith, that their members represented particular "worldviews." However, the two most important of these parties, the Center Party and the Social Democratic Party, were born minority parties, and this was in accordance with their declared intentions.[61] The leading circles

60. [This phrase is in English.]

61. [The Center Party was destined to remain a minority party because it essentially represented Roman Catholics in Germany; the same thing is true of Social Democracy, which set out to represent only the working class.]

of the Center Party never disguised the fact that they were opposed to parliamentary rule, because they feared that this would condemn them to be in the minority and that this in turn would make it harder than before to find posts for their careerists, as they had done previously, by exerting pressure on the government. Social Democracy was a minority party on principle and an obstacle to the introduction of parliamentary government because it did not wish to become contaminated by contact with the existing bourgeois political order. The fact that both parties excluded themselves from the parliamentary system made that system unworkable.

What, then, was the fate of professional politicians in Germany? They had no power or responsibility and could only play a somewhat inferior role as notables. The consequence was that they were animated once again by the typical instincts to be found in "guilds" everywhere. In the circle of these notables who made their living from whatever little positions they held, it was impossible for men not cast in the same mold to rise to prominence. I could list a large number of names from every party, and, of course, that includes Social Democracy, of people whose political careers ended in tragedy because they involved men who had leadership qualities but who were not tolerated by the notables for that very reason. All our parties have experienced this development into a guild of notables. Bebel,[62] for example, was still a leader by virtue of his temperament and integrity, however modest his intellectual accomplishments were. The fact that he was a martyr, that he never abused the trust of the masses (in their eyes, at least), meant that they stood behind him to a man, and there was no power in the party that could have provided him with a serious challenge. After his death this situation came to an end, and the rule of the officials began. Trade union officials, party secretaries, and journalists all came to the fore; bureaucratic instincts dominated the party, a highly principled bureaucracy—of rare integrity, we may say, when we consider conditions in other countries, particularly the frequently corrupt union officials in America—but the consequences of bureaucracy already alluded to also made their appearance in the party.

From the 1880s onward, the bourgeois parties became guilds of notables pure and simple. It is true that occasionally the parties attracted able minds from outside the party for publicity purposes and so that they could say, "we have this or that famous person in our ranks." As far as possible, however, they made sure that these people did not stand for election, and only where it was unavoidable and one or other of them insisted did it occur.

The same spirit prevails in Parliament. Our parliamentary parties were guilds and still are. Every speech that is made in the plenary sessions of the Reichstag is previously subjected to a thoroughgoing censorship in the party. This explains why they are so unutterably boring. The only members who can speak are those who have been summoned. A more glaring contrast with the British practice, or indeed the French system (though for entirely opposite reasons), is scarcely imaginable.

At present, following the gigantic upheaval that people customarily refer to as a revolution, a change may now be in progress. Perhaps, but it is not certain. The change began when we started to observe new kinds of party organization. These were amateur organizations in the first instance. They were staffed frequently by students from the different universities who would say to a man to whom they ascribed leadership qualities, "We shall do what has to be done for you, if you tell us what it is." Second, there were commercial organizations. People would come to men to whom they ascribed leadership qualities and offer to take over the business of canvassing for votes in exchange for a fixed payment for each vote. If you were to ask me which of the two methods I would regard as the more reliable from a technical and political point of view, I would, I believe, prefer the second. But both were bubbles that quickly appeared and vanished again just as quickly. The existing apparatuses reorganized themselves but kept on functioning. Such phenomena were merely symptomatic of the belief that new apparatuses would automatically appear if only there were leaders. But the technical

62. [August Bebel (1840–1913) was one of the cofounders of the Social Democratic Party in Germany. He was elected to the Reichstag in 1875 and led the party until his death. Weber refers to him as a martyr because under Bismarck's anti-Socialist legislation, Bebel was repeatedly imprisoned for his convictions.]

characteristics of proportional representation were sufficient to preclude their emergence in advance. Only a few dictators of the street made their appearance, and they then disappeared once more.[63] And only the dictatorship of the street has a following that is subject to an order of strict discipline. It is this that explains the power of these tiny minorities.

If we assume that this were to change, we need to be clear, after what we have already said, that to put plebiscitary leaders in charge of parties means that their followers suffer from a "loss of soul," what we might call their spiritual proletarianization. To be of use as an apparatus for their leader they must obey blindly, they must become a machine in the American sense, undisturbed by the vanity of notables or by any pretentions to opinions of their own. Lincoln's election was made possible only by an organization of this type, and as we have pointed out, the caucus had the same function in Gladstone's case. That is the price that has to be paid for having leaders. But there is only this stark choice: either a democracy with a leader together with a "machine" or a leaderless democracy, in other words, the rule of the "professional politicians" who have no vocation and who lack the inner, charismatic qualities that turn a man into a leader. And that leads to what the rebels in any given party usually call rule by a "clique." For the time being we have only the latter in Germany. And for the future, this situation will be guaranteed, for the Reich at least, first, by the likelihood that the Upper House [*Bundesrat*] will be revived, which will necessarily restrict the power of the Reichstag and with that its importance as a place from which leaders are selected. It will be guaranteed, second, by the system of proportional representation as it exists at present. This is a typical feature of a leaderless democracy, not only because it favors horse-trading among the notables for positions but also because it opens the doors for pressure groups to force the inclusion of their officials in the lists, thus creating an unpolitical parliament in which there is no room for genuine leaders.

63. [Weber's marginal note makes it clear that he was thinking of the establishment of the German Communist Party by Karl Liebknecht and Rosa Luxemburg in December 1918. They were murdered by right-wing extremists on January 15, 1919.]

The only safety valve for the desire for leadership could be provided by the office of president of the Reich if the president were to be directly elected, instead of indirectly, by Parliament. Leaders could emerge and be selected on the basis of proven ability if, in the large municipalities, directly elected town dictators were to make their appearance on the scene with the right to provide their own administrative personnel. This is what happened in the United States, wherever a serious attempt was made to combat corruption. But this could come about only if a party organization existed that was tailored to the needs of such elections. But because all petty bourgeois parties are hostile to leaders, including and above all Social Democracy, we cannot say anything about the future shape the parties will take and what prospects there are of such ideas becoming a reality.

It is not possible to see today, therefore, how the business of politics can take the outward shape of a "profession," and even less what prospects of a worthwhile political challenge might open up for people who are politically talented. The man who is compelled by his financial situation to live "from" politics will always find that the typical direct paths will involve choosing between journalism or a post as party official. Or else he could consider a post with one of the representative bodies: trade union, chamber of commerce, farmers' association, craft workers' chamber, industrial chamber, employers' associations, and so on, or the appropriate positions in local government. Nothing further can be said about the outward shape of the profession except that the party official shares with the journalist the odium of being "*déclassé*." He will, unfortunately, always have the actual or unspoken rebuke of "hired hack" ringing in his ears, in the case of the journalist, or "hired speaker," in the case of the official. Anyone who lacks inner defenses against accusations of this kind and is unable to find the proper retort to them should avoid such a career, because in addition to the risk of exposing himself to grave temptations, he may find that it turns out to be full of disappointments.

We may inquire what inner pleasures may be expected from a political career and what are the personal qualifications called for in those who choose it?

Well, to start with, it provides a sense of power. Even in what may be quite a modest post formally,

the professional politician may feel he has been raised above the commonplace by his discovery that he has influence on people, that he has his share of power over them, but above all that he holds in his hands a strand of some important historical process. But the question now confronting such a politician is: What qualities does he need to do justice to this power (however narrowly circumscribed it may be) and hence to the responsibility that it imposes on him? This takes us onto the terrain of ethical questions. For to ask what kind of a human being one must be to have the right to grasp the spokes of the wheel of history is to ask an ethical question.

We can say that three qualities, above all, are of decisive importance for a politician: passion, a sense of responsibility, and a sense of proportion. Passion in the sense of a *commitment to the matter in hand* [*Sachlichkeit*], that is, the passionate dedication to a "cause" [*Sache*], to the God or demon that presides over it. Not in the sense of that inner state of mind that my late friend Georg Simmel was in the habit of describing as "sterile excitement." That state of mind is characteristic of a certain type of intellectual, Russian intellectuals above all (though by no means all of them!), and now plays such a great part among our intellectuals, too, in this carnival that is being flattered with the proud name of "revolution." For this excitement is no more than an aimless and unfocused "romanticism of the intellectually interesting," devoid of a sense of responsibility for any cause whatever. For mere passion, however sincerely felt, is not enough in itself. It cannot make a politician of anyone, unless service to a "cause" also means that a sense of *responsibility* toward that cause is made the decisive guiding light of action. And for that (and this is the crucial psychological characteristic of the politician) *a sense of proportion* is required, the ability to allow realities to impinge on you while maintaining an inner calm and composure. What is needed, in short, is a *distance* from people and things. The "absence of distance," pure and simple, is one of the deadly sins of every politician and one of those qualities which, if instilled into our intellectuals, will condemn them to political impotence. For the heart of the problem is how to forge a unity between hot passion and a cool sense of proportion in one and the same person. Politics is made with the mind, not with other parts of the body or the soul. And yet if politics is to be an authentic human activity and not just a frivolous intellectual game, commitment to it must be born of passion and be nourished by it. Even so, the ability to keep the soul in check is what characterizes the passionate politician and distinguishes his attitude from the "sterile excitement" of the amateur. This can be achieved only by acquiring the habit of distance, in every sense of the word. The "strength" of a political "personality" means, primarily, the possession of these qualities.

Thus the politician is faced daily and hourly with the task of overcoming in himself a very trivial, all-too-human enemy: common or garden *vanity*, the deadly enemy of all dedication to a cause and of all distance, in this case, the distance from oneself.

Vanity is a very widespread quality, and perhaps no one is entirely free of it. And in academic and scholarly circles it is a kind of occupational disease. But in the case of the scholar, repugnant though it may be, it is relatively innocuous in the sense that as a rule it does not disrupt the business of scholarship. It is quite otherwise with politicians. For politicians, the striving for *power* is an unavoidable tool [*Mittel*] of their trade. Thus the "power instinct," as it is often called, belongs among their normal attributes. However, the sin against the Holy Spirit of their profession begins where this striving for power is *separated from the matter in hand* and becomes an object purely of self-intoxication instead of something that enters exclusively into the service of their "cause." For ultimately there are only two kinds of mortal sin in the field of politics: the lack of commitment to a cause and the lack of a sense of responsibility that is often, but not always, identical with it. Vanity, the need to thrust oneself center stage, is what is most likely to lead the politician into the temptation of committing either or both of these sins. All the more, as the demagogue is forced to play for "effect." Because he is concerned only with the "impression" he is making, he always runs the risk both of turning into an actor and of taking too lightly his responsibility for his own actions. His lack of objectivity leads him to strive for the glittering facade of power, instead of its reality, while his lack of a sense of responsibility seduces him into enjoying power for its own sake, rather than for its substantive purpose. For although, or rather *because*, power is an unavoidable tool of all politics,

and the striving for power, therefore, is one of its driving forces, there is no more destructive distortion of political energy than when the parvenu swaggers around, boasting of his power, conceitedly reveling in its reflected glory—or indeed any worship of power for its own sake. An energetically fostered cult that has grown up in Germany, as elsewhere, has sought to idealize the mere "power politician." Such figures may make a strong impression, but in actual fact their activity is empty and meaningless. The critics of "power politics" are completely right about this. There have been a number of instances when the typical representatives of this cast of mind have suddenly suffered an inner collapse, exposing the internal weakness and impotence lurking behind this showy but entirely vacuous pose. This pose is the product of an exceedingly impoverished and superficial indifference toward the *meaning* of human activity, a blasé attitude that remains completely blind to the tragedy in which all action is ensnared, political action above all.

It is entirely true and a fundamental fact of all history (though one we cannot explore further here) that the ultimate product of political activity frequently, indeed, as a matter of course, fails utterly to do justice to its original purpose and may even be a travesty of it. Nevertheless, this purpose, this service on behalf of a *cause*, cannot be dispensed with if action is to have any internal support. The *nature* of the cause in whose service the politician strives for power and makes use of power is a matter of belief. He may serve national or universally human goals, social and ethical goals, or goals that are cultural, worldly, or religious. He may be motivated by a powerful faith in "progress" (however this is defined), or he may coolly reject faith of this kind; he can claim to be acting in the service of an "idea," or he may wish to reject such claims on principle and choose instead to promote external goals of ordinary life. But some belief or other must always be *present*. Otherwise, even what seem outwardly to be the most glorious political successes will be cursed—and rightly so—because they will have no more meaning and purpose than events in the animal kingdom.

What we have said up to now has brought us to a discussion of the final problem that preoccupies us this evening: the *ethos* of politics as a "cause." Quite apart from its specific goals, what vocation can politics have within the overall moral economy of our conduct of life? Where is what we might term the ethical location in which politics is at home? At this point we find ourselves caught up in a conflict of ultimate worldviews, and it falls to us to *choose* between them. Let us then make a resolute attempt to tackle this problem, which has recently been addressed from what is in my view a completely wrong angle.

Let us begin by liberating it from a quite trivial distortion. Ethics can sometimes make its appearance in what is morally a highly unfortunate role. Let us consider some examples. Take the case of a man whose affections have turned away from one woman to another. He will be an unusual man if he does not experience the need to justify this to himself by saying, "She was not worthy of my love" or "She has disappointed me" or by coming up with other "reasons" of a similar sort. This is a highly unchivalrous reaction to the blunt reality that he no longer loves her and that she must put up with that. Even more unchivalrously, he goes on to invent a "legitimacy" that enables him to put himself in the right and add to her misfortune by trying to put her in the wrong. The successful rival for a woman's affections behaves in like manner: his predecessor must be the more worthless of the two, for he would not otherwise have emerged the loser. And obviously, it is no different after a victorious war when the victor asserts with a wholly discreditable self-righteousness, "I won because I was in the right." Or, take the case of a man who collapses mentally under the strain of the horrors of war. Instead simply of saying, "It was all too much," he may feel the need to justify his own war weariness to himself by replacing it with the feeling that he could not put up with any more because he had been forced to fight for an immoral cause. And the same thing holds true for those on the losing side. There is no point in complaining like old women who start looking for the "guilty party" once the war is over, when in reality the war was the product of the structures of society. Instead, every uncomplaining, manly person will say to the enemy: "We lost the war—you have won it. That's over and done with. So let us now talk about what conclusions we must draw with regard to the *objective* [*sachlichen*] interests that were at stake, and—this is the main thing—in the light of

our responsibility for the *future*, which must weigh most heavily on the victor." Everything else is unworthy and will exact its own retribution. A nation can forgive damage to its interests, but not an assault on its honor, least of all in the spirit of sanctimonious self-righteousness. Every new document that comes to light after decades have passed will revive undignified quarrels and stir up all the hatred and anger once more, whereas our task should be to make sure that *morally* the war is laid to rest once it is over. This can be achieved only through a combination of matter-of-factness and chivalry and, above all, by respecting other people's *dignity*. It can never be brought about by an "ethic" that amounts in reality to undignified behavior on both sides. Instead of focusing on those issues that concern the politician, namely, the future and our responsibility for the future, such an ethic becomes immersed in questions of past guilt, which are politically sterile because they can never be resolved. To become *so immersed* is political guilt if anything is. In the process, moreover, the participants can easily overlook the inevitable distortion of the entire problem by very material interests: the interest of the victor in securing the greatest possible gains, both moral and material, the hopes of the defeated that they will obtain various concessions in exchange for confessions of guilt.[64] If anything is truly *mean and base*, this is it, and it is the consequence of using "ethics" to "prove" one is "in the right."

If that is so, what is the true relation between ethics and politics? Have they absolutely nothing in common, as has occasionally been maintained? Or is the opposite the case: that the ethic that applies to political action is "the same ethic" that holds true for any other activity? It has sometimes been claimed that these two assertions are mutually exclusive. Either one or the other must be right. But is it then true that there is any system of ethics in the world in which substantially the *same* commandments can be proposed for all relationships, whether erotic, business, family and official relations, relations to one's wife, the greengrocer's assistant, one's son, competitors, friends, and the accused in the dock? Can the ethical demands made on politics really be quite indifferent to the fact that politics operates with a highly specific means, namely, power, behind which *violence* lies concealed? Is it not obvious that the Bolshevist and Spartacist[65] ideologues are achieving exactly the *same* results as any militarist dictator precisely because they use this tool of politics? How, then, other than by the identity of the rulers and their amateurish ways, are we to distinguish the rule of the Councils of Workers and Soldiers[66] from that of any potentate under the old regime? How are we to distinguish between the polemics leveled by the majority of the representatives of the supposedly new ethics at the opponents they criticize and the polemics of any other demagogues? By their noble intentions, we shall be told! Well and good. But it is the methods they use that we are talking about here, and the nobility of their ultimate intentions is also claimed by the people they oppose and with a sincerity that

64. [Weber alludes here to the policy adopted by Kurt Eisner, who was briefly prime minister in Bavaria. Eisner, together with large parts of his own party, the Independent Socialists (USPD), was convinced that Germany's position in the peace negotiations would be improved by the unreserved confession of Germany's guilt for the outbreak of World War I. Accordingly, he published documents showing that the German government had encouraged Austria-Hungary to take a hard line toward Serbia and had consciously accepted the risk of widening the conflict to embrace the whole of Europe.]

65. [The Spartakus League (named in memory of a slave who had led a rebellion in ancient Rome) was a left-wing socialist group that was established in 1916 in opposition to World War I. In December 1918 it reformed itself into the German Communist Party (KPD).]

66. [These revolutionary councils (= "soviets") were established in Russia after the February Revolution of 1917. Nominally, they were the chief organ of revolutionary authority, but in practice their powers were undermined by the growing ascendancy of the centralizing Communist Party. In Germany, similar councils were set up in November 1918, and they forced the kaiser and the other German princes into abdication and exile. After attempts to seize power regionally (e.g., in Bavaria) and nationally, they were defeated in the spring of 1919 and put down brutally by an alliance of troops belonging to the central government and the so-called *Freikorps*, militias made up of extreme right-wing volunteers who had been demobilized from the regular army after the defeat of Germany.]

is just as genuine. "All they that take the sword shall perish with the sword,"[67] and conflict is everywhere the same. So, what about the ethics of the *Sermon on the Mount*? The Sermon on the Mount (and by this is meant the absolute ethics of the Gospel) is a far more serious business than is imagined by those who like to quote its commandments nowadays. In truth, it is no laughing matter. We may say of it what has been said about causality in science: it is no hansom cab that can be stopped anywhere, to jump into or out of at will.[68] Rather, the sermon is a matter of all *or* nothing; *that* is the point of it if it is to amount to anything more than a set of platitudes. For example, consider the rich young man who "went away sorrowful: for he was one that had great possessions."[69] The Gospel's commandment is unconditional and unambiguous: give up everything that thou hast—absolutely *everything*. The politician will say that socially this is a senseless demand as long as it does not apply to *everyone*. That means taxation, redistribution, confiscation—in a word, coercion and order applied to *everyone*. The ethical commandment, however, ignores such matters *entirely*; that is its nature. Or again, consider the commandment to "turn the other cheek." Unconditionally, without asking why the other person has lashed out at you. An ethic of ignominy [*Würdelosigkeit*]—except for a saint. That is the crux of the matter: you must be a saint in *all* respects or at least want to be one; you must live like Jesus, the apostles, St. Francis, and their like, and *then* this ethic will make sense and be the expression of true dignity. But *not otherwise*. For if, following this unworldly ethic of love, you ought to "resist not him that is evil with violence"[70]—the politician must abide by the opposite commandment: "You *shall* use force to resist evil, for otherwise you will be *responsible* for its running amok." Anyone who wishes to act in accordance with the ethic of the Gospel should abstain from going on strike—for strikes are a form of coercion. Instead, he should join the company unions. Above all, such a person should not speak of "revolution." For surely this ethic does not intend to teach that of all wars civil war is the only legitimate one. The pacifist who acts in accordance with the Gospel will refuse to take up arms or will throw them away, as was recommended in Germany, so that we might perform our moral duty to put an end to the war and thus to all war. The politician will say that the only certain way to discredit war for the *foreseeable* future would have been a peace on the basis of the *status quo*. For in that event the nations would have asked themselves why the war had been fought. It would have been fought for nothing at all, an absurdity. But that is now not possible. For the war will have turned out to be politically profitable for the victors, or at least for some of them. And what is responsible for that result is the very behavior that made it impossible for us to resist in the first place. Now, once the period of exhaustion is over, *it is peace that will be discredited, not war*. And this will be the consequence of an absolutist ethic.

Finally, there is the duty to tell the truth. For an absolutist ethic this duty is paramount. Some people have inferred from this, therefore, that what was needed was the publication of all documents, especially those that incriminated our own nation. And what followed from this unilateral publication was a confession of guilt, itself one-sided, unconditional and heedless of its consequences. The politician will find that the cause of truth is not advanced by the misuse of these documents and the renewed unleashing of passions but rather is certain to be obscured by it. He will discover that only an all-around systematic inquiry by nonpartisan witnesses could be fruitful, while every other approach may well lead to consequences for the nation that cannot be made good for decades. But an absolutist ethic simply refuses to *inquire* about "consequences."

This is the crucial point. We need to be clear that all ethically oriented action can be guided by either of two fundamentally different, irredeemably incom-

67. [Matthew 26:52.]

68. [The metaphor is derived from Arthur Schopenhauer, who asserted that the "Law of causality is not so obliging as to let itself be used like a cab, to be dismissed when we have reached our destination." See "The Fourfold Root of the Principle of Sufficient Reason," in Julius Frauenstädt, ed., *Sämmtliche Werke*, vol. 1 (Leipzig: Brockhaus, 1898), p. 38.]

69. [Matthew 19:21.]

70. ["But I say unto you, Resist not him that is evil: but whosoever smiteth thee on thy right cheek, turn to him the other also" (Matthew 5:39).]

patible maxims: it can be guided by an "ethics of conviction" or an "ethics of responsibility." This does not mean that an ethics of conviction is identical with irresponsibility or an ethics of responsibility with a lack of conviction. Needless to say, there can be no question of that. But there is a profound abyss between acting in accordance with the maxim governing an ethics of conviction and acting in tune with an ethics of responsibility. In the former case this means, to put it in religious terms: "A Christian does what is right and leaves the outcome to God,"[71] while in the latter you must answer for the (foreseeable) *consequences* of your actions. You may be able to prove to a syndicalist[72] who is a convinced adherent of an ethics of conviction that in all likelihood the consequences of his actions will be to improve the prospects of the reactionaries, to increase the oppression of his own class and to hamper its rise. But however convincing your proofs may be, you will make no impression on him at all. Such a man believes that if an action performed out of pure conviction has evil consequences, then the responsibility must lie not with the agent but with the world, the stupidity of men—or the will of God who created them thus. With the ethics of responsibility, on the other hand, a man reckons with exactly those average human failings. As Fichte has justly pointed out, he has absolutely no right to assume humankind's goodness and perfection.[73] He does not feel that he is in a position to shift the consequences of his actions, where they are foreseeable, onto others. He will say, "These consequences are to be ascribed to my actions." With an ethics of conviction, one feels "responsible" only for ensuring that the flame of pure conviction, for example, the flame of protest against the injustice of the social order, should never be extinguished. To keep on reigniting it is the purpose of his actions. These actions, when judged from the standpoint of their possible success, are entirely irrational; they can and should have merely exemplary value.

But even this does not exhaust the problem. No ethic in the world can ignore the fact that in many cases the achievement of "good" ends is inseparable from the use of morally dubious or at least dangerous means and that we cannot escape the possibility or even probability of evil side effects. And no ethic in the world can say when, and to what extent, the ethically good end can "justify" the ethically dangerous means and its side effects.

In politics, the decisive means is the use of force. The extent of the moral tension between means and ends can be gauged from the case of the revolutionary Socialists (of the Zimmerwald tendency).[74] As is

71. [According to the editors of the *Gesamtausgabe* of Max Weber's writings, this quotation may be traced back to a remark made by Luther in his lecture on the book of Genesis, "Fac tuum officium, et eventum Deo permitte," *D. Martin Luthers Werke, Kritische Gesamtausgabe*, vol. 44 (Weimar: Böhlhaus-Nachfolger, 1915), p. 78.]

72. [Syndicalism wished to bring about the emancipation of the working class by means of "direct action" against the immediate class enemy—that is, the employers. Direct action included general strikes as demonstrations but not parliamentary methods as traditional trade-union tactics. Although such action was not expected to lead immediately to the overthrow of capitalism, it was hoped that in time the foundations of capitalism would be shaken. Syndicalism's ultimate goal was a decentralized society based on self-managing production units, not the all-embracing bureaucratic system aspired to by Socialist parties.]

73. [Fichte cites a passage from Machiavelli's *The Discourses* in which the latter advises every statesman to act on the assumption that humankind's evil nature is a basic fact of life, and that people instantly display this evil nature whenever the opportunity arises. Fichte adds that this fundamental principle of Machiavelli's political doctrine is self-evidently true and has lost none of its validity. *Johann Gottlieb Fichtes Nachgelassene Werke*, vol. 3 (Bonn: A. Marcus, 1835), p. 420.]

74. [The Zimmerwald tendency refers to a conference of Socialists held in Zimmerwald in Switzerland in September 1915 to work out an "internationalist" response to the war and counter the national loyalties to which Socialists of the belligerent nations had fallen prey. It was attended most notably by Lenin, although his radical point of view did not prevail. He had called for an appeal to soldiers and workers to lay down their arms and go on strike against the war. However, French Socialists pointed out that Lenin would be quite safe in Switzerland, while any soldiers and workers following his advice would be liable to the death penalty for treason. The

generally known, even during the war these Socialists adopted the principle that we might succinctly formulate as follows: "If we face the choice of either another few years' war, after which there will be revolution, or else peace now but no revolution, our choice must be: another few years' war!" And to the further question: "What can this revolution achieve?" every scientifically schooled Socialist would have answered that there could be no question of a transition to an economy that could be called Socialist in *his* sense of the word. Instead, yet another bourgeois economy would emerge, but with the difference that its feudal elements and the vestiges of dynastic rule would have been stripped away. So they would approve of "another few years' war"—for this modest gain! We shall surely be permitted to say that however firm our Socialist convictions might be, we might legitimately reject the end that called for such means. But this is precisely the situation with Bolshevism and Spartacism and indeed with revolutionary socialism of every kind. It is, of course, ludicrous to see the Socialists *morally* denouncing the "politicians of violence" of the old regime for making use of exactly the same means as they are willing to use themselves—however justified they may be in rejecting their *ends*.

Here, with this problem of justifying the means by the ends, we see the inevitable failure of an ethics of conviction in general. And in fact, it logically has only one possibility. That is to *repudiate every* action that makes use of morally suspect means, logically. In the world of realities, of course, we see again and again how the representatives of an ethics of conviction suddenly become transformed into chiliastic[75] prophets. For example, people who have just preached "love against force" are found calling for the use of force the very next moment. It is always the very *last* use of force that will then bring about a situation in which *all* violence will have been destroyed—just as our military leaders tell the soldiers that every offensive will be the last. This one will bring victory and then peace. The man who embraces an ethics of conviction is unable to tolerate the ethical irrationality of the world. He is a cosmic, ethical "rationalist." All of you who know your Dostoyevsky will remember the scene with the Grand Inquisitor,[76] where the problem is cogently set out. It is not possible to reconcile an ethics of conviction with an ethics of responsibility or to decree which end can justify *which* means, if indeed you wish to make any concessions to this principle at all.

My colleague F. W. Foerster,[77] whom I esteem very highly personally because of the undoubted integrity of his convictions, while rejecting him unconditionally as a politician, expresses the belief in his book that we can get around the difficulty with the aid of the simple thesis that nothing but good can come from good and nothing but evil from evil. Needless to say, if that were true, the entire problem would cease to exist. But it is astonishing for such an assertion to see the light of day 2,500 years after the first appearance of the Upanishads. Not only the entire course of world history but also every dispassionate scrutiny of our everyday experience tells us the opposite. The history of every religion on earth is based on the conviction that the reverse is true. After all, the age-old problem of theodicy asks the question: How could a power that is said to be both omnipotent and good create such an irrational world of unmerited suffering, unpunished injustice, and incorrigible stupidity? Either that power is not omnipotent or it is not good, or else—a third possibility—life is governed by completely different principles of compensation and retribution, principles that we can interpret metaphysically or that are destined always to elude our attempts at interpretation. This problem, the experience of

---

compromise manifesto adopted called for "peace without indemnities and without annexations" on the basis of the "self-determination of peoples."]

75. [That is, prophets who believe in a future thousand-year age of blessedness, the Second Coming of Christ or a Golden Age.]

76. [From Dostoyevsky's *The Brothers Karamazov*, book 5, chapter 5. In that scene Christ reappears in Seville at the time of the Inquisition, only to be re-arrested and sentenced to death by the Grand Inquisitor because his presence interferes with the power of the church, which alone understands how to distribute bread among humankind and to save them from the curse of freedom.]

77. [The book referred to here is his *Staatsbürgerliche Erziehung* (Leipzig and Berlin: Teubner, 1914), p. 202.]

the irrationality of the universe, has always been the driving force of the entire history of religion. The Indian doctrine of *karma*, Persian dualism, original sin, predestination, and the *deus absconditus*[78] have all grown out of this experience. The early Christians, too, were well aware that the world was governed by demons and that whoever becomes involved with politics, that is to say, with power and violence as a means, has made a pact with satanic powers. It follows that as far as a person's actions are concerned, it is *not* true that nothing but good comes from good and nothing but evil from evil, but rather quite frequently the opposite is the case. Anyone who does not realize this is in fact a mere child in political matters.

Religious ethics has made various accommodations with the fact that we find ourselves placed in different cultures [*Lebensordnungen*], each of which is subject to different laws. Hellenistic polytheism sacrificed to Aphrodite as well as to Hera, to Dionysos as well as to Apollo, knowing full well that these divinities were often at loggerheads with one another. The Hindu culture made each of the different professions into the object of a particular ethical law, a *dharma*. It then placed them in castes, separating them from one another forever in a fixed hierarchy from which there was no escape for those born into a particular caste, other than through their reincarnation in the next life. In this way the different occupations were positioned at varying distances from the highest spiritual goods. This made it possible for Hinduism to elaborate the *dharma* of each individual caste in accordance with the intrinsic laws governing each profession, from the ascetics and the Brahmans down to the villains and whores. These included war and politics. One can see how war was inserted into the general culture in the *Bhagavad Gita*, in the dialogue between Krishna and Arjuna. "Do what is necessary," in other words, do whatever "work" is prescribed by the *dharma* of the warrior caste and its rules as a duty necessary for the conduct of war. According to this faith, to do this "work" does not detract from religious salvation but contributes to it.[79] Acceptance into Indra's heaven[80] was as certain a reward for the Indian warrior who had died a hero's death as was Valhalla for the Germanic warrior. But the Indian warrior would have scorned nirvana just as his Germanic equivalent would have despised the Christian paradise with its angelic choirs. This specialized approach to ethics made it possible for Indian philosophy to develop an internally consistent treatment of the royal art of politics, focusing entirely on its own particular laws and indeed intensifying them radically. A genuinely radical "Machiavellianism," in the popular sense of the word, received its classic formulation in Indian literature as early as Kautilya's *Arthashastra*[81] (long before the Christian era, allegedly from the time of Chandragupta). Machiavelli's *The Prince* is harmless in comparison. It is well known that in Catholic ethics, which Foerster generally finds

78. [The idea that God is hidden, that is, that revelation cannot be fully communicated in books and sermons, is found in many religions, including Hasidic Judaism and the Hinduism of the Upanishads. A strain of Christian theology has argued that God is best known through a "negative" theology that makes no positive statements about God. This idea was taken up by, among others, Martin Luther, who maintained that the revealed God remained the *hidden God*.]

79. [The *Bhagavad Gita*, or "Song of God," which was written in the first or second century C.E., is regarded as one of the greatest of the Hindu scriptures. It consists of a dialogue between Prince Arjuna and his friend and charioteer Krishna, who is also an earthly incarnation of the god Vishnu. The discussion takes place on the eve of battle, when Arjuna sees many of his kinsmen and friends lined up on the opposing side. He considers whether it would not be better to throw down his arms and allow himself to be slain than to engage in a just but cruel war. Krishna recalls him to his sense of duty as a warrior by pointing out to him that the higher way is the dispassionate discharge of his duty, performed with faith in God and without selfish concern for personal triumph or gain.]

80. [Indra was the warrior king of the heavens, the god of war and storm.]

81. [Kautilya was an Indian statesman and philosopher who was said to have been the chief minister and adviser to King Chandragupta (c. 300 B.C.E.), the founder of the Maurya dynasty. His work, the *Arthashastra* (The Handbook of [the King's] Profit) was regarded as a foundational text on the state. It appeared originally in 321–296 B.C.E. The third English edition appeared in 1929.]

congenial, the *consilia evangelica*[82] constitute a special ethics intended for those endowed with the charisma of the holy life. In it we find the monk who may not shed blood or earn his living, and next to him the pious knight and the burgher, of whom the one may do the first and the other the second. The hierarchy of ethical goods and its integration in an organic doctrine of salvation is less logical than in India, as was only to be expected, given the premises of the Christian faith. The corruption of the world through original sin should have made it relatively simple to integrate violence into ethics as a way of punishing sin and the heretics who placed human souls in jeopardy.

However, the unworldly imperatives of the Sermon on the Mount, which are in complete harmony with an ethics of conviction, and the absolute demands made by the religious natural law based on it retained their revolutionary power. In almost every age of social upheaval they appeared on the scene with elemental force. In particular they created the radical, pacifist sects, one of which, in Pennsylvania, tried the experiment of a polity that refused to use force in its relations with the outside world. This proved tragic in the event since, when the War of Independence broke out, the Quakers were unable to take up arms in defense of their ideals, even though it was those ideals that were being defended in the war.

Normal Protestantism, in contrast, legitimated the state, in other words, the use of force, absolutely, as a divine institution, and in particular it endorsed the legitimate authoritarian state. Luther absolved the individual from the ethical responsibility for war and shifted that burden onto the shoulders of the authorities. To obey them in matters not affecting faith, it was held, could never be wrong. In the same way Calvinism accepted the use of force in principle as a means of defending the faith, religious war, in short. This had been Islam's natural element from the very outset. It is evident that the problem of political ethics is *not* simply the product of the modern rejection of faith that springs from the cult of the hero during the Renaissance. All religions have wrestled with it, with widely differing success; and what we have said makes it clear that things could not be otherwise. The specific use of *legitimate force* purely as such in the hands of human organizations is what determines the particular nature of all ethical problems in politics.

Whoever makes a pact with the use of force, for whatever ends (and every politician does so), is at the mercy of its particular consequences. The man who fights for his faith, whether religious or revolutionary, is particularly exposed to this risk. We need not look beyond the present to find examples. Anyone who desires to use *force* to establish absolute justice on earth needs followers, a human "apparatus." He must be able to hold out the prospect of the necessary internal and external prizes (heavenly and earthly rewards), or else this apparatus will not function. Given the conditions of modern class conflict, what is meant by internal reward is the gratification of hatred and the desire for vengeance, and especially of resentment and the need for a pseudoethical feeling of self-righteousness, in other words, the felt need to slander your opponents and denounce them as heretics. By external prizes we mean adventure, victory, booty, power, and the rewards of office. The leader is entirely dependent for his success on the functioning of this apparatus. He is dependent, therefore, on *its* motives, not on his own. He is therefore dependent on being able to keep providing the followers he relies on—the Red Guard,[83] the informers, the agitators—with these rewards *in perpetuity*. Since his activities must be carried out under these conditions, it is evident that what he in fact achieves is not in his own hands but is laid down for him by the predominantly base motives governing the actions of his followers. For they can only be kept under control as long as at least some of them, though probably never a majority, are inspired by a genuine belief in him personally and his cause. But this belief, even when it is subjectively sincere, is in very many cases really no more than the ethical "legitimation" of the desire for revenge, power, booty, and the rewards of office. And we must not let ourselves be persuaded

82. [The *consilia evangelica* are a body of instructions for living a Christian life; they emphasize celibacy, poverty, and obedience.]

83. [The Red Guard was an armed militia recruited from the working class. They appeared first in Petrograd in the February Revolution in 1917, and their task was to guarantee public safety and defend the revolution.]

otherwise about this, since the materialist interpretation of history is not a hansom cab to be picked up on an impulse, and it makes no exceptions for the agents of revolutions! But after the emotional excitement of revolution comes the return to the traditional *daily grind*, the hero of faith disappears, and, above all, faith itself evaporates or—and this is even more effective—becomes part of the conventional phrasemongering of political philistines and technicians. This process unfolds with particular rapidity in religious wars because they tend to be led or inspired by genuine *leaders*, prophets of revolution. For, as with every machinery of leadership, so here, too, one of the preconditions of success is that the followers undergo a process of spiritual impoverishment and routinization [*Versachlichung*], of a spiritual proletarianization in the interests of "discipline." Thus, when the followers of a man who fights for his faith come to power, they are particularly prone to degenerate into a very ordinary class of fortune hunters.

Anyone who wishes to engage in politics at all, and particularly anyone who wishes to practice it as a profession, must become conscious of these ethical paradoxes and of his own responsibility for what may become *of him* under the pressure they exert. For, I repeat, he is entering into relations with the satanic powers that lurk in every act of violence. The great virtuosos of unworldly goodness and the love of humankind, whether from Nazareth or Assisi or the royal palaces of India, have never operated with the methods of politics, that is, the use of force. Their kingdom was "not of this world," and yet they were and are at work in this world, and the figures of Platon Karatayev and Dostoyevsky's saints still remain their nearest successors.[84] Anyone who seeks the salvation of his soul and that of others does not seek it through politics, since politics faces quite different tasks, tasks that can only be accomplished with the use of force. The genius, or the demon, of politics lives in an inner tension with the God of love as well as with the Christian God as institutionalized in the Christian churches, and it is a tension that can erupt at any time into an insoluble conflict. People knew this even in the days of church rule. An interdict in those days represented a far more oppressive use of power over people and the salvation of their souls than what Fichte termed the "cold approval" of Kantian moral judgment.[85] Time and again the city of Florence was placed under such an interdict, and yet its citizens continued to fight against the papacy. And in a reference to such situations in a beautiful passage from his *History of Florence*, if my memory serves me right, Machiavelli makes one of his heroes praise those citizens who esteemed the greatness of their native city more than the salvation of their souls.[86]

If you replace "native city" or "fatherland," terms that may not be utterly straightforward to everyone at the present time, with "the future of socialism" or "international peace," then you will be able to see the problem as it affects us today. For when men strive to attain such ideal goals by *political* action, they act in the name of an ethics of responsibility and make use of violent methods. In so doing they jeopardize the "salvation of their souls." But to seek such salvation through religious wars that are fought from the standpoint of a pure ethics of conviction is to risk damaging and discrediting their idols for generations to come, because the participants take no responsibility for the *consequences* of their actions. In such cases the political actors remain ignorant of the satanic powers that are at work. These powers are inexorable and create consequences for their actions and also subjectively for themselves, against which

84. [Platon Karatayev is the saintly plebeian in Tolstoy's *War and Peace* whose simple faith helps to restore the belief of the hero, Pierre Bezukhov, in his native land. The saintly characters Weber has in mind in Dostoyevsky must include Prince Myshkin in *The Idiot* and Alyosha Karamazov and Father Zossima in *The Brothers Karamazov*.]

85. [According to Fichte, the moral life is based on the individual's consciousness of his duty. However, it can only be effective if this consciousness is backed up by a feeling that he refers to as "cold approval," in contrast to the "aesthetic feelings" of pleasure. *Das System der Sittenlehre nach den Principien der Wissenschaftslehre*, in *Johann Gottlieb Fichtes sämmtliche Werke*, vol. 4 (Berlin: Veit, 1845), p. 167.]

86. [The passage occurs in a letter from Machiavelli to his friend Vettori. See Niccolò Machiavelli, *The Chief Works and Others*, translated by Allan Gilbert (Durham, NC: Duke University Press, 1989), vol. 3, p. 1150.]

they are helpless if they fail to perceive them. "The Devil is old." And this does not refer to his age in years, to his time of life. "To understand him, best grow older."[87] I have never let myself be trumped in an argument by someone simply because he has claimed the privilege of greater age. But by the same token, the mere fact that someone is twenty and I am over fifty does not in itself convince me that his achievement should make me faint with admiration. Age is not the decisive factor here. What matters is the trained ability to scrutinize the realities of life ruthlessly, to withstand them and to measure up to them inwardly.

In truth, politics is an activity of the head but by no means *only* of the head. In this respect the adherents of an ethics of conviction are in the right. But whether we *should* act in accordance with an ethics of conviction or an ethics of responsibility, and when we should choose one rather than the other, is not a matter on which we can lay down the law to anyone else. We can only say one thing. We live in an age of excitement, which you may think is *not* of a "sterile" kind, though excitement is one thing, and it is not by any means always the same as authentic passion. Now in such an age, conviction politicians may well spring up in large numbers *all of a sudden* and run riot, declaring, "The world is stupid and nasty, not I. The responsibility for the consequences cannot be laid at my door but must rest with those who employ me and whose stupidity or nastiness I shall do away with." And if this happens, I shall say openly that I would begin by asking how much *inner gravity* lies behind this ethics of conviction, and I suspect I should come to the conclusion that in nine cases out of ten I was dealing with windbags who do not genuinely feel what they are taking on themselves but who are making themselves drunk on romantic sensations. Humanly, this is of little interest, and it fails utterly to shake my own convictions. By the same token, I find it immeasurably moving when a *mature* human being—whether young or old in actual years is immaterial—who feels the responsibility he bears for the consequences of his own actions with his entire soul and who acts in harmony with an ethics of responsibility reaches the point where he says, "Here I stand, I can do no other."[88] That is authentically human and cannot fail to move us. For this is a situation that *may* befall *any* of us at some point, if we are not inwardly dead. In this sense an ethics of conviction and an ethics of responsibility are not absolute antitheses but are mutually complementary, and only when taken together do they constitute the authentic human being who *is capable* of having a "vocation for politics."

And now, ladies and gentlemen, let us return to these questions *in ten years' time*. I fear, as unfortunately I must, that for a whole variety of reasons, an Age of Reaction will have long since broken in on us, and little will have been accomplished of what many of you, and I openly confess, I, too, have wanted and hoped for. Perhaps not exactly nothing at all, but at least, to all appearances, very little. This is highly probable. This will not disillusion me entirely, but, of course, it is an inner burden to have to live with this knowledge. If this proves indeed to be the case, then I would like to see what will have "become," in the inner sense of the word, of those of you who now feel yourselves to be "conviction politicians" and who share in the intoxication that this revolution involves. It would be wonderful if the situation then could resemble the one described in Shakespeare's sonnet 102:

> Our love was new, and then but in the
> spring,
> When I was wont to greet it with my lays;
> As Philomel in summer's front doth sing,
> And stops her pipe in growth of riper days.

But this is not the situation. What lies before us is not the "summer's front" but, initially at least, a polar night of icy darkness and harshness, whichever group may outwardly turn out the victor. For where there is nothing, not only will the kaiser have lost his rights but the proletarian will lose his rights, too. When this night slowly begins to recede, how many will still be

87. [This is a quotation from J. W. von Goethe, *Faust*, part 2, trans. by Philip Wayne (Harmondsworth: Penguin, 1959), p. 99, lines 6817–8.]

88. [Words historically attributed to Martin Luther at the Diet of Worms in 1521, explaining his refusal to recant his criticisms of the papacy.]

alive of all those for whom the spring had seemed to bloom so gloriously? And what will have become of you all inwardly? Will everyone have become embittered or philistine, will they settle for a simple, dull acceptance of the world and their profession, or, and this is the third and not the most unlikely possibility: will they attempt a mystical escape from the world if they have the talent for it or—as happens frequently and damagingly—will they take to it against their better judgment because it is fashionable? In every such case, I shall conclude that they were *not* equal to the task they had chosen, *not* equal to the challenge of the world as it really is or to their everyday existence. They did not really, truly, and objectively have the vocation for politics in its innermost meaning that they had imagined themselves to have. They would have done better to cultivate neighborly contacts with other people, individually, in a simple and straightforward way, and apart from that, to go about their daily work without any fuss.

Politics means a slow, powerful drilling through hard boards, with a mixture of passion and a sense of proportion. It is absolutely true, and our entire historical experience confirms it, that what is possible could never have been achieved unless people had tried again and again to achieve the impossible in this world. But the man who can do this must be a leader, and not only that, he must also be a hero—in a very literal sense. And even those who are neither a leader or a hero must arm themselves with that staunchness of heart that refuses to be daunted by the collapse of all their hopes, for otherwise they will not even be capable of achieving what is possible today. The only man who has a "vocation" for politics is one who is certain that his spirit will not be broken if the world, when looked at from his point of view, proves too stupid or base to accept what he wishes to offer it, and who, when faced with all that obduracy, can still say "Nevertheless!" despite everything.

The fifth edition of Michael L. Morgan's *Classics of Moral and Political Theory* broadens the scope and increases the versatility of this landmark anthology by offering new selections from Aristotle's *Politics*, Aquinas' *Disputed Questions on Virtue* and *Treatise on Law*, as well as the entirety of Locke's *Letter Concerning Toleration*, Kant's *To Perpetual Peace*, and Nietzsche's *On the Advantage and Disadvantage of History for Life*.

Comments on the First Edition

"A remarkable achievement. . . . May it remain in print for a thousand years."
—Alasdair MacIntyre, University of Notre Dame

"This is a wonderful collection of primary texts that will provide instructors with a cost-effective way to teach the basic works of political theory."
—Michael Gillespie, Duke University

Michael L. Morgan is Professor Emeritus of Philosophy, Indiana University. He is the editor of *Spinoza: Complete Works* (Hackett); the co-editor (with Peter Eli Gordon) of *The Cambridge Companion to Modern Jewish Philosophy* (CUP); and the author of, among other works, *Platonic Piety: Philosophy and Ritual in Fourth-Century Athens* (Yale), *Discovering Levinas* (CUP), and *On Shame* (Routledge).
